No. 818, *New Series*.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscripts.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

Memories and Portraits. By R. L. Stevenson. (Chatto & Windus.)

MR. STEVENSON has collected into a little volume some sixteen essays, many of which, he tells us, have appeared already in various publications; but, to the present reviewer, they are most of them new discoveries, and he must ask the reader's indulgence if he calls his attention to what is already familiar.

The first essay is on "The Foreigner at Home," by which is meant especially the Scotchman in England. Both the scenery and the manners of the English are strange, it appears, to Scotch immigrants; and to neither do they, even in a life-time, wholly reconcile themselves. Mr. Stevenson describes in several charming pages a Scotch boy's first impressions of English scenery.

"The change from a hilly to a level country strikes him with delighted wonder. Along the flat horizon there arise the frequent venerable towers of churches. He sees at the end of airy vistas the revolution of the windmill sails. There are, indeed, few merrier spectacles than that of many windmills bickering together in a fresh breeze over a woody country; their halting alacrity of movement, their pleasant business, making bread all day with uncouth gesticulations, their air, gigantically human, as of a creature half alive, put a spirit of romance into the tame landscape. When the Scotch child sees them first, he falls immediately in love; and from that time forward windmills keep turning in his dreams."

When he comes to describe the Scotchman's impression of English manners, the English reader will be less pleased with Mr. Stevenson and with himself. With much of his inditement of us there is no disagreeing. There is no doubt that the average of education is far higher in Scotland than in England. The English peasant is undoubtedly "sunk in matter." He has no metaphysical leanings, and little interest in his ancestors. But charges follow which will be read with some dismay. We are, it seems, as a nation, reserved; our speech too often lacking in generous ardour; the better part of us withheld from the social commerce, and the contact of mind with mind evaded as with terror. Now, granting that the English have a (perhaps unworthy) delight and capacity for small jests, which is not shared by their northern brethren, this does not make them any the less ready to declare their whole mind when occasion serves; and, surely to pit the English against the Scotch for characteristic aloofness is to invert the common experience of mankind. The ordinary Englishman quite recognises the readily expansive type of Scotchman whom Mr. Stevenson describes; but he knows also that there is another type,

quite as widely disseminated in England, with as remarkable powers of contraction. Certainly in Oxford, if a reviewer may put his own university experiences against those of his author, while there were several brilliant specimens of the cordial Scotchman, reserve was inferred to be a North British attribute.

Far more satisfactory, however, than any disquisition on national characteristics, which cannot fail to be overcoloured by personal experiences, are the essays which deal professedly with Mr. Stevenson's own recollections—his memories and confessions. There are, first of all, a series of papers on his college life at Edinburgh, with memories (rather than portraits, say some) of certain contemporary students and professors; an unflattering analysis of a spirit which in those days drove him among the tombs; and the story of a short-lived college magazine. Then come two sketches of two old friends—a gardener and a shepherd—who may not have been such delightful people to know as they are to read about; and then recollections of his father and a clerical grandfather. This biographical and autobiographical work is of course beyond criticism; it is also beyond praise. There remain certain essays, on talking, on the character of dogs, on the juvenile drama, on romance. They are all well written and sparkling, and all very readable, except, perhaps, the first essay on talking. Of the essay on romance we shall have a word to say presently.

Meanwhile there is one piece of autobiography to which special notice should be drawn in a literary journal. In his essay on "A College Magazine" Mr. Stevenson lets us into the secret, much as the conjurers do, of how he learned to write. His method was twofold. In the first place, he was ever practising description:

"As I walked, my mind was busy fitting what I saw with appropriate words. When I sat by the roadside I would either read, or a pencil and a penny version-book would be in my hand, to note down the features of the scene or commemorate some halting stanzas. . . . And yet this was not the most efficient part of my training. . . . There was perhaps more profit, as there was certainly more effort, in my secret labours at home. Whenever I read a book or a passage that particularly pleased me, in which a thing was said or an effect rendered with propriety, in which there was either some conspicuous force or some happy distinction in the style, I must sit down at once and set myself to ape that quality."

In regard to the first part of this method, the reader may remember that on the solitary occasion when the Laureate broke through his admirable reserve, and condescended to explain how he worked, he confessed to the same practice of photographing scenery, as he called it. Probably all capable artists have been in the habit, with more or less intention, of doing the same; though they may not, like Scott and Mr. Stevenson, have carried a notebook for the purpose. In the other branch Mr. Stevenson is probably an originator. The result of this indefatigable imitation has probably been, as Mr. Stevenson himself points out, that great variety of turns of phrase by which his style is distinguished; another is as certainly his very large vocabulary; but is not a third result a certain want of repose, a touch of the modern malady of self-conscious-

ness, the suggestion of an audience, which haunts Mr. Stevenson's essay writing, and is only banished when he is well on the war-path?

In the critical essays with which the volume concludes Mr. Stevenson contrives to say a number of good things. "That heat and height of sane emotion which we agree to call by the name of poetry" seems to me, notwithstanding the alliteration, to be one of them; "the obvious is not of necessity the normal" is another; "Drama is the poetry of conduct, romance the poetry of circumstance," is a third. Indeed, the whole section which opens with this last aphorism is so happy (except for one barbarous hybrid), that space must be found for some of it:

"The pleasure that we take in life is of two sorts—the active and the passive. Now we are conscious of a great command over our destiny; anon we are lifted up by circumstance, as by a breaking wave, and dashed we know not how into the future. Now we are pleased by our conduct, anon only pleased by our surroundings. It would be hard to say which of these modes of satisfaction is the more effective, but the latter is surely the more constant. Conduct is three parts of life, they say, but I think they put it high. There is a vast deal in life and letters which is not immoral, but simply a-moral; which either does not regard the human will at all, or deals with it in obvious and healthy relations; where the interest turns, not upon what a man shall choose to do, but on how he manages to do it; not on the passionate slips and hesitations of the conscience, but on the problems of the body and of the practical intelligence, in clean, open-air adventure, the shock of arms or the diplomacy of life. With such material as this it is impossible to build a play, for the serious theatre exists solely on moral grounds, and is a standing proof of the dissemination of the human conscience. But it is possible to build, upon this ground, the most joyous of verses and the most lively, beautiful and buoyant tales."

The essay in which this passage occurs—"A Gossip on Romance"—is all through up to Mr. Stevenson's high-water mark of essay writing. Much of it is excellent criticism; and a good deal that is too much coloured by personal habits and preference to be good criticism is most interesting as autobiography. And this leads to a remark about a habit which Mr. Stevenson shares with one who cast over him, as he confesses, "a passing spell"—Mr. Ruskin. He is too much given to hasty generalisation, especially from his own particular. To appreciate this in Mr. Ruskin's case you have only to open a "text-book" in which dogmas chosen from his writings are arranged for all the days of the year. Each contains the kernel of existence for everybody, the root of the whole matter, the "one thing needful"; and yet strangely enough, and distractingly enough for him who would frame his life by them, all are different. Mr. Stevenson is less given to formulating the whole duty of man, so that he may escape the fortune of a textbook, but he is scarcely less fond of universal propositions. For instance, "It is not character but incident that woos us out of our reserve" (p. 258). Is it? or is it always, and for all men? Surely there are people, and they no fools, who find *Robinson Crusoe* insipid and "Hamlet" engrossing. Or again, "And this is the particular crown and triumph of

the artist—not to be true merely, but to be lovable; not simply to convince, but to enchant." Mr. Stevenson develops this universal from the statement a moment before that he is in love with Dumas's D'Artagnan.

Not to end with fault-finding, the reader's attention should be called, in conclusion, to the last paper in the book, entitled "A Humble Remonstrance," and particularly to pp. 283-5. The unphilosophical reader may be puzzled by the use of the word "life" without warning in a disparaging sense, and by an absurd misprint of "discreet" for "discrete"; but these pages are well worth reading carefully.

H. C. BRECHING.

Lord Carteret: a Political Biography, 1690—1763. By Archibald Ballantyne. (Bentley.)

By birth and by personal characteristics Carteret was the stuff that prime ministers are made of. As a Carteret, he was the representative of the family whose career during the seventeenth century is written in the history of the Channel Islands. Through his mother he was the grandson of Grenville, the first Earl of Bath—Mr. Ballantyne is surely not correct in saying that this peer was by birth Sir John Grenville—and the direct descendant of Sir Bevil Grenville, the noblest cavalier that came out of Cornwall, and of Sir Richard Grenville, the hero of the *Revenge*. A boy with a birth like this must have been inspired from his youth by the traditions of his race into playing a part in history no less prominent than theirs. He was sent to Westminster at a time when the school was at the height of its fortunes, and within its buildings he associated with many of those whom in the politics of later life he was destined to assist or oppose. From its lessons and from the academic training of Christ Church he carried away more learning than was possessed by any of his contemporaries. There were many good classical scholars among the politicians of the last century—the names of Pulteney and Mansfield rise at once in the memory in proof of that—but Carteret carried away the palm of learning from the whole of them. At his entrance into the world of London he held his own among the wits and scholars of the day. In the closing year of his life the official who called at his house on state affairs was often tempted into lingering while the dying statesman discussed the orations of Demosthenes or the poems of Homer. Two glimpses are afforded to us of Carteret's last days. In one he delighted his visitor with an apt quotation from the *Iliad*; in the other, when already delirious, he gave an imaginary clerk of the House of Commons an account of recent events "with infinite wit, accuracy and humour." A classical scholar of distinction, a narrator of rich humour, an orator "so honoured in the House of Lords," imbued for great part of his life with the spirit of intense application—his life still fell short, in spite of all these endowments, of the high aims with which he entered upon his career. He was ousted from the leading place by Walpole, he was forced into resignation by the Pelhams. Men with talents infinitely less than his own trampled on him while he was alive; and his name, as Mr. Ballantyne plain-

tively acknowledges, is now all but forgotten. It is the aim of his biographer to rescue Carteret's name from this undeserved oblivion, rather than to throw fresh light on the general history of the age. The story was worth telling, and it is well told. Mr. Ballantyne may be congratulated on the production of a volume in which the narrative is lucidly set out, and with a due sense of proportion.

The Granvilles had long been among the fiercest partisans of Toryism, but Carteret took his seat among the Whigs in the House of Lords in 1711, when he was only a few weeks over age. His early advancement to the peerage was in itself a detriment. More and more every year was power slipping into the hands of the lower house, and Carteret was some years short of fifty when both Pulteney and Walpole realised that their entry among the peers meant the decay of their power. The Whigs were, at Carteret's entry into public life, dwelling in the cold shade of opposition; and, in the presence of their victorious foe, any symptoms of internal dissension were promptly quelled. When their turn came for power, Carteret threw his influence upon the side of Sunderland and Stanhope, who rewarded him, on their acquiring the undisturbed control of public affairs, with the post of ambassador to Sweden in 1719, and by advancing him in the early months of 1721 to the all-important position of secretary of state. Sweden had been involved in constant troubles with her neighbours on the Baltic, and the troops of Russia threatened to seize Stockholm itself. It was the aim of Carteret to resist the advance of the Czar, and to induce the rulers of Sweden to come to terms, by judicious concessions, with the rest of their opponents. He succeeded in both objects; but the task was surmounted with difficulty, and more than once seemed to be destined to failure. The victory of Sunderland and Stanhope over their rivals, Townshend and Walpole, had given Carteret his mission to Sweden; and, when the bursting of the South Sea bubble placed the latter pair of Whig statesmen at the head of the Government, it was Carteret's good fortune to profit by the fall of his friends. The death of one secretary of state, the forced retirement of another, had created two serious gaps in the ranks of the Whig politicians capable of filling high offices in the state. And, as the success of his mission in Sweden had proved his fitness for the discharge of delicate negotiations, Sunderland suggested, and the king at once adopted the suggestion, that Carteret should be entrusted, as secretary of state for the southern department, with the guardianship of England's interest in the more important parts of the continent. The threads of continental politics were hopelessly entangled at this epoch, and it required all Carteret's abilities to unravel them in such a way that the influence of England should not be impaired. Conference succeeded conference, and treaty was followed by treaty; and if the life of each treaty came to an abrupt end in a few short months, and the congresses dragged their slow length without arriving at any definite conclusion, the peace of Europe was maintained by these means, and the internal prosperity of our country was slowly

consolidated. In a ministry which the jealous Walpole presided over, a politician of abilities and ambition could not long retain a place. Carteret's intimate acquaintance with the politics of the continent and his influence over the king had long been distasteful to his leading colleagues, and they aimed at his expulsion from power. The failure of his satellite, our ambassador at Paris, to obtain an advancement in the French peerage for the future husband of a relation of the king's favourite mistress, afforded them the opportunity for Carteret's dismissal. A few short years before Townshend had been driven from a secretaryship of state to the vice-royalty of Ireland; and it was now Carteret's turn to exchange the same post for that dignified banishment.

The earlier portion of Carteret's six years (1724-30) of rule in Ireland was troubled by Wood's patent for a new copper coinage. Like most of the English projects which have disturbed our sister kingdom, it was the manner, rather than the matter, of the scheme which gave offence. An increase of copper coin in circulation was greatly wanted—complaints on that point had been rife for years; and through the influence of the Duchess of Kendal, who had secured for herself a good round sum out of the profits, the patent for supplying the money was entrusted to Wood, an iron-founder in the Midlands of England. Rumours of the bribe which the duchess had secured soon became prevalent in Ireland; the coin was at once pronounced to be unduly debased, and the whole proposition was denounced as favouring the English at the expense of the Irish. Swift, fretting in his Irish hole, saw his opportunity for revenge on the hated Whigs; and the *Drapier Letters* fanned the resentment of the populace to fury. Never has a nation been so stirred over a projected alteration in the currency. Even the indignation of the Scotch a century later, when the Southron attempted to lay a rude hand upon their beloved one pound notes, though it brought forth Sir Walter Scott's talents on the popular side, was but a faint echo of the excitement in Ireland over Wood's patent. Carteret landed in Ireland when the hubbub was at its height; and he soon found that, although he could hold his own with the Irish wits in social converse and could prove a match for Dean Swift in compliment or epigram, he was forced to acknowledge the popular leader's supremacy over the natives of Ireland. The patent was withdrawn, and England had her first serious fall in her wrestles with Ireland. The rest of Carteret's viceroyalty passed happily away in the gaieties of social life, where he stood unrivalled.

After his return to England twelve weary years (1730-42) were spent by Carteret in open opposition. He was then in the prime of life, and his faculties were as yet unclouded; but Walpole resolutely refused, even under royal pressure, to act in any way with the ex-viceroy. Carteret was perforce driven into the ranks of Walpole's opponents, and with them he worked so zealously as to become the leader of the Whig opposition in the House of Lords. History has rendered scant justice to Carteret's vigorous attacks in the upper house. Two figures alone, Pulteney and Bolingbroke, loom large among the

politicians in opposition. It was in the Commons that the battle was fought and won, and among the combatants there the abilities of Pulteney were pre-eminent. When the spoils of office at last fell to the lot of Walpole's opponents they quarrelled, according to the recognised custom, over their division; but to Carteret's share was given the chief prize, the Northern secretaryship of state. The position was surrounded with difficulties, for Maria Theresa was at war with both Russia and France, and their armies seemed likely to overrun her territory. The new secretary assured the hapless queen of his support; and, while aiding her with money and troops, succeeded in inducing her to make peace—though with an inevitable loss of territory—with Frederick. This was the turning point of Carteret's fortunes. It was recognised in all the centres of European life as his work, and as securing Austria's territory against the ambitious designs of France. Carteret was present at the victory of Dettingen, and for once in his life rioted in the noisy enthusiasm of the London populace; but his efforts were often frustrated by his colleagues at home, and he was accused of humouring the Hanoverian prejudices of the second George and of aiming at a despotism akin to that formerly exercised by Walpole. Much to the chagrin of the king, the command of the Pelhams was laid upon him, either that they would resign or that Carteret must be dismissed from his secretaryship. Reluctantly, with many an objection, with many an outbreak of indignation against Newcastle and his associates, the king accepted the latter alternative. From that time the deposed minister, who had now succeeded to his mother's title of Granville, remained in comparative obscurity. Once, indeed, the king did endeavour to shake off the toils of the Pelhams, and for four days in 1746 the secretaryship of state was again held by Granville; but this effort for liberty proved a failure, and the old clique re-entered upon office. In 1751 the Pelhams again took Carteret into their cabinet as president of the council; but although he held that post until his death, and was twice offered the position of prime minister, his active influence in public affairs had ceased.

Why, with these brilliant qualities of mind, this commanding eloquence, this complete knowledge of foreign politics, did Carteret's career prove a comparative failure? The answer is clear: he stood aloof in isolation from his fellows, and his talents, conspicuous as they were, proved insufficient without the presence of less showy, but more practical, faculties. The influence of the borough-monger had become an indispensable assistance for most statesmen; and there were some who, like the fussy Duke of Newcastle, kept themselves in high office all their lives through the delicate manipulation of the constituencies. Carteret's ancestors, the Granvilles, had vast influence over the electors in the pocket-boroughs of the West; but the feelings of that family were cast on the side of Toryism and High Churchism, and when he enlisted in the ranks of the Whigs the political friends of his ancestors were estranged from him. No prominent statesman of that age had so little borough-influence as Carteret. In the pride of his independence he resembled the first Pitt; but even that

marvel of power over his fellow citizens was supported for the greater part of his life by the parliamentary influence of Lord Temple and the Lytteltons. The main reliance of Carteret's position lay in the king's favour, and his enemies turned even the royal partiality to his disadvantage. They insinuated that he was imbued with Hanoverian sympathies; and, while the Tory hated the very name of the Electorate, the Whig could not look with favour on a connexion which proved so damaging to his party cause.

In physical qualities and in mental characteristics the figure of Carteret stands out prominently in the long roll of English politicians; and Mr. Ballantyne has shown a sound instinct in the selection of his subject.

W. P. COURTNEY.

The Pioneers of the Alps. By C. D. Cunningham and Capt. Abney. (Sampson Low.)

THE mass of published matter dealing with Alpine climbing issued during the last twenty-five years is appalling; but the number of good books on the subject is relatively insignificant. *Peaks, Passes, and Glaciers*, "by Members of the Alpine Club," was the first comprehensive treatise on mountaineering to attain popularity. The different points of view of the various writers contributed not a little to the charm of those still delightful volumes. Mr. Cunningham has done well to follow the example thus set in bringing together a series of lives of the great guides of the Alps, written, so far as possible, each one by the amateur in whose company the guide most frequently worked.

The title of the volume is perhaps a little misleading. At least half the guides described belong not to the generation which first opened up the mountains as the "playground of Europe," but to the next. With the ascent of the Matterhorn in 1865 the years of discovery were brought to a close. Up to that time the craft of climbing was in process of invention. The use of rope and axe had to be found out; the right way to attack a mountain had to be learnt. Peaks now known to be easy of ascent repulsed their assailants again and again in the early days; and that, not because climbers were less strong or bold than they are now, but because the craft of climbing was in an undeveloped condition. The modern guide is a product of at least three generations. He has learnt to know what can be done and what cannot. He has learnt, and so have the more intelligent of his employers, to judge at once, by the aspect of a mountain, the best line of attack to take. He has lost all memory of the old dread of the unknown. He does not waste time in attempting impossibilities, neither is he to be turned back by illusive appearances of difficulty or danger. So soon as this kind of knowledge had been acquired the impediments against making a first ascent were removed. The method of attack was known; and therefore the remaining virgin summits fell one after another, and new routes up mountains already ascended were discovered in incredible number. A few peaks, such as the Aiguille du Dru, the Meije, or the Dent de Géant, held out for a long time against all attempts; but this was because of their extreme difficulty. The general run of mountains, it was

discovered, could be ascended in suitable weather by almost every ridge and face. To accomplish all these ascents will take years. It is needful that each should be done in order that the fittest routes may be known and the less fit abandoned. At the present day it may be questioned whether half the possible ascents in the Alps have been made.

From what precedes it is clear that guides admit of division into two classes: the true pioneers, that is to say, the men who invented guidecraft; and the modern class of instructed guides, who learn a craft already developed, and whose goodness depends upon their strength and skill in execution. Guides have arisen in the last ten years who, by continual practice upon rocks of extreme difficulty, have acquired powers of actual climbing such as were not dreamt of twenty-years ago. In this respect they may be said to have improved the craft, but in all others it remains what it was made in the pre-Matterhorn period.

A strict classification would only have admitted into the ranks of the pioneers men who were flourishing as guides before the year 1865. The Balmats and other well-known Chamonix names would have found place, and so would the Andereggs, the Laueners, old Almer, Franz Andermatten, and a few more, but not Jaun, nor Imboden, nor Pollinger, nor Imseng, nor Rey. Such exclusions, however, would have been a great loss, and the editor has done well to give a more elastic interpretation to his title.

The time is propitious for the appearance of such a work. Many of the true pioneers still survive both among guides and amateurs. Living people can remember the time when the remoter valleys of the Alps were little better known than the regions of Central Africa are now. The wonderful change that has taken place in the course of some third of a century was accomplished by a remarkable set of men. Without the guides far less would have been accomplished. To the guides a large share of credit is due. The leading amateur climbers are tolerably well-known men, though a corresponding volume about them would not lack of interest. In a few more years the old guides would have gone into forgetfulness. Their memory is now secured. In every case the description of a guide has been written by one of his employers, and, therefore, in most cases, by a devoted admirer and friend. Little criticism need then be expected. The portraits are, perhaps, somewhat flattered. But such men as Melchior Andereg, François Dévouassoud, Franz Andermatten, and Andreas Maurer, it would, indeed, be hard to flatter. They are types of a noble class of men, who, without ceasing to be peasants, have earned the right to be numbered among the bravest gentlemen of any age.

The volume in question would be but half noticed if we omitted to mention the remarkably fine series of portraits, and other illustrations with which it is embellished. It is enough to say that these are process prints made from negatives taken by Capt. Abney. The likenesses are in almost every case good, and the photogravure plates are of remarkable excellence. The little tail-pieces, and other minor illustrations of details in Alpine work, are often remarkably happy. On page 126 is

the very best representation of a rock-climbing incident that I have ever seen.

The volume is opened by some eighty pages of interesting introductory matter dealing with the growth and development of mountaineering. Here and there certain controversial matters, interesting to members of the Alpine Club, but of no wide or permanent importance, are referred to which it would have been better to omit in a work intended to have a lasting value.

A few misprints should be removed in later editions. The Matterhorn accident (p. 238) occurred in 1865, not 1864. The initials T. M. of the author of the article on "Jaun" are not those of any gentleman in the list of contributors. They doubtless pertain to Mr. T. Middlemore. It is matter of regret that no likenesses of the dead guides are given. In almost every case more or less satisfactory ones could have been found. As a whole the work is a great success, and the editor is to be congratulated upon it.

W. M. CONWAY.

The Invasion of the Crimea. By A. W. Kinglake. Vols. VII. and VIII. (Blackwood.)

(Second Notice.)

THE command of the French army was transferred to Pelissier in the third week of May, 1855. By this time the army of reserve, which Napoleon III. had intended to lead, had arrived upon the theatre of war; and, including the Turks and the Sardinian troops, the forces of the allies actually in the field were not far from 200,000 men, while the Russians, exhausted by the sufferings of the siege, and by the enormous waste of immense marches, were scarcely more than 100,000 strong. Mr. Kinglake has stated the figures truly; but he does not clearly bring out their significance, or indicate how completely they changed the situation in front of Sebastopol. The superiority of strength which, up to April, had decidedly been on the Russian side, was now as distinctly on the side of the foe; and this fact ought to be borne in mind in estimating the operations that followed, Mr. Kinglake's account of which, we think, is, in many respects, unjust and misleading.

Mr. Kinglake has given us an excellent sketch of the qualities of Pelissier and of his outward man; and he hints that Pelissier was a great chief, apparently because the French general was usually in accord with Lord Raglan. Undoubtedly, too, this fierce soldier was an improvement on Canrobert's weakness; and it was, on the whole, well for the allied cause that, bad as Pelissier's plans were, he vindicated his ascendancy in command, and was allowed to carry them out on the spot. But when Mr. Kinglake asserts that Pelissier was a strategist in any sense of the word, and that his projects for the siege were able and sound, we venture to say no experienced student of the art of war will agree with him. The French commander was, no doubt, right in tacitly condemning his predecessor's slackness, and in refusing to give Todleben a free hand to make counter approaches; but his general conception of the operations to be undertaken against Sebastopol

assuredly displays neither skill nor judgment. His idea was that the siege should be pressed at all costs against the one front assailed; that an attempt at investment should not be made; that no effort should be tried to cut off the reinforcements poured into the place, by a movement against the enemy's rear, and that the contest should resolve itself into a duel between the besiegers in their lines and the besieged in their great fortified camp, with their retreat, in the event of defeat, open. It is unnecessary to say that this strategy was contrary to plain military rules. It "took the bull by the horns," so to speak, imperilling the attack, and facilitating the defence. By leaving the fortress open, and not seeking to intercept the troops being dispatched to it, it made the prospects of the siege indefinite, and nullified the superiority of the allies in the field; and it reduced the issue to a mere trial of strength, in which the enemy had every advantage. The plan, in a word, was essentially bad; and, if it be alleged that it succeeded at last, this was owing to a purely accidental circumstance. Sebastopol fell after a desperate contest, which cost the allies many thousands of lives; but the Russian army effected its escape. And the war was only brought to a close because—Fate avenging the campaign of Moscow—the losses of the Russians had been so prodigious in moving troops into this distant region that the Czar was unable to prolong the struggle. In the case of the attack and the defence of Sebastopol, as in the case of the attack and the defence of Richmond, the vanquished bear off the palm of generalship; but Lord Raglan, it is only fair to say, disapproved in some respects of his French colleague's strategy.

Pelissier's method of carrying on the siege brought him into collision with the French emperor. Mr. Kinglake describes at undue length the controversy between the chief and his sovereign, and in his usual way takes care to hold up Napoleon III. to the contempt of history. It was well, we have said, that the French commander was at last allowed to act as he chose; for the direction of war by an amateur strategist—and Louis Napoleon was little more—thousands of miles away was perilous in the extreme. Yet few will deny that the general view of the emperor, that the allied armies ought to be employed in surrounding the fortress and in operating on the communications of the foe, was superior to those of his rough lieutenant. It should be observed, besides, that, to a certain extent, Lord Raglan concurred with the imperial plans, though he did not convince his obstinate colleague. He certainly wished that a powerful diversion should be made on the rear of the hostile forces being brought up to join in the defence, and that Sebastopol should be in some degree isolated.

Mr. Kinglake's account of the third bombardment is graphic, though in his usual manner; and we agree with him that it had become necessary to master Todleben's counter-approaches, if the fortress was to be ever reduced, enormous as was the cost of success. We pass on to the grand effort made by the allies on June 18. Mr. Kinglake has fully and fairly described—false as his style occasionally is—the effects wrought by the fourth bombard-

ment, and the heroic but ultimately fruitless attempts to storm the defences and seize their works made by the French and the English armies; and he has clearly indicated the causes of the failure. It is absurd, however, to ascribe the result to a temporary eclipse of Pelissier's faculties. This is a mere invention to excuse the statement that the Frenchman had great military parts, and it is simply unworthy of a grave historian. The plain truth is that Pelissier was a resolute but unscientific soldier, trained in a bad school for European warfare; and he risked an assault on a first-rate fortress without understanding its powers of resistance or properly distributing his own forces. He made three capital mistakes at least, each sufficient to account for the allies' defeat: he underrated the effects of Todleben's ordnance; he launched his columns of attack over exposed spaces completely swept by a destructive fire; and he did not know how to employ his reserves. It must be matter of regret that Lord Raglan appears to have assented to faulty tactics of this kind.

We have commented on the faults of Mr. Kinglake's style, most objectionable in the case of a history of war, which ought to be a simple, rapid, and dramatic narrative. The following, evidently borrowed from a passage in Victor Hugo's "1793," is a specimen of one of the purple patches he often tacks on to the stuff of his work, and seems to us to be in very bad taste:

"Not only does a cannon-ball seem to be armed with a mighty will, but somehow to govern its action with ever ready intelligence, and even to have 'a policy.' The demon is cruel and firm, not blindly, not stupidly obstinate. He is not a straightforward enemy. Against things that are hard and directly confronting him he indeed frankly tries his strength, and does his utmost to shatter them and send them in splinters and fragments to aid in the havoc he brings; but with obstacles that are smooth and face him obliquely he always compounds, being ready, even on slight challenge to come, as men say, to 'fair terms' by varying his line of advance, and even, if need be, resorting to crooked, to sinuous paths. By dint of simple friction with metal, with earth, and with even the soft, yielding air, he adds varied rotatory movements to those first enjoined by his mission; he improves his fell skill as he goes; he acquires a strange nimbleness, can do more than simply strike, can wrench, can lift, can toss, can almost grasp; can gather from each conquered hindrance a new and baneful power; can be rushing, for instance, straight on in a horizontal direction, and then—because of some contact—spring up all at once like a tiger intent on the throat of a camel.

"So far, one may say, his devices are not unfamiliar to men versed in war, and some of his changes indeed, as, for instance, his flight by ricochet, they can indicate at their own wish and pleasure; but under special conditions he sometimes will toil in a way that is much less commonly known. When encountering things that are tough (such as gabions or sandbags well-filled), which do much towards obstructing his course, yet have not the required strength of numbers with which to withstand and defeat him, he plays the conqueror over them, he presses them into his service, he compels them to forget their inertness, and sends them hurled this way and that against all they can reach with their blows."

Mr. Kinglake describes in minute detail the successful expedition of the allies to

Kertch, and the negotiations of the spring of 1855. These are episodes, however, of the main narrative, and we cannot do more than refer to them. This history closes with the death of Lord Raglan, and it is to be regretted that an arbitrary limit should have been set to a work of the kind. Mr. Kinglake's account of the last moments of the warrior is written with good taste; and in some respects we agree with his estimate of the commander-in-chief of the Crimean army. Lord Raglan was not a really great general, and as an administrator he stands in a low rank; but he had something of Wellington's eye in the field; he retained traditions of a grand age of war; he was beloved by all who came in contact with him, and he towers high above his French colleagues. His peculiar excellence, however, was that he kept an alliance liable to be strained together; and, with Mr. Kinglake, we do not refuse him the sagacity and fine tact of a statesman.

Mr. Kinglake does not attempt to describe the last scenes of the siege; and this was well for his theories. Sebastopol, as we have said, fell, after a murderous and protracted struggle; but the allies gained a ruined nest only, from which the Russian eagles had safely flown; and, had the Czar been able to continue the war, the contest would have only begun. In that event the siege would have been an obviously wasteful and tedious effort to master an advanced post at the outset of a campaign; and this is decisive against Pelissier's generalship, though he was an able and energetic soldier. The West, however, showed little genius for war in this campaign, or in that of 1859; and beyond dispute the one real chief the occasion produced was the renowned Tottleben. The grand examples of the first years of the century appeared again, for the first time, in the terrible Civil War of America, not studied nearly enough in Europe; and Lee imitated with extreme brilliancy, in his operations around Richmond, the rapidity and scientific skill of Napoleon. Meantime a patient and profound genius had devoted a life to the study of war; and Sadowa and Sedan revealed to astonished Europe what could be accomplished by great commanders ably wielding the power of well-prepared armies.

WILLIAM O'CONNOR MORRIS.

The Heroic Enthusiasts (Gli Eroi Furori).
By Giordano Bruno. Part I. Translated
by L. Williams. (Redway.)

THE growing fashion of veiling an author's Christian name under an initial merits reprobation. One can readily understand the modesty which suggests blank anonymity; but the confession of a surname and place of residence, coupled with a letter as vague and "unknown" as an algebraical x , seems a gratuitous piece of perversity. I am loath to accept the suggestion of a cynical friend that names so written stand for women "who want to be taken for men." I cannot bring myself to believe that in times like the present, when "the nobility and pre-eminence of the female sex," as Agrippa styled his treatise, forms the first article in the creed of every woman of culture, any female could be found who would adopt a device involving, if only as a contingency, such a profound degradation.

But, whatever be the sex of the translator (I assume, as a matter of courtesy, that she is of the gentler sex), she must be congratulated on the choice of a book worthy of translation into English. I wish I could add that the execution of the work was on the same high level as the good taste which prompted its selection. Unfortunately this is far from being the case. The author starts on her subject with the laxest notions of her obligations as a translator. She not only omits the second part of the dialogue, which is absolutely necessary for its continuity; but a still more unpardonable offence—she leaves out Bruno's characteristic dedication to Sir Philip Sidney, which contains a synopsis of the argument from its author's own point of view. Nor is this all. I find omissions of words, phrases, and sometimes paragraphs, even in the truncated remnant actually Englished. To go no further than the second page of the translation (p. 36), the argument of Bruno is maimed by the omission of a whole paragraph. Apparently the author did not understand the classical allusions in the couplet—

"Non mancaranno, O Flacco, li Maroni
Se penuria non è de Mecenati,"

which is Bruno's version of Martial's verse—

"Sint Mecenates, non deerunt, Flacce, Marones,"

and, therefore, left out the whole passage in which it occurs. This is bad enough, but worse remains to be told. The translator has in many cases not only perverted, but absolutely inverted, Bruno's meaning. One instance of such perversion occurs in the passage following the omitted paragraph just mentioned. Another startling example occurs a few lines further on (Wagner, vol. ii., p. 314), where Bruno's "instituendo gli animi eroici per la filosofia speculativa e morale" is grotesquely rendered "substituting heroic souls for speculative and moral philosophy." I had marked more than a dozen blunders of a similar kind within the compass of a few pages, but have no space to refer to them. Their frequency seems to prove that the author was inadequately equipped for her task both as to her knowledge of Italian and her acquaintance with Bruno.

Spite of these drawbacks, however, there are portions of the dialogue which are rendered with a fair amount of accuracy—sufficient, perhaps, to give the English reader some notion of Bruno's spirit and teaching. The luminous intensity of the Nolan philosopher is transparent through its imperfect English setting as the sun is discerned through clouds. *Gli Eroi Furori* is indeed one of the most important of Bruno's constructive dialogues. Its title, "Heroic Transports" or "Enthusiasms," was the name he gave to the mystical raptures, the passionate aspirations of the seeker for truth, wisdom, and intellectual beauty. Much of his teaching and no small portion of his fervour he derived from Plato and Plotinus, and more generally from the spiritual side of the Greek doctrine of *Eros*; but he also found points of sympathetic contact in the thought of his time. The Italian Renaissance was a period of sublime and restless aspiration in every direction of human energy—a time when there was small discrimination between excited craving and mad passion. Thus, as the wild projects of

chivalry were best described under the character of an Orlando Furioso, so intense intellectual cravings secured the fitting name of "Heroic Furores," or "Transports."

The full significance of this yearning of Giordano Bruno for truth and beauty has been underestimated by his biographers. In truth, it was the guiding stimulus of his thought and life. It was the mental unrest which was at once the source and analogue of his physical restlessness. It represents the scorn for mere finality which found partial expression in his contempt for all dogmas as definitive assertions of truth; for like every thoroughgoing skeptic he preferred search to attainment. It indicates the life of pure aspiration which ever looked upward and onward, and refused to be satisfied with the present, excepting as a standpoint for future energy. Lastly, it has a final and pathetic reference to his death. Long before the stake had been prepared for him in the Campo dei Fiori, Bruno foresaw that his fervently aspiring life would be consummated on the martyr's pyre, and recognised the singular fitness of such a termination. His death by fire appropriately closed a life whose burning restlessness he thus described:

"L'incendio è tal, ch'io m'ardo, e non mi sfaccio."

I have described the object of *Gli Eroi Furori* in order to draw the attention of English readers to the striking sublimity of its contents, and the general loftiness of Giordano Bruno's speculations. To L. Williams I would recommend a starting on her task *de novo* with a fuller equipment, both philosophical and linguistic, than she (if it be she) now possesses. JOHN OWEN.

NEW NOVELS.

The Wrong Road. By Major Arthur Griffiths. In 3 vols. (Blackwood.)

Saddle and Sabre. By Hawley Smart. In 3 vols. (Chapman & Hall.)

Born in the Purple. By Maxwell Fox. In 3 vols. (Hurst & Blackett.)

Gilbert Freethorne's Heritage. By W. G. Alvary. In 2 vols. (Sonnenschein.)

Love and Theology. By Celia Parker Woolley (Boston: Ticknor; London: Trübner.)

The Fox and the Goose. By the author of "Spavin Hall." (Ward & Downey.)

A Swallow's Wing. By Charles Hannan. (Sonnenschein.)

In the Web of Destiny. By Arthur Lee Knight. (Sampson Low.)

Luck at the Diamond Fields. By Dalrymple J. Belgrave. (Ward & Downey.)

Better Dead. By J. M. Barrie. (Sonnenschein.)

MAJOR GRIFFITHS has, in *The Wrong Road*, devoted himself absolutely to the work of mystifying his readers in regard to his plot; and he has attained complete success. The problem which he propounds in his first chapter is—Who is it that has poisoned Sir Carysfort Lezaire, the young owner of Straddlethorpe Hall? and it is not until the reader has digested two of Major Griffiths's three volumes that it dawns upon him

that he is mistaken in his belief that the murderer is Colonel St. Evelyn, Carysfort's guardian and brother-in-law. He appears in the character of a selfish adventurer. He has an interest in the death of the young baronet, in virtue of the "expectations" of his wife on that event taking place. He is in debt. A person wearing a cloak of his is proved to have purchased the poison which, there is every reason to believe, killed his brother-in-law. His mother-in-law, who had hoped to be his wife, implicitly believes him to have been guilty. A clever detective is taken in. At last, however, suspicion is diverted from the Colonel to Mrs. Leleu, one of the inmates of Straddlethorpe Hall, who takes a deep and mysterious interest in Hubert Podifat, a cub who, up to the time of the death of the young baronet, had been known chiefly as his "bad companion." It would be unfair to say more of a story which is plot *et præterea nihil*, than that Hubert Podifat is permitted to posture for a time as Sir Hubert Lezaire, and the St. Evelyns are reduced to poverty, before poetical justice is done and Mrs. Leleu is tracked to her lair—on the other side of the Atlantic. Major Griffiths is thoroughly at home, it is unnecessary to say, in his detective and trial-by-jury business; and Gibbings, a faithful retainer of Colonel St. Evelyn, looks as if he were drawn from the life. Hubert Podifat is, however, too much of a brute. Such a man could never have played the rôle of a baronet—he would have been found out as an impostor the first day he attempted it. Altogether, however, *The Wrong Road* is Major Griffiths's masterpiece.

Saddle and Sabre is in Mr. Hawley Smart's better style, and is a decided improvement on certain of his recent stories, which seemed to indicate that he had written himself out. Not that there is in it much that is original—as regards either plot, or incident, or character—except, perhaps, the introduction of the Burmese war, with its dacoity. We have here the old society of sharps and flats, hawks and pigeons, hard-up heroes and butterfly heroines, from whose minds a new costume, or a glass of champagne, or a well-run race, can at a moment's notice expel a debt or a death. But Mr. Smart has taken more than his usual—or at least more than his recent—pains in sketching these folks; and his Letties and Gilberts, and Charlies look uncommonly life-like. The two sporting hawks—Major Kynaston and Ralph Furzedon—are well matched and well drawn. The feud between Furzedon and his enemy Sam Prance, which slumbers through three volumes, to awaken into terrible tragedy at the end, is managed with great skill, and, for Mr. Smart, with extraordinary patience in points of detail.

Born in the Purple is an ambitious yet tedious and essentially conventional story, with a great deal of mystery and far too much millinery in it—the ladies are always dressing, though happily most of them are partial to high bodices. The characters are mostly disagreeable—from Bruno, the Mephistophelian violinist, and Luna Treadgold, the mischievous actress, to Egbert Dundas, the poor young squire who is willing to sell himself in matrimony for money, and Sir Charles Hall, the chronically tipsy baronet to whom he is will-

ing to sell his sister Hermia. Philip Blacklock, the good genius of the story, whose love and lead discoveries come to the rescue of everybody in the end, is meant to be a "typical," yet reasonable Radical. His portrait is somewhat blurred, however. The author of *Born in the Purple* ought, also, to have taken more pains than she has done—the costumes in the story make one inclined to say "she"—with Fedora Tenniswood's early and unfortunate marriage, and still more with the improvement in Fedora's character. A moral transformation does not take place in the turning over of a page.

Mr. Alvary has put too much into his Scotch story of *Gilbert Freethorne's Heritage*—Scotch hills, Scotch thunderstorms, Scotch drink, Scotch elections, Scotch divinity students, Scotch "infidel" blacksmiths, Scotch heresy charges, and a good deal of mystery, seduction, illegitimacy, and selfishness, which are cosmopolitan, perhaps, rather than Scotch. But Mr. Alvary's haggis, though in certain chapters it is a trifle too "sappy"—in Burns's, not Mr. R. L. Stevenson's, sense of "sappy"—and in others tries terribly hard to look like an English mince-pie, is a sound, saleable, and, on the whole, digestible compound. It takes two volumes, closely packed with accidents, reveries, drinking bouts, exercises in the Scotch dialect, illustrations of Scotch character, gossip, remorse, and heart disease, before the Rev. Gilbert Freethorne discovers that he is not only not the son of Daniel Freethorne, but is the son of the exemplary and respectable Mr. Abbot. But Mr. Alvary, though too much given to packing, is blameless of padding. He means well—he is terribly conscientious; and his "landscapes," even if they look too much like undergraduate attempts at high-class composition, are true to nature and Wordsworth. *Gilbert Freethorne's Heritage* is not so much an achievement as an earnest of what Mr. Alvary will do some day.

Love and Theology proves that the less theology has to do with love the better, if not in real life, most unquestionably in fiction. Miss (?) Woolley writes like a lady of culture; she has an eye to character; and the solvent influence of the modern spirit on American Puritanism is an eminently interesting subject to write upon. But, as Miss (?) Woolley demonstrates to others, if she has not discovered for herself, it is no easy matter for a "progressive young man" like Arthur Forbes at one and the same time to embrace a creed redolent of "Darwin and John Fiske," and a charming and theologically conservative young woman like Rachel Armstrong.

There is even more of rough writing than of rough riding in *The Fox and the Goose*—the action of the plot is far too spasmodic; and there is not one of the author's heroines that is perfectly satisfactory. But it contains an abundance of Irish naïveté, slapdash, impetuosity, imperviousness to misfortune, and—to use Southey's phrase—bibulous clay. The sporting scenes, at Punchestown and elsewhere, have a thoroughly realistic look, and, whether they are true to the life or not, are depicted with unquestionable vigour. The suppressed feud between the Fox and the Goose, which ends fatally for both, is almost too well told.

Would Mr. Charles Hannan have written his "Tale of Pekin," had not Mr. James Payn, some years ago, published a powerful story, in which he reproduced the tortures inflicted on an Englishman who had flouted Chinese superstitions? Whether or not, there is a delightful amount of Christmas improbability in the idea of an Englishman who, in Brussels, captures a swallow with a message attached to its wing, starting off for China, to rescue another Englishman, who is disclosed by that message to be in trouble of some sort there. The plot and the incidents in *A Swallow's Wing* are everything; the characters, with one exception, are nothing. Mr. Hannan unquestionably works up the rescue of Norris with considerable skill; and most of that wretched man's experiences, including a peculiarly revolting torture—to which he is subjected at the hands of the Chinese priests, to whom he has rendered himself hateful—are given in artistic though not inordinately detail. The exceptional character in the story, and the true hero of it—the ostracised Chinaman Chin-chin-wa—somehow recalls Mr. Haggard's great Zulu alike in his physical and in his moral strength. But whether or not Mr. Hannan is indebted to Mr. Payn or to Mr. Haggard or to both, he has produced a powerful and essentially original story.

In the Web of Destiny is either an elaborate farce, or it is the *reductio ad absurdum*—none the less notable that it is unconscious—of latter-day spiritualism. In any case, Mr. Knight has spoiled what would otherwise have been a good story of naval adventure—with dashing cutlass play, the rescuing of a heroine, and all the rest of it—by the letter which Victor Fairlie discovers in his father's handwriting informing him that it is probable a hereditary madness will appear in him, and by the mysterious voice which keeps perpetually telling Victor "Embrace thy fate: Isabel awaits thee," and puts him on the track of a burglary. The love-making in *In the Web of Destiny* is also of the most conventional character, consisting of little but "My dear old Victor," "All right, my darling," "My darling smiled," and "I caught her in my arms and covered her face with kisses." But Mr. Knight would, no doubt, manage even a love story passably, if he would refrain from playing tricks with what he chooses to term Destiny. He is no conjuror.

There is a good deal of Mr. Bret Harte's realism in the collection of stories to which Mr. Belgrave has given the title of *Luck at the Diamond Fields*—a little of Mr. Bret Harte's grim pathos, but practically none of his imagination. There can be no doubt that the diamond discoveries in South Africa have attracted to that region a remarkable and heterogeneous host of pariahs, swindlers, and adventurers, in some respects resembling the men who were drawn by gold to California and Australia, and yet in others showing a special character of their own. Both these similarities and differences are well hit off by Mr. Belgrave in such stories as "The Farm Boschfontein," "A Queer Race," "Jumped," and "A Vaal River Heiress." Besides, Mr. Belgrave shows, in his pathetic story of "Kitty of the Frozen Bar," and in his eerie history of "A Fatal Diamond," that there are in him veins both of tenderness and

tragedy, which he ought some day to work to good purpose.

In *Better Dead* Mr. J. M. Barrie stands revealed as a new, genuine, and medium-dry humourist—though only to those who have not been let into certain of the more open secrets of anonymous journalism. It is not merely that *Better Dead* is the best skit that has appeared for a long time—that would be but a poor compliment—but it even encourages the hope that the shilling laughable will in time supplant the shilling dreadful. The central idea of Mr. Barrie's *jeu d'esprit*—the existence of a society whose business it is to get rid of people who for the sake of their own reputation were "better dead"—recalls, if, indeed, it has not been suggested by, Mr. Stevenson's Suicide Club. But Mr. Barrie, although he is not a stylist like Mr. Stevenson, is thoroughly original; and there is not a spark of affectation about his fun. The interview between his grotesque Scotch hero, Andrew Riach, and Mr. Labouchere, with a view to inducing that gentleman to make away with himself, and Riach's attempt on the life of Lord Randolph Churchill, are perfect in their way; yet that way is one which may be eulogised, but cannot be described. *Better Dead* is a book that is sure to be enjoyed, but for that very reason cannot be minutely criticised. The only positive weakness is the introduction. It is forced and too farcical. WILLIAM WALLACE.

SOME VOLUMES OF SERMONS.

Faculties and Difficulties for Belief and Disbelief. By the Rev. Francis Paget. (Rivingtons.) Canon Paget explains, in an introductory essay, that these sermons deal with the difficulties occasioned by "the discouraging influence of uncertainty in matters of religion," which now-a-days prevents many from "enjoying that sense of security which is attached to the recognition of a Divine and final revelation." The ten sermons included in Part I. call attention to certain "elements, instincts, powers, senses, in man's inner being, presumed and addressed by Christianity"; the nine sermons of Part II. point out some of the "very serious difficulties which beset the position of unbelief." The sermons will be read with profit by all thoughtful readers. The preacher's learning and culture, the eloquence and finish of his style, his candour and fairness will be recognised even by those who do not accept his conclusions. In the first sermon, which is called rather oddly "the Virtue of Self-assertion," Canon Paget insists on the difficulty of finding time for self knowledge in the hurry of modern life. He seems to think such self-knowledge specially necessary to teach us what sin is; but if for sin we read salvation, the reasoning is just as cogent, and some of the subsequent sermons receive valuable illustration. The love of Christ is a stronger constraining force even than the blackness of sin, but this fact theologians can never be brought to accept. The two sermons on love of beauty in nature and art may be mentioned as specially good, though we consider the passing criticism on Rossetti essentially mistaken. In the second part the sermon called "The Transformation of Hope" strikes us as the finest. Throughout the volume the quotations from other authors are admirably chosen.

Godliness and Manliness. By the Rev. J. W. Diggle. (Macmillan.) This "miscellany of brief papers touching the relation of religion to life" consists of extracts from sermons and other papers in which some one train of

thought is clearly stated and closely reasoned out in such short space that it can be "read in snatches of time when longer essays would be impracticable." The book might, therefore, be described as a volume of sermons with the padding left out, and the omission constitutes the special charm of the volume. If all preachers but the very great ones would publish their sermons in a similar form the gain would be immense, both to authors and readers. In one or two of his papers Mr. Diggle is feeble in argument and unfair to opponents; but he writes always clearly and vigorously, with considerable felicity of phrase, and frequently the argument and thought are original and valuable. The paper on "Christianity and the Individual" is the weakest in the collection, and those suggested by Bishop Butler's *Analogy* are, perhaps, the most interesting. But why does Mr. Diggle treat the second chapter of the *Analogy* as an argument for eternal punishment? Butler points out that carelessness is punished in this life as inevitably as vice; but such punishment is quite irreconcilable with the existence of a just God, unless it is purely corrective. And, again, Butler insists that the consequences of sin endure as long as life endures, and Mr. Diggle remarks that this fact "appears to shed some light upon the vexed question of punishments after death"; but a more obvious comment is that it makes Christ's promises of forgiveness and peace to the penitent of very little affect.

Sermons New and Old. By Richard Chenevix Trench. (Kegan Paul, Trench & Co.) The late Archbishop of Dublin was not a great preacher. His delivery was affected unpleasantly by indistinct articulation; and the unvarying solemnity, if we ought not rather say gloom, of his manner was oppressive. It is not as a pulpit orator, but as an expositor of Holy Scripture, that Trench will be remembered. Yet, though never rising to the higher flights of eloquence, there is enough of simple earnestness and tender thoughtfulness about these discourses to make the volume a memorial that will be gratefully received by many of those who knew and valued the archbishop. It should have been indicated that the interesting and warmly appreciative lecture on "Baxter and The Saint's Rest" had appeared in the first series of *Companions for the Devout Life*, lectures delivered in St. James's, Piccadilly, in 1875.

Rational Aspects of Some Revealed Truths. By the Rev. Edward B. Otley. (Rivingtons.) These six addresses were delivered "to a mixed congregation during two Quiet Days in Holy Week." They deal from a Churchman's point of view, but with much more candour and knowledge than is possessed by most Churchmen, with "modern doubt and unbelief." The first address is perhaps the best in the series, while the last is the most readable. It is entitled "Christianity and Culture." Mr. Otley startles us somewhat by beginning with the assertion that "human life, is externally pleasanter now-a-days than it was, and that 'unparalleled success has attended men's efforts to make themselves comfortable'; but we find before reaching the end of his address that he has read Mr. William Morris on modern civilisation, though he has scarcely realised the facts which Mr. Morris deals with. We object also to the statement that Comtism "is notoriously a refined system of pure Atheism," which Canon Westcott has sufficiently refuted; but Mr. Otley's main contention, that Christianity is concerned both with science and art, is ably and eloquently maintained. He quotes, from Dr. Abbott's *Through Nature to Christ*, the maxim that "if a man desires to live resolutely in the Whole, the Beautiful, and the Good, or, in other words, to render due homage

to science, to art and to morality, he cannot do this better than by striving to live in conformity with the Spirit of Jesus of Nazareth"; and his enforcement of this truth is well put and much needed. Mr. Otley shows a tendency now and then to be too discursive; but much rigour of logic and method cannot be looked for in devotional addresses. "Doubt and Unbelief" are rarely treated in Mr. Otley's spirit, so that his book will be valued.

Tolerance. Two Lectures. By Phillips Brooks. (Macmillan.) It cannot be said that these lectures—animated and eloquent as they are—contribute much to our existing knowledge of the duty of tolerance. The author has not begun at the philosophical starting-point of his subject, viz., the genesis of belief. He speaks of "conviction" as if it were always uniform in degree and in kind. He has evidently never subjected his own beliefs to the searching analysis which most men of intellectual power deem it right to bestow on their *credenda*, and therefore cannot claim to be an authority, intellectually speaking, on the subject of which he treats. Owing to this defect of preparation, he commits himself at starting to the singular paradox that "so far from earnest personal conviction and generous tolerance being incompatible with one another, the two are necessary each to each." Stated thus, without qualification, a more unfounded proposition could scarcely be formulated, or one more fully contradicted by the growth of dogma whether in churches or in individuals. Doubtless there have been exceptional cases in which persons—Maurice was an example—of profound conviction have been conspicuously tolerant. But this was true in his case on account, firstly, of his possession of a rare amount of many-sided imaginative sympathy; secondly, because his own convictions, even when most earnest, were never square or angular, but had all their corners rounded off and elaborately smoothed, as if to prevent all injury by chance collisions. The author is, however, not consistent. As he progresses in his lectures his first crude paradox of the necessary alliance of absolute certitude with tolerance begins to disappear. If his lectures reach a second edition he had better reconsider this position, which is, indeed, much too narrow for his comprehensive intellect and genial sympathies.

Sermons preached to Harrow Boys in the Years 1885 and 1886. By the Rev. J. E. C. Weldon. (Rivingtons.) Mr. Weldon modestly explains in his preface that the reason for the publication of these sermons is the personal one that they may be presented to Harrow boys on leaving school; but no such apology—if it be meant as an apology—was needed. The sermons are excellent. They do not aim at novelty or subtlety of thought; but they are nevertheless thoughtful, careful, earnest, and, above all, interesting. In preaching addressed to the young this last quality is primarily important, and the neglect of it is the main reason for the disfavour with which sermons are usually regarded by boys. Mr. Weldon's success depends upon his naturalness. He preaches to boys as he would talk to them, and he is used to talking to them unaffectedly and without effort. He does not depend for his interest on his illustrations, and make his sermons a mixture of jam and medicine. The interest is genuine, depending on the quiet, clear manner in which the subject of the discourse is discussed. The volume contains twenty sermons, of which we will mention the twelfth, on "The Natural Body and the Spiritual Body," and the fourteenth, on "The Animal World," as examples of Mr. Weldon's success in treating widely different subjects—the former difficult and the latter easy to bring within a boy's comprehension.

Lessons from the Cross. Addresses given in Oxley Parish Church on Good Friday, 1886. By Stewart D. Headlam. (Kegan Paul, Trench & Co.) A very genuine and arousing reality is the distinguishing characteristic of these addresses. Mr. Headlam hides none of his opinions, and some of them will displease many of his readers; but his frankness gives him great force and freedom. He never beats about the bush, but says his say directly and vigorously. Such a sentence as, "Keep it constantly in your minds, holy brethren, that the Jesus whom we worship is not half man and half God, but perfect man and perfect God," shows him at his best; and his allusion to "the dark Calvinism which in so many ways has cast its slime over English religion," at his worst. But there is much more of his best than his worst in this volume. He puts forward his views on social questions boldly and yet temperately, asking his congregation to

"bring deliberately into your meditations the contrast between rich and poor, between grinding toil and vulgar luxury; and listen whether the voice from the Cross has not anything to say on the fact that those who produce most have least of the good things, whether temporal or spiritual, for their enjoyment."

The only passage in which we find any unreality is the one insisting that "it is impossible for any generation which hesitates to call our Lady blessed in any adequate manner to worship our Lord." We confess to a feeling that this is said only to annoy.

The Scripture Doctrine of the Church: Cunningham Lectures, 1887. By D. D. Banner-man. (Edinburgh: T. and T. Clark.) The subject and scope of this—the eleventh series of the Cunningham Lectures—is sufficiently set forth in the title-page. Displaying a creditable amount of learning and research, and written in a clear attractive style, the book is likely to achieve a considerable measure of esteem from the author's co-religionists of the Scottish Free Church. It seems to us, however, to suffer from narrowness and occasional manifestations of sectarian proclivities. The time has surely come for interpreting the Church in the broadest and most catholic sense of the term, discreetly relegating such questions as "election" and similar traditional technicalities to a befitting background of nescience and reticence.

NOTES AND NEWS.

MR. J. A. FROUDE's new book, *The English in the West Indies*; or, *The Bow of Ulysses*, will be ready by the end of next week. It will be illustrated with nine sketches by the author.

WE understand that M. Paul du Chaillu has been compelled to postpone till autumn the publication of his work on the History of the Vikings.

MR. GEORGE ALLEN, of Orpington, has in preparation a re-issue of Mr. Ruskin's *Modern Painters*, in 5 vols., uniform with the re-issue of *The Stones of Venice*. The text will be that of the last edition (1873), with the author's subsequent notes. All the original illustrations will be given, the plates having been carefully re-engraved; and, in addition, there will be some unpublished plates, etched by Mr. Ruskin and mezzotinted by the late Thomas Lupton, which were originally intended for the fifth volume.

MR. W. DIGBY SEYMOUR, recorder of Newcastle, has written an essay, entitled *Home Rule and State Supremacy*, which will be published immediately by Messrs. Kegan Paul, Trench, & Co., together with the draft of a bill further to amend the Act of Union and provide for the federal government of Ireland.

OWING to Mr. Paget Toynbee's prolonged absence from Europe, the printing of the dictionary to the *Divina Commedia*, upon which he has been engaged for some time past, has been unavoidably postponed. The work will be completed without further delay now that Mr. Toynbee has returned to England.

MESSRS. LONGMANS announce a cheap re-issue of the Greville Memoirs, in eight volumes, to be issued monthly, beginning in January.

MR. CHARLES MARVIN, who has gone to Russia for a month to attend the International Petroleum Exhibition, will also, while there, undertake researches for a life of Prince Gortschakoff, which he is preparing for Messrs. W. H. Allen & Co., to be issued in their "Statesmen's Series" in the spring.

A MEMORIAL volume, entitled *Personal Recollections of Lord Wriothley Russell and Chénies*, by the Rev. F. W. B. Dunne, is announced for immediate publication by Mr. Elliot Stock.

MESSRS. SWAN SONNENSCHEN & Co. will publish early in the present month Mr. George Moore's *Confessions of a Young Man*, with a portrait of the author, etched by Mr. William Strang, and a pictorial cover designed by M. J. E. Blanche. The same firm announce a cheap edition of Mr. F. C. Philips's *Strange Adventures of Lucy Smith*.

THE next volume in the series of "Epochs of Church History" will be *The Church and the Eastern Empire*, by the Rev. H. F. Tozer.

MESSRS. KEGAN PAUL, TRENCH, & Co. will publish an English edition of Prof. J. B. McMaster's *Life of Benjamin Franklin* in the series of "American Men of Letters."

A NEW issue of Cassell's *Popular Gardening*, edited by Mr. D. T. Fish, is in course of preparation. The first part will be published on January 25.

THE parishioners of St. Margaret's, Westminster, have presented a window to the church in commemoration of the Jubilee. The window, by Messrs. Clayton & Bell, contains a full-length figure of the Queen, bearing the orb and sceptre, with scenes from the coronation and the jubilee service, the arms of the colonies, and other details. The memorial lines for the window, written by Mr. Robert Browning, are as follows:

"Fifty years' flight! wherein should he rejoice
Who hailed their birth, who as they die decays?
This—England echoes his attesting voice;
Wondrous and well—thanks Ancient Thou of days."

A REVIEW of Cheyne's recent work on the *Wisdom of the Old Testament*, by H. Guthe, appears in the *Theologische Literaturzeitung* for December 31. After representing very fairly the object of the work, at once critical and educational, which prescribed the method to be adopted, it suggests various points which need fuller treatment with a view to bringing out the special peculiarity of Israelitish religious wisdom. With regard to the Book of Job, it recognises that, however open to question, the author's results are such as historical critics would admit in other literatures, and that they make the book easier to understand.

THE last number of the *Publishers' Circular* (Sampson Low) contains the usual analytical table of books published during 1887. The total number is 5,686, of which 4,410 were new books, and 1,276 were new editions. All these figures, when compared with the preceding year, show an increase, more marked in new books than in new editions; but the total is still far below that of 1884, which was 6,373. The changes that have taken place in the number of books in the several classes during the past six years are remarkable, if we may assume that the classification has itself

remained constant. Fiction now easily heads the list with 990, whereas in 1882 the corresponding number was only 330, or exactly one-third. Theology was at its maximum in 1884 with 929, and at its minimum in 1886 with 752. Educational books have ranged from 691 in 1883 to 525 in 1882. Juvenile works show the extraordinary variation from 939 in 1883 to 445 in 1886. Law, the still more astonishing change of 279 in 1884, and only 33 in 1886. Political and economical books numbered 253 in 1885, and 138 in 1887. Scientific and illustrated works—591 in 1884, and only 138 in 1887. Books of travel—331 in 1884, and 221 in 1886. History and biography—623 in 1884, and 350 in 1886. Poetry and the drama—228 in 1884, and 93 in 1886. Serials—347 in 1885, and 269 in 1882, being the smallest variation in any class. Medical—253 in 1883, and 171 in 1886. Belles lettres—479 in 1886, and only 106 in 1882. The significance of these last figures will be more clearly seen when it is stated that new editions in this class amounted to 351 in 1886 and 235 in 1887, as compared with the insignificant number of 14 in 1882, before cheap reprints had come into vogue. Finally, miscellaneous has increased from 213 in 1883 to 447 in 1887.

TRANSLATION.*

THE LEAF AND THE BREEZE.

(From the French of Arnault.)

"PARTED from thy native bough,
Whither, whither goest thou,
Leaflet frail?"
"From the oak-tree where I grew,
In the vale;
From the woods all wet with dew,
Lo! the wind hath torn me!
Over hill and plain he flew,
And hither he hath borne me.
With him wandering for aye,
Until he forsakes me,
I with many others stray,
Heedless where he takes me:
Where the leaf of laurel goes,
And the leaflet of the rose!"

A. B. E.

MAGAZINES AND REVIEWS.

WE have to acknowledge two new periodicals—each of some special interest—appearing with the new year. The *Reflector* is a weekly, containing sixteen pages of large quarto form, both edited and published by Mr. James Stephen, at Lonsdale Chambers, Chancery Lane. The nature of its aims may be gathered from the title—or, better still, from the first number; we find ourselves unable to summarise them. The *Selborne Magazine* is a monthly, also of sixteen pages of the usual magazine size, published by Mr. William Rice, of Fleet Street, at the low price of twopence. It is the organ of the Selborne Society—now, we hope, fairly well known—whose primary object is "to preserve from unnecessary destruction such wild birds, animals, and plants as are useful, beautiful, or rare," and, we should be disposed to add, "harmless." A bird, animal, or plant, may be neither useful, beautiful, nor rare, and yet there seems no reason why it should be unnecessarily destroyed. The society, we may add, will hold a special general meeting for the approval of its rules at 6 Pall Mall Place, on January 26, at 4 p.m.

* The translator claims only to have made a paraphrase of this little poem, some versions of which, by different hands, were given not long since in the *Academy*. It originally appeared in her little volume of *Ballads*, which has been out of print for twenty years and more.

THE *Expositor* for January opens with a hopeful paper on "Characteristics of Modern English Exegesis," by Archdeacon Farrar. "The Use of Mythic Phrases by the Old Testament Writers" is shown and illustrated, with the help of Assyriology, by Prof. Cheyne. Prof. A. B. Davidson is introduced as a teacher and a man to those who only know and respect him as a scholar, by an enthusiastic disciple (Prof. Elmslie), who, with the ingenuity of affection, makes even the master's failings "lean to virtue's side," or, indeed, seem to be virtues themselves. M. Godet, with that smooth but incisive style which we all admire, expounds the present position (as it appears to him) of the questions relative to the Pastoral Epistles; and lastly, Profs. Cheyne and Curtiss notice recent English and American works on the Old Testament. Among the former we observe an American-printed work by Canon Driver, but not Dean Bradley's just published popular lectures on the Book of Job.

In the *Antiquary* for January Mr. R. W. Dixon gives the first part of an account of Thaxted, which promises well. Thaxted is a decayed town in Essex; quaint and picturesque it remains, for modern improvements have touched it but lightly. Mr. A. Stapleton concludes his series of papers on the crosses of Nottinghamshire. We trust that they will be collected and published separately. Mr. G. L. Gomme's paper on the Christmas pantomime is thin. So good a subject might have had much more made of it. Mr. Ainsworth's archaeological recollections are full of interest. The portions which tell of his Eastern wanderings are specially noteworthy.

It would not have been surprising if the December *Livre* had been quite drowned in "Livres d'Etranges"; but the contrary is the case. M. Uzanne has provided two considerable "original" articles. We must indeed say, though with regret, as we have said before, that M. du Pontavice de Houssey is a little to seek in his articles on English men of letters. It is not his fault that the irrepressible French printer has entitled his article on the author of *Pelham* in the list of contents "Edwards Bulwer." But it is his fault that in his text he has spoken of "un éditeur du temps du nom de Colburn." We should not think much in England of a historian of some *romantique* who wrote "a publisher named Renduel" or "named Mame." Much more important is M. Derome's monograph on Perrault, which it will be interesting to compare with Mr. Lang's forthcoming Clarendon Press edition of that worthy, though, of course, M. Derome's point of view is almost purely bibliographic.

CORRESPONDENCE.

THE WORD "HERENUS" IN CHAUCER.

Cambridge: Dec. 30, 1887.

I believe I have solved yet one more difficulty in Chaucer, viz., the meaning of "Herenus," in l. 92 of the "Complaint to Pity." The line is—

"Have mercy on me, thou *Herenus* quene."

Four MSS. at least have "Herenus," and one "Heremus." Shirley alters it to "vertuouse," at the same time omitting "thou." This otiose epithet is obviously a substituted one. We are bound to take the reading as the right one, even if we cannot explain it.

The printed editions treat it as a proper name, which is probable from the context. The Trinity MS., which has "Heremus," denotes the -us by a mark of contraction, so that there may be a little doubt about the last syllable. We must also observe that the accent falls on the second e, so that it cannot possibly be an error for "hevenus" or "hevenes," i.e., heaven's, which was accented on the first e, and evidently will not suit the scansion.

I was long since inclined to think that it is a mere error for "Herines," i.e., the Erinnyes or Furies; being led to this by the line in the last stanza of the invocation to book iv. of "Troilus," which, in the printed edition of 1561, runs thus—

"O ye *Herines*, nightes daughters thre."

Morris's edition has "Herynes," which is, of course, the same thing.

The peculiar spelling (with H) is noticeable; but still more important is the accentuation of the word. We have only to read—

"Have mercy on me, thou *Herines* quene";

and the line is mended at once, and that with a true Chaucerian word.

But I have always opposed guess-work, and have, therefore, long hesitated to inflict this emendation upon a much-suffering literary public. I made up my mind to wait and see if the *true sense* of the epithet would appear.

Patience has met with its usual reward, as will, I hope, be acknowledged.

The real question, of course, becomes—Why is Pity the queen of the Furies, and who says so? I lately put this question; and a suggestion was made to me, that Pity may fairly be called "the queen of the Furies," because she alone can control them. I think this is satisfactory; but the question remains—who says this? Where did Chaucer get it from?

Well, the answer is—from Statius, just the very author whom Chaucer so closely studied, and from whom he took, among other things, the description of the "Brooch of Thebes" in the "Complaint of Mars," as noted, long ago, by Tyrwhitt (see Bell's *Chaucer*, iii. 312).

The original passage is in Statius, *Theb.* xi. 458-496; but the whole of the context (xi. 1-457) must be also glanced at. The culminating point of the story is precisely here. It was just an even chance whether there was to be peace or war. We find mention of Tisiphone in l. 58, Megaera in l. 60, Erinnyes in l. 343, Erinnyes in l. 383; and we are led up to the point where the Furies have stirred up every evil passion between the hostile armies, just as the third Fury, Alecto, in the seventh book of the *Aeneid*, broke the treaty between Latinus and Aeneas. (It need not be said here how frequently Statius takes his ideas from Vergil).

At this crisis of fate, only one power remains who has a chance of overruling the Furies. This power is Pietas, in English, Pity. She is personified by Statius for this express purpose. She is mentioned in l. 458, and ll. 465 and 466 are thus translated by Lewis:

"Why was I [Pity] formed, O author of my birth,
To sway the sons of Heaven, and sons of earth?"

She is not, indeed, called *regina*, but she is called *diva* (l. 496), which implies her queen-ship.

In the story, even Pity fails, on this occasion, to overrule the Furies; but the necessity of the story so required it. It is clearly understood that her province was to do so, as a rule.

If we now turn to Chaucer's poem, we shall understand the whole a great deal better. In ll. 78-91 the struggle between Pity on the one hand and Cruelty on the other is a fair rendering of the struggle between Pietas and Tisiphone, as told by Statius. This explains such a line as

"Shal Cruelte be your governeresse?"

and again, such lines as

"Ye be than fro your heritage y-throwe
By Cruelte, that occupieth your place?"

For that is precisely what happened in the *Thebaid*. Or, once more, we may compare the first line of the address to Pity, viz.:

"Humblest of herte, hyst of reverence,"

with Statius, *Theb.* xi. 493, 467:

"*pudivundaque longe*

Ora reducentem . . .
Nil jam ego per populos, nusquam
reverentia nostri."

WALTER W. SKEAT.

GUJARATI LANGUAGE AND LITERATURE.

London: Jan. 3, 1888.

Students of the ancient language of India are too often apt to neglect or despise vernacular literature as the expression merely of so much culture and erudition as the subject races have been able to borrow from their English rulers. It is natural and necessary that handbooks of Old Testament history and elementary treatises on arithmetic and mensuration should be translated into the dialects understood of the people; and a Bengali poet may occasionally surprise us with a vernacular sonnet-sequence in imitation of Wordsworth. But whether,

before the English first set foot in India, these same dialects may have contained the record of centuries of political change or of religious and artistic development is a question which few even of those whose special studies connect them with India have cared to ask, much less to answer.

It is true that the trained philologist has learned, at least theoretically, to call no truth common or unclean. A fact once established may, in the course of time, lead most strangely to the establishment of other facts; and, with respect to the scientific value of vernaculars, there are the labours of the so-called new school of comparative philologists to prove that the anatomy of the classical languages can no longer yield sound conclusions unless aided and controlled by the vivisection of their spoken derivatives. But, apart from those who are concerned with the forms of a language, there is the class—at least as large—of those who are concerned with its historical, artistic, and religious contents; and, if we confine our attention to India, we shall, perhaps, discover that students of this class, under the influence of an unconscious assumption which there is nothing to justify, have neglected the vernaculars to the loss and detriment of their own science.

In the *Advocate of India* for July 1 of the present year there appeared a leading article in which the popular fallacy as to the mongrel character of vernacular literature was ably exposed in the case of Gujarati. This led to the publication, by Mr. N. N. Dhruva, in the same journal of a series of letters, in which he reviews the history and expounds the beauties of his own language with the zeal of a patriot and the learning of an antiquary.

"It is not only that Gujarati abounds in poems of fancy. It counts among its literature some prose works, translations, grammars, and commentaries on works in Sanskrit and Hindi. Its literature dates its existence far anterior to the period of Kavi Narsinha Mehta, who has been styled the Chaucer of Gujarati. I have been able to find some contemporaries as well as predecessors of that Narsinha Mehta; and so far as my poor inquiries go, I trace the existence of the Gujarati language to so early a period as the reign of the glorious Lion King of Gujarat, Siddharaja, popularly called Sadhra Jesing, and even Vanaraja. Mr. Beames, the author of the comparative grammar of the seven modern vernacular languages of India, is of opinion that this vernacular has perhaps the oldest and earliest existence. My researches point out a wider extension once of the speaking area of the language, which would perhaps embrace Malwa and Rajputana. The close relationship existing between the Harauti and other dialects of Rajputana are too marked to escape notice. Who knows that perhaps the celebrated Prithiraj Rasan of Chand Bardai will head the list of authors of the literature which will be found to be nearly allied to Gujarati? These are problems to be decided by scholars and antiquaries. But they tend to show the importance of the language and the subject."

Mr. Dhruva complains with reason that, while the search for Sanskrit MSS. has been vigorously conducted under Government patronage, the very existence of vernacular MSS. has been officially ignored. For the publication of texts private enterprise has accomplished something; but, compared to the amount of what is still hidden, the result appears inappreciably small.

Not the least interesting result of Mr. Dhruva's researches is the light which they throw upon periods of literary activity hitherto inaccessible to the historian and the critic. By the side of Narsinha Mehta we can now discern and identify at least two poets, Padmanabha, the author of the *Kanhad-de-Prabandha*, and Bhima Kavi, whose *Hari-Liha-Shodasha-Kala* was written A.D. 1485. Besides, there is no lack of MSS. and inscriptions to furnish links

in the evidence both for this period and for others earlier and later.

"An inscription of the ruler of Pavagadh, near Baroda, Jayasinhadeva, dated 1525 v.s. (A.D. 1469), has been found to be in existence, telling its own tale; and so early as v.s. 802 (A.D. 746) I have been able to obtain a colophon or inscription at Patan, at the foot of an image, to the following effect: 'This is the installation of Uma Mahesvara of Vanaraja Rao.' Between these dates I met with inscriptions (v.s. 1715), old title-deeds (v.s. 1686, 1757, &c.), and other scrolls. In the fourteenth century of the Christian era I have found a collection of Gujarati idioms written in the year v.s. 1450 (A.D. 1394), the MS. of which bears date v.s. 1490 (A.D. 1434). It is not simply a collection of idioms of the language, but it is an attempt at a grammar of the language too. As regards the existence of the Gujarati language in the thirteenth century, I have been able to pick up an endorsement in Gujarati dated v.s. 1365 (A.D. 1309) to a palm-leaf MS. of Bhuvana Sundari. Going earlier, we come on the Augustan age of literary life in Gujarat, the prominent luminary of the period being the Jaina writer on almost all branches of literature and science then known, Sri Hemachandra Suri, the *protégé* and contemporary of the Solanki kings, Siddharaja Jayasinha and Kumarapala. His grammar of the Apabhramsa or Prakrit language, or the local dialect, was written in the year v.s. 1168 (A.D. 1112). The MSS. of the work in the possession of the Gujarat Vernacular Society date from v.s. 1499 (A.D. 1443)."

Students will probably be concerned, though not surprised, to hear that the devotion even of a lifetime to a subject, for which bumbledom in its classification can as yet find no place, goes, as things are now, unnoticed and unrewarded.

"An excellent work on the history and philology of the Gujarati language by Shastri Vrajtal Kalidas, written under the patronage of the Gujarat Vernacular Society, has not secured that notice and attention it richly deserves. The wiry old Shastri is a useful man in the field; but who utilises his powers and resources? He saved from ruin several of the choicest old Gujarati MSS. and rare works possessed by the society at Ahmedabad. But that society and the Educational Department, too, have repudiated him. He was teacher of poetry in the Ahmedabad Training College on a pittance of 15rs. or 20rs.; but our departmental finance has found him a burden, and his services were dispensed with long since. He now lives a sturdy rustic life in the village of Malataj, near Neriad."

I pass over Mr. Dhruva's remarks upon the complicated character of the caste-system in the Province of Gujarat, and his endeavour to trace its influence in the popular literature. His proposal to widen the curriculum of the Indian universities so as to include the vernaculars may interest those who are aware of the opposition which a precisely similar proposal excited in Oxford. I cannot suppose that Mr. Dhruva will live to see his dream come true. We must be aware that, when he allows his enthusiasm to carry him to the extravagant length of suggesting that in an Indian university lectures on Hebrew should be few and far between, he offends more official susceptibilities than one. Still, by way of conclusion to the whole matter, the following observations seem harmless, and are probably true.

"The Oriental research of our time and up till now is palaeontological. The dead bones and fossils and remains of human speech are studied, and not the comprehensive geology of Indian or Aryan languages of the East. It is the present that supplies us with a key to the knowledge of the past in all scientific research. The source is to be traced upwards from the mouth of the river, and not always downwards—not wholly, at least, in the study of human institutions, languages, literatures, religions and customs. Both directions require to be followed, and notes compared; and then we can have the truth."

S. ARTHUR STRONG,

THE ETYMOLOGY OF "ACQUIRE, ENQUIRE, REQUIRE."

Oxford: Dec. 12, 1887.

The usual account given of these modern English forms is that they are due to the Latin forms in *-quirere*, either by direct derivation or by a touching up of the Anglo-French form (existing in Middle English), in order to make it more like Latin. The *i* of the English verbs is supposed to be the equivalent and representative of the *i* of the Latin verbs *acquiro*, *inquiro*, *requiro*. Thus Prof. Skeat derives "acquire" immediately from *acquirere*. Of "enquire" he says: "Properly *enquire*, but altered to *enquire* to make it look more like Latin." Of "require" he says: "The word was taken from the French *requerir*, but was influenced by the Latin spelling."

In the New English Dictionary we find the following etymological account of "acquire" (the Middle-English forms of which were *awere*, *acquerre*): "Adopted from Old-French *acquer-re*, *acquer-re*, which is the regular phonetic descendant of Latin *acquirere*; refashioned in the sixteenth century after the Latin."

I think it is possible to show that the French *acquerre* cannot be the phonetic equivalent of Latin *acquirere*, that there are analogies which make it probable that our form "acquire" may be a regular phonetic development from the French verb, and that therefore the *i* of "acquire" is not necessarily due to the *i* of *acquirere*.

Old-French *acquerre* cannot = *acquirere*, for Latin *i* remains *i* in French; Latin *vivere*, *scribere* are in French *vivre*, *écrire* (*écrire*). The verb *acquerre* (*acquerre*) = Late-Latin *acquere* = Latin *ad* + *querere*; the diphthong *ae* becoming in many cases *e* in Romanic, which *e* remains in French when it is in a closed syllable.

The Middle-English representative of the French verb *acquerre* was *awere*, *acquerre*; but we also find in the Middle-English period forms in *-quire*, *-quire* in the cases of the sister compounds. The form "require" occurs in "Syr Gawain" 1036 (E.E.T.S. 4); so "required" in the "Crowned King," 37 (E.E.T.S. 54); "required" in the "Knight of La Tour-Landry," p. 154 (E.E.T.S. 33); "require" in the "Wars of Alexander" (E.E.T.S. xlvii); "enquire," "enquire," "enquire" in *Palsgrave*, p. 536. These forms in *i* do not belong to the period of Latin refashioning. I would suggest another explanation, namely, that "require" (for instance) is the phonetic representative of *requier-s*, the accented stem of *requerre*; the Latin *e* becoming *i* in French when it has the stress, and is in an open syllable. English "require" = French *requier-s*, just as "squire" = *esquier* (*scutarium*), "squire" = *esquiere*, *esquiere* ("esquadra"), and "entire" = *entier* (*integrum*). But it would be quite possible to explain "enquire" as a normal development of Middle-English *enquire* (= Old-French *enquerre*), just as "quire" = Middle-English *quere*, *quere* (= Old-French *quer*, Latin *chōrum*), and "frier" = Middle-English *frere* (= Old-French *frere*, Latin *fratrem*).

I think I have brought forward evidence sufficient to suggest that the verbs "acquire," "enquire," "require" may probably be of French origin, and that touching-up or refashioning is an unnecessary assumption.

A. L. MAYHEW.

ALESSANDRO IN THE "INFERNO."

London: Dec. 30, 1887.

Owing to my absence from England, I have only just seen Mr. Hoskyns-Abraham's remarks (*ACADEMY*, Oct. 22) upon my letter of the previous week, in which I discussed the question of the identity of the "Alessandro" of *Inf.* xii. 107. I there expressed an opinion,

which I supported from Orosius, that Dante was referring to Alexander the Great, rather than to the Thessalian tyrant, Alexander of Phæra, who "was scarcely famous enough to be recognised simply as Alexander, without any further description."

By way of meeting this last objection, Mr. Hoakyns-Abrahall quotes from Petrarch (*Trionfo d'Amore*, vv. 103, 104) the following lines:

"Que' duo pien di paura e di sospetto,
L'un è Dionisio, e l'altro è Alessandro,"

upon which he strangely enough remarks: here Alexander of Phæra is spoken of "simply as Alexander, without any further description."

Now Dante says simply: "Quivi è Alessandro"; but Petrarch expressly speaks of "Alessandro" as "pien di paura e di sospetto." Surely that is a "further description," and a very definite one; for Alexander the tyrant might very fitly be described as "full of fear and suspicion," whereas such a description could hardly apply to Alexander the conqueror of the world.

P.S.—Since writing the above, I have had the opportunity of consulting the newly-published commentary of Benvenuto da Imola. He, I find, emphatically asserts that Dante was referring to Alexander the Great; and he supports his opinion with precisely the same arguments as were used in my first letter (dated from Australia in August last), quoting some of the identical passages from Orosius. His comment is as follows:

"Ad sciendum quis fuerit iste Alexander est notandum, quod aliqui sequentes opinionem vulgi dixerunt, quod autor non loquitur hic de Alexandro Macedone, sed de quodam alio, sed certe istud est omnino falsum, quod potest patere dupliciter: primo, quia cum dicitur Alexander debet intelligi per excellentiam de Alexandro Magno; secundo, quia iste fuit violentissimus hominum."

Benvenuto then proceeds to justify his opinion from Orosius and other authors, and concludes with these words:

"Ad propositum ergo autor ponit Alexandrum hic tamquam primum et principem violentorum. . . et describit eum simpliciter et nude, quasi dicat: cum nomine Alexandrum intellige quod iste fuit maximus autor violentiarum in terris" (*Com. Inf.*, Tom. i., pp. 405-6-7).

PAGET TOYNBEE.

THE ISIS, THE OCK, AND OXFORD.

Nottingham: Jan. 2, 1888.

The proof of my letter in the ACADEMY of December 31 arrived so late that I was unable to return it in time for press. This is rather unfortunate, for the printers, misled apparently by my writing, have needlessly divided "Eocce," "Eoccan," "Æoccen," &c., into "Eo-oc-e," "Eo-occe," &c. In l. 13 "bric" (= *brycg*) has been misprinted "brig." I am responsible for writing "Garford" instead of "Garford."

The descent of "Ock" from "Eocce" may find support in the fact that the neighbouring "Colesiege" has become, not, as we should expect, "Chelsey," but "Cholsey."

Mr. Birch identifies the Isis with "Wasa," which is mentioned in a Fyfield charter of A.D. 956, printed in part 23 of his *Cartularium Saxonum*, which has come to hand since I wrote my letter. Mr. Birch does not explain to us how "Isis" could possibly descend from "Wasa." The identification is altogether wrong, as he might have discovered from the Abingdon history. The passage containing this mention of "Wasa" is as follows:

"of þære sc[e]ortan dic[e] on Ælfryðe dic; andlang [þære] dic[e] on [þone] holan bróc; andlang [þæs] holan bróces on [þá] Wasan; andlang

[þære] Wasan eft to Ydeles ige" (*Cart. Sax.*, iii., p. 168).

That is:

"From the short ditch into Ælfryð's ditch; along the ditch into the hollow brook; along the hollow brook into the Wase; along the Wase to Ydel's island again."

There is another grant of land at Fyfield to Abingdon in A.D. 968; and, although the grant is of greater extent than that of 956, the boundaries are practically the same, commencing, however, at a different point in the circuit. The passage corresponding to the one above quoted is as follows:

"Of [þære] sc[e]ortan dic[e] on Ælfryðe dic; andlang [þære] dic[e] on þære mór; of þam móre on þá ealdan dic; of þære dic[e] on Temese stream; on þá[m] r[í]g; andlang r[í]ges on [þá] Uuase [sic]; of [þære] Uuase on Cyddes ige," etc. (*Chron. Mon. de Abing.*, i. 324; *Codex. Diplom.* iii. 466).

That is:

"From the short ditch to Ælfryð's ditch; along the ditch to the moor or fen; from the moor or fen into the old ditch; from the ditch into the stream of Thames; into the watercourse; along the watercourse into the Wase; from the Wase to Cyddes [= Ydel's] island," etc.

It will be seen that the Thames is mentioned by name in the boundaries of A.D. 968; so it is impossible for the Wase to mean the Thames. It is, moreover, very improbable that, if the Wase and the Thames were two names for the same river, the two names should so immediately follow one another in these boundaries. Joseph Stevenson, the editor of the Abingdon history, has entered the Wasan (?) in his index as "a brook, a boundary" (that is, a brook occurring as a boundary). Now, the Wase is certainly not the Isis, and it is not, I believe, even a brook. There is a fairly common Old-English word *wáse*, wk. fem. Middle-English *wóse*, Modern-English *ooze*, which must be, I think, this Fyfield Wase. This word is recorded in one of our most important glossaries, the Corpus Glossary, No. 386, as "caenum, wase," and it occurs in several of the later glossaries. A tenth-century glossary in Wright-Wülcker, 203, 45, gives us the meaning required in the above passages: "Cenum, i[d est] luti uorago, uel lutum sub aquis fetidum, i[d est] wase uel fan." The Fyfield wase was thus either a fen or a stagnant pool (like the corresponding Old-Norse *veisa*); and it is, therefore, not an early form of the name "Isis."

W. H. STEVENSON.

AL POINTMENTS FOR NEXT WEEK.

MONDAY, January 9, 5 p.m. London Institution: "Invisible Stars," by Sir R. S. Ball.

8 p.m. Royal Academy: "Painting," III., by Mr. J. E. Hodgson.

8 p.m. Aristotelian: "Darwinism in Relation to Design," by Mr. G. J. Romanes.

TUESDAY, January 10, 8 p.m. Biblical Archaeology: Anniversary Meeting, Election of Council and Officers.

8 p.m. Anthropological: "The Evolution of a Characteristic Pattern on the Shafts of Arrows from the Solomon Islands," by Mr. H. Balfour; "Tattooing," by Miss A. W. Buckland; "On the Occurrence of Stone Mortars in the Ancient (Pliocene?) River Gravels of Butte County, California," by Mr. Sydney B. J. Skerrett.

8 p.m. Civil Engineers: "The Use and Testing of Open-hearth Steel for Boiler-making," by the late Hamilton Goodall.

8 p.m. Colonial Institute: "The Tea Industry of Ceylon," by Mr. J. S. Shand.

WEDNESDAY, Jan. 11, 7 p.m. Society of Arts: Juvenile Lecture: "The Application of Electricity to Lighting and Working," II., by Mr. W. H. Preece.

8 p.m. Geological: "The Law that governs the Action of Flowing Streams," by Mr. R. D. Oldham; "Supplementary Notes on the Stratigraphy of the Bagshot Beds of the London Basin" and "The Red-Rock Series of the Devon Coast Section," by the Rev. A. Irving.

8 p.m. Shelley Society: "The 'Prometheus Unbound' considered as a Poem," II., by Mr. W. M. Rossetti.

THURSDAY, Jan. 12, 6 p.m. London Institution: "Material of Music, V., Colour and Callisthenics," by Mr. W. A. Barrett.

8 p.m. Royal Academy: "Painting," IV., by Mr. J. E. Hodgson.

8 p.m. Telegraph Engineers: Opening Meeting, Inaugural Address by the President, Mr. E. Graves.

8 p.m. Mathematical: "The Analogues in Space of Three Dimensions of the Nine-Points Circle," by Mr. S. Roberts; "Reciprocal Theorems in Dynamics," by Prof. H. Lamb.

8.30 p.m. Antiquaries.

FRIDAY, Jan. 12, 7.30 p.m. Civil Engineers: Students' Meeting, "Railway-Engineering in British North America," by Mr. R. J. Moay.

8 p.m. New Shakespeare: A Paper by Mr. R. G. Moulton.

SATURDAY, Jan. 14, 11 a.m. Association for the Improvement of Geometrical Teaching: General Meeting, Election of Officers—"The Recent Geometry of the Triangle," by Mr. E. F. Davis; "The Multiplication and Division of Concrete Quantities," by Prof. A. Lodge; and "Some Principles of Arithmetic," by Mr. W. G. Bell.

SCIENCE.

Weather: a Popular Exposition of the Nature of Weather Changes from Day to Day. By the Hon. Ralph Abercrombie. International Series. (Kegan Paul, Trench & Co.)

No subject is so much talked about and so little understood as the weather. Men are still to be found of excellent education in other respects who connect change of weather with the phases of the moon, and consult their almanacks for rain or fine weather with all the credulousness of Zadkiel. These empirics swear, it may be, by the Shepherd of Banbury, and eagerly watch, like him, in what direction a sheep looks when it first rises, or whether a swallow flies low or high. Others observe the barometer, and perhaps register its figures; but are so little acquainted with the conditions of weather that when the glass rises during rain (owing to the observer being in front of a cyclone) they are inclined to doubt the sanity of their oracle, and to follow the old gentleman's example who, under such circumstances, opened the window and flung his barometer out on the lawn, exclaiming, "Perhaps you will now believe that it does rain!" Yet a third group of the unscientific weather-wise revel in statistics of rainfall, forgetting that these can only show the climate, not prognosticate the weather of any locality, which is due to the distribution of surrounding pressure. To obtain a knowledge of this it is necessary to search the daily charts issued by the Meteorological Office; and to peruse them to advantage the student must be well acquainted with the exact meanings of isobars, anticyclones and hemicyclones, cols, depressions, and gradients. This is one branch of his subject on which Mr. Abercrombie bestows much care. Then he explains the character and value of variations—how diurnal variation modifies but never alters the general character of the weather. Thus his readers are conducted to the methods of forecasting which are at present in vogue. First, are pointed out what helps a "plain man," as Macaulay called an ordinary man of common-sense, has besides his senses to warn him of storms ahead; next the extended wisdom of the public meteorologist is estimated, of him who in his office receives periodical barograms from the Atlantic, puts together synoptic charts, and adds his own knowledge of the nature of the weather and the motion of depressions in his district. Thus, feeling the pulse, as it were, of the approaching weather, the modern scientific meteorologist issues his forecasts, and, it may be, saves much valuable property and many still more valuable lives,

appearing to rival Jupiter or Aeolus in his power over the winds and waves. An exhaustive treatise on modern meteorology has long been desired, and Mr. Abercrombie has herein done his best to supply it. It will not only satisfy the needs of the student; but, as enabling them to appreciate the information supplied to the papers each morning by the Meteorological Department, seafaring men, farmers, and country gentlemen will find their account in reading this book.

After some paragraphs on the use of synoptic charts, the author explains with useful diagrams the seven fundamental shapes of isobars, on the due consideration of which, in juxtaposition with the diurnal influences of the observer's locality, all true prognostication of weather is founded, according to modern meteorologists. An excellent chapter on clouds succeeds, paying especial attention to the cirrus. Following Ley, Mr. Abercrombie attaches especial importance to this form of cloud when considered in reference to its surroundings; indeed, "the most valuable addition of recent times to weather-lore is undoubtedly in the methodical observation of cirrus clouds." In short, with one eye on the clouds and the other on his barometer, even if unaided by telegraphic messages, an observer can, after a somewhat empiric fashion, forecast his own weather fairly well. The author generally points out the grain of scientific truth which frequently underlies popular weather proverbs; and it is amusing to hear with what gravity he draws deductions from the fact of the scalps taken by the New Mexican Indians growing damp before rain. "From this," he says, "we may assume that scalps are slightly hygroscopic, probably from the salt which they contain." It is matter of the commonest observation that all hair becomes damp before rain.

The more advanced chapters of the book give instances of cyclones with their interpretation from barograms, and explain the importance from a national point of view of careful and successive meteograms for any useful weather prognostication. The influences of heat and cold, of wind and storms, upon the climate of any place, as well as upon the weather to be expected, are elucidated, and by the aid of figures, synoptical charts, and meteograms, made clear to the most ordinary understanding. There are two good chapters on the local and diurnal variation of weather, after perusing which, the reader who has thus far followed Mr. Abercrombie should be able, not only to estimate the factors which make up the weather in his own locality, but also the data required for national forecasting. This is mainly a question of money to procure a succession of barometrical readings, and of skilled observers who can read these barograms with a careful eye to local and diurnal variation around them. Meteorology is certainly not at present (although its students hope it is always drawing nearer to it) an exact science. The best prognostics are liable to disturbing influences, which have not been taken into account. Only a percentage of forecasts can reasonably be expected to turn out correct. A much larger percentage, however, when thus scientifically calculated, is claimed as correct by modern meteorologists than would be the case were the weather merely estimated

empirically, and, as it were, by rule of thumb. "Natural aptitude, and the experience of many years' study, are" still "the qualifications of a successful forecaster."

How completely weather can upset calculations was curiously shown when we were reading this book. Throughout autumn the prevailing tone of British weather had been persistently anticyclonic. On the evening of October 21 the conditions were threatening, and the cone was hoisted for a southerly gale in some of the districts. On the next day (Saturday), however, the barometer rose, and some improvement in the weather was manifest. But that evening a cyclone was brewing at the mouth of the Channel and travelling eastward at a great rate; the barometer fell rapidly, and a gale speedily swept over the Channel Islands and the southern coast of England, fraught with some loss of life and much damage to shipping. It has been pointed out that for rapidity of formation and motion very few parallels to this gale exist. It has been compared to those of October 23, 1883, and of November 1, 1872. The swiftness of the career of these gales was so great that they did not allow time for mariners to get out of their way. Unless the officials at the Meteorological Office had been at their posts all night, and been furnished with frequent telegrams of the weather in the southwest, it would have been impossible to forecast these gales. In short, if government is to do its duty by our seafaring population, in order to ensure reasonable correctness in the weather forecasts, more money must be expended. Whether it is worth while doing so may be judged from the consideration that not property so much as lives are at stake.

To return to Mr. Abercrombie, his book is a most useful manual, well put together, and well illustrated. It worthily sustains the reputation of the International Series.

M. G. WATKINS.

CORRESPONDENCE.

NEW INDIAN INSCRIPTIONS.

London: Jan. 2, 1888.

In the ACADEMY of December 24 (p. 427), Dr. Burgess has claimed the discovery of a new historical inscription of the Gupta period, at Madhâ on the upper Jamnâ.

The inscription is an interesting one. And it will be useful to have a full reading of the text and a translation of it, as we may hope will now shortly be the case. But, in claiming it as a new discovery, Dr. Burgess has written under a mistake.

This inscription was discovered in 1849, by Major Dawes, of the Bengal Artillery. A copy of it was sent to General Sir Alexander Cunningham, from which an abstract translation, by Babu Siva Prasad, was published in the Simla *Akhbâr* in the same year. Another copy was sent to England. And an account of the contents of the record—considerably more accurate than that given by Dr. Burgess—was prepared by Prof. H. H. Wilson, and was published in 1858 by Mr. Thomas, in his edition of Prinsep's *Essays* (vol. ii., Useful Tables, p. 245, note).

Among other points—e.g., Harivarman instead of Dêvavarman, and Pradipavarman instead of Pradiptavarman—Dr. Burgess has altogether omitted Jalavarman, the son of Singharvarman, and the father of Yajnavarman; and also Achalavarman, the son of Yajnavarman, and the father of Divâkaravarman.

As regards Dr. Burgess's suggestion that the record may belong to the time of the Early Gupta King Chandragupta II., whose recorded dates range from A.D. 401 to 413 or 414 (not A.D. 382 to 410, as given by him), it will be sufficient at present to state that the contents of the latter part of the inscription differ entirely from his account of them. What is really recorded is that Divâkaravarman's younger brother was Bhâskara; Bhâskara's wife was Jayâvali, the daughter of Kapilavardhana; their daughter was Îsvari; and the latter became the wife of Chandragupta, the son of an unnamed "king," i.e., feudatory chieftain, of Jâlandhara. The religious establishment was founded by Îsvari, in memory of her deceased husband Chandragupta. I may add that the wife of the Early Gupta King Chandragupta II. was Dhruvadêvi.

There is no foundation whatever for Dr. Burgess's suggestion that the members of this family of feudatory chieftains belonged to the Sûryavamsa of Nêpâl. On the contrary, that this was not the case can be distinctly proved.

J. F. FLEET.

DE QUATREFAGES ON PREHISTORIC MAN.

Fulham: Dec. 31, 1887.

I do not think that the overheated atmosphere of Darwinism in which Mr. Grant Allen lives has permitted him to do justice to Prof. A. de Quatrefages's *Introduction à l'Étude des Races humaines*, which he reviewed in the last number of the ACADEMY. The eminent French savant is thoroughly loyal to the facts, he has few equals in Europe for a knowledge of anthropometrical and ethnological data; and these first-rate qualifications are indeed recognised by his critic. Is it, therefore, surprising that M. de Quatrefages should have refused to twist his facts to those of the Darwinian theories with which his facts do not agree? The ages of *magister dixit* are gone, and modern science knows no dogma such as the enthusiastic followers of the great Englishman desire to impress. It is no use concealing that Darwinism has failed to satisfy our present knowledge of the human races from the Pleistocene period to the present day. M. de Quatrefages has not accepted the wild theory of Lemuria, for the simple reason that there is no proof of the former existence of such a continent, and because the facts to be explained do not require such a hypothesis.

Mr. Grant Allen does not correctly represent the book he reviews when he says that the author places the cradle of humanity in the Central Asiatic plateau. M. de Quatrefages, on the contrary, says, pp. 133-137, that it must be sought for elsewhere; and he himself inclines to a *boreal origin*, as the only one that agrees with all the known facts.

TERRIEN DE LACOUTERIE.

SCIENCE NOTES.

THE general meeting of the Association for the Improvement of Geometrical Teaching will be held in the mathematical theatre of University College on Saturday next, January 14. The election of officers and other business will take place at 11 a.m., and at 2 p.m. the following papers will be read: (1) "The Recent Geometry of the Triangle," by Mr. R. F. Davis; (2) "The Multiplication and Division of Concrete Quantities," by Prof. A. Lodge; and (3) "Some Principles of Arithmetic," by Mr. W. G. Bell. All persons are invited to attend who are interested in the objects of the association—viz., to effect improvements in the teaching of elementary mathematics and mathematic physics, and of geometry in particular.

MRS. AYRTON, a graduate of Girton, and wife of Prof. Ayrton, is about to give a course of six lectures to ladies on "The Domestic Uses of Electricity," at 2, Upper Phillimore Gardens, W. The lectures will have special reference to the electric lighting of private houses, will be well illustrated by experiments, and will be adapted to an audience with no scientific knowledge.

MR. THEODORE WOOD has in the press a new work dealing with the various animals which influence British agriculture for good or evil. It will be published by Messrs. Swan Sonnenschein & Co., under the title of *The Farmer's Friends and Foes*.

PROF. PRESTWICH, in recently discussing the classification of the Eocene strata—a subject on which he is the highest authority in this country—has suggested some important changes. Thus, the sands which immediately overlie the London clay at Hampstead and elsewhere near London, and which are now regarded as Lower Bagshot beds, he proposes to remove from the Bagshot series and to place in the Lower Eocene group, with the London clay, under the name of the "London Sands." It is well known that the London clay, as it passes upwards, becomes more and more sandy, and may graduate insensibly into these sands, so that there seems much justification for the suggested change of classification.

THE delegates of the Clarendon Press—to whom English students of botany already owe so many translations of advanced German treatises—have just published the first volume of a series of *Translations of Foreign Biological Memoirs*, edited by Prof. J. Burdon-Sanderson. The memoirs here translated, thirteen in number, all deal with the physiology of nerve, of muscle, or of the electrical organ. They are divided into three parts—(1) researches relating to the law of nerve contraction—by Tigerstedt, Griitzner, and Hering; (2) researches relating to secondary electromotive phenomena in muscles, nerves, and electrical organs—by Du Bois-Reymond, Hering, Hermann, and Biedermann; and (3) researches relating to the electrical phenomena of *Malapterurus* and *Torpedo*—by Du Bois-Reymond. The translators are as numerous as the authors, those who have contributed most being Dr. James Niven, Dr. Aug. Waller, and Miss Edith France.

PHILOLOGY NOTES.

PROF. DUESSEN has just published a complete translation of the Vedānta-Sūtras and Sankara's commentary. An English translation of the same work by Prof. Thibaut is advertised as forthcoming in the "Sacred Books of the East"; and the first volume, as we are informed, is actually printed. In India a Bengali translation is being published by Pandit Kahvara Vedantavagis, which includes, besides the Sūtras and Sankara's commentary, the old annotations on that commentary by Vākaspati Miśra. An English translation of the Vedānta-Sūtras, with a commentary in Marāthi, published in *Studies in Indian Philosophy*, has not, so far as we know, been carried beyond the end of the first book, about one-fourth of the whole work.

MEETINGS OF SOCIETIES.

PHILOLOGICAL SOCIETY.—(Friday, December 16.)

A. J. ELLIS, V.P., in the chair.—A paper was read by Herr K. Dornbusch on "Volapük." He explained that Volapük was a new language, proposed for international use, and first published in outline in 1879 by the inventor, Schleyer of Konstanz. The idea of a rational language was far from new, as it had been worked at by Bishop Wilkins, by Leibniz, and by Descartes. Among modern writers, Prof. Max Müller had recognised

the possibility of an artificial language, and had pointed out that such a system might be made far more regular, complete, and easy of acquisition than any existing idiom. There were several significant facts in other departments of life showing the need for an international language. Thus we had the metrical system, now almost universal on the continent, chemical notation, telegraphic and marine signals, musical symbols, etc. It might be objected that an artificial language was an absurdity, and that only the traditional ones were capable of supplying the requirements of society. The answer was that all languages were created by the human mind; but in developing a natural language the mind worked instinctively and without conscious control of its own powers, while in working out an artificial language each step was an intentional calculation. In constructing Volapük, Schleyer formed the vocabulary by borrowing words from several European languages, ancient and modern, but chiefly from English. The choice of English was justified by the enormous number of speakers of this language—over 200 millions. The mixture of roots from various languages was a process similar to that which has always gone on when different nations come in contact, and produce a common dialect, such as the *Lingua Franca* or as *Pidgin English*. But the process is carried out in Volapük far more systematically. Words, moreover, are not always borrowed by Schleyer in their original forms, but are often simplified and shortened. Thus: *Tim* from "time," *lif* from "life," *smal* from "smallness," and so on. Derivatives are formed from roots by adding prefixes and suffixes, thus: *Plan* = "plant"; *as* suffix = "science," hence *planas* = "botany." Similarly *natas* = "nature-science" = physics. Volapük had proved to be a very easy language to learn, and its use was widely spread over the continent. France had led the movement, and in Paris there were Volapük classes in almost every mairie, as well as at the high commercial school. In the provinces branch societies had been formed in most of the towns. After France, the country which next took up the new language was Spain; then, in order, Portugal, Italy, Austria, and South Germany. Russia has a fervent Volapükist in Mr. Harrison, an Englishman residing in St. Petersburg, who lectured on the subject to his fellow-countrymen in that city last March. Denmark and Holland had also joined the movement. There were already eleven journals published in or on Volapük in various countries, and a comic paper in Munich. A congress to settle doubtful questions was held in Munich last August, and an academy was established to maintain the uniformity of the language. Another international congress on Volapük will be held in 1889, in connexion with the Paris Exhibition.—In the discussion Mr. Ellis remarked that Volapük presented a schoolboy's ideal grammar, there being only one declension, one conjugation, and no exceptions. He had been quite fascinated by the ingenuity and regularity of the system, and wished it every success. He thought it would be particularly useful to travellers and business men. Formerly he had believed that Italian might come into use as an international language—a purpose for which Italian was well fitted by its distinct, simple, and sonorous character. But at present the chances were against Italian and in favour of English, which was about the worst that could be chosen; and, indeed, had not been chosen at all, but had spread by the force of circumstances. The primary problem in inventing a new language was to get the roots. Bishop Wilkins founded his vocabulary on a classification of ideas. But that classification was now utterly out of date, and the words, therefore, would have lost their systematic meaning. Schleyer had escaped this result by taking existing roots, or what Leibniz would have called "trivial" roots. The greatest difficulty in the future employment of Volapük would be to preserve its unity; as it would become useless if it split up into dialects. He regretted to see that the Munich Congress had already made alterations in the system, and that the earlier grammars and dictionaries of Volapük were thus at variance with the later. If further changes were adopted, we should ultimately have a new confusion of Babel on the basis of Volapük. In particular, he regretted that the polite form of

the pronoun second person singular had been abolished, as something of the kind appeared to be necessary, and was furnished at present in every existing language. Another great difficulty would be to teach the sounds of Volapük to others than Germans. The sounds of *ä, ö, ü*, and initial *ts*, were exceedingly troublesome to Englishmen. Schleyer had done well to avoid *r*—a very variable letter. In ancient Egyptian there was no distinction between *r* and *l*. On the other hand, Germans could not pronounce English *j*—a sound included in Volapük. When Prof. Max Müller lectured at the Royal Institution, he pronounced *religion* for "religion." Hence Volapük would be of use principally as a written and not as a spoken language.—Dr. Furnival had expected to find a good deal of prejudice against Volapük, and hence was glad that it had been received with so much liberality. The merit of the language was that it was utterly empirical, and had come about naturally among business people. It would be a great relief from the necessity of learning that detestable German. Scientific theorists would of course object to it. Gaston Paris had condemned it, because each word was not constructed so as to show whether it was a verb, noun, or adjective, &c. The great success of Volapük showed there was something in it.—Mr. Lecky regretted that so few members were present, as the subject of a rational language had already been discussed in the society, and had excited much interest. Many students of the question agreed that the construction of such a systematic vocabulary and grammar was the most important practical application of philology—an object to which all historical, phonetic, and psychological researches in speech were preparatory. It was evident that Volapük fell far short of what a rational language should be. The vocabulary was entirely irrational. No word had any connexion with the meaning arbitrarily assigned to it by Schleyer. The root *Vol* would never suggest the idea of the "earth" to anybody. Even on Schleyer's method of borrowing existing words, *Vol* might mean "theft," "flight," "volition," "volume," a "water-vole," "volcano," or a "shutter," &c. Similarly *Pik* might be taken from a "spook," to "pucker" to "puke," &c. If words were not to be rational, they might at least be customary and familiar. But the English "world" was so deformed in making the new root *vol*, that no one could guess that any relation between them existed. Even when a natural descriptive word was already in general use, it was altered and spoiled in Volapük, as in *kuk*, from "cuckoo." A rational vocabulary could be founded partly on imitative sounds, as in "cuckoo," partly on natural exclamations, partly on signal-calls used in various branches of active labour, partly on symbolised definitions. In this last method, each letter of the word would express an element in the character of the object. As these ideas were widely held, they would, in all probability, soon take practical shape, and lead to the formation of a genuinely rational language. In the meantime, it was a waste of energy to learn such an imperfect essay as Volapük.—Mr. Bradley said that if Volapük was to be of any real use its application should be restricted to commercial, mechanical, and purely utilitarian objects. Anything humorous or imaginative would break down the system. Poetry and higher literature generally implied metaphors, peculiar usages of words, unusual forms of phrases, and a general divergence from direct logical expression. This tendency would act differently in each country, and finally produce a variety of national idioms instead of one international system. As regards phonetics, some of the distinctions employed in Volapük were too minute for general adoption: *ä, e*, and *ei*, being identical to an English ear. Moreover, Herr Dornbusch had apparently made no distinction between *k* and *g*, *t* and *d*, *p* and *b* in his reading of Volapük aloud. Hence the use of the system for purposes of speech seemed to labour under great difficulties. Volapük was, however, a creditable invention, and its future career would be followed with interest.—Mr. George Day said that he was, besides the lecturer, the only other active Volapükist in London. In eight days he had learnt enough of the language to write a letter to a French adherent of the system. The well-known journalist, Francisque Sarcey, considered that a

good knowledge of the language could be acquired in a few days. He (Mr. Day) had received letters in Volapük from California. He had never found that any difference of pronunciation prevented him from understanding foreigners who spoke Volapük. German-Swiss and Spanish speakers were quite intelligible to each other.—A visitor remarked that there was another attempt at a rational language called "International," invented by Dr. Esperanto, of Warsaw.

ROYAL SOCIETY OF LITERATURE.—(Thursday,
Dec. 22)

Dr. W. KNIGHTON, V.-P., in the chair.—A paper was read on "Petrarch and the Fourteenth Century," by Mr. C. H. E. Carmichael, who began by reminding the society of his attendance as their delegate at the fifth centenary of the death of Petrarch, held at Padua in 1874, and urged as a special reason for bringing forward an Italian subject at the present moment that it was closely connected with the forthcoming Italian Exhibition in London. At this exhibition the reader suggested that at least photographs of the most famous MSS. and early printed texts of the great Italian poets should be made exhibits, as well as photographs of the various commemorations, such as the Padua festival and others. Passing to an account of the life and times of Petrarch, Mr. Carmichael discussed the general character of the age, the poet's own view of it, as shown by his writings; his influence over it, and over later times; his relations with Dante, with Rienzi, and with the popes and princes of his day; and the lasting character of his influence, as of that of Dante, over Italian literature.—On the conclusion of the paper, the chairman, after complimenting the author upon the interesting manner in which he had treated his subject, stated it to be his opinion that the character of Petrarch was somewhat weak and unstable, and that though he was undoubtedly a poet of the highest order, yet that he did not, as in the case of his *quondam* friend Rienzi, use his abilities with the courage that the occasion demanded.—Dr. Phené told an amusing story of a laurel tree at Vaulcuse being held, on the spot, to be the Laura of Petrarch.—Mr. E. Gilbert Highton, the secretary, referred to the serious arguments used by Dr. Fraser Tytler—as published in vol. v. of the *Transactions* of the Royal Society of Edinburgh many years ago—to prove that Laura was an unmarried lady, and defended Petrarch's social and political opinions and conduct on the ground that he looked for reform in Church and State rather from internal than from external regeneration.—Mr. Bone, in supporting a vote of thanks to the reader of the paper, while quite prepared to draw a broad line of distinction between a great poet and the ordinary run of men, would not commit himself to expressing unmixed approval of the sonnets which have made the memory of Laura immortal. He vindicated, however, the character and conduct of Laura as entirely free from reproach.

FINE ART.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromos, and Olographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—Geo. Raza, 115, Strand, near Waterloo-bridge.

A History of Miniature Art. By J. L. Propert. (Macmillan.)

UNDER the title of *A History of Miniature Art* Mr. Propert has collected a great deal of information of a somewhat miscellaneous character. First, we have an introductory chapter commencing with the art of the cave-dwellers, and passing through the Greeks and Romans to Cimabue, and then by easy transition to Vasari, Holbein, and Horace Walpole. Next comes a chapter on missals and illuminated MSS., the object of which is, in the author's language, "to trace, in the broadest manner, the main improvements which occurred in its practice (i.e., the prac-

tice of illumination), as time, national tendencies, and artistic development raised it from its first rude beginnings, and led it by imperceptible, but inevitable, steps to the production of the miniature portrait." Then comes the history of miniature art in England, which is treated in seven chapters; then one on the foreign schools. Afterwards the curious art of modelling portraits in wax (an art which has not escaped revival in the present day) has a chapter to itself. The next is devoted to "La petite Sculpture," or miniature sculpture, and then we have one on snuff-boxes, &c. Finally, we have four chapters, or sections as the author prefers to call them, on collectors and collections.

The field or fields occupied by the book are so extensive that it is impossible to do more than touch lightly here and there upon the subject treated by the author and the manner of treatment. It may be said generally that Mr. Propert has gathered together and carefully arranged a large amount of matter hitherto scattered and undigested; and that, especially with regard to miniature art in England, his work, if not exhaustive, is yet a valuable contribution to the literature of a comparatively neglected and interesting branch of art. Mr. Propert's love of his subject, his artistic taste, and considerable personal research, give a greater value, both literary and artistic, to this part of his book than to the rest; but it is a pity that the author does not more clearly distinguish what of new fact or original conjecture he has added to those of former writers. For instance, in chap. iii., which is devoted to Holbein and his time, he speaks of it as compiled and chiefly taken from Wornum, Franks, Nichols, and others; but he leaves the reader in doubt as to the origin of the suggestion that Lucas Hornebolt was the teacher of Holbein in miniatures.

In the next chapter, which deals with the seventeenth century, Mr. Propert records his discovery of the long-disputed dates of the deaths of Isaac and Peter Oliver, or, at least, of their burials—Isaac was buried on October 2, 1617, and Peter on December 22, 1647. Perhaps the record of this century, which extends over two chapters, is, on the whole, the fullest and most interesting section of the volume. All of what may be called the "old masters" of English miniature lived in it, for Hilliard and Isaac Oliver were still at work in its first years. As Mr. Propert points out, there was a distinct British school at least of miniature from the days of Elizabeth to our own; and the roll of the seventeenth century includes the names of Hilliard and the Olivers, of Hoskins and Betts (by this rare master Mr. Propert's collection contains a portrait of John Digby, Earl of Bristol, reproduced to illustrate his book), Gibson and the great Samuel Cooper, not to mention many others. The diaries of Pepys and Evelyn furnish material for enlivening the chronicle of the art of this period, and help to realise the social conditions of its production. It was the time, also, of many distinguished foreigners who made England their temporary home; some of whom, like Vandyck, painted miniatures now and then, while others, like the famous enameller Petitot, confined themselves to the "little" art.

Something like an exhaustive history of miniature painting in the seventeenth century may be accomplished, or at least a history of what is known of it; but when we come to the eighteenth century—especially the latter part of it, when Cosway lived, and nearly every artist painted miniatures—it is not to be expected that Mr. Propert, in such a book as this, could do more than sketch the subject. It might perhaps have been wiser if he had mentioned fewer names and said more about the more notable men, such as Cosway, Edridge, and Hone.

If our remarks are principally confined to one portion of this book, it is because the preliminary history of missal painting seems unnecessary, and the final sections on collectors and collections scarcely sufficiently connected with the main object of the book. A few words would have been sufficient to show the connexion between the "miniature" of the illuminator and the "miniature" of the portrait-painter in little; whereas Mr. Propert, in many pages and with several illustrations, fails to make the connexion clear. A chapter on the growth of portrait art would have been more in place. Taken, however, by themselves, all parts of the book are interesting. The illustrations are also good and well-chosen; but, notwithstanding the use of the orthochromatic process, a comparison of the plates in this book with ordinary photographs of miniatures, such as those in the great historic galleries, is not all in favour of the former. These may represent more perfectly the tonic relation between the colours of the originals, but they certainly have not the same force or delicacy of modelling. COSMO MONKHOUSE.

THE ROYAL ACADEMY.

I.

THE collection brought together this winter at Burlington House is less numerous, and has, so far as the section of painting is concerned, less of novelty than many of its predecessors in the same place; but it is, for all that—perhaps, indeed, because it is comparatively restricted in extent—a singularly enjoyable gathering of works of art. A sad disappointment, however, awaits the students and lovers of the schools of the fourteenth and fifteenth centuries; for they will, on this occasion, find the room which every year, up to the present time has been devoted to the exhibition of paintings belonging to these periods, closed and barred. On the other hand, the collection acquires an entirely novel interest from the fact that the water-colour room has been filled with a precious and admirably arranged series of sculptures in bronze, marble, and stone, chiefly of the period of the fifteenth and the first half of the sixteenth centuries; to which are added many cases filled with rare bronzes, medals, and plaquettes of the same period, including a large part of the famous collection of Mr. Drury E. Fortnum—one of the highest authorities in this branch of art—besides rich contributions from Mr. Heseltine, Sir J. C. Robinson, Mr. Salting, Mr. Alfred Morrison, and many others. It must be owned that the room contains, interspersed with works of high character, a large number of very inferior productions; some of them mere antique *clichés* in terra cotta and *gesso duro* of the most popular productions of the Florentine studios. But even these have a certain interest, as showing the second-rate—we may say, the commercial productions of that time of wonderful fertility

in art; while what remains, if we eliminate or disregard that which is not of the first order, is deserving of the closest study. Our regret that the Italian schools of painting, of the period corresponding to the major part of these sculptures, should this year be entirely unrepresented must be redoubled, when we consider that here would have been an opportunity almost unique, at the present moment, for closely verifying the inter-connexion of the two sister branches of art, then so nearly related that they actually overlapped and, in many instances, encroached the one on the domain of the other. We propose to return later to this, the most interesting section of the year's show, in which, however, false and overbearing attributions are rather the rule than the exception; as they must inevitably be, so long as the Academy is content to accept, without question, the designations of works of art supplied by their too ambitious owners.

In the section of painting, the earlier schools being entirely wanting, mis-descriptions are fewer and less diverting than usual. Most curious is, perhaps, the attribution to Luis de Morales of a "Virgin and Child" (139), which has all the appearance of being the imitation by a Fleming of a work of the Milanese school of Leonardo; the motive having some relation to that of Andrea Solario's famous "Vierge au Cousin vert," in the Louvre. The "Portrait of a Man" (127), belonging to the National Gallery of Ireland, and attributed to this same school of Leonardo, is rather of Venetian than of Milanese origin. It is a second-rate and inexpressive performance, the style of which approaches closely to that of Marco Bassati in its latest development. Lady Lindsay's so-called Palma Vecchio, "The Painter's Daughters" (124) appears to be an inferior replica, or copy, of a picture, the colouring, the types, and especially the landscape-background of which recall rather one of the elder Bonifazios than their prototype Palma. The inevitable Giorgione, without which no collection of old masters would be complete, is not wanting. It is a "Virgin and Child" (141) from the same collection, in which is attacked with considerable success the problem of dealing with predominant masses of blue of varying hue, unbalanced by any other colour sufficient in quantity or force to keep it in check. The Madonna, robed entirely in garments of warm rich azure, is relieved against a Titianesque landscape and sky, in which other gradations of the same colour predominate. The main difficulty has been overcome, much as Gainsborough met it in the often-cited "Blue Boy," by an exaggeration of the brown and rosy flesh-tints in the face of the Virgin and the nude form of the child, with the aid, too, of an orange-toned halo and a sunset of red gold. This painting, which would appear to belong to the Trevisan branch of Venetian art is, however, too loosely executed, too superficial, to justify for a moment its attribution to the great master of Castelfranco, to whose works it is in style and execution only very distantly related. Mainly some motives of the landscape might serve as an excuse, though not as a justification, for the attribution. Lord Darnley's famous "Europa" (134), one of the most important examples from Titian's brush which now remain in England, reappears here in exactly the same place which it occupied in the gallery some years since. It is a performance of the master's ripe maturity, showing his hand still in its prime, and revealing to the full his unsurpassed power of producing colour-combinations radiant in their seeming simplicity, and yet controlled in their splendour so as to achieve an unfeigned general harmony of tone. Yet, how unassuming, how prosaic in its realism appears this conception of the nymph, if we compare it to the types of female loveliness in that exquisite

early work of the painter, the "Sacred and Profane Love," of the Borghese Palace; or even to those masterpieces of the middle time, the "Venere del Pardo" and our own "Bacchus and Ariadne"! The luxury and sensuous splendour which marked Titian's mode of life in the later years of his maturity here tell their own tale.

Two sufficiently characteristic, though not exactly first-rate, specimens of the peculiar mannerism of Spagnoletto (129 and 140) appropriately bridge over the chasm between Italian and Spanish art.

Velasquez, this year as last, triumphs over all competitors, though, almost in juxtaposition with his two masterpieces, are seen unsurpassed examples of the work of Vandyck and Frank Hals. Sir R. Wallace's famous "Femme à l'éventail" (132) has now become doubly precious, seeing that Berlin has recently robbed us of Lord Dudley's almost equally fine portrait, representing, it may be remembered, a lady, evidently of high rank, young, and—by comparison with the court ladies of the period as presented in their hideous panoply of ceremony—beautiful. Both paintings, with perhaps one or two others, constitute an exception in the life-work of Velasquez, showing, as they do, Spanish women untrammelled by the court formulas and conventionalities which crushed all personality out of them, and rendered their delineation, even to the most genial of portrait-painters, an arduous and ungrateful task. The "Lady of the Fan" is apparently of lower rank than most of Velasquez's sitters, for her walking-costume, national and picturesque in its sober details, denotes rather the citizen's wife than the noble *doña*. She is not, according to modern canons, beautiful; but the smouldering fire of her large dark eyes, passionate yet cold and almost cruel in their intensity, is of irresistible fascination. Nothing can exceed the force with which the suggestion of an ardent vitality, thinly veiled under the fallacious semblance of calm, is conveyed. The unflinching but passionate realist has here offered for solution a riddle, half-hidden, half-revealed, which exercises the imagination, although by altogether different means, yet hardly less strongly than does the problem which Leonardo da Vinci, with a mysterious idealism, presents to us in his "Joconde." This masterpiece of Velasquez belongs rather to his second than to his third manner; and its technique is more sober, if not less masterly, than that of his later work. It has unfortunately suffered considerably from retouches, especially on the breast, the greater part of which appears to have been painted upon. Hardly less masterly, and in better preservation, is Mr. Fraser's "Don Balthazar Carlos" (137)—a full length of the young Prince of the Asturias standing in a splendidly brushed grey-green landscape, under a fig-tree. Murillo is represented by two genuine works of high class: the one, Sir R. Wallace's small "Marriage of the Virgin" (128), a canvas exquisite in line and arrangement, and set off with the usual *sfumato* colour—now somewhat the worse for wear—but singularly devoid of real fervour, and almost insane in its lack of true dramatic instinct. Far better is Lord Wantage's "Virgin and Child" (131), which, apart from its fine technical qualities, shows genuine naïveté and charm. It is one of the painter's more realistic and undisguisedly national presentments of his favourite subject.

The Low Countries are once more splendidly represented at Burlington House. The "Apotheosis of the Duke of Buckingham" (148), sent by his descendant, the Earl of Jersey, and attributed to Rubens and Jordaens, is undoubtedly an imposing piece of decoration, appropriately pompous in design, and both splendid and harmonious in colour. The finest

portion of the enormous canvas is that which includes the two figures of Neptune and Amphitrite, attributed—and no doubt justly attributed—to Jordaens. The rest of the picture, including the equestrian portrait of the brilliant favourite, is conspicuously inferior to these figures, though quite up to the level of similar "machines" issuing from the Rubens studio. The design was, no doubt, originally an invention of the great Antwerp master; but even this appears to have been diluted, and deprived of some of its original energy in the process of realisation. It would thus be unsafe to attribute the actual execution of any portion of the work, as it stands, to Rubens. With regard to the statement contained in the catalogue—that the picture was probably painted at Paris in the year 1625—it is well known that the great series of the Luxembourg decorations, now in the Long Gallery of the Louvre, was not actually painted in the French capital, but was carried out in the Antwerp studio from the preliminary designs made by the master; and it may fairly be assumed that a like process was adopted in the evolution of the present very similar work.

The three magnificent examples of the art of Vandyck which adorn the exhibition happily complete the great series of his works contained in the exhibitions of last winter. It would be impossible to name two finer specimens of the painter's second Flemish manner than Sir Richard Wallace's celebrated full-lengths of Philippe Le Roy and M^{me}. Le Roy (147 and 149). Traces of the so-called Genoese manner still appear in the sombre colouring of both works, characteristic of which earlier phase is especially the somewhat conventional dignity which marks the pose and general conception of the male portrait; but the execution is more delicate, the flesh tones are more in the Flemish mode than in the Italian examples. The portrait of M^{me}. Le Roy is a triumph of subtle execution, and, what is more, of subtle characterisation, in which, indeed, it far surpasses most female portraits of the subsequent English period. Mr. Gladstone's masterly "Sir Kenelm Digby" (121), showing Vandyck's protector and friend wrapped in a dark cloak, and fronting a huge sunflower—emblematic, as has been suggested, of the sun of the royal favour—is, perhaps, the finest of the many presentments of the distinguished courtier and eccentric transcendentalist. It is drawn and modelled with singular firmness and care, and may well have been executed very soon after Vandyck's final migration to England. The large but beautifully formed hand of the knight is evidently very carefully studied from nature; it is in singular contrast with the type generally affected by the master, and fully justifies Sir Kenelm's reputation for extraordinary strength as well as comeliness.

Out of three works which the catalogue gives to Rembrandt, two, at least, are of the first rank, and so well known that only a passing allusion to them appears necessary. Lord Landsdowne's famous "Mill" (74)—a work of the painter's second period (*circa* 1645)—appears here for the second time, and again makes good its claim to rank as the painter's most pathetic masterpiece in landscape. Lord Wantage's "Portrait of an Old Woman" (109), signed and dated 1660, is a pearl of the painter's latest time. The execution is looser, the modelling perhaps less firm than in earlier works; but seldom has even Rembrandt rendered the golden radiance of subdued light with more magical power, seldom has he delineated extreme old age with a more tender sympathy. The picture is in an unusually fine state of preservation. Mr. Humphry Ward's fine "Portrait of a Young Man" (51), furnished with the signature "Rembrandt f. 1646" affords a curious puzzle to those seriously interested in

the great master's work. This signature—of which the "4" is, however, somewhat blurred—bears the appearance of being genuine; and it is stated that it revealed itself while the picture was undergoing a process of cleaning, under a spurious signature of larger dimensions. The work is a fine one, firmly and closely modelled, in greenish flesh-tones such as characterise Rembrandt's first period; and the characterisation of the rather sleepy, stolid countenance is very happily achieved. On the other hand, if we are to accept the date as definitive, it is difficult to believe that the master painted thus in the year 1646, at the period when he was producing the "Woman taken in Adultery" (1644), the "Adoration of the Shepherds" (1646) (both at the National Gallery) his own portrait at Buckingham Palace, and the "Head of a Girl" (1645) at Dulwich. The peculiar greenish half-tones in the flesh are rather such as we find in the "Lesson of Anatomy," Mr. Holford's "Martin Looten," and the Dulwich portrait of the painter—all of the year 1632. On the other hand, it may be pointed out that the portraits of Claasz Berchem and his wife at Grosvenor House—both belonging to the year 1647—are painted in a peculiar blackish tone which differs markedly from that of the works of the same time to which we have referred. Altogether the question must remain open for future elucidation. It must be owned that it would be difficult to point to any pupil or imitator of Rembrandt to whom we could with safety attribute the portrait, save, perhaps, Karel Fabritius, whose rare authenticated works have something of the same peculiar tone. CLAUDE PHILLIPS.

MR. WHISTLER'S LITHOGRAPHS.

A GROUP of lithographs by Mr. Whistler has just been issued by Messrs. Bousso, Valadon & Co. They commend themselves scarcely, perhaps, to the general public, but very specially to the real students of Mr. Whistler's talent—to those who enjoy his flexibility, his happiness of vision, his extreme dexterity of touch. Only a hundred sets of the lithographs are put forth, and the stones are, in all probability, now destroyed. Indeed, we notice that of the hundred different sets, only thirty are endowed with the full complement of impressions: only thirty have the admirable and sombre "Limehouse" which is assuredly one of the best things ever done in lithography. Mr. Whistler's lithographs have been spoken of as "facsimiles," as if his hand had not itself worked upon the stone. As a matter of fact, they are as autographic as his etchings, and this should be clearly understood. They owe, of course, an immense deal to the sympathetic craft of Mr. Way, the lithographic printer whose printing has done, as perhaps none other could, absolute justice to the works.

The works are various in subject, various in attractiveness, various, we think, even in success. If the "Limehouse," which we have mentioned already, is one of the finest, it is perhaps surpassed by the "Nocturne." This is a night scene on the river: the buildings on the further bank massive and grey; the chimneys rising like campaniles into a quiet sky; and a delightful sense of mystery and vivacity—of mysterious activity, shall we rather say?—being produced by the treatment of the river itself with its grouped steamers, puffing and palpitating in the dark. In "Battersea Bridge," lithography practically presents you with a pencil or chalk drawing—a work in "line," in fact—just as "Limehouse" and "Nocturne" present you with drawings in washes of colour. The least attractive of the set is the "Victoria Club." Next to it comes "Gaiety Stage Door"—a lively enough production, which was completed long before Mr. Leslie sang or Miss

Sylvia Grey danced in "Frankenstein." Objection has been taken to the fact that the horse's head in the foreground in Wellington Street is not drawn. But you do not see the horse's head—you are not looking at it; you are looking at the stage door. The drawing must have been made in Mr. Way's office, almost opposite. "Reading"—the sixth of the lithographs, and the only one remaining to be named—is a vivacious and expressive study of a slim young woman in modern attire, with bonnet on, with "fringe" of hair, with legs crossed, and herself entirely absorbed in who shall say what novel? In all these things of Mr. Whistler's it is *la vie vécue* that is recorded: the group at the stage door; the absorption of the young woman in what is certainly light literature; the wonderful poem of the river. We are very glad these things have been issued. F. W.

CORRESPONDENCE.

ROMAN SCULPTURED AND INSCRIBED STONES.

South Shields: Jan. 2, 1887.

Since my last letter to you there has been discovered, upside down, in the splay of one of the windows in an old pele tower at Newburn-on-Tyne, an interesting inscribed stone of the Roman period. When first noticed it was thickly coated with whitewash, which was carefully removed by Messrs. Spencer, in whose steel works the old building is situate. Mr. Spencer has since taken it out, and has presented it, subject to the consent of the Duke of Northumberland, the owner of the property, to the museum of the Newcastle Society of Antiquaries.

The stone is about 14 in. long by 11 in. broad, and is thus inscribed—

LEG XXV
CHO IIII
LIB PRO
TER MA

which Dr. Bruce expands and translates "The century of Liburnius Fronto and the century of Terentius Magnus of the 4th cohort of the 20th legion surnamed the Valerian and victorious [erected this]." On each side is a standard, that on the left being inscribed with the number of the legion, LEG XX. On the inner top corner of this is what appears to be an eagle (partly covering the letter L), perched. In the centre, between the names of the centuriae, is an eagle with a garland in its mouth. The names Marcus Liburnius Fronto occur on an altar found at Benwell (*Condercum*) (*Lapid. Sep.*, No. 16, *C. I. L.* vii. 506).

ROBERT BLAIR.

NOTES ON ART AND ARCHAEOLOGY.

MR. FULLEYLOVE has made great progress with the important series of water-colour drawings which record Oxford, and which the Fine Art Society will exhibit later in the season. To begin with, his largest drawings are, it is pretty evident, of a quality he has not hitherto attained on a scale of the same magnitude. Then, the quality to which one is accustomed in his work of medium size and in small drawings, is, at the very least, well maintained. A drawing of Iffley Mill is a bit of landscape of curious freshness, vivacity, and, as some say, "first intention." There is a very fine representation of St. Mary's, and the dome of the Radcliffe. The "quad" of Hertford is excellently rendered. Among the smaller ones, a bit of Peckwater, with the end of the library of Christ Church, is delightful. But it is probably in a drawing of the Inigo Jones entrance and arcade in the "quad" of St. John's—with the statue of Charles I.—that Mr. Fulleylove has reached his highest point in the

more detailed rendering of architecture. Of this entrance we may remark that tradition, not record, says it is the work of Inigo Jones; but, as records of at least one college have been sold as waste paper, the absence of chronicle does not, perhaps, tell very much against the attribution to the great Inigo of this quite exquisite architectural creation. In addition to these and many other water-colours, Mr. Fulleylove—whose pencil work is much approved—will exhibit fifty pencil drawings, which will be reproduced in lithography or photo-lithography, and so published.

MESSRS. DOWDESWELL will have on view next week a collection of paintings by Adolphe Monticelli, which is stated to be the first ever brought together in England; also some examples of a new decorative art called "cloisonné-mosaic," the invention of Mr. Clement Heaton.

THE new number of *The Hobby Horse* (Kegan Paul, Trench & Co.) is in some respects the very best of this artistic quarterly that has yet appeared. We cannot enumerate the whole of its contents, literary and pictorial; but we shall permit ourselves to say that Mr. Shorthouse has provided the editor with a paper of interest; that Mr. Selwyn Image has a quietly penetrating review, not so much of Mr. Pater's last book as of all Mr. Pater's contributions to literature; and that there are head and tail-pieces by Mr. Herbert Horne which afford great pleasure. This gentleman has likewise employed himself in making careful comparison among the best examples of earlier Italian printing, with the result that type which is singularly decorative in its massing is now, and is to be hereafter, used for the printing of *The Hobby Horse*.

WE are compelled to postpone the publication of M. Naville's lecture, in connexion with the Egypt Exploration Fund, on "Bubastis and the City of Onias," as we hope to give a verbatim report of it.

THE STAGE.

STAGE NOTES.

OF Mr. Buchanan's "Partners"—produced for the first time at the Haymarket almost as we were going to press—we shall doubtless have something to say hereafter. Meanwhile, let it be recorded only that to Mr. Beerbohm Tree, Mr. Brookfield, Miss Marion Terry, and Miss Janet A. Church were assigned the principal parts in a long five-act drama.

FOR January 24—for a *matinée* at the Prince of Wales's on that day—is appointed the production of an English version of M. Alphonse Daudet's "Arlésienne," with the admirable comedian, Miss Rose Norreys, in a principal part. Bizet's illustrative music is to be given, and, as we hear—and can believe at a theatre which commands the resources of the orchestra of "Dorothy"—given quite adequately. This should be a performance of real interest.

A GENERAL word about the new spectacular pieces is desirable, now that they have settled down—first night faults amended—and will run nearly till Easter. Covent Garden has a pantomime in some respects approaching the old-fashioned sort—the sort that may be voted funny, but cannot be counted grand. Drury Lane has in "Puss in Boots" a very great sight. Mr. Laurie, it would seem, has a perfect genius for representing a cat. He enters absolutely into the feline life, and is thus the Briton Rivière or the Burton Barber of the stage. Here, too, the armour scene is the "dernier mot" of pure brilliance. At the Gaiety, "Falkenstein," in part because of those

who bear a share in it, has claims to rather longer notice than can be given in the present lines, which, indeed, must be directed chiefly to record Mr. Percy Anderson's curiously artistic—shall we not say really perfect?—arrangement of dress and of stage groupings.

MUSIC.

MUSICAL PUBLICATIONS.

The Organist's Quarterly Journal. Part 76. (Novello.) This part commences with the finale of Mr. H. M. Higge's Sonata in C minor. It is very Mendelssohnian, but written in scholarly fashion. The themes are pleasing and well contrasted. With good playing it should prove effective. The only other piece is an Andante and Rondo, for violin and organ, by the late Sir G. A. Macfarren. The andante is graceful, and recalls, at times, Schumann. The rondo is bright and pleasing. These two movements will prove acceptable to musicians, as the union of these two instruments is by no means common.

Sonata in F sharp minor, for Violin and Piano. By E. M. Lawrence. (Novello.) So far as form is concerned, there is no reason to complain of the first movement; but the first theme is not very original, and the second somewhat commonplace. The *largetto*—a cantabile movement—is simple and pleasing, but not striking. The finale pleases us best. It appears to us more compact and more interesting than the opening allegro. The composer is ambitious; but she would achieve, we imagine, greater success in pieces of a lighter calibre.

The Holy Vision. By C. Gounod. (Novello.) This sacred song, sung by Mr. Lloyd at the recent Norwich Festival, could not be mistaken for the music of any other composer. The first part is effective, but towards the close it becomes less refined.

The Musician. Sixth Grade. By Ridley Prentice. (Sonnenschein.) We have on several occasions spoken about this excellent work. It will, therefore, suffice to say that it terminates with this sixth grade, in which advanced pieces, such as Beethoven's "Waldstein" and "Appassionata" Sonatas are analysed. Charts, too, of some of Bach's fugues are given on the model of those in Mr. J. Higge's "Primer on Fugue."

Waiting for Her. Song. By E. M. Lawrence. (Stanley Lucas.) Commonplace, and the accompaniment is now tawdry, now dull.

Angels' Voices. Song. By W. Stokes. (Birmingham: W. Stokes.) The words are sentimental, and so is the music.

FROM MESSRS. ASCHENBERG WE HAVE RECEIVED:

Moods of a Moment. For Pianoforte. By Tobias A. Matthay. The composer, an excellent pianist, has plenty of good ideas; but he is evidently afraid of being commonplace. Hence, at every moment there is something peculiar, in either technique, harmony, or phrasing. So the music disturbs rather than pleases, and after a time becomes monotonous. Mr. Matthay has only to write more naturally, and he will produce something really good.

Love Song. Sketch for the Pianoforte. By F. M. Gwyn. Mr. Gwyn would do well to imitate Beethoven, who did not publish his sketches. Besides, Mr. Gwyn's acquaintances with the technique of the instrument is singularly feeble.

Le Duo. Sketch for Violin and Piano. By J. C. Beazley. A short, easy, but graceful piece.

Rubini's Nocturne, for Violin, with Piano Accompaniment. By E. Polonaski. A pleas-

ing drawing-room piece. The pianoforte part is skilfully written, and quite in keeping with the melody.

I wish to tune my Quivering Lyre. Duet for Tenor and Baritone. By M. Watson. Lord Byron's lines have been set by the composer to excellent and effective music. This duet will, doubtless, become popular. It is in Mr. Watson's best vein.

Thou still art near to me, and The Old Church at Home. By H. Smart. These posthumous songs by the once popular composer will be welcome to those who like smooth sentimental ballads.

FROM THE LONDON PUBLISHING COMPANY:

Ballet Music. For Pianoforte. By Erskine Allon. This fourth set of dances shows taste and knowledge, but with a little trouble the composer might study to make his pianoforte writing less troublesome and quite as effective. Large stretches and uncomfortable positions for the hands should be avoided in music of this kind. Of the four numbers we prefer the Gavotte and the Mazurka.

Sissie. Gavotte for Pianoforte. By J. T. Musgrave. Rather pleasing, but not quite in Gavotte style.

Fealty. Song. By E. Allon. An interesting song; but, as in most of that composer's vocal music, the harmonic element predominates over the melodic.

To Laura. Song. By C. Barton. The melody is not very attractive, but the accompaniment is interesting.

FROM MESSRS. PATTERSON & SONS (EDINBURGH):

The Two Margarets and John Frazer. Ballads. By A. C. Mackenzie. The composer of "Jason" and the "Rose of Sharon" shows, in these songs, how simply he can write. Prof. Blackie's humorous words are quietly coloured and supported by Mr. Mackenzie.

Danse Fantastique and Mazurka. For Piano. By J. McLachlan Key. We cannot see anything particularly fantastic or even original in the first. The opening section of the second is graceful, but the rest of the writing is heavy for the style of piece. J. S. SHEDLOCK.

MUSIC NOTES.

MR. HENSCHEL gave his seventh Symphony Concert on Wednesday afternoon at St. James's Hall. A large portion of the third act from "Die Meistersinger" was announced in the programme-book, but only the introduction was played. It was, on the whole, carefully rendered, though the balance of tone in the passages for brass was not even. Mr. C. Hallé gave an excellent performance of Beethoven's "Emperor" Concerto. There was refinement and vigour, and the technique was faultless. Mendelssohn's "Scotch" Symphony showed up the strings, the weakest portion of Mr. Henschel's orchestra. Reinecke's graceful *entr'acte* from his "König Manfred" opera, and a bright and characteristic overture by Herr Dvorák, completed the instrumental portion of the programme. Miss Marguerite Hall sang with success two songs of Schubert with orchestration by Brahms. The first, "Memnon," is most effective; but the light accompaniment of "Geheimes" seems to us far more effective on the pianoforte as Schubert wrote it. There was a very good attendance.

THE triennial Handel Festival will be held at the Crystal Palace in June. Mdmes. Albani, Valleria, Nordica, Patey, and Trubelli, and Mr. Edward Lloyd and Mr. Santley, have already been engaged. Mr. August Manns will again be the conductor.

CAMBRIDGE UNIVERSITY PRESS.

NEW PUBLICATIONS.

Sophocles.—The Plays and Fragments. With Critical Notes, Commentary, and Translation in English Prose, by H. C. JENN, Litt.D., LL.D., Professor of Greek in the University of Glasgow.

Part I. *Oedipus Tyrannus.* Demy 8vo, New Edition, 12s. 6d.

Part II. *Oedipus Coloneus.* Demy 8vo, 12s. 6d.

Part III. *The Antigone.* [Nearly ready.]

The Old Testament in Greek according to the SEPTUAGINT. Edited by H. B. SWETE, D.D., Honorary Fellow of Gonville and Caius College. Vol. I. Genesis—IV. Kings. Crown 8vo, 7s. 6d.

An Introduction to Greek Epigraphy. Part I. The Archaic Inscriptions and the Greek Alphabet. By E. S. HOBBS, M.A., Fellow and Tutor of Gonville and Caius College. Demy 8vo, with Illustrations, 18s.

Xenophon.—Cyropaedia. Books I, II. With Introduction, Notes, and Maps. By Rev. HUBERT A. HOLDEN, M.A., LL.D. 2 vols. Vol. I. Text. Vol. II. Notes. 6s.

Books III, IV, V. By the same Editor. 6s.

Platonis Apologia Socratis. With Introduction, Notes, and Appendices, by J. ADAM, B.A. 3s. 6d.

LITERATURE.

The Commedia and Canzoniere of Dante Alighieri. Vol. II. By E. H. Plumptre. (Isbister.)

THIS concluding volume of Dean Plumptre's great and laborious work contains (1) the translation of the *Paradiso in terza rima* in continuation of the two earlier *Cantiche* published about a year ago; (2) the translation of the whole of the comparatively little-read *Canzoniere*, in form and metre corresponding as far as possible to the varied types of the original poems; also of the paraphrases (of very doubtful authenticity) known as the *Credo*, *Sacramenta*, *Ave Maria*, &c.; and of the curious poetical correspondence in Latin eclogues between Dante and his friend, Joannes de Virgilio, which are full of interesting personal allusions and details; (3) a series of "studies" on subjects of great interest to students of Dante, though, unfortunately, not including the whole of the programme foreshadowed in the first volume. In particular, we regret not to see here one of the subjects promised, which the dean would certainly have treated with peculiar skill—viz., Dante as an interpreter of Scripture.

On translations of the *Commedia* generally and of the earlier portion of this translation in particular so much has already been said in the ACADEMY that we may pass rapidly over this portion of the subject. One gladly recognises the very great skill with which the dean handles the extremely difficult instrument of the *terza rima* which he has chosen—difficult both in itself and still more under the circumstances of translation. The severity of the conditions both of rhyme and metre inevitably leads sometimes to loss of, addition to, or alteration in, the precise ideas and features of the original. The rhymes generally seem very fair and true, but occasionally proper names have been awkwardly manipulated to afford a rhyme, as in *Sardanapal'*, *Montemal'*, *Salterell'*, &c. The only case noticed of an entirely false rhyme (probably an oversight) is "*Jerusalem*" rhyming with "*greed*" and "*freed*" in *Par.* xix. 128-133.

We may point out, though in no captious spirit, some instances in which, either from the exigencies of rhyme or, perhaps, from occasional "*incuria*" inevitable in so long a task, the exact spirit of the original is not quite satisfactorily reproduced. It is surely wrong, for instance, in *Par.* viii. 147,

"E fate re di tal che è di sermone,"

to translate—

"And take as king some sermonising fool."

Dante (see ll. 139-148) is deploring the

diversion of special natural gifts to unsuitable lines of life; in short, the attempt, as we say, to fit "round pegs into square holes." The point here, therefore, surely is that one who might have been really great as a preacher or an orator (in probable allusion to King Robert of Naples; see Villani, quoted by Scartazzini *l.l.*) is spoilt by becoming a king, and in that capacity succeeds ill.

Another case of an unhappily imported idea (though here rhyme, at any rate, has nothing to do with it) occurs in *Par.* xxvi. 97. "Tal volta un animal coperta broglia"—"As oft we see some *poor brute* moving still." Why "*poor brute*"? It seems an idea quite inappropriate to the context of the original, which refers to a tame or pet animal; perhaps, as the dean himself suggests, a favourite cat. Another case in which the meaning seems to be somewhat missed is that curious passage about the *lettere mozze*, in which Dante says that the faults of Frederick II. of Sicily are to be recorded (see *Par.* xix. 133-5). The dean translates—

"And to show well how mean he is and vile,
The writing shall in letters maimed be shown,
Which, noting much, are read in *little while*."

The point clearly is not that his faults could be "*read in little while*," but that numerous as they were they should be recorded in abbreviated characters and crowded into a *little space* to show contempt for him (*δὲ ὕβρις*), as though he were not worth wasting good paper or parchment upon. Once more, in *Par.* xvi. 10, "*Dal voi, che prima Roma sofferie*" means merely, "*which Rome first suffered, or tolerated*." An entirely alien idea is introduced by translating "*which suffering Rome first spake*."

The next portion of the work is the translation of the *Canzoniere*. It will certainly be a great help to the English student to have the dean's careful and scholarly translation as his guide through the not always very interesting mazes of these highly artificial poems. The arrangement adopted (apparently that of Fraticelli) is most convenient, being chronological, so far as internal evidence enables us approximately to arrange the poems in connexion with the chief known landmarks of Dante's life. We add as a specimen of these translations the rendering of one of Dante's best known and most touching sonnets, that occurring in the forty-first chapter of the *Vita Nuova*, and commencing "*Deh peregrini*," &c.

"Ye pilgrims, who pass on with thoughtful mien,
Musing, perchance, of things now far away,
Take ye from such a distant land your way,
As one may judge from what in you is seen?
For ye weep not, as ye pass on between
The woeful city's streets in sad array,
As they might do whose careless looks display
That they know nought of all her anguish keen.
But if ye will remain with wish to hear,
My heart tells me in sooth with many a sigh,
That, as ye leave it, ye will surely weep:
She hath beheld her Beatrice die,
And what a man may wish to say of her,
Hath power the hearers' eyes in tears to steep."

We turn now with great interest to the "*Studies*," which occupy about one-third of the volume. The first is on the "*Genesis and Growth of the Commedia*." The dean here traces distinctly the preparatory part which each of the other works of Dante played in reference to his *magnum opus*, not

omitting to indicate the internal evidence in each case for the period of their composition. It is noticeable that the *Divina Commedia* and the *Vita Nuova* are the only works in which Dante carried his plan to completion, the *De Monarchia*, the *De Vulgari Eloquentia*, and the *Convito* above all, being mere fragments of the original design in each case. One after another of these works was abandoned as the idea of the *Commedia* took full possession of his mind. The *Vita Nuova* itself (having regard to its concluding sentences) is hardly an exception to this. Next we have a full, though very brief, enumeration of the external sources of the poem in previous visions of the unseen world, from the sixth book of the *Aeneid* down to the *Tesoretto* of Dante's own master, Brunetto Latini. We have, further, a list of the principal authors studied or quoted by Dante, with an estimate of their influence upon him, among whom we may note especially Hugh of S. Victor (treated of at very great length in Labin's *Studi*), Bonaventura, the Abbot Joachim, and "the Everlasting Gospel" (pp. 397-401). The dean, I think, perhaps a little exaggerates the influence of S. Augustine, though Dante himself confesses to it in reference to a special point in his epistle to Can Grande, c. 28. The dean speaks of S. Augustine as "*Dante's Master*" (p. 429), and also of the "position assigned to Augustine" in *Par.* x. 120—a passage which contains merely a passing allusion to his (S. Augustine's) appreciation of (probably) Orosius. He has, indeed, "a position assigned to him" in *Par.* xxxii. 35; but otherwise I have always considered the comparatively inconspicuous recognition of S. Augustine in the *Paradiso* as one among many of the anomalies found in Dante's hagiology. The dean's wide reading suggests many interesting literary comparisons, such as that of the *Purgatorio* with the *Confessions*, and to some extent also with the *Retractions*, of S. Augustine, and with the recantations of Cardinal Newman; also that of the dedicatory letter of the *Paradiso* addressed to Can Grande with Spenser's epistle to Sir W. Raleigh respecting the *Faerie Queene* (p. 358). Indeed, a conspicuous feature of the work is the abundant wealth of quotations from classical and other authors, either embodied in the notes (which, as before, are models of concise information and illustration), or serving as graceful ornaments of style in the essays.

The second and most elaborate study is on "*Estimates Contemporary and Later of Dante*," in which the fortunes of Dante's reputation are traced through succeeding centuries in the literature of England, Italy, France, Germany, and America. We have an account not only of the principal writers upon Dante himself, but also of his influence upon, or recognition by, many whose names are great in literature, politics, or art down to our own day. To us, naturally, the portion relating to England has a special interest. The dean gives us a most interesting *catena* of great names in our literature who have alluded to, or been influenced by, Dante, beginning, of course, with Chaucer, and including (among many others) Sidney, Spenser, Sir T. Browne, Milton, Jeremy Taylor, Shelley, Byron, &c. The list of those in whom Dante is rather conspicuous by his absence is also interesting: Shakspeare (in

spite of a recent theory advocated with much learning and ingenuity), Dryden, Wordsworth, and more recently Arnold, Thirlwall, Stanley, and Newman. To these may be added, from Germany, Schiller and Lessing. Finally, we have what we may call a black list of those who knew Dante, but failed to appreciate him, and in some cases vehemently condemned him, such as Voltaire, Goethe, Leigh Hunt, and Landor. *Per contra*, we find an enthusiastic admirer, where we should scarcely have expected it, in Comte, who "looked on the daily reading of a canto of the *Commedia* and a chapter in the *De Imitations* as an almost essential element in spiritual self-culture" (p. 472). The list of works on Dante is tolerably copious, but curiously indiscriminating, books good, bad (thoroughly so), and indifferent being mentioned *per simplicem enumerationem*. It is a little startling to find among "works well worth consulting" (a very restricted list, moreover), on p. 466, Mrs. Oliphant's *Dante*—a shallow piece of popular book-making disfigured in the translations (a part of the work which is, at any rate, quite original) by the most grotesque blunders in rudimentary Italian grammar. It was a pity to disturb its oblivion. Another merely superficial work, which is still more distinctly recommended, is Ampère's (so-called) *Voyage Dantesque*, "as the records of the pilgrimage of a devout worshipper to every place that had been made sacred by its association with Dante's life." It might, I think, be more accurately described by borrowing the title of a well-known work of De Maistre as *Voyage [Dantesque] autour de ma Chambre*, since it is quite evident, from some of his ludicrous blunders, that some, at any rate, of the places described the brilliant author (for he certainly is that) never visited at all.

Studies 3 and 4 are upon "Dante as an Observer and Traveller," and on "Portraits of Dante." The former has more of a "popular" character than the other studies, and displays something of the tendency which the dean had exhibited in "The Life" in vol. i. to erect elaborate conjectural hypotheses on a very slender foundation of fact. In this study, as in two or three other places in the volume (pp. 59, 138, 525), the dean recurs to his favourite conjecture that Dante not only visited England, but probably also Wells Cathedral. In vol. i. this was based on the fact that Dante twice draws a simile from the works of a clock, and, clocks being then rare, there was one of some celebrity at Wells. This argument is now emphasised by a very questionable interpretation of *Par. x.* 139, &c., that the circling dance of the glorified spirits is here compared not, as in *Par. xxiv.* 13-15, to the "inner works" of the clock, but to the "outward mechanism" by which, "as at Strasburg and Wells," a procession of figures wheels round as the clock strikes the hour. To say nothing of the somewhat undignified nature of such a comparison, it loses the force of the reference in l. 142 (as in *Par. xxiv.*, l.c.) to the visible complicated mechanism, and still more to the harmonious melody (l. 143), which—as Scartazzini observes—is much more suggestive of a *carillon* (which would also require the elaborate mechanism) than of the mere striking of the hour.

A few minor corrections may perhaps be

suggested. In *Par. xiii.* 125 we have, as in some other modern translations, the imaginary "Brissus" instead of "Bryson." It may be questioned whether this is not an error rather of Dante than of his translator. He of course knew Aristotle only through a translation, and, as I think it can be abundantly proved, probably through the *Antiqua Translatio* as printed with the works of Aquinas. He would there find (at any rate in *Post. Anal. ii.* 9) the name as "Brisso"—not, as in later translations, "Brisson"—which he probably adopted as it stood. It is twice stated (pp. 357, 421) that the first occurrence of the title "*Divina Commedia*" occurs in the Venice edition of 1554. This, in any case, probably refers to the edition of Giolito in 1555; but the assertion (though it is, I believe, to be found elsewhere) is erroneous, since the title is found in a Venetian edition as early as 1516 (see Colomb de Batines, *Bibliografia*, vol. i., p. 78). In the note on Sonnet x. (p. 219) it is stated that Juvenal is called "sage" (*il savio*) in *Conv. iv.* 13. I think it is pretty certain that the expression is there applied to Boethius, not Juvenal; since, though a loose quotation of the well-known line "*Cantabit vaneus*," &c., is there introduced by the expression "*dice il Savio*," Dante's words very closely reproduce a passage of Boethius, *De Cons. Phil. ii.* 5 *fin*, but have a much less precise resemblance to the language of Juvenal. Hence he is almost certainly quoting here from Boethius, to whom the expression *il savio* would more naturally apply. Dante does not seem to have been specially familiar with Juvenal, though he quotes him (in both cases, *Sat. viii.*), once in the *De Mon.* and once in the *Conv.* In one or two other places (e.g., *Par. xv.* 107, and perhaps *Purg. xxi.* 88) we may however suspect reminiscences.

These are but small points, and not perhaps altogether beyond dispute. The whole work is a monument of many years' devoted study, it is illustrated throughout by an unusual range of reading and culture in other fields of literature, and it is accompanied by a most copious and valuable index of subjects and names. We regret to note that the dean in the *Envoi* takes his final leave of Dante and passes on to another field of labour, in which, however, we heartily wish him health and strength to bring his work to an equally successful issue. E. MOORE.

Early Adventures in Persia, Susiana, and Babylonia, including a Residence among the Bakhtiyari and other Wild Tribes before the discovery of Nineveh. By Sir Henry Layard. In 2 vols. (John Murray.)

THE bilious politician who said he could never forgive Nineveh for discovering Sir Henry Layard may learn, by reading these volumes, that Sir Henry is a man who, without the aid of Nineveh, would have made himself known to the British public. The present work may be said to describe the base of the author's literary and adventurous career. There is some matter of importance with regard to the Karûn, the only navigable river in Persia. Sir Henry Layard has now leisure and considerable influence with Lord Salisbury. He could not use it more advantageously than by pressing upon the Foreign Office the recommendations contained in these volumes as to

the improvement and the freedom of the navigation both of the Karûn and of the great Turkish rivers, the Euphrates and the Tigris, with which the Karûn is connected.

Sir Henry Layard's life has been influenced throughout by his boyhood in Italy; but his travels began in 1839, when he and Mr. Mitford, author of *A Land March to Ceylon*, proposed to journey together. Sir Henry Layard, it seems, was not born for such concurrence; and the first touch of the strong self-assertion which makes a great part of his character breaks out at p. 16, where he seems to complain of Mr. Mitford for not mentioning his name as that of his companion. The plan of travelling together broke down at Jerusalem, when Sir Henry started off to visit Petra and other sites in the Syrian desert, and to wander among the Bakhtiyari tribes in the Karûn district of Persia. Before the author arrives—almost shoeless, and in a tattered Arab cloak, breaking through the quarantine at Damascus—he will have established with any impartial reader a character for all the best qualities of a successful adventurer—daring, brave, and cautious, with strength of arm and suppleness of speech, ready for any emergency, and at the same time a cool calculator as to the events of the morrow. Perhaps no one will enjoy so much as Sir Henry Layard does the point of contrast between this ragged and almost penniless entry and that of a later period when,

"as Queen's Ambassador to the Sultan, I entered Damascus in 1878 . . . through vast crowds of men and women of all creeds—Mohammedans, Christians, Jews, &c.—with their respective chiefs, who had come out to welcome me."

At Baghdad, the author assumed "the Persian dress," and soon observed the keen interest with which Persians regard the Turkish town of Kerbelah. This is, indeed, the Mecca of the Shiah Mohammedans, the burial-place of Ali, the son-in-law of the Prophet. From thence the little traders carry to-day, as they did forty years ago, "circular bits of earth upon which devout Shiahs place their foreheads when prostrate in prayer." Nothing is more common in a Persian caravan than to see one of these circular bits of sacred clay passed round so that each in turn may pray, westward, with his forehead pressing upon it to the ground. Persian Khans, the author notes, have a way of interpreting the injunctions of Mohammed so as to admit of great indulgence in "swallowing glasses of fiery arak." Approaching Ispahan, the author "passed through the labyrinth of walls which enclose the gardens and melon beds, the Armenian quarter of Julfa." Now that the controversy on missionary work throughout Islam is going on, it may be well to explain that in Persia the work of the Missionary Society, though nominally directed against Mohammedanism, is practically confined to the Christians, the Armenians of Julfa. There is perhaps no nobler or bolder missionary of the English Church than Dr. Bruce, who has for nearly twenty years resided at Julfa; but no one would be more ready than he himself to acknowledge the utter impossibility of any direct mission in Persia against Islam, or that his own work has been mainly among his Armenian neighbours, of whom he has educated hundreds. Sir Henry Layard says,

with reference to forty years ago: "In those days" a Christian speaking against Islam "would have caused a public tumult, and might even have been torn to pieces." The danger to anyone who should speak against Mohammed in the bazaars of Ispahan is scarcely less to-day. Apostasy carries with it a sentence of death in Persia. Even in Constantinople, so late as 1843, an Armenian, who had embraced Islam and then returned to his former faith, was executed, and his head, "covered by a European hat," was exposed in Stamboul. Sir Stratford Canning protested, and the Sultan consented to abolish the death penalty in such cases, but refused to go further. "The law as regards Mohammedans who apostatised was inexorable, and, being prescribed by the Prophet himself in the Koran, the Sultan had no power to alter or modify it."

Persian punishments have a horrible reputation. Sir Henry Layard, writing of "one of the best administrators in the kingdom," says, "one of his modes of dealing with criminals was what he called 'planting vines.' A hole having been dug in the ground, men were thrust headlong into it and then covered with earth, their legs being allowed to protrude to represent what he facetiously called 'the vines.' . . . A tower still existed near Shiraz which he had built of three hundred living men belonging to a tribe which had rebelled against the Shah."

"The sticks" with which bastinado is inflicted are rarely out of sight or out of use. With regard to two servants of one Suleiman Khan, accused of stealing a gun, the author writes:

"The unfortunate men were first subjected to a cruel bastinado on the soles of their feet until they fainted. When they had been revived by buckets of water poured upon them, they were burnt in the most sensitive parts of their bodies with hot irons. They still maintained their innocence, and only admitted they were guilty when unable to resist the excruciating agony of having packing-needles forced under their finger nails."

These travels were undertaken more than forty years ago, but they relate the manners of a country less changeable, perhaps, than any empire of the world. Parts of the work are of immediate interest in regard to commercial prospects. Sir Henry Layard, in a note, points out that "As the discovery of the passage round the Cape of Good Hope ruined the trade of Baara (Bussorah), so the passage through the Isthmus of Suez promises to revive it." The free and open navigation of the Euphrates, the Tigris, and the Karûn is for English trade a matter of high importance. It is probably a mistaken policy that her Majesty's consuls in that region are paid exclusively by the Indian Government. "The Karûn," says Sir Henry Layard, "flows through one of the richest, though one of the most neglected, provinces of Persia. These rivers are destined to become great trading highways." It is no exaggeration to say that the trade of this country in Asiatic Turkey and Central Asia would soon be doubled, and more than doubled, if the views which Sir Henry Layard was one of the first to put forth were realised by the co-operation of the Sultan's and the Shah's governments, acting in concert with those Powers of Europe which may be supposed to have interests in the Persian Gulf.

ARTHUR ARNOLD.

THREE BOOKS ON IRISH HISTORY.

The Story of Ireland. By the Hon. Emily Lawless. (Fisher Unwin.)

A Short History of the Irish People down to the Date of the Plantation of Ulster. By A. G. Richey. Edited by Romney Kane. (Longmans.)

Ethne; being a Truthful Historie of the Great and Final Settlement of Ireland by Oliver Cromwell, and certain other Noteworthy Events, from the Records of Ethne O'Connor and of Roger Standfast, Captain in the Army of the Commons of England. Edited by Mrs. E. M. Field. (Wells, Gardner & Co.)

TRULY to the making of Irish history books there at present appears to be no end. Miss Lawless's contribution to "The Story of the Nations" has certainly some advantage over its fellows, inasmuch as it is illustrated; but, for the rest, it is neither better nor worse than such of its contemporaries as owe their origin to the prevailing thirst for information on Irish matters, which it is to the interest of authors, publishers, and printers—devils alike to foster. The story of Ireland, told from the days when the country was one huge ice-field, and when icebergs played at nine-pins in Clew Bay, down to the latest phase of the Home Rule movement, and all within the compass of something less than four hundred octavo pages, is now an ordinary accomplishment, and no longer furnishes us with an argument in favour of the credibility of miracles. Unfortunately, however, these productions labour under several rather serious disadvantages, which may be trusted sooner or later to sweep them out of the field of current literature into the general limbo of waste-paper. Nor is the present one, I am afraid, likely to prove an exception to the rule. In design it is too ambitious, in execution it is loose, and in structure it is invertebrate. Its total effect on the mind of the reader, ignorant of Irish history, is to leave him in a fog. It may be all very true, all very instructive—likely, perhaps, to assist him at the next parliamentary election; but at the time, and without further light, it seems altogether unintelligible. He has no clue to its meaning. And the only consolation that comes to him is an assurance that there are no "guide posts" here—a fault inherent in Irish history. And so writer and reader together "scramble forward across these intermediate and comparatively eventless periods in order to reach what lies beyond." In this way the pages are rapidly turned over; and, it is only when we reach the eighteenth century, and Mr. Lecky holds out his hand across the quaking bog, that things become a little less intolerable. Now all this is eminently unsatisfactory, and not only unsatisfactory, but excessively annoying, considering the possibilities of doing so much better. What we want, and what we have a right to expect, is an intelligible retrospect of Irish history, and not a mere concatenation of events, or hodge-podge of facts. If it is impossible within the space at our disposal to give a complete history of Ireland, then let us recognise the fact. Let us content ourselves with its salient features, and of these give as rational an explanation as possible. Let us assume that by careful

study we may come to understand Irish history. If there are no naturally constructed guide posts, it is the very business of the historian to make them. This is his *raison d'être*. But worse even than the crudeness that marks this story is its carelessness. Independence of judgment is legitimate. The Hy-Nial race may have in early days been "a supine race," though it produced a Nial of the Nine hostages, and governed Ireland for several centuries; Edward III. may have been "the strongest and ablest of all the Angevin kings," though the school boy that ventured to say so would undoubtedly deserve as sound a flogging as he ever got for a false quantity; "clemency" may have been "the strong point" of Henry VII., but one instinctively remembers Empson and Dudley; Sir William Fitzwilliam may have been "a man of very inferior calibre to Perrot," though the statement is probably meaningless; Lord Deputy Falkland may have been "a man of moderation," though he was undoubtedly mixed up in that very nasty O'Byrne case in Wicklow; Sir Phelim O'Neill may have been nothing better than a "drunken ruffian," and have been "hanged with little regret even from his own side," though his conduct on the scaffold wanted little to make it heroic, and though his memory was long cherished in Ulster; the great rebellion of 1641 may have been "essentially an agrarian rising," though the confederates declared it to be also a religious war; the Catholic Emancipation Bill may have been won "without a shackling condition," notwithstanding the disfranchisement of the forty-shilling freeholders. But surely there was no need to confound Oswin with Oswiu, and that three times; to miscall "glibbes" "gibbes," also three times; to misspell Rinuccini's name every time; to confound two quite distinct invasions; to attribute the death of Gerald, Earl of Desmond to English soldiers; and to credit the defence of Drogheda to Sir Arthur Ashton. These are all blunders of a sort that could and ought to have been avoided; and they are all the more deplorable because the book is not altogether worthless. Nothing, indeed, could be more to the point than the following criticism on the Statute of Kilkenny:

"Weakness, especially weakness in high places, is apt to fall back upon cruelty to supply false strength; and a government that found itself face to face with an entire country in arms, absolutely antagonistic to and defiant of its authority, may easily have felt itself driven by sheer despair into some such false and futile exhibition of power."

Then, also, the account of the passing of the Act of Union is, as a summary, perhaps as near the truth as we are likely to get. The moral of the whole seems to be that Irish history is not to be written to order, and that it is not particularly interesting because it is particularly inaccurate.

Few persons were so well qualified, both from predilection and training, to write the history of Ireland as was the late Prof. Richey. His study of the Brehon laws endowed him with an acuteness of perception that enabled him to thread his way with unerring instinct through the mazes of Irish history. More than this, it taught him to appreciate the feelings of the Irish natives, and at the same

time to do justice to those efforts of the English Government which, however mistaken in design, however fruitless in results, were for the most part born of a good intention and an honest desire to civilise Ireland. Nothing is truer, in his case, than that "the study of Irish history teaches us sympathy with all parties." Always keenly alive to anything that savours of injustice and tyranny, Prof. Richey is never unmindful of the fluctuating standard of political ethics. He is content to understand and explain, but unwilling to blame. He feels that "thoroughly to appreciate the history of Ireland, or of any other country, it is necessary to sympathise with all parties—to understand their prejudices, their difficulties, and their errors." It is this sympathy, as wise as it is generous, that makes his work so useful. Even when compelled to dissent from him, as new facts come to light to change and modify our knowledge, we can never afford to neglect him; for his work is not so much a history in the ordinary sense, as an *organon* or a clue wherewith to read history. And this is just what is wanted at the present time, when so many earnest students are being attracted to Irish history. Nor is its value limited to the view he takes of Irish history in itself.

"I protest," he said, "against the method adopted by Irish historians of shutting themselves out from all the events which occur beyond a narrow local horizon. They endeavour to learn the history of this country by devoting their attention to it alone, and ignoring the rest of the world."

For all these reasons then, we are glad to receive this fresh edition of Prof. Richey's lectures from the hand of his friend, Dr. Romney Kane, who has performed his duties as editor with admirable discretion; though, for myself, I cannot help wishing that he had found courage to exclude that mongrel word "coteremporary," which had as peculiar a fascination for Prof. Richey as it seems to have for Irishmen in general. When his last illness overtook him, Prof. Richey was engaged in writing a larger history of Ireland, but of this only the first chapter was finished at the time of his death. It now constitutes the second and third chapters of the present volume.

"What I have done," says the editor, "in preparing this work for the press has been this—I have put together the two series of lectures already published, the first Edinburgh lecture, and the fragment of the history, into one connected series, divided into chapters instead of into lectures."

These alterations and additions, together with Dr. Kane's own notes, have enhanced the value of the book. The Edinburgh lecture, on "The Physical Geography of Ireland," is deserving of close attention, especially at this time, when so many wild theories are afloat regarding the natural capacities of Ireland. I cannot quote as much of it as I should like, but the following extract will furnish food for serious reflection and, I hope, lead to a perusal of the entire chapter.

"For a pastoral people, Ireland was an enviable home. There were plains with rich herbage for their cattle; the woods were full of game, and the lakes abounded with wild fowl; timber was abundant, and iron, the prime necessity of life, was procured without difficulty. But the

physical conditions, which render a country suitable for such a population, are not those which, in the subsequent stages of civilisation, are most advantageous for its inhabitants. . . . The accumulation of capital being impossible so long as Ireland remained a pastoral country, the influence of realised wealth, by which the older forms of society are broken up and transformed, was wanting, and the ancient system of society was maintained long after it had ceased to exist in the western countries of Europe. The extensive introduction of agriculture, and the attempt to develop the resources of the country, are referable to the introduction of English and Scotch settlers at the commencement of the seventeenth century; but, so manifest are the advantages of the island for pastoral purposes, that agriculture has extended solely by pressure of population; and to the present day, if the self-interest of the owners of the land were alone consulted, the country would revert to its original condition."

Despite one or two defects, to be noticed directly, Mrs. Field's little historical romance is much more entitled to serious consideration than many more pretentious works on Irish history. Naturally, and not altogether unjustifiably, there appears to be a well-grounded antipathy against the historical novel; but, perhaps, it is quite possible to carry this distrust of the desecration of history to an absurd degree. Provided the historical romance be essentially true—true, that is, not merely as regards the general facts on which it is based, but also in its expression of the spirit of the times it illustrates—then surely it is a harmless, as well as a pleasant, way of learning history. Mrs. Field has been happy in selecting for her subject the Cromwellian settlement of Ireland. The incidents of that great drama are, if I may be allowed the expression, so intense as to take away almost the opportunity for exaggeration. Cromwell himself has come and gone; the back of the "great rebellion" has been broken; the army of the Commons of England has, in large measure, been disbanded; and officers, soldiers, and adventurers are preparing to settle down on the lands assigned to them by lot. One of them, Captain Roger Standfast-on-the-Rock, has taken possession of Lara Castle, the home and property, until confiscated by the English Parliament, of Gerald O'Connor. But it is not for me to tell again this charming story, which, breathing the spirit of the time, is in miniature the history of Ireland itself. For the case of Roger Standfast and Ethne O'Connor was no new one. Love, we know, transcends all limits, is terrified by no penalties, whether contained in statutes of Kilkenny or in ordinances of Cromwell. English army after English army has invaded and devastated Ireland; but, when at last the sword has been laid aside, love has crept in between conqueror and conquered, and undone the work of statesmen and armies. Reading this little story, we shall come to understand how Ireland yet remains Ireland. How, indeed, as Spenser himself said long ago, could it be otherwise, "seeing that commonly the child taketh most of his nature of the mother"? Two generations had hardly passed away, and the children of Cromwellian planters had ceased to speak the English language. Ethne, the Roman Catholic, lays aside her father's religion, and marries the Puritan captain; but, just as naturally, and more frequently,

did the Englishman adopt the creed of his Irish wife. As for the story itself, there is a freshness and naturalness about it as delightful as the Western breezes that ruffled sweet Ethne's hair—that hair, alas! that never would keep straight, as Roger liked to see it. Not a great novel, perhaps, but pleasant, profitable, and wholesome reading; full of sympathy for what is true and noble in English Puritan and Irish Catholic alike. One or two defects there are which seem to call for notice, though they are not likely to mar the enjoyment of most readers. Ethne O'Connor may be allowed to pass; but Gerald O'Connor is a combination of names, pardonable enough in an English writer, but one which must appear intensely absurd to an Irishman for obvious reasons. Lara Castle, too, has no definite situation, as we naturally expect it to have, being the home of an O'Connor, for reasons equally abstruse to Englishmen. Ethne's knowledge of Irish history often verges on the miraculous; but then it was hardly wise to make her the mouthpiece of Ben Jonson and Phineas Fletcher's tittle-tattle about Spenser's flight from Kilkoman, notwithstanding the example of W. S. Lander to the contrary. Mrs. Field is not generally guilty of anachronisms; but it is sufficiently startling to find Lady Burke quoting Longfellow's well-known line,

"Though the mills of God grind slowly, yet they grind exceeding small,"

even if that remarkable lady had happened to possess a copy of the *Sinnegedichte* of Friedrich von Logau!

R. DUNLOP.

"Great Writers" Series.—*Life of Oliver Goldsmith*. By Austin Dobson. (Walter Scott.)

GOLDSMITH's name always suggests two poignant regrets. One is that Dr. Johnson did not keep his promise and write his friend's life; and the other is that the friend himself forbore to paint Johnson for us in that wonderful gallery of portraits, the poem "Retaliation." There we find Burke, Reynolds, Garrick, done to the life, but no Johnson. It is hard to dissipate the gloom these thoughts occasion. But Goldsmith's ill-luck has not pursued him far in this matter of biographers. He must be pronounced well provided with the means of posthumous existence. His was a hard life to live, but it has been made easy to read, which is, surely, what an author would wish. The account of Goldsmith's life and writings prefixed to the first collected edition of his miscellaneous works, published in 1801 and several times reprinted, has always been attributed to the pen of Bishop Percy, and is, whoever wrote it, a delightful sketch. It is also well charged with matter, and, indeed, most things of real import about Goldsmith, to be found in his later biographies, will also be found there. Mitford, Prior, Washington Irving, Forster, Macaulay, and Mr. William Black, have all tried their practised pens on the life of Goldsmith. And now we have Mr. Dobson, and may be glad of him.

There is a kind of confusion about Goldsmith, created by the huge difference between the loveable smallness of his character, and the loveable greatness of his works—between

the incomparable awkwardness of his life, and the incomparable felicity of his language. When we think of the man, a hundred ludicrous incidents crowd upon the memory: misadventures, buffooneries, grimaces, and absurdities; practical jokes of which he was the victim, ignominious scuffles, and numberless splutterings of vanity. He brought nothing out of Ireland, as he tells us, but his brogue and his blunders. He was ugly to start with, and small-pox had early marked him for her own. He was as poor as a rat, a wandering beggar, a luckless usher, sleeping in the same bed with the French master, a doctor out at elbows. The Church early refused him. India rejected him. Surgeons' Hall examined him and found him wanting. He never knew what it was to be respected. But he was loved, and none knew better than poor Goldsmith the value of that. Writing to his brother of his sister Jenny, who had married unfortunately, he says, "My dear sir, give me some account about poor Jenny. Yet her husband loves her. If so, she cannot be unhappy." The ragged children of Green Arbour Court, Old Bailey, loved the lodger at No. 12 and danced merrily to the music of his flute. That poor woman may well have loved him to whom one bitter night he resigned his blanket, taking refuge himself within the ticking of the mattress, which he slit open for the purpose. What sort of a night he spent inside the mattress is not known, but a morning visitor has recorded the fact that the kind-hearted doctor's efforts to get out were violent, undignified, and for a long while ineffectual. His life is, indeed, a long series of kindly follies and foolish kindnesses. His worse vice was gambling. Of course, he always lost. It is pleasant to know he was not a tippler. He was fond of boiled milk. He loved to array his ugly little person in fine garments. He died heavily indebted to his tailor and without any estate. The tailor said he knew Dr. Goldsmith would have paid him every farthing if he had lived; and so saying wrote off the whole sum of £79 as a bad debt. You may read all these things and more in Mr. Dobson's book. The "Anecdotes of Goldsmith" collected in the Aldine edition of his poems keep the reader on the titter for an hour together; and then just when he grows a little weary of all this tomfoolery and good nature, and is about to dismiss Goldsmith with something between a cheer and a groan, he remembers that this was the man whose felicity of execution was such that he wrote the *Vicar of Wakefield*, *She Stoops to Conquer* and *The Deserted Village*. Then it is that the reader takes final refuge in the irreversible judgment of Johnson "Sir, let us not remember his infirmities. He was a very great man." As Hans Andersen says, "It does not matter being born in a duck-yard, if you have been laid in a swan's egg."

Mr. Dobson gives us both sides of Goldsmith; but, most becomingly, he never lets us forget that we are reading about a very great man. That interesting creature, De Quincey, starts the enquiry, Was Goldsmith a happy man? and, after his positive fashion, answers "Yes," and for two reasons: first, he had unfailing good spirits, or what he called the "knack of hoping"; and, secondly, he had

neither wife nor child, but only his own absurd self to feed and clothe.

"How easy," observes De Quincey in his striking way, "was it to bear the brutal affront of being to his face described as Doctor Minor, when an hour or less would dismiss the Doctor Major, so invidiously contra-distinguished from himself, to a struggle with scrofulous melancholy, whilst he, if returning to solitude and a garret, was returning also to habitual cheerfulness."

Mr. Dobson, however, does not concern himself with this inquiry, and, therefore, I must not pursue it.

The difficulty that has lately arisen about the sale of the *Vicar* to divers people who bought shares of it is treated with authority by Mr. Dobson; but the subject has still the obscurity which, perhaps, can only attach to a matter of business concerning which all the facts are not known. One thing, however, appears clear—that sixty guineas was the cash value of the *Vicar of Wakefield* at the date of publication.

Mr. Dobson brings out with admirable clearness Johnson's relations with Goldsmith. The troubles of *Ursa Major*, save so far as they were inherent in his own melancholy self, were over before *Ursa Minor* commenced author. Johnson had known troubles as many and as grievous as those of Goldsmith, but they have found no historian, for Boswell, it must always be remembered, wrote of Johnson triumphant, not of Johnson militant. He had lived on fourpence-halfpenny a day. He, who was afterwards to bear undisputed sway over a thousand dinner-tables, had dined behind a screen because he was too shabby to be seen, and had many a time owed his dinner to good Mrs. Gardiner, who kept a tallow-chandler's shop in Snow Hill, or to Jack Ellis, the money scrivener behind the Royal Exchange. The worst of it, however, was all over when Johnson sought out Goldsmith. From the very first he recognised in Goldsmith the owner of an exquisite style and of an extraordinary power of literary presentation. Long before Goldsmith had written any of the things on which his fame now rests, Johnson had hailed him one of the first of living authors; and though he was always ready to criticise Goldsmith's character and conversation, he would never hear anyone say a word in depreciation of his supreme excellence as a writer.

But Mr. Dobson's book has one fault, inherent in its constitution. It is too short. You may epitomise the histories of Rome and Greece—Goldsmith, indeed, has done so—but you cannot epitomise Goldsmith. He must be read at length and at leisure. All his letters should be printed and all the stories told. To see the biographer, as you fondly imagine, leading up to some excellent jest or moving incident, and then to turn the page and not to find it, is trying.

However, an age which orders even a nine-penny book from Mudie's, so that it may save itself the expense of buying a copy at the grocery stores, may deem itself lucky when a man like Mr. Dobson, who has the whole period at his fingers' ends, chooses to tell it, as much as can be told of Oliver Goldsmith, in a couple of hundred pages.

AUGUSTINE BIRRELL.

Lectures on the Book of Job. Delivered in Westminster Abbey. By G. G. Bradley. (Oxford: Clarendon Press.)

WHAT John Colet, Dean of St. Paul's, sought to do for the New Testament, the present Dean of Westminster is doing for the Old by his expository lectures in the abbey. He has chosen that section of the older Scriptures which theologians term the Hagio-grapha, and friends of religion not less than those of literature will be thankful to him Dean Church has lately pointed out the abiding social and religious value of the Book of Psalms; Dean Bradley is, by his thorough and yet popular lecture-studies, bringing home to many the permanent human importance of Job and Ecclesiastes. Job has of course taken more hold of him than Ecclesiastes. Who, indeed, can touch Job without having "the thoughts of his heart revealed," if, at least, he has ever been arrested by the everlasting problems of life? Let no one neglect Dean Bradley's preface. We there learn a fresh debt which England owes to the Rugby of a past generation, for it was amid the engrossing duties of a Rugby master that the studies of which this volume is the ripened fruit began. To these old Rugby men the Bible was indeed the foundation of theology—was theology. And, if it be not too subtle, one may justify on this ground an otherwise unfortunate use of the term, when our author (Preface, p. xv.) offers his guidance to readers "of little leisure for independent study and unversed in theological literature"—unfortunate, I call it, because the tendency of Dean Bradley's work undoubtedly is to a literary and historical, and although deeply religious, yet absolutely untheological treatment of the Hebrew Scriptures. If he is a theologian, it is only in the sense in which Ewald is pronounced to be one by the author of a book largely inspired by him—the *Lectures on the Jewish Church*.

For the objects described in the preface it was not essential that the author should be a Hebraist. Considering the disparagement showered upon "mere Hebrew scholars" in this country, it is perhaps well for him that he does not approach the public as one of the guild. It was, however, indispensable that he should be a man of literary and even critical instincts, trained to thoroughness of study, and well acquainted with the moral and religious problems to which the author of the Book of Job was the first, or among the first, to give artistic expression. I cannot say too much in praise of Dean Bradley's style—so free from ostentation and yet so vivid, so unpedantic and yet so richly freighted with the distilled wisdom of generations of students. There are some books which can only be read with concentration; but this book, though it will reward a concentrated study, may also be dipped into standing by the fire. The side-lights which Stanley's successor throws upon the great poem are in themselves delightful. Turning over the pages one meets with illustrations which, if they cannot heighten the brilliance of the original, yet help considerably to make it sparkle for us. I need not dwell here on those from Butler, Ruskin, and Thucydides; there are others of more striking significance. Thus, it is a pleasing surprise to find a grateful mention accorded to the "wonderfully

powerful" sketches of the poet-painter, William Blake (p. 39). Most of the great painters have, in fact, neglected Job; but Dean Bradley reminds us that the "storied windows of stately churches" have not disdained the image of the great sufferer, and refers to a little-known series of windows in the Church of St. Patrice, at Rouen (p. 8). It is equally gratifying to find that no mistaken Christian zeal has prevented a recognition of the true affinity between the religion of Islam and the character of Job (pp. 40, 41); or the illustration of a grand oratorical flight of the Hebrew sage who personates the patriarch by an utterance of a not too orthodox student of nature, Tyndall (p. 236), not less than Kepler (p. 225), having caught one side of "divine philosophy." And, of course, it was impossible that one who wrote in the heart of the richest and poorest of cities, and in touch with men of all classes, should miss what the author of *Alton Locks* would have called the "democratic" tendency of the great poem. See, for instance, the sympathetic lecture on chap. xxiv., and the passage on Job's description of his present degradation (chap. xxx., 1-7), though it is fair to add, what a brilliant reviewer has overlooked, that some of the best modern parallels to the oppressed folk in Job had already been pointed out by a "mere Hebrew scholar," Heinrich Ewald (*History of Israel*, i. 227).

Of the exposition, I will only say that it is sympathetic and admirably expressed, and that it is based, happily, not on the Authorised, but on the Revised Version. The critical and historical aspects of the book are, no doubt, kept in the background; and even the ordinary reader will have to supplement this delightful book by other guidance. But lecture vii. is, from an educational point of view, excellent. How wisely this practised teacher postponed the subject of the import, age, and authorship of the book till he had accustomed his students somewhat to the unfamiliar atmosphere of the old-world poem! And when he does gird himself to the difficult task of correcting traditional prejudices, how gently and tenderly he touches them, as one who has himself felt their power! Nor does he profess to have settled everything for himself; indeed, he shows, if I may say so, a quite unnecessary hesitancy on the subject of Elihu. But I fully agree with Dean Bradley that the essential thing in the study of the Old Testament is to grasp its leading ideas (and facts). How much, how very much, is clear and intelligible; and how much more instructive to the ordinary reader is the study of Job and the Psalms as they stand than the study of the Pentateuch controversy! Great as are the issues involved in this controversy, it is not in the popular press that it ought to be discussed; and I thank Dean Bradley for calling the attention of all whom it concerns to the religious as well as poetic significance of the book of Job, which in its own day had a vast influence on Israel's choicest spirits, and has still, perhaps, an unexhausted educational value for our own time.

T. K. CHRYNE.

NEW NOVELS.

Major Lawrence. By the Hon. Emily Lawless. In 3 vols. (John Murray.)

Whitepatch: a Romance for Quiet People. In 3 vols. (Bentley.)

Castle Heather. By Lady William Lennox. (Sonnenschein.)

Una's Revenge. By Melville Gray. (W. H. Allen.)

The Haunted Harp. By Somerville A. Gurney. (Bristol: Arrowsmith.)

Dudley. By Curtis Yorke. (Jarrold & Sons.)

Miss Curtis. By Kate Gannett Wells. (Boston: Ticknor; London: Trübner.)

Dominic Penterno. By Godfrey Burchett. (Vizetelly.)

It was not an easy task to write a novel like *Major Lawrence*, *F.L.S.*, on the lines laid down by the author. On the one hand, the hero's devotion to science may seem exaggerated, and sufficient to deprive him of any title to admiration in the eyes of some readers; while, on the other hand, his apparent stifling of the human affections, and his frequent calls to India at critical moments, may serve to exasperate others. But, in our judgment, Miss Lawless has completely succeeded in drawing the character of Major Lawrence with such skill as to entitle him to sympathy in both aspects. As a scientist he has a profound reverence for knowledge, and as a man he is thoroughly human, with deep emotions at the base of a nature which might be thought shallow and erratic by superficial observers. His love for Elly Mordaunt, which grows with her growth from childhood upwards, is very effecting. With sleepless energy he watches her interests, and befriends her in her darkest periods of trial, when she has become the wife of a false, sneering, and selfish husband, who endeavours to crush all womanly tenderness out of her and her child. Little less touching is it to note the growth of an almost maternal and filial bond of affection between Lady Mordaunt and the major. This is one of those friendships which do honour to human nature. Backwards and forwards between England and the East the destiny of the gallant soldier tosses him; and with his stern adherence to duty is mingled a noble self-abnegation which makes his character shine forth all the brighter. The remaining persons in the narrative are likewise well drawn; and altogether there have been few stories published this season which may be read with such sincere pleasure, or studied with more profit. We have noticed several vagaries in spelling, such as "Jérôme" for the name of the French painter Gérôme.

The anonymous author of *Whitepatch*, whom we assume to be a lady, has wisely entitled her story "A Romance for Quiet People." It exactly fulfils this description; and, while it is in no sense inane, it is a healthy change from the ultra-sensationalism now so prevalent. The style is easy and flowing, and the work has an old-world flavour about it which is very delightful. *Whitepatch* is the name of an ancient manor in East Kent, not far from the sea. It has seen centuries of occupancy under one family; and the latest descendants of this family, to

whom we are introduced, are Colonel Dodgingstead and his granddaughter Mary, the charming heroine of the novel, who has a very original maid, one Jenny Spillet. Two ghosts also play a conspicuous part in the narrative—one of a benignant, and the other of a dark and gloomy aspect. There is a love episode, which ends happily for the heroine after a long period of obstinacy on the part of the Colonel, whose ancestors have had a fierce feud with the ancestors of her lover. Forgiveness triumphs through affection. Jenny Spillet is, perhaps, more vigorously drawn than any other person in the story. Her sayings are very amusing. "I would never let any man think he was quite sure of me," she observes to Mary, "until I was actually stitched to his back by the parson." Again, with respect to the pride of blood, "Good blood is a delicate matter to deal with, I know, though it is from being too nice that it sometimes gets thin and poor; and I know a good name is often blown away as easily as a thistle." Delivering her views upon novelists, Jenny Spillet says of Sir Walter Scott, "There is a lot of go about him. He writes like a man, and a man that sees things big." After the death of a favourite dog, she declares that if she were the Pope or the Archbishop of Canterbury she would proclaim a funeral service for animals, for "many dogs have got more goodness in them than half the Christians going." Among the heroine's domestic pets is a very funny parrot. He is in the habit of calling out, with an absurd French accent, "God the King! Go to hell, ros-bif!" But he has also pleasanter modes of salutation. *Whitepatch* is agreeable reading, and, as a whole, certainly not without promise.

Lady William Lennox has written a pleasant little story in *Castle Heather*, and the interest is kept alive by the love affairs of two heroines, one of whom is consumed with jealousy of the other. A fortune-telling gipsy is introduced, and from her reading of the horoscope of the heroines we rather expected to see Cassandra's box of evils emptied upon their heads; but, after some troubles of a not very sanguinary kind, the author lets them down very gently. This sketch is better written than many books which are far more pretentious.

Una's Revenge—"a picture of real life in the nineteenth century"—relates how at school the said Una took upon herself the odium of a base action to shield a school-fellow. She bore the burden through much tribulation, her revenge being the forgiveness of her foe. The real offender, when lying upon her death-bed, made a clean breast of the whole affair; but one has not much sympathy with this kind of hell-fire-avoiding confession. Miss Gray, as the Americans would say, is "great things, you bet," on apposite poetical quotations.

There are only eighty-five very small pages in *The Haunted Harp*, but these are eighty-five too many. If anyone can read this story and not feel that the morbid psychological style of writing started by the late Hugh Conway is not being overdone, we can only commiserate his taste. The horrible details given in chaps. xi. and xii. are simply disgusting, and answer no useful purpose what-

soever; and we strongly protest against the human form being hacked about like butcher's meat at the shambles.

Dudley is above the average of one-volume stories, both as regards literary workmanship and the narrative itself. We shall not reveal the plot; but may say that the power of self-renunciation in woman is powerfully and painfully illustrated. The women characters are far superior to the men, and are much better drawn; from which we may infer the sex of the writer. By the way, we may remind "Mr. Curtis Yorke" that it was neither St. Augustine nor Solomon who said, "Give me neither poverty nor riches."

There is something distinctly fresh and original in *Miss Curtis*. It is thoroughly American, and very quaint in its humour; while there is true pathos in the account of her own sad and ill-starred life given by the lady who furnishes the title to the story. Little Olive Cadwallader is one of the most amusing children, without being priggish, that we have met with for many a long day, and it is a real pleasure to trace her growth in womanliness and knowledge. The volume is full of clever things, and many of the sayings enshrine actual wisdom; while there is not a single conventional character in the book.

Dominic Pontorne is a strange Cornish story, in which figure both madness and murder. The tragic conclusion is well led up to, and the sketch is not without ability, albeit it may be a little too sensational for some tastes. G. BARNETT SMITH.

SOME BOOKS ON THE COLONIES.

Introduction to a Historical Geography of the British Colonies. By C. P. Lucas. (Oxford: Clarendon Press.) It is pleasing to find a clerk in the Colonial Office following in the path trodden early in the century by Stephen and Taylor, and undertaking a serious contribution to our knowledge of the foreign dependencies of the Crown. For the present volume—which is indeed somewhat slight in substance and analytical in treatment—is announced as only introductory to an "historical geography" of the Colonies, to be completed in several parts. We may say at once that this "introduction" supplies a want that has been long felt. Borrowing its doctrines from Heeren, Sir George Cornewall Lewis, and Prof. Seeley, it summarises and arranges the facts relating to colonisation from the days of the Phoenicians and Greeks down to the latest English—we cannot add German—protectorate. The subject abounds in difficulties—far more than the unreflecting might suppose. The very meaning of "colony" is matter for dispute, especially in historical discussion. Though for practical purposes it may be sufficient to use the term as comprising all those foreign dependencies that are subject to the Secretary of State for the Colonies, it seems impossible to frame a definition that shall include Ceylon but not India, Labuan but not Sarawak—nay, even Canada but not the United States. Besides his admirable clearness, Mr. Lucas's great merit in our eyes is the rigorous impartiality with which he treats the efforts at colonial empires of other nations than our own, and indicates the causes of failure or success. But it is rather as a repertory of facts and principles, than as a philosophy of history, that this little book deserves to be consulted. The maps are too small in scale and too crowded with names to be of much use; nor are we quite prepared to accept—even on the authority of the Colonial

Office—that Grinnell Land (here is a chance for those with good atlases!) is a British colony. And why do Messrs. W. & A. K. Johnston, of Edinburgh, always write it "English" colony? Lastly, in view of a second edition, we would direct the author's attention to two manifest misprints of proper names on p. 69.

Australasia: a Descriptive and Pictorial Account of the Australasian and New Zealand Colonies, Tasmania, and the adjoining Lands. By W. Wilkins. (Blackie.) How is the term Australasia to be understood? Not, says Mr. Wilkins, in its literal sense of Southern Asia. He proceeds to draw an imaginary circle to include Australia, New Zealand, the Fiji Islands, and New Guinea, together with such other groups not belonging to England as cannot be excluded from the circle. His arbitrary method of determining Australasia obliges him to include such islands as Flores, Sumba, Timor, and Timor Laut, which plainly belong to the Malayan groups. He designs his volume for use as a reading-book for advanced classes. To such, perhaps, it will be useful; but it has too much the manner and style of a school-book for the general reader. Mr. Wilkins gives a general and rather dry description of each of our Australasian colonies and their institutions, upon the whole accurate; but it might easily have been made more interesting. It is hardly necessary to state that full toleration of all forms of religion exists in Tasmania; and when we are repeatedly told of other colonies that there is no state church, we are inclined to ask, Who ever thought there was?

Wild Life and Adventure in the Australian Bush. Four Years' Personal Experience. By Arthur Nicols. (Bentley.) Mr. Nicols embodies his own experience in Queensland in the adventures of an imaginary person, Harold Bertram, the younger son of a Yorkshire squire, who at the age of twenty goes out to seek his fortune in Australia. Many writers have made us familiar with sheep and cattle runs, with mobs of ferocious bulls, buck-jumpers, dingoes, kangaroos, muderous blacks, &c.; still, if anyone wants a graphic description of station life, mixed with pleasant sketches of scenery and natural history, he cannot do better than send for Mr. Nicols's two lively volumes. The author's object in writing is to induce some of the sons of the mother-country to carry their education, intelligence, energy, and capital to Queensland, to lay the foundation of the new empire of the English-speaking race in the Southern Hemisphere; but they must be prepared for a more monotonous life than that depicted by Mr. Nicols, and must not expect to meet in the short space of a year with many of the thrilling adventures that befel Harold Bertram. Mr. Nicols does not try to smooth over any of the coarseness and squalor of bush life, and he gives us a little too much of the slang. We are amused to find it necessary to provide a *deus ex machina*, in the shape of an unexpected legacy of £4,000 from a distant relation, to enable the hero to succeed. We must conclude that, without capital, success in Queensland is not, in the author's opinion, very probable. Much may be done at home by an active, strong, hardworking and temperate young man with a fortune of £4,000.

Our New Zealand Cousins. By the Hon. James Inglis ("Maori"). (Sampson Low.) Mr. Inglis, the author of *Our Australian Cousins*, has republished in the present volume the letters he wrote for a Sydney newspaper from New Zealand in the spring of 1885. He makes the usual excuse for reproducing these fugitive pieces in book form. He yielded to the entreaties of friends, not unwillingly we imagine. We will not, however, find fault with them, or with him; and though his book certainly betrays its

origin, yet it gives an account of New Zealand both fresh and interesting. Twenty years had elapsed between the author's first and second visit to New Zealand—a long period in the life of the colony—and he must have expected to see great changes; nevertheless, the progress and advance of that interval astonished him, and he is constantly enlarging on the subject. New Zealanders have a staunch friend and admirer in Mr. Inglis. Everything they have done or are doing meets with his approval, with two exceptions: one, the wasteful method of farming too common, such as burning straw and cropping year after year with the same crop without manuring, leading inevitably to the exhaustion of the soil; and secondly, the reckless waste of timber—he found the settlers in the forest clearing their ground by simply burning, no use being made of magnificent trees or their products. Such wholesale destruction justly seemed grievous to him. If Mr. Inglis is constantly praising the New Zealanders and their works, it is at the expense of New South Wales. The people of Sydney must be a very long-suffering folk, if they are not a little nettled at being continually told how inferior they are to their New Zealand cousins. Even in the matter of slovenly farming they are no better. One feature in New Zealand which struck the author was

"the frequency of villages—the nearness of neighbours—in a word, settlement in communities, as contrasted with the isolated, detached way in which habitations are found set down, at wide, weary intervals, in most of the country districts of New South Wales. Indeed, village life, such as we know it in the old country, or as it is found in many parts of New Zealand, is scarcely known in our older colony. . . . But in New Zealand, especially in Otago, farms and fields were neatly fenced and divided. Village churches were numerous; common centres round which clustered the neat homes of village tradesmen and traders. Farmhouses were trim and neat, and adorned with gardens and orchards much more than is common in Australia. Waste places were fewer, roads were more numerous and better kept, and, in fact, rural settlement was more forward; and notwithstanding a widespread depression commercially, consequent on continued bad seasons and low prices for produce, the people looked healthy, happy, and contented, and I saw nothing to indicate any absence of the material comforts, and even the common luxuries of life."

Taken in; being a sketch of New Zealand Life. By "Hopeful" (W. H. Allen.) "Hopeful" is a lady who writes from Christ Church in New Zealand to a brother in Canada. It does not appear why she went to New Zealand; but whatever hopes she entertained in setting out were ruthlessly dispelled. Her expectations seem to have been unreasonable, and still more unreasonable are most of her complaints about New Zealand, or, at least, that very small portion of it which she saw. They amount, in substance, to little more than that New Zealand is not England over again. Christ Church is dull, the inns are not so good as at home, the shops are dearer; there are no old buildings, no cathedrals, castles or ruins; the birds are different from what they are in the old country; and there are no primroses, cowslips, or violets. Here our author is specially unreasonable, for even English gorse grown in New Zealand does not suit her. It is "gorgeous but not pleasing." This little book may serve as an antidote to some others of a different character, which cry up the colony at the expense of the mother country, and which we have always read with some suspicion. Doubtless there is truth in what "Hopeful" says; and her lists of prices, and advice as to who should or should not emigrate, will be useful.

History of the Boers in South Africa; or, The Wanderings and Wars of the Emigrant Farmers,

from their leaving the Cape Colony to the Acknowledgment of their Independence by Great Britain. By George McCall Theal. (Sonnenschein.) We cannot agree with Mr. Theal that there was any want of a detailed history of the Boers, still less of the first half of it, if we may so call the period up to the first acknowledgment of their independence in 1854. It is difficult to understand why he should have confined himself to this earlier history, when the latter portion, with the Zulu war, the annexation of the Transvaal, the revolt of the Boers of the Transvaal, the war which followed, the brilliant and crowning victory of Majuba Hill, and the final acknowledgment of their independence is so much more striking and picturesque. Mr. Theal's work is more of a chronicle than a history; events are detailed in order and at great length, so that he fills near 400 pages. How many volumes would he have required if he had carried down his chronicle on the same scale to the present time? The author has consulted every possible authority on his subject, and has spared no pains to make his narrative accurate. We must also do him the justice to say that he fully bears out the determination he expresses in his preface, to be strictly impartial. He gives all parties their due; and it is easy to gather that the prime motive which urged on the Boers in their migrations was their desire to treat the natives in their own way, and not according to English notions and sentiments.

NOTES AND NEWS.

THE Rev. W. Denton, whose death was announced last week, had been engaged for some years upon a history of England in the fifteenth century. A portion of this work, complete in itself, and dealing with the social condition of the country shortly before the Reformation, had been finished, and will be published in the course of a few weeks by Messrs. Bell.

THE letters of Dorothy Osborne to Sir William Temple, with an introduction and notes by Edward Abbott Perry, will shortly be published by Messrs. Griffith, Farran & Co. These letters were written by Dorothy Osborne in 1652-54, during her long and romantic engagement with Sir William Temple. They not only tell a very interesting old-world love-story, but also give a complete and accurate picture of certain phases of social life of the seventeenth century. It was of these letters—some few of which were published in an appendix to Courtney's *Life of Temple*—that Macaulay said "He would gladly purchase equally interesting billets with ten times their weight in state papers taken at random."

MESSRS. GRIFFITH, FARRAN & Co. also announce *The Silver Wedding*, in commemoration of the silver wedding of the Prince and Princess of Wales, giving a short account of the lives of the Prince and Princess, with illustrations of the chief historical events in which they have taken prominent part during the last twenty-five years; a cheap edition of Baron Maudat de Grancy's *Cowboys and Colonels*; new editions of the *Imitation of Christ* and the *Christian Year*, handsomely printed, in crown octavo, on good paper; *Uncle Charlie's Babies' First Book*, uniform with the *Babies' Museum*; and *Games for Boys and Girls*. Also the following monthly volumes of the "Ancient and Modern Library": *Law's Serious Call to a Devout Holy Life*; *Platina's Lives of the Popes to the Accession of Gregory VII.*; *Giles Fletcher's Victory of Christ*; and the first Prayer-Book of Edward VI.

THE *Library of American Literature*, from

the *Earliest Settlement to the Present Time*, on which Mr. E. C. Stedman and Miss Ellen Mackay Hutchinson have been at work for several years, is to be published by subscription by Messrs. Charles L. Webster & Co., of New York. Each of the ten octavo volumes will contain over 500 pages; and among the 150 full-page portraits (fifteen in each volume) will be many noticeable for their intrinsic value or great scarcity. The arrangement of volumes is as follows: vol. i., "Early Colonial Literature," 1607-75; ii., "Later Colonial Literature," 1676-1764; iii., "Literature of the Revolution," 1765-77; iv., "Literature of the Republic—Constitutional Period," 1788-1820; v., "Literature of the Republic," 1821-34; vi., vii., viii., "Literature of the Republic," 1835-60; ix., x., "Literature of the Republic," 1861-87 (representing the writers that have arisen since the beginning of the Civil War). Six of the ten volumes are now ready.

MR. SPENCER BLACKETT, successor to Messrs. J. & R. Maxwell, will publish immediately Mr. James Stanley Little's new book, *Whose Wife shall she be?*

TWO new one-volume novels are announced by Mr. Elliot Stock for immediate publication: *In Love and Honor: a Story of Scotch Country Life*; and *On Hauleys*; or, *Wheels within Wheels*, by Mrs. Caumont.

More than he Bargained For, a tale of life in Madras, by J. R. Hutchinson, will be issued next week by Mr. T. Fisher Unwin.

THE forthcoming number of the *Scottish Review* will contain a number of opinions on the subject of Scottish University Reform, by Prof. Knight, of St. Andrews, and other authorities; and an article on "Scotland in Early Times," by the Lyon King at Arms.

THE second number of the *Quarterly Review of Jurisprudence*, to be published in the course of the present Hilary term, will contain the following articles: "The Court of Chancery," "The Want of an Appeal from the County Courts," "The Law Lectures at Gresham College," "The Amalgamation of the two Branches of the Profession, from an Irish Point of View," and "The Withdrawal of Calendars and Indices from the Record Office."

"CHARLES ROBERT DARWIN" is the title of a paper by the Rev. S. Fletcher Williams, in the January number of the *Central Literary Magazine* (Birmingham: Cornish), chiefly dealing with the revolution effected by Darwinism in all departments of human knowledge, and with its bearing on the progress of religious ideas.

THE Autotype Company has now executed in its very best manner the facsimile of the document with the signatures of John Harvard and his brother, of which details were given in the *ACADEMY* of December 10. Those persons who may desire to purchase copies of the facsimile are requested to communicate at once with Messrs. Pawsey & Hayes, booksellers, Ipswich.

MR. GEORGE J. ROMANES will, on Tuesday next (January 17), begin a course of ten lectures at the Royal Institution, entitled "Before and after Darwin"; Mr. Hubert Herkomer will, on Thursday (January 19), begin a course of three lectures—(1) "The Walker School," (2) "My Visits to America," and (3) "Art Education"; and Lord Rayleigh will, on Saturday (January 21), begin a course of seven lectures on "Experimental Optics." The Friday evening meetings will begin on January 20, when Lord Rayleigh will give a discourse on "Diffraction of Sound."

A TRANSLATION.

AN ANONYMOUS MODERN GREEK SONG.

Πάντα νά 'μεθα μαζί,
Τί μεγάλη εὐτυχία!
Τί μικρός ὁ χωρισμός,
Τί μεγάλη δυστυχία!
μακρὰν 'πὸ σέ, ψυχῇ,
Τί τὴν θέλω; τί τὴν θέλω τὴν ζωή;

Δακτυλὶδ' ἀπὸ μαλλιά
μόν' ἀνάμνησις μοῦ μένει.

"Ἄλλο δὲν παρηγορεῖ,
Αὐτὸ μένει καὶ μαραίνει . . .

Μακρὰν ἀπὸ σέ, ψυχῇ,
Τί τὴν θέλω; δὲν τὴν θέλω τὴν ζωή!

COULD you ever near me be
What a blissful life of gladness!
But to part so tries the heart,
Fills it with such utter sadness!
Yet, love, when far from thee,
Why is life, ah! why is life still dear to me?
Just a ring of braided hair
Is the only gift remaining.
Nothing else can comfort me—
Lustre-less yet love-retaining . . .
And yet so far from thee
Why live longer? Life no more is dear to me!

GEORGE GORDON HAKE.

OBITUARY.

MR. JOHN ANDREWS DALE, M.A. of Balliol College, who died at Oxford on Thursday, January 5, at the age of 71, was a man of great and varied learning, although, in consequence of his retiring habits, he was but little known outside the circle of his immediate friends.

Mr. Dale was several times examiner in the mathematical and natural science schools, and was a student of physics when such branches of knowledge were but little studied in the universities. Besides the learning necessary for these public functions which he occasionally discharged at Oxford, he was an excellent philologist of the old school, acquainted with many languages—Arabic and Turkish among the number—and an enthusiastic student of Anglo-Saxon. Moreover, he had a wide knowledge of both ancient and modern history.

He had planned many works, and in two had made some progress—one dealing with the manner of computing time among various nations, the other on the derivations of English place-names. We can only regret that a man of such solid attainments should not have obtained any of the more valuable pieces of preferment in the gift of the university.

MAGAZINES AND REVIEWS.

THE January number of the *New Princeton Review*—published in this country by Messrs. Hodder & Stoughton—opens with an article by Prof. Rhys, entitled "Race Theories and European Politics," which we commend to all those who have taken interest in the recent discussion on the primitive home of the Aryans. Prof. Rhys here summarises with admirable clearness the Teuto-Scandian theory of Penka, shows its relation with the general questions of ethnology and philology, and suggests certain practical conclusions connected with modern politics. Other articles in the number are also worth reading, especially Mark Twain's reply to Mr. Brander Matthews upon the piracy of English publishers.

THE *Theologisch Tijdschrift* for January contains an interesting notice of Hugo Sommers' "Individualismus oder Evolutionismus?" by P. R. Hugenoltz; an essay on the narratives of the Resurrection, by J. G. Bockennoogen; and—which should attract many readers—a survey, by Kuemen, of the most recent phases of the

criticism of the Hexateuch. The writer remarks that

"Dillmann places us before a mere literary problem, and, although he cannot conceal the fact that the questions treated of are deeply concerned with the history of Israel and of its religion, yet he makes no effort at all to bring out its historical significance, to shed the light of history on the questions. The most singular point is that he takes credit to himself for this."

Progress, thinks Kuenen, is impossible on this road. W. O. van Manen reviews Lipsius' "Die apocryphen Apostelgeschichten"; and Kuenen notices very favourably vol. i. of Dr. Swete's edition of the Septuagint, and Dr. Wickes' "Treatise on the Accentuation of the Prose Books."

CORRESPONDENCE.

THE ENGLISH GAWAIN-POET AND "THE WARS OF ALEXANDER."

London: Jan. 7, 1888.

I do not know whether anyone has hitherto called attention to certain significant coincidences in diction between the Middle-English "Wars of Alexander" and the works of the Gawain-poet (viz., "Sir Gawain and the Green Knight," and the three alliterative poems called by Dr. Morris "The Pearl," "Cleanness," and "Patience"). As, however, Prof. Skeat, in the preface to his admirable edition of the "Wars of Alexander," gives no hint of any remarkable affinity between this poem and those just mentioned, and as the most striking of the coincidences referred to has obviously escaped his notice, it may be assumed that the facts are at any rate not so well known that it is needless to call attention to them.

In the "Wars of Alexander," l. 1154, the reading of the Ashmole MS. is—

"Pe pure populande hurle . passis it umbi."

In his note to the passage, the editor says that "Hurle is shown by the alliteration to be an error for *purle* or *perle* (as in Dublin MS.)." He has apparently overlooked the fact that the poem called "Patience" has the same peculiar phrase, and in the form which he condemns as incorrect. In l. 319 the poet makes the prophet Jonah say:

"Pe pure poplande hourle playes on my heued."

The law of the alliterative verse does not require us to adopt the reading of the Dublin MS., as three stave-rimes are a sufficient number for a line. There are often four, but this is not at all imperative. The line immediately preceding that

quoted from the "Alexander" contains a non-alliterating substantive as the last word of the first hemistich:

"Pe Wawis of pe Wild see . apon pe wallis betis."

I therefore believe that *hurle* is the true reading, and that the *perle* of the Dublin MS. is a corruption due to the wish to complete the alliteration.

The fact that so singular a phrase occurs both in the "Wars of Alexander" and in the writings of the Gawain-poet is certainly noteworthy. So far as I know, neither the exact expression, nor anything very like it, is found elsewhere in Middle-English poetry, so that it does not seem to be a mere epic formula. If it does not imply unity of authorship, it must be due to imitation on one side or the other, or else to copying on the part of both writers from a common original. Which of these hypotheses is to be preferred is a question that requires an extended comparison of the vocabulary of the "Wars of Alexander" with that of the Gawain-poet.

In order to establish the existence of any specially close relation between the author of the "Wars of Alexander," and the author of "Gawain" it is not sufficient to adduce, as could easily be done, a long list of words common to both. This would prove merely, what is already well known, that they belong to the same poetic school. Dr. Morris's glossaries to the writings of the Gawain-poet cite many parallels from the "Wars of Alexander," and Prof. Skeat's glossary to the latter cites many parallels from the former. What I wish more particularly to insist upon is that in a considerable number of cases the words that are common to the two authors are found nowhere else, or at least very rarely elsewhere, in Middle-English literature. The following examples are the result of a very hasty comparison of Prof. Skeat's glossary to the "Wars of Alexander" (WA.) and Dr. Morris's glossaries to the writings of the Gawain-poet (GP.). The word *ossen*, to show, and its derivative, *ossing*, are found four times in WA., and once in GP.; and nowhere else. *Ethen* (a derivative of *oath*) to conjure, occurs once in WA., twice in GP., and, as Prof. Skeat says in his note, not in any other instance. *Runisch*, *renisch* (explained variously as "strange," "furious"), and its adverb *runischly*, *renischly*, are found six times in GP. and three times in WA.; Stratmann gives no examples except those from GP. *Rakente*, chain, is found once in GP. and twice in WA.; other writers use only the compound *rakente-e*, *rakenteie*. The word *tolc*, *tolc*, in the sense "man, knight," is found seventeen times in WA., nine times in GP. The glossary to the "Troy-book"—a work which Dr. Morris was once disposed to assign (erroneously, as I believe) to the Gawain-poet—gives one reference to the word. I do not know of any other example. The verb *salpen*, to defile, occurs five times in GP. (its compound *bysalpen* once), and once (spelt *solp*) in WA.; apparently not elsewhere. *Honischen*, to dishonour (cf. *Honi soit qui mal y pense*), occurs once in GP., twice in WA.; Mätzner quotes only the former. *Founce*, *founs*, bottom (a word not given in Stratmann), occurs twice in GP., and once in WA. *Asperly*, fiercely, which is elsewhere somewhat rare, is found six times in WA., and once in GP. *Freke*, "man, knight," though not particularly rare in Middle-English poetry, deserves notice for its frequent occurrence both in GP. and in WA.; in the former it occurs eleven times, in the latter fourteen times.

I could give many more instances of this kind, but probably it has been sufficiently proved that there exists a very intimate relation between the vocabulary of the author of the "Wars of Alexander" and that of the author of "Gawain." In general tone and style, also, it appears to me that the two writers—if, indeed, they be not one—are closely akin. The resemblance between them is far greater than that which exists between either

of them and any of the other works belonging to the same school—the "Morte Arthur" or the Troy-book, for example; and it must be remembered that this resemblance is obscured by the fact that our present copies of them probably differ widely in date, and certainly in dialect. I have no time for the careful investigation which alone could entitle one to speak with confidence as to the precise interpretation to be given to the facts I have pointed out; but at present I strongly incline to the conjecture that the "Wars of Alexander," the "Gawain," and the three religious poems are ultimately (i.e. in their original form) of the same authorship.

Before closing this letter I may mention a small mistake which has met my eye in turning over the excellent glossary to the "Wars of Alexander." The word *tymbre*, crest of the helmet, is explained as "lit. timber, the crests being originally of wood." The word is the French *tymbre*, from Latin *tympanum*, used in the same sense. The Teutonic word *timber* means building material, and a Middle-English writer would no more have spoken of a "timber" helmet-crest than of a "timber leg."

HENRY BRADLEY.

"WASA" AND "CERN."

London: Jan. 10, 1888.

Mr. Stevenson's criticism on my identification of Wasa=River Isis appears to me to be a good example of the mistake of working backwards from current forms of place-names, and arguing that they must appear in such and such a shape at a given date. The only proper method, as I maintain, is to start with the old name and work downwards to the current form. Ancient place-names in England (and, for the matter of that, everywhere), unhappily, can not be brought under any hard-and-fast rules of etymology, for there is an important series of factors which also enter into the equation—viz., dialecticism, phoneticism, ellipsis, and so forth. If it were worth while, one could easily draw up a list of modern place-names, the identity of which with ancient names of unexpectedly dissimilar appearance is undisputed. This very Fyfield="Fif-hida" (five hydes) is a capital specimen.

As for the original meaning of "Wasa," probably Mr. Stevenson is right in referring it to *ooze*. I do not challenge it, as it does not concern the suggestion I make—that "Wasa" is "Isis." Anyone who looks at the O.S. map of Berkshire will perceive that Fyfield lies directly south of the Isis and directly north of the Ock, each river running eastward. Now the boundaries of this land start at Ydel's island, then reach the River Ock, and eventually pass "along the hollow brook into Wasa" (not "the Wase"—there is no article, nor is it customary to use articles when rivers are mentioned in boundaries), and so "along Wasa to Ydel's island again." Let it be observed that whatever "Wasa" may be—ooze or river—there is a hollow brook running into it, and an island in it. Now the Rivers Isis and Ock are the only two important watercourses which help to make up the Fyfield boundaries; and we should expect naturally, indeed imperatively, to find the Isis appearing in some form or other in a detailed account of these boundaries. Instead of "Isis" we find "Wasa" under conditions which preclude any other deduction than that they are identical. Possibly in Isis=Wasa=ooze, we see the real meaning of the river's name—a sluggish, oozy, not swift, but gently flowing river. May not the result stand thus:

Wasa=[w]ooze=[w]isis.

I desire here to remind your readers of the important fact that *Wasa*, *Wase*, or *Wæse* occurs, so far as I know, only in the boundaries of Cumnor (*Chr. Abingd.* i. 268); Fyfield (i. 233, 324); Earmundeslei=Appleton (i. 101, 260);

and Buckland (i. 243, 244). All these four sites lie along the sloping south bank of the Isis, in Berkshire, and their extreme distance by water is upwards of ten miles. Can Mr. Stevenson produce any evidence of a ten-mile-long fen, ooze, or stagnant pool boundary of these four parishes; or, in fact, any kind of water or land boundary common to them other than Isis herself? Notwithstanding that *Wasa* may= ooze (cf. also *Wasser*, German=water; *vase*, Fr., and *vasa*, Portug.=ooze or mud), it is not impossible that it is after all a river-god's name; for *Wasinga-tune* and *Wassan-ham*, sites occurring in the same chronicle, may be outlying colonies, whose settlers looked to *Wasa* as their tutelary genius.

So far, therefore, from accepting Mr. Stevenson's *ex cathedra* dictum, that by the Abingdon History I might have discovered that my "identification is altogether wrong," I submit, with all deference to him, that the History confirms my position. I never said that "Wase and Thames were two names for the same river," but I maintain that "Wasa" is the early and the only "early form of the name 'Isis.'" Where *Wasa* ends Thames begins.

I am happy to inform readers of the ACADEMY that one branch of the River Ock was named "Cern" (see *Chr. Abingd.* i. 250, 251). In a charter of Eadwig, A.D. 958, of land "æt Cern" to Kenric, the boundaries use "Cern" as a river—as well as a place-name. Stevenson call this place Cerne in Dorsetshire! There is no evidence connecting Cerne in Dorset, with Abingdon; but, I believe, it is Charney-Bassett, near Faringdon, on the River Ock, in Berks, and near West and East Hanney, which locality is mentioned in the boundaries (i.e.) as Aniges, and Haniges ham. If this derivation be conceded, a gleam of light is thrown upon the signification of the names of the neighbouring Cherbury Camp and Charlock Farm. In Walker's map, and others, Charney-Bassett is a veritable island—Charn-ey, on the Ock. Here one is tempted to show how purely generic this word "Cern" is, for a river, cf. Cerne-abbas, on the River Cerne, in Dorset; and North and South Cerney, near Cirencester, on the River Churn, anciently Corin, perhaps connected with to *churn*—i.e., to froth and agitate. But he who will edit for us a list of river- and stream-names to be supplied by county antiquaries will confer untold benefits on students of the early history of England, and supply a want shamefully neglected by all dictionary makers, who are blind to the fact that the names of persons and places and rivers belong vitally to a language. No dictionary that ignores this fact can be considered completely representative.

WALTER DE GRAY BIRCH.

THE REGULATIONS OF THE RECORD OFFICE. Wimbledon: Jan. 6, 1888.

I perceive that in the ACADEMY of December 17 credit is deservedly given to Mr. Maxwell Lyte for having relaxed a rule formerly in force at the Record Office, whereby the number of documents supplied to a reader at one time was restricted to three. But, if the Master of the Rolls and the Deputy Keeper really wish to attract students to the Record Office, would they not do well to rescind the edict of rather recent date prohibiting the use of ink there? Readers are now restricted to the use of pencil, which soon becomes obliterated. Everything has to be copied out in ink at home, and the labour either of copying or of taking notes at the Record Office has been doubled, and more than doubled. That will not tend to encourage study there.

J. H. RAMSAY.

[It seems evident that the use of ink at such a place as the Record Office might furnish the means for serious injury to the original docu-

ments consulted—not only through accident or mere mischief, but even from deliberate intention to obliterate.—ED. ACADEMY.]

"MORT," "AMORT."

Pisa: Jan. 4, 1888.

Having noticed in the ACADEMY of December 31 a letter by J. Gonino on the words "smort" and "smorta," I beg to refer the writer to the following verses in Dante:

"Incomincio' il poeta tutto smorto."
Inferno, canto iv.

"Quant' io vidi due ombre smorte e nude."
Inferno, canto xxx.

"L'anime che si fur di me accorte
Per lo spirar, ch' io era ancor vivo
Maravigliando diventaro smorte."
Purgatorio, canto ii.

Bembo, in his *Intorno alla volgar Lingua*, says "Molto diverso sentimento hanno — e ce — morto e smorto la quel voce da smorire si forma."

In all these instances the word "smorto" is used in the sense of "pale." A. B.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, January 16, 5 p.m. London Institution: "The Ancient Eastern Empire," by the Rev. W. Benham.

6 p.m. Royal Academy: Demonstration, "The Foot and Leg," by Prof. J. Marshall.

8 p.m. Royal Academy: "Painting," V., by Mr. J. E. Hodgson.

8 p.m. Victoria Institute: "The Aborigines of Australia, their Ethnic Position and Relation," by Dr. Fraser.

8.30 p.m. Geographical: "Exploration of the Rio Doce, Brazil," by Mr. W. J. Stead.

TUESDAY, January 17, 8 p.m. Royal Institution: "Before and after Darwin," by Mr. G. J. Romanes.

7.30 p.m. Statistical: "Progress, Organisation, and Aims of Working-Class Co-operators," by Mr. B. Jones.

8 p.m. Society of Arts: "The Colonies and Dependencies of the Netherlands," by Mr. A. J. R. Trendell, C.M.G.

8 p.m. Civil Engineers: Discussion, "The Use and Testing of Open-hearth Steel for Boiler-making," by the late Mr. Hamilton Goodall.

8.30 p.m. Zoological: "A Collection of Mammals obtained by Emin Pasha in Central Africa, and presented by him to the Natural History Museum," by Mr. Oldfield Thomas; "The Lepidoptera received from Dr. Emin Pasha," by Mr. Arthur G. Butler; "The Shells of the Albert Nyanza, Central Africa, obtained by Dr. Emin Pasha," by Mr. Edgar A. Smith; "Some New Lepidoptera from Kilima-njaro," by Mr. A. G. Butler.

WEDNESDAY, Jan. 18, 5 p.m. Royal Academy: Demonstration, "The Knee and Thigh," by Prof. J. Marshall.

8 p.m. Society of Arts: "Methods of taking the Ballot," by Messrs. John Leighton, James Withers, and John Imray.

THURSDAY, Jan. 19, 8 p.m. Royal Institution: "The Walker School," by Prof. H. Herkomer.

6 p.m. London Institution: "Material of Music, VI., Cultivation," by Mr. W. A. Barrett.

8 p.m. Royal Academy: "Painting," VI., by Mr. J. E. Hodgson.

8 p.m. Linnean: "Influence of Light on Protoplasmic Movement," by Mr. Spencer Moore; "Studies of the Mochrochires (Humming Birds and Allies)," by Dr. K. W. Schufeldt; "New British Plants," by Mr. W. H. Beeby.

8 p.m. Chemical: "Morindon," by Mr. T. E. Thorpe and Mr. W. T. Smith; "Manganese Trioxide," by Mr. T. E. Thorpe and Mr. F. G. Hambley; "The Theory of the Vitriol Chamber Process," by Prof. Lunge; "Coal Distillation," by Mr. Lewis T. Wright.

8.30 p.m. Historical: "The Despatches of Prince Henry of Monmouth during the War in Wales (1405-6) and the Treaty of Surrender by the Welsh Chieftains," by Mr. F. Solly Flood.

FRIDAY, Jan. 20, 5 p.m. Royal Academy: Demonstration, "The Trunk," I., by Prof. J. Marshall.

8 p.m. Philological: "A Dictionary Evening," by Dr. J. A. H. Murray.

9 p.m. Royal Institution: "Diffraction of Sound," by Lord Rayleigh.

SATURDAY, Jan. 21, 8 p.m. Royal Institution: "Experimental Optics," I., by Lord Rayleigh.

SCIENCE.

The Mammoth and the Flood: an Attempt to confront the Theory of Uniformity with the Facts of Recent Geology. By Henry H. Howorth. (Sampson Low.)

Most geologists know that Mr. Howorth has been considerably exercised of late years about the history of the mammoth, especially as to the precise way in which its disappearance from the living world was effected. In the volume under review he has collected a remarkable mass of information on this subject—partly scientific and partly legendary, some of it extremely curious, and for the most part pleasant enough reading. At the outset he connects the word "mammoth" with "Behemoth"; and, having settled this bit of etymology, he brings together—in some cases from most out-of-the-way sources—scraps of lore about griffons, and dragons, and giant's bones. After this preliminary skirmish, he falls to the attack of his subject in earnest.

It was Cuvier who first showed, in 1796, that the mammoth was an extinct species of elephant. For this species he subsequently suggested the name of *Elephas mammothus*—a name which he abandoned, however, in favour of Blumenbach's term, *E. primigenius*, by which the creature is still known to every naturalist. If the mammoth were an object of purely scientific interest, we should probably know much less about it than we do; for, though its remains are widely scattered over parts of Europe, yet the great repositories of its bones are situated in the inhospitable tundras of Northern Siberia, which few scientific investigators could visit—or would care to visit if they could. Fortunately, the tusks and teeth of the quaint beast possess considerable economic value. From the tenth century, if not earlier, this fossil ivory has been an object of eager quest, and it is still collected and utilised in larger quantities than most people imagine.

It is not, however, simply the bare bones of these primeval elephants that are heaped together in the arctic charnel-houses. Thanks to the antiseptic properties of the ice in which they are entombed, the very carcasses have been in some cases fairly preserved; and if our museums of natural history contain no mummies of the mammoth, they at least possess, among their most valued treasures, samples of its hide and hair. How these carcasses have been discovered, and set free from their frozen tombs, forms one of the most interesting stories in Mr. Howorth's volume. Nor is it scarcely less interesting to follow his narrative of the discoveries of mammoth bones in localities more familiar than the remote regions of Siberia. For the relics of the old shaggy-haired and curved-tusked elephant are found, in greater or less abundance, over a large part of Eastern and Central Europe—not, it is true, in frozen ground, as in the Siberian wilds, but scattered through the ancient river-gravels or buried in ossiferous caverns, associated with the relics of other pleistocene mammals and of palaeolithic man.

The great problem which Mr. Howorth sets himself to solve is how the mammoth and many of its contemporaries became extinct. There is no blinking the fact that the extinction does present some serious difficul-

ties; but few geologists will be disposed to get over these difficulties by means of the bridge which our author has constructed. Mr. Howorth believes—and the prime object of the volume is to support this belief—that the phenomena can only be explained by invoking a sudden cataclysm whereby a great rush of waters swept far and wide over Northern latitudes, accompanied throughout Northern Siberia by an abrupt and permanent reduction of temperature. The arguments by which he supports his views are unquestionably ingenious and worthy of thorough discussion; yet, after all, they are not unlike certain views which were current in geological circles long ago, and which, after patient consideration for years, were abandoned as untenable.

Whatever may have been the state of opinion in the past, most geologists, in these latter days, recoil from the invocation of a cataclysm in order to explain phenomena which, though perplexing, seem capable of more or less satisfactory elucidation on less abnormal principles. Mr. Howorth's reversion to the teachings of the old catastrophic schools may, perhaps, be partly explained by the fact that he passed much of his early life in Lisbon, in what he calls "the very focus and kernel of the famous cataclysm." But how much greater than the Lisbon catastrophe must have been the gigantic disturbance which he requires for his present purpose! He is well aware that the interpretation which he favours is directly opposed to the arch-principle of modern geology, or what he calls "the superstition of uniformity"; but he thinks that the pendulum of scientific opinion, after having executed an excursion of great amplitude in the direction of uniformity, shows signs of swinging back to its former position. We do not deny that such a tendency may be detected; but we believe that it is much slighter than Mr. Howorth seems to think. At any rate, it will not be easy to get geologists to admit, with our author, that "for many years past geological reasoning has been vitiated by being tied to metaphysical premises"; that Lyell's view of uniformitarianism, though perhaps a trifle overstrained now and then, is a "grotesque exaggeration," and "has very greatly impeded the development of the science." Nor are geologists, as a body, either so dishonest, or so dull-witted, as to "first formulate a law, and then to bring the facts within it." Geologists, like most other people, no doubt, need to review their opinions from time to time, and should be grateful to anyone who honestly spurs them to the work, however unpleasant it may be; but we feel satisfied that no amount of revision will disclose such radical error in their philosophy as Mr. Howorth believes he can detect.

Having satisfied himself that the period during which the mammoth lived was suddenly brought to a close, in many latitudes, by a cataclysm of appalling magnitude, our author proceeds to identify this catastrophe with the great flood of human tradition. On this subject, he very justly observes that it is most irrational "to refuse credence to a story because it is contained in the Bible." But while cordially agreeing with this axiom, we trust that the

general body of geologists are not guilty of such unreasonableness. To believe, however, in a wide-spread deluge is one thing; to believe that such a deluge caused the extinction of the mammoth is quite another matter. Biblical students, not less than men of science, have yet to learn that the disappearance of the mammoth was an event that had any direct connexion with the Noachian Flood.

F. W. RUDLER.

CORRESPONDENCE.

A DIONYSIAC ETRUSCAN INSCRIPTION.

Barton-on-Humber: Dec. 12, 1887.

The Inscription Gamurrini, No. 30, "fufun-sulpaxiesvelousi," affords a good instance of the different methods of Etruscan interpretation. Schaefer renders Fabretti, No. 2250, which is identical except in one letter:

"Dem Fufuns weilt (dies) Vel Pachies."

Corssen renders Fab. *Primo Sup.*, No. 453, which is very rudely scrawled on a rhyton with a mule's head:

Fufun *Pachies* *Vel. C.* *Lithi*
"Bacchicum [poculum] Pacii Veli Gati fili Lartia matre nati."

Deecke renders the three inscriptions:

"Libero (eig.-ri) Velus Pachius (hoc) donat."

The Germans read *clai*, which, according to Deecke, "=*clui*, 'donat'"; and suppose that some totpot called Pachies, who, it would seem, was dedicating cups to Bacchus in various parts of Italy, is referred to. There is, I believe, a Samnite name "Pacius." Gamurrini utterly rejects the reading *clai* (and the copy inscriptions seem to quite bear out his view), and describes the inscription in question thus: "Sotto il piede di una tazza dipinta a figure rosse, rappresentanti un satiro con una capra." He renders it, on Indo-European principles:

fufun *sul* *paxi* *es vel* *cudi*
"Fufuns! solus Bacchus es fortiter gaude."

Since I regard this latter method as being, notwithstanding the recent efforts of Prof. Moratti, out of the question, I shall not discuss its application here. The statements in inscriptions are generally simple enough; and any rendering that is harsh, obscure, roundabout, or grotesque, stands self-condemned.

We have here a Bacchic cup bearing a representation of a satyr and a goat. Such representations were common enough in Etruria, and particularly at Vulci, whence No. 2250 came. On vases from Vulci we find such scenes as satyr riding on goat; Dionysos, satyrs and goat; Dionysos holding the two halves of a torn kid, &c. It would not, then, be an extravagant supposition to imagine that this inscription, like scores of other Etruscan inscriptions, simply mentioned the beings depicted, or who were connected with the cup, or both. In short, if we imagined the inscription to read, "The (Cup) of the Wine-god, Satyr and Goat," we should, I think, be quite in accordance with abstract probability. And this is just what I submit, without any dogmatism, it really does mean. I read:

fufun-s-ul *paxi-s-vel*
"Wine-god-the-belonging-to: Bacchanal-and Goat."

1. *Fufun*. The wine-god in question is, as shown on a well-known mirror, the son of Semla-Samlath, not a native Etruscan divinity. Corssen's objection that this name could not represent the Greek *Béβαιος*, because the Gk. and Lat. *b* = Et. *p*, never *f*, is based on a misapprehension. It is a question of script. *F* is the last and latest letter in the Etruscan

alphabet, and the name is older than the letter. We thus obtain:

Greek — B-ú-β-λ-ι-ο-ς-ι
Earlier Et. { *P-u-p-l-u-n-u*
 { *φ-u-φ-l-u-n-u*
Later Et. — *P-u-f-l-u-n-u*

As to the Phoenician Dionysos of Byblos (*vide* Hehn, *Wanderings of Plants and Animals*, Eng. edit. by Stallybrass, pp. 448-9), students, with the exception of Mr. A. Lang, are now agreed on the question of the Oriental origin of the Dionysiac cult. Mr. Lang, in his latest work, describes it as the product of an (hypothetic) era in Greece, when people worshipped "goats and deer and bulls." While, on the one hand, the evidence of the foreign character of the cult is overwhelming, on the other, the historical evidence of the goat-worshipping age is simply nil.

2. -S. = "the" (*vide* Sayce, "Etruscan Notes," in *ACADEMY*, September 7, 1878; "The Suffix in Et." in Pauli's *Altital. Stud.*, part ii.)

3. -UL. = "of," "belonging to." A genitive and possessive case suffix, variant of *al*, which was used as a matronymic (*vide* Sayce, *ut sup.*; Taylor, *Et. Researches*, 223). *E.g.*, inscription on an Apollo-statue—*Jupetr-ul Epure*; *Trui-al-s* = "Troy-belonging-to-the" = "The Trojan."

4. *Paxi*-s. "Final s" frequently "introduces a new subject, and may be translated either by the definite article or by the conjunction 'and,'" (Sayce. *Cf.* the Magyar *és, s*, "and"). Etruscan transliteration does not, as a rule, preserve the Gk. final *s*, *e.g.*, *Oppéús* = Et. *Urpe*, &c., though we find the Et. *Vilatas* = *Ῥιλᾶδης*. Hence the *s* in *Paxi*s probably does not represent the Gk. *s*, though perhaps it may do so. The instances are:

(1). Et.—*P-a-x-i-s-s* (Gam. No. 30).

Cf. Gk.—*B-a-κ-χ-ε-ύ-ς* (= *Bákχos* = a Bacchanal.)

(2). Et.—*P-a-x-i-s-s* (Fab. No. 2250).

Cf. Gk.—*B-a-κ-χ-ε-ύ-ς* (*θεός* = *Bákχos*. *Cf.* Herod. iv. 79).

(3). Et.—*P-a-x-i* (Gam. No. 552: *kuθna . paxi* . *rex* . . .).

Cf. Gk.—*B-a-κ-χ-ε* (*Cf.* Euripides, *Bakchai*, 998, 1020).

5. *Vel*. In the bilinguals the Et. *Vele* = (in sense) the Lat. *Caius*, because, as Prof. Sayce well observes, *Vele*, fem. *Velu*, must, like *Caius* and *Caia*, have at times meant "Groom" and "Bride." The reason of this will now appear, and the following comparisons will show the course of ideas. In Magyar, *vel*, "companion," becomes the sign of the comitative -*vel*, -*val*.

Akkadian — { *m-u-l-u* } = *vulu*, "man."
 { *m-u-r-u* }
 { *u-r-u* }

Samoied — { *f-a-l-e-a* } = "relative."
 { *f-a-r-i-e* }
 { *p-a-r-e-na* }

Magyar — { *f-a-r* - *fi* } = "man,"
 { *f-a-rj* } = "husband."

Karagass — { *u-s-l* } = "with."
 { *b-i-l-a* }
 { *p-i-l-a* }

Etruscan — { *v-s-l-s* } = "bridegroom."
 { *v-s-l-u* } = "bride," "consort."
 { *v-s-l* } = "with," "and."

Thus *vel* is naturally a common Et. town-name prefix (*vide* Taylor, *Et. Researches*, 346), and also appears in abraded forms, *e.g.*, *marunux-va* ("and Procurator," Fab. 2056. With the Et. *maru* and *mari-s*, "the youth," *cf.* the Ak. *maru*). So, again, in Fab. 2055, we read, "*etara-v(a) denar ci acnanasa vloši*" (= *veluši*), "and younger children two of Acnanasa my consort" (note that *Acnanasa*, as the first of two words in the same case, is not inflected. So in Ostiak, "toma, *dieser*, abl. *tomiwet*, von *diesem*"; but "toma [not *tomiwet*] *xajadivet*, von *diesem Menschen*"). In Magyar, *vel* is a postposition, *e.g.*, *erö-vel* ("by force"), *ásorál*

("with a spade"). I, therefore, write *paxie-s-vel*.

6. *Cui*. The following comparisons illustrate this word. The variants accord with the laws of Turanian letter-change, and the words mean "goat," except as indicated:

Akkadian	— s-u-r (vide Sayce, <i>Rel. Auct. Bab.</i> 285).
Assyrian	— s-u-r-r-u (a loan-word).
Burial	— s-u-r
Lapponic	— s-a-r-w = "elk."
Finnic	— k-a-u-r-is (first form).
Burial	— x-u-r-ai
(Other dialects.)	{ g-u-r-a k-u-r-a
Tungusic	{ k-o-r-ai k-o-r-ai
Basque	— a-k-s-r-r-a
Arintzi	— o-k-ao-sch-i = "elk."
Finnic	— w-uo-h-i (second form).
Magyar	— k-a-cak-e
Finnic	— k-u-ll-u (third form).
Etruscan	— k-u-θ-i

Kuθna (Gam. No. 552, *sup.*) = *kuθina*, as *suθna* = *suθina*; *na* = "belonging to" (vide Sayce, "Et. Notes," *sup.*). Hence *kuθna* = ἡ τοῦ τράγου, the goat-cup. This inscription is on a cup. The goat-cup is the equivalent of the αἶμα δακνὸν οἶνον (*Od.* ix. 196), and goat's blood is, in Bacchic ideas, closely connected with wine (cf. Euripides, *Bak.* 139-42: αἶμα τραγοκτόνον . . . βεῖ δὲ γάλακτι πῖνον, βεῖ δ' οἶνον. So of the baby-skin in the *Theomorphiazousai*: δὲς μοι σφαγείον, ἵν' ὅν τ' αἶμα τοῦ τέκνου τοῦμοῦ λάβω.) It seems from Hesychios that the Etruscans pronounced the Lat. *cap-er* (which would appear to them a plural formation) *kapra*, thus assimilating it to such forms as *Kupra*. The Etruscan inscriptions should be studied both from within and without. ROBERT BROWN, JUN.

THE CHÊDI ERA.

Göttingen: Jan. 2, 1898.

To few other books am I indebted for so much valuable information regarding the history of the Indian middle-ages, and there are none to which I have to refer so often, as to Sir A. Cunningham's *Reports of the Archaeological Survey of India*; and I have not overlooked the Besāni inscription in vol. xxi., p. 102, to which the author has kindly drawn my attention in the *ACADEMY* of December 31. I, too, am of opinion that the date of that inscription is recorded in the Chêdi Era, the epoch of which I consider to be A.D. 248; for, taking the figure 958 to denote the number of years elapsed, the corresponding year is A.D. 1207, in which the month Āshādha was intercalary, as stated by General Cunningham.

Three other inscriptions, the dates of which have been referred to the Chêdi era, are mentioned in the *Indian Antiquary*, vol. xiii., p. 77. Of these, the Ilāo grant is dated 417, on the new-moon day of Jyāishtha, on the occasion of a solar eclipse. Taking 417 to be the current year of the Chêdi era, the corresponding English date is April 21, 665, when there was a solar eclipse. The Nausāri grant is dated 456, Māgha su. di. 15, on the occasion of an eclipse of the moon, on either a Monday or a Tuesday (which of the two is doubtful). Taking 456 to be the number of years elapsed, the corresponding date is Tuesday, February 2, 706, when there was a lunar eclipse. In the case of these two inscriptions, my calculations by Prof. Jacobi's tables agree with those of Sir A. Cunningham. For the Kāvi grant, we have in the body of the inscription the data "Āshādha su. di. 10, when the sun entered the sign Cancer [in other words, on the first of the solar month S'rāvāna]," and towards the end the data "486, Āshādha su. di. [without a figure], on a Sunday." Here my calculation shows that 486, the figure given in the pub-

lished grant, cannot be the current year. And taking it to denote the number of years elapsed, the corresponding date would be June 5, 735, which was a Sunday, but was not the first of the solar month S'rāvāna = June 23. In the year A.D. 736, which would be the Chêdi year 488 current, Āshādha su. di. 10 did fall on the first day of the solar month S'rāvāna; but that day, June 22, was a Friday, not a Sunday. I am inclined to believe that the grant was really made on Friday, June 22, 736, and recorded on the Sunday following; but I should like to examine the original plate or a good photograph of it, before expressing any definite opinion.

Finally, I am aware that Sir A. Cunningham has referred to the Chêdi era the Rêwa copper-plate inscription of Jayasimhadêva of the year 926, and I have to confess that in the case of this inscription my calculations have not yet furnished any satisfactory results.

F. KIELHORN.

A BILINGUAL LIST OF ASSYRIAN GODS.

London: Dec. 22, 1887.

From Mr. Pinches' letter in the *ACADEMY* of December 24 a casual reader would conclude that Dr. Bezold had fallen into gross error about a clear matter of fact; whereas Dr. Bezold's suggestion (which, by the way, he puts in a conditional form) is, to say the least, as logical as the counter suggestion of Mr. Pinches. Let us look at the facts once more.

The tablet K. 2100 is a fragment representing less than one quarter of the original text, as its measurements show. On the obverse are two columns; the one containing a list of words or phrases in Akkadian, and the other giving the name of the god Rammanu in the first line, with the character signifying "ditto" in all the following lines, the names of certain countries being added in seven instances to the word "ditto." On the reverse are four short sections in two columns. Section 1 gives two Akkadian phrases on the one side, with the Assyrian words for "great gods" (probably) on the other. Section 2 and section 3 are mutilated, and consist only of three lines and one line respectively. Section 4 is the one transcribed by Mr. Pinches in his letter. It gives, first, certain words in Assyrian (probably), Phœnician, Syrian (probably), Elamite, Kassite, and Akkadian, to which the Assyrian word "god," according to Mr. Pinches' probable restoration, corresponds in the second column. Next it gives two words (perhaps Akkadian) to which the Assyrian word for "goddess" corresponds. Then follows the same Assyrian word for "goddess," with the name "Ishtar" corresponding to it. Then, "Ashtar" is given as corresponding to "Ishtar," the word "Phœnicia" being added. Then come two Elamite words to which "Ishtar" is understood to correspond. Lastly, the Akkadian phrase meaning "all the gods" is written, with the same words in Assyrian in the corresponding place.

From this analysis it is evident that Mr. Pinches has made two erroneous statements in his letter. First, that the tablet is a "list of gods," and secondly that the last line contains a "statement that it is, in fact, a 'list of all the gods.'" There is a great difficulty, of course, in arriving at the true character of such a fragment as this tablet. It would seem, with far greater probability, to be a gloss on some particular text, perhaps a ritual formula such as a hymn. In that case the second column would not always contain translations, as Mr. Pinches asserts, of the words and phrases in the first column, but rather explanations of unusual words or difficult phrases, whether Assyrian or foreign. For instance, the Semitic "Qadmu" cannot be merely an equivalent for

"God," but is far more [probably an epithet explained as referring to a god—perhaps to Rammanu, as the obverse would suggest. Then "Ishtar" cannot possibly be a translation of "Iltum" (goddess), but is far more likely to be an explanation of some allusion to Ishtar as "the goddess" in a particular text. The last line certainly contains an Assyrian translation of an Akkadian phrase, which probably occurred in the text to be explained. At any rate, there is no "statement" there as to the character of the document.

We come, then, to the disputed word "malahum." There is, in fact, nothing to prove that it is the well-known *malah* "boatman," and nothing to disprove it. It is at least possible that the "boatman" was an epithet of the god, perhaps Rammanu, borrowed from Phœnicia. This is, at any rate, a more legitimate conjecture than that the word is connected with Molech and Malcham, as Mr. Pinches suggests. The interchange of ʾ and ʿ is unknown in the Semitic languages. In the later Syriac, it is true, the Arabic *kh* is represented by Kaph; but, as this is merely a conventional mode of transcription, and not a natural phonetic change, it offers no analogy. The question must be left open, as so many questions in Assyriology must be, until our knowledge is greater. There is no warrant whatever for Mr. Pinches' assertion that "the word *malahum*, therefore [?], is not the well-known *malah* 'boatman,' but the ancient Phœnician word for 'god,'" &c.

B. T. A. EVETTS.

SCIENCE NOTES.

It is proposed to establish in Cornwall a central Museum of Mineralogy, to be connected with the Mining Association and Institute. The purpose of the museum is to be purely practical and educational. It will illustrate the geological structure of the important mining districts of Cornwall, and will seek to exhibit, not fancy specimens, but typical examples of rocks, ores, and other minerals of economic or geological interest.

PHILOLOGY NOTES.

MR. G. BERTIN will deliver a course of four lectures at the British Museum on "The Languages and Races of the Babylonian Empire, illustrated from the Monuments." The lectures will be given on Thursdays, at 2.30 p.m., during the month of February. The fee for the entire course is 15s. The subjects of the several lectures are: (1) "The Great City"; (2) "Languages and Writing"; (3) "The Populations"; and (4) "The Races."

FINE ART.

THE ART MAGAZINES.

THE three illustrated art magazines, the *Art Journal*, the *Portfolio*, and the *Magazine of Art* (to take them in the order of seniority), have all started on their new year's career with their wonted vigour. Their "programmes" for the year are already too well-known to make it necessary to recapitulate their attractive items; and we will therefore confine ourselves to some notes on the first fruits of their promises—promises which, if we may judge from the experience of the past year, will be well kept, if not quite literally, at least in spirit.

Most readers, whether disciples or not of Mr. Ruskin, would turn to any paper of his, on whatever subject, before they sought what others had to say—at least in art magazines; and none will be disappointed with his deep-

sighted, surely-and-sweetly worded "Reverie in the Strand." There is not a little pathetic admission in these thoughts on "the Black Arts," and the Strand's "wonderful displays of etchings and engravings and photographs, all done to perfection such as I never thought possible in my younger days." He sees the forces at work, the sincerity and accomplishment of the artists, the "quantity of living character," the "tourist curiosity and the scientific naturalism," and asks what it is all to come to. We will leave our readers to seek his answer and all the sad and wise thoughts which occur to him at a state of things artistic, which, without arousing his sympathy, greatly attracts his wonder, and makes him, perhaps, think regretfully of some too confident utterances of past years. "It has," he writes, "so long been my habit to assert things—at all events very questionable in the terms I choose for them—in mere love of provocation, that now in my subdued state of age and infirmity I take refuge, as often as possible, in the unquestionable."

It is a pity, and we feel it more when we find Mr. Ruskin writing in this temper, that there should be so much truth in what Mr. Hamerton says of him in the *Portfolio*. One of the most vigorous papers that has, for a long time, come from the pen of the editor of this periodical is the first of a series of "Conversations on Book Illustrations," conducted by an artist, a poet, a critic, and a scientist. It is the critic who says, "As Mr. Ruskin has himself said, the literary and artistic faculties cannot be both cultivated to the same extent—he is an artist when he writes, a student when he draws. In writing he unhesitatingly sacrifices accuracy to effect, and that is quite characteristic of an artist. In drawing he seems always anxious, above all things, to be accurate, and that is characteristic of the painstaking and conscientious student." At all events, as to the accuracy of Mr. Ruskin's paper on "The Black Arts," and the beauty of the drawings by himself which illustrate it, there can be no doubt.

All the magazines start with a plate or plates of much merit. M. Massé has etched for the *Art Journal*, with singular skill of line and beauty of tone, Mr. Orchardson's well-known "Hard Hit"; and though (at least in our impression) Mr. Dobie's etching in the *Magazine of Art*, of Mr. J. W. Waterhouse's "Mariamne," is too black in parts, it is a fine piece of work. The *Portfolio* has three engravings on metal, one by Mr. A. H. Palmer, which reproduces with admirable fidelity Sir John Millais' portrait of Mr. Hook; a brilliant and delicate etching by Mr. C. O. Murray, after a luminous and elegant composition by Paul Sandby, which illustrates Mr. Monkhouse's first paper on "The Earlier English Water-colour Painters"; and another etching of singular power by Mdlle. Bynot, after one of M. Henner's strongly lit studies, called "Une Créole."

Among other papers to be noted are, in the *Art Journal*, "The Seine as a Painting Ground," written and illustrated by Mr. R. A. M. Stevenson, and "Barye," by Mr. W. E. Henley; in the *Magazine of Art*, "Modern Life in Modern Art," by Mr. F. Wedmore, and "The Portraits of Napoleon the First," by Mr. Richard Heath; in the *Portfolio* the beginning of a very interesting biography of Mr. Hook by the engraver of his portrait, Mr. A. H. Palmer.

THE GROSVENOR GALLERY.

A CENTURY OF BRITISH ART.

THE devotion of an entire exhibition at the Grosvenor Gallery to the works of the earlier masters of the British School is in some measure a new departure. That there was a British School at all in the last century was not only

denied by foreigners but has scarcely been admitted by Englishmen. Hogarth, of course, and Gainsborough, Wilson and Sir Joshua, Romney and a few more, were recognised as great artists, worthy to be included in any gathering of deceased masters, worthy (some of them at least) to have special exhibitions of their works. Nevertheless it has scarcely been recognised that there were, besides these great masters, a number of smaller ones quite equal to the smaller masters of other schools, and that all taken together form quite as respectable a body of painters as any foreign country could produce during the same period. What was proved of the last fifty years by the Jubilee Exhibition at Manchester may be said to have been proved of the century previous to it by the present exhibition at the Grosvenor Gallery; and the fact that this latter exhibition is but a partial one, and is largely composed of what are generally called "unimportant" pictures, only serves to emphasise the fact.

Of course a historical exhibition of the period 1737 to 1837, which takes no account of the water-colour painters as such, must be an unfair and incomplete one, nationally considered. And though many of the greatest painters in water colours were also fine painters in oils, and some of these are represented here like De Wint, Copley Fielding, Cotman, Havell, and G. Barrett, jun.—others, who also painted in oils, like Paul Sandby and David Cox, are omitted. From the regular oil painters also we miss some names, notably that of Joseph Wright, of Derby. But the merit of the present collection does not consist in the complete representation of the greatest names in English art, but in bringing to notice some names which are in danger of being forgotten, in showing the merit of others not duly appreciated, and even introducing some artists whose existence is unknown to any but art students.

In the last category are Aikman, the portrait painter, and Herbert Pugh, by whom two pictures of London Bridge (122, 124) are sent by Messrs. Graves, who also contribute a very interesting picture of Covent Garden (252) by Joseph Francis Nollekens, the father of the sculptor, who, for the majority, is another *pictor ignotus*. If a few have heard of the Rev. John Thomson, of Duddingston (3, 140, 184), few know how good a painter this amateur was; and still fewer know the name or work of his countryman, William Ewbank, R.S.A. (101, 199, 273, 327). And there will be many who appreciate the water-colour drawing of William Havell who will yet be surprised by the purity and delicacy and fine colour of his work in oils (215, 216, 220, 311).

To turn to some better-known names—do not the public need, at least, reminding that the early work of Sir Augustus Calcott was exquisite in tone, beautiful in composition, and of extreme care and skill in execution; that Bonington was a rare and versatile genius, an artist born, a colourist of unique quality, a painter of atmosphere and light comparable only to the greatest; that De Wint was also a great colourist, and as fine a painter in oil as in water; that John Sell Cotman was an artist of power and originality; and even that Richard Wilson studied nature, as well as art, and painted Wales as well as Italy?

If we turn to the figure painters we shall find as many things worth knowing, if we are ignorant; worth remembering, if we know. John Raphael Smith was an accomplished painter, as well as a great engraver in mezzotint. He was the master of De Wint and of Hilton. He painted landscapes, but he also painted the charming "Visit to Grandfather" (225), lent by Sir Charles Tennant. Near it will be found another domestic scene, also belonging to Sir Charles, called "The Disaster," which cannot fail to raise the reputation of Wheatley as a painter in oils, and a designer of *genre* subjects. But, perhaps, the reputation which will gain most from this ex-

hibition is that of Opie. "The Schoolmistress" (171), belonging to Lord Wantage, is stated in Mr. F. G. Stephens's interesting and learned catalogue to have first brought the artist into notice. It has now done him much the same service with the present generation, by whom Opie is principally known, not as the "Cornish Wonder," the painter of the "Murder of David Rizzio," the man of low origin and high intellect, but as a forcible portrait painter, with a tendency to blackness in the shadows. This masterly composition of life-size figures—finely drawn and modelled, grand in distribution of light and shade, fine, if sombre in colour—will show them something more of the man and the artist. The dignity and refinement which mark the expression and character of the faces raise the composition above the usual level of *genre*, and few will look at the picture without thinking also of some great names in art.

Some of the greatest masters of the English School are well represented. By Constable there are thirty-three pictures, large or small, sketches and finished pictures; by Morland, twenty-eight; to Hogarth, twenty-five are ascribed, which, if all be genuine, is the largest collection of this artist's work which has probably been seen since his death; by Old Crome, twenty-one; by Gainsborough, seventeen; by Wilson, fifteen; by Wilkie and Romney, twelve each; by Turner, eleven; and by Sir Joshua Reynolds, ten. The collection of Constables fairly represents the whole career of the artist and his various manners, from the most careful brushwork and elaborate drawing to the flashing gleams of his palette knife. Here is the great "Hadleigh Castle," of 1829 (the year he was made an Academician, the year after he lost his wife)—a grand composition, with the two ruined towers on the left, and the estuary of the Thames shining like silver in the distance, a wide stretch of marsh gleaming with light and moisture and streaked with the shadows of the rainclouds, the remnants of last night's storm. It is No. 7 in the catalogue, and lent by Mr. Louis Huth. There are three views of Dedham Vale, the original (or a replica) of the well-known picture engraved by Lucas (161), lent by Sir J. Neeld; a charming early picture (40) belonging to Mr. Woolner, and painted in 1811; and a small one lent by Mr. Orrock (275). Mr. Holbrook Gaskell is the owner of Constable's last work, "Arundel Castle and Mill" (47), painted in 1837. Mr. Thomas Ashton sends the great "Salisbury" with the rainbow engraved by Lucas (142); and Mr. Hobson, one of "Salisbury Cathedral" (173) from the bishop's grounds—a slightly altered version of the picture in the South Kensington Museum. Mr. J. Dixon Piper's "Barge and Lock Gates—Stormy Weather" (51); Mr. Andrews's silvery sketch of "The Lock" (135); Mr. Lockwood's rich, gleaming "Landscape, with a Barge" (137), and Mr. Woolner's "Glebe Farm" (46), conclude the list of Constable's larger works here; but there are a number of delightful small examples, sent principally by Mr. Orrock.

Of Turner, the examples are all of his earlier period, before he indulged himself in bright colour. The Earl of Yarborough sends the great "Wreck of the *Minotaur*" (139), and the "Vintage of Macon" (121); the Duke of Westminster the fine "Conway Castle" (107), and the perhaps finer "Dunstanborough" (69), a work of extreme simplicity and grandeur, besides a small "Mouth of the Thames" (111). Beautiful also in light and sentiment, and masterly in their management of a restricted scale of colour, are Mr. Woolner's "Early Morning" (9) and Mr. Brocklebank's "Somer Hill" (64); Mr. Ashton's "Calder Bridge" (60), one of Turner's rare interiors, "The Fitzalan Chapel, Arundel" (169), belonging to Mr. Andrews, and Mr. Hughes' sketch for the "*Minotaur*" (301), complete the list, unless we include Mr. Wass's singularly fine

portrait of a handsome and gallant young man, which is presented as a portrait of Turner by himself (137).

The works of some other of the landscape painters deserve to be treated at greater length than can be spared them here. Of the numerous Wilsons, the most important are the fine and unusually warm-coloured "View on the Tiber" (79), lent by Sir Clare Ford, and Mr. Rankin's perfect "View between Dolgelly and Barmouth" (94). By Gainsborough are a fine sketch for "The Cottage Door" (165), belonging to Mr. Lockwood, and "A Wooded Landscape with Cart and Horse" (155), lent by Mr. R. Goring Thomas. The Norwich School is amply represented by many fine Cromes, including Mr. Louis Huth's noble "Grove Scene near Marlingford" (152), and several good examples of his pupils Stark and Vincent. Of the latter rare master is the celebrated "St. Paul's" (132), lent by Mr. Lockwood, and a beautiful view of "Hastings Beach" (167), belonging to Mr. Crook. Among the Cotmans are Mr. Woolner's "Off Ecclesbourne" (4), and "Merton Hall" (78). Though not belonging to the Norwich School, Patrick Nasmyth, as a student of Hobbema, has much affinity to Crome and Stark, as Mr. David Price's beautiful "View in Surrey" (41) clearly shows. Finally, before leaving the landscapes, attention should again be called to the Boningtons—to the Duke of Westminster's "Sea-piece" (125); to Mr. W. Fuller Maitland's exquisite little "Chateau of the Duchesse de Berri" (15), perhaps the most luminous landscape in the gallery, and to numerous little gem-like pictures in the smaller rooms. Mr. Woolner also sends two of this artist's rare and beautiful little figure-pieces—"Don Quixote in his Study" (205) and "Charles V. visiting Francis I." (96). It is as a landscape painter, also, that George Morland is here specially distinguished. This admirable painter is well represented all round—by little *genre* pictures, beautifully finished and charming in colour, like Sir Charles Tennant's "Diligence" (73) and "Idleness" (67); by pictures of interiors as fine as if by Teniers, of horses and pigs and sheep, unexcelled by anyone—lent by Mr. Bonamy Dobree, Mr. Louis Huth—who sends "The White Horse" (99)—Mr. Ford, Mr. W. W. Lewis, and others. Morland's reputation for such subjects can scarcely be increased, but the remarkable beauty of Mr. Richard Gibbs's little "Landscape, with Soldiers on a Bridge" (81) will be a surprise even to some of his admirers.

Of the three great portrait painters—Reynolds, Gainsborough, and Romney—it is the last that is best represented. There is nothing by the first two to compare, as capital examples of their genius, with Romney's full-length of the "Dowager Countess Poulett" (56), lent by Lord Burton; and other very fine Romneys are lent by Mr. Carwardine, Mr. Gray Hill, Earl Cathcart, and Lord Petre. There are, nevertheless, some fine and interesting examples of Reynolds and Gainsborough; but these painters are so constantly before the public that their reputations can afford a little comparative neglect in this article. Nor have we space to treat as they deserve the unusually numerous collection of Hogarths. Their interest is so great that it would need a separate article to exhaust it; but that interest is largely of a historical and social character, while most of the finest works, considered as paintings, such as the large "David Garrick as Richard III." (28), the portrait group of "Garrick and his Wife" (27), and "The Lady's Last Stake" (113), are well known. There is the less reason to dwell upon these pictures here, as a great deal of interesting information about them and their history is supplied by Mr. Stephens in the catalogue. There is also little need to call attention to the Wilkies, which include one of his finest works, "The Letter of Introduction" (1), lent by Mr. Brocklebank; and the life-like portrait of himself (133), belonging to Mr. R. Rankin; nor

to Sir George Beaumont's pair of groups of actors by Zoffany (120 and 126), full of life and character; nor to the Mulready, among which is the very fine "Idle Boys" (62), lent by Mr. Woolner; nor even to the life-size figure of "The Woodman," by Barker of Bath, lent by the Duke of Cleveland, and once so popular through the engraving. These are all sure of attracting their due share of attention.

All considered, the hundred years of English art—from 1737 to 1837—is fairly well represented: in landscape, from Wilson to Linnell; in portrait, from Aikman to Sir Thomas Lawrence; in *genre*, from Hogarth to Mulready. In these lines the British may challenge, without fear, any other modern school of the same time. But what of what used to be called "High Art"? What of Finch and Hamilton, of Mortimer and Hilton, of Haydon and Barry, and the rest of the gallant—but, as we now think, mistaken—band of artists, who looked with comparative scorn on landscape and portrait and *genre*? Truly, time brings revenges; and the British School is proud only of those men whose art was despised in their day. Only one of the painters of poetry and history is well represented here—is, indeed, practically represented at all—and this is Etty, whose extraordinary gifts as a colourist and a painter of flesh saves his reputation from this huge wreck of mistaken ambition. Here are Sir J. Neeld's "Pandora" (187), exquisite still for artists and connoisseurs, but of little attraction to the ordinary visitor; here is Mr. Louis Huth's forcible "Robinson Crusoe" (70), and several other fine examples of a master who, in certain qualities as a painter, has no rival in any modern school, but who is doomed, not without reason, to perpetual unpopularity.

If this collection proves nothing else, it proves the want of the really National Gallery of Pictures, and the collection under one roof of all the examples of our own masters which the nation possesses. Scattered at South Kensington, the British Museum, Bethnal Green, and Trafalgar-square, the nation has no easy means even of estimating its riches, or of obtaining a full view of the history and merits of the British School. These riches are no doubt considerable, thanks to private generosity. In Turners, Landseers, Constables, and some other artists we are rich indeed; but in many others, great as well as little, we are very poor. We have only one poor Cotman, no David Cox, nothing worthy to represent Muller or Bonington, not a Vincent, scarcely a Romney. But it is not only the greatest artists who should be represented—and well represented. We should have (speaking only of oil paintings) our Zoffany and our Ibbetsons, our Havells, and our Ewbanks. Some of these may be bought cheaply now, but it will not be so soon. The public are becoming aware of the merits of our minor masters of the end of the last century and the beginning of this; and a few more exhibitions like this at the Grosvenor Gallery will make a collection of them costly and difficult to procure.

COSMO MONKHOUSE.

THE ART COLLECTIONS IN THE GOETHE HOUSE AT WEIMAR.

ON July 3, 1886, the Grand Duke of Saxe-Weimar, in the presence of a distinguished company, opened the Goethe Museum. The last grandson of Goethe, Baron Walther, died the year before in Leipzig, having bequeathed to the Grand Duchess of Saxe-Weimar the Goethe archives and to the state of Weimar the Goethe House with its collections. The grand duke accordingly formed the plan of giving the numerous objects of art therein a worthy home, and also determined that everything now procurable which had belonged to Goethe, or had been in any way connected with him, should be here brought together. The care-

fully restored house of the poet has thus become a memorial of his wide knowledge and universal artistic interests, and the Goethe National Museum has been created.

The Goethe House in Weimar was at that time in a ruinous condition. The grandsons of Goethe, during the fifty years after his death, had not only prohibited admission to its archives and collections, but they had allowed the house in which these were stored to go to decay. The Government of Saxe-Weimar granted a necessary sum for repairs; and, through the energetic endeavours of the new director, Mr. Ruhland, the Goethe House on the opening day presented as nearly as possible the same aspect as when the great poet died in it in 1832.

The impression on the mind of the visitor is deep. What varied collections, what artistic and scientific interests they embrace! What a true individuality in the great collector they indicate! One feels that here lived a spirit which moved on the summit of artistic knowledge of his time. Indeed, the manner in which the different objects of art are classified, and the evidence of design disclosed in their arrangement, prove that he was in advance of his contemporaries. Thus, as Goethe discovered new problems in the domain of natural science and new limits to its development, so also his conception of art and its history was characteristic and original. Goethe was, in fact, the first modern art historian. He felt the comparative science of art as it now presents itself to us.

On entering the vestibule of the Goethe house we are impressed by the collector's marked preference for the antique. This entrance-hall, as well as the staircase, was restored by the poet on his return from Rome. Afterwards he regretted the waste of space, but consoled himself with the consciousness of having retained the character of an Italian piazza, which was for Weimar in those days something remarkable. Whether the sight of this plain winding staircase, these colourless walls with their unmeaning triglyph-frieze under the ceiling, calls forth a smile or a feeling of emotion, it remains important to observe how Goethe thought out the impression which the whole was to produce. The statues on the landing and staircase give the special character. It is true that they are only tolerably good casts, which were bronzed over from motives of decoration; yet the choice of these is significant and interesting. The "Adorante" at the bottom of the landing and the "Ildelfonso Group" (the sacrifice of Antinous) at the entrance-hall show the prime and decline of Greco-Roman art. Over the door, on the first landing, we find the busts of the "Apollo of Belvedere" and of "Mars Borghese." A larger space is taken up with two cartoons on the longer side of the hall. They give us drawings of the Elgin Marbles of the size of the originals. The mere fact of Goethe having placed the Cecrops and the Hyades with the Vatican Apollo shows that he was not ignorant of the distinctive change which had taken place in the artistic world after the works of Phidias became known. Instead of the former blind reverence paid to works of art, criticism came into power and masterpieces were judged from a historical point of view. In examining the contents of the different rooms we see that Goethe felt this connecting historical idea in all he collected, and that it influenced him in the arrangement of his collections.

We are welcomed on entering by a Pompeian "Salve" in mosaic, on the step of the door which we pass through in order to get to the so-called Saal (Goethe's reception room). The numerous family pictures and portraits here are very interesting; but we must leave them, and turn our attention to the various objects

gathered together in the glass cases in front of the window. It is, perhaps, necessary to mention that they were not in this room during Goethe's lifetime. We can only ascertain that he kept his collections in two rooms—the "ceiling room" and the "engraving room," and that he showed them at times to his visitors. Notwithstanding these additions, the apartments have retained as much as possible their original character of dwelling-rooms. We feel ourselves in a private house, and at the same time enjoy the survey of a well-arranged museum. The glass case to the left contains, among other personal souvenirs, small bronzes, ivory tablets—in short, objects of art industry, not numerous but, as one sees at a glance, systematically disposed. Thus, next to a small Etruscan figure of a sphinx or winged Medusa we find beautiful implements (handles, &c.), which, although of Italian origin, breathe the true Greek style. Further on we see small images (*laræ*) belonging especially to Roman worship. It is striking how correctly the productions of the Northern bronze period are arranged: pieces of arms, ornaments—among others one of the well-known brooches or fibulae. It is seen that Goethe anticipated and felt, even in these inferior objects of art, the existence of a kind of development which worked itself out according to the countries and the periods with a sort of necessity. His historical feeling, which appears throughout, shows itself very clearly in the distribution of the ivory objects and signet rings. The ancient period, including an exquisite small ivory Atlas; the middle ages and the modern period of ivory work, together with the nationalities, are successively represented.

Turning to the right we find the original collection room. This so-called "ceiling room" contains, as it formerly did (according to the statement of an old inventory lately found), the medal collection, scientific instruments, and small casts. The walls are covered with drawings and sketches. It is well known that Goethe loved medals, and the specimens before us are valuable and numerous. Masterpieces of Italian Renaissance form a principal portion of it. The Quattro and Cinquecento are well represented, nor are French and German medals of the same and later dates wanting. The feeling of historical development is strikingly marked. Nearly every dynasty of the Italian Renaissance is represented: the Farara as well as the Este, the Malatesta, Sforza, and Medici, King Alfonso of Naples, Sixtus IV., Julius II., doges, celebrated poets, even the reigning Sultan Mohammed. It is not so much the historical knowledge which impresses us as the technical grasp of the subject. Goethe possessed unique specimens—medals of Vittore Pisano (medallion of Lionello d'Este), cast medals of the earlier periods and beautifully coined ones of the later. Bronze statues of the Renaissance, as well as of the middle ages and the ancient periods, are, for well-known reasons, rarely to be found. The artistically designed Greek coins throw light on the works of high art which have perished, and compensate in some degree for the lost creations of architecture and sculpture. A similar result can be deduced from the Renaissance medallions. On the reverse of a medal of Sigismondo Malatesta we have a view of the never-finished "San Francesco" at Rimini. The medal of Julius II. gives St. Peter's according to the design of Bramante. Of still greater importance are the finely chased heads on these medals. They in themselves claim a distinguished rank as independent works of art. They not only make up for deficiencies in the Italian portraiture of the fifteenth and sixteenth centuries, but in many cases replace lost busts and statues. A connoisseur like Goethe felt the full value of Italian art. The whole of the Italian Renaissance

stood before him, as we also see from his other collections, with a completeness and accuracy which have only been acquired with much labour by later investigators.

The drawings on the walls are numerous. They include many personal souvenirs of contemporary painters, such as the first illustrations which Angelica Kaufmann sketched for scenes of "Iphigenia" and the apotheosis of the poet; the "Fair of Phindersweilen," by G. M. Kraus; landscapes by Oesser, Schütz, Lobell, Kniep, the so-called "Teufels Müller," &c. It is surprising how many good specimens of Italian Cinquecentists and German Renaissance artists are gathered together here. One among the latter, an allegory of the Reformation by the celebrated sculptor, Peter Vischer, stands pre-eminent by the beauty of its drawing and the originality of its idea. Among the engravings of this period we find the works of Altdorfer, Ringlin and Schwarz, &c. That Goethe's knowledge, even in this sphere, was not superficial, but that he was possessed of thorough judgment, is shown by his appreciation of German sketches for glass paintings, such as Holbein drew. Among the Italian drawings, industrial art is brought forward in water-colour decorative paintings from Giovanni da Udine—a celebrated pupil of Raphael in this branch. Not less full of meaning is the placing together of the Roman Victory—a miniature model of the antique tomb near Igel—and Peter Vischer's statue of himself on the Sebaldus Monument at Nürnberg. The interesting portrait-sketch of Chodowiecki and the admirable specimens of Watteau lead us on to corresponding works of modern masters in the adjoining room. Here, again, we find, in cupboards and cases, costly collections, such as Italian bronze plaquettes, and a choice selection of Italian majolica. In the former especially Goethe gave evidence of his accurate comprehension of Italian art. These bronze tablets (which were used as ornaments) are decorated with haut- and bas-reliefs, and are of great value on account of the reflected light which monumental art throws upon them. In the charming plaquette with the kneeling angels (early Renaissance) the fine touch of Verrocchio is easily to be recognised. The embossed "Saint George" on another leaf reveals the brilliant manner of Cellini. Boucher seems to have furnished the sketch of a Cupid relief, as is intimated by the softness and wanton grace of the forms and movements. The art of the fifteenth and the eighteenth centuries is progressively presented to us. The historical development of the epochs here, as throughout the museum, gave consistency to Goethe's love of collecting. He exercised a perfectly independent judgment in reference to majolica ware. Indeed, his preference for this pottery, at a time when the beauties of china were highly and exclusively esteemed, seemed so incomprehensible that Goethe thought it necessary to excuse himself for this hobby. In doing so in a letter to Zelter (November 6, 1827) he explains the impression which majolica painting made upon him as "a joyful life, lavishing the heritage bequeathed to it by mighty art." Numbers of Raphael's compositions appear here in lighter forms on these plates and vases, chiefly the products of old Umbrian manufactories. The subjects taken from ancient mythology especially are copies of great models. Goethe clearly realised the influence which high art had upon objects of every-day use. "The Abduction of Europa," "The Triumph of Omphale," the "Punishment of Actæon," or the figure of Apollo as fiddler on his majolica, must have been to him a perpetual reminder of the masterpieces of classical and Renaissance art.

L. VON SCHEFFLER.

CORRESPONDENCE.

LAKE MENZALEH.

Westbury-on-Trym: January 2, 1888.

I venture to suggest that not only is the name of Lake Menzaleh derived from the ancient Egyptian name of the city of Tanis, but that it actually preserves that name intact to the present day. Tanis, like Thebes, had many sacred names; but the most important was that to which the Greeks—and notably the Septuagint—gave the form of "Tanis"; and the original of Tanis would undoubtedly seem to have been "Ta," "T'an," "T'sān," "Zal," or "Zar"—all dialectal varieties of the one name, which became "Zoan" in Hebrew, "Tsānu" in Assyrian, "Tania" in Greek, "Tani" in Coptic, and "San" in the Arabic of to-day. That "Ha-uar," the great stronghold of the Hyksôs, the "Avaris" of Manetho, was identical with Tanis may be regarded as proved by Mariette's discovery of a stone inscribed with the name of "Ha-uar" in the ruins of the great temple of Tanis, and by De Rouge's celebrated discovery of the variant which gave to "Ha-uar" the pronunciation of "Ha-T'an."

This is not, perhaps, the place in which to discuss the phonetic values of Egyptian hieroglyphs; but I may be allowed to explain, for the benefit of such as do not dabble in "cockology" that the signs which compose "Ha-uar" are (1) the groundplan of a building, pronounced *ha* and (2) a bent leg, apparently in the act of running, pronounced *uar*. It is, however, one of the pleasant peculiarities of Egyptian syllabic signs that a single hieroglyph may have, not only two or more distinct meanings, but two or more different pronunciations—a circumstance which multiplies pitfalls in the path of the hapless translator. The bent leg is a case in point. This sign (as demonstrated by de Rouge) is susceptible of two pronunciations, namely *uar* and *t'an*; so that the city might be spoken of indifferently as "Ha-uar" or "Ha-T'an." It is possible that these two phonetic values were in concurrent use; but having regard to the inscriptions of various periods, it would seem as if "Ha-uar" prevailed during the twelfth, thirteenth, and fourteenth dynasties, and also during the Hyksôs period; but that in the time of Rameses II., it was superseded by "Ha-T'an," and by its abbreviations "T'an" and "T'sān." The Greeks, with their characteristic distaste for unmusical vocables, adopted "T'an" and converted it into *Tāvis*. The Semitic nations, on the contrary, were attracted by the sibilant "T'sān," which, as I have already said, became transformed into (Hebrew) "Zoan," (Assyrian) "Tsānu," and (Arabic) "San."

Meanwhile, it is to be remembered—and Brugsch insists emphatically on this point—that the popular name of the place in all ages was "Zal" or "Zar" (Brugsch's *Dict. Géographique*, p. 995); but it does not seem to be generally known that "Zar" actually survived down to the middle of the twelfth century of our era as the local name for that part of Lake Menzaleh into which the Bahr San-el-Hagar discharges its waters. This we learn from Edrisi, a celebrated Arab geographer who wrote about A.D. 1153. He distinguishes the N.E. end of the great lagoon as "the lake of Tennis," after the island-city of Tennis there situate; and to the S.W. basin, he gives the name of "the Lake of Zar." Now, it is to be especially observed that in Coptic the *l* of the Bashmuric dialect (the dialect of the district) regularly indicates the *r* of the Sahidic and Memphitic dialects; therefore, Edrisi wrote as "Zar" what the natives of the place would, at that time, have pronounced and written "Zal."

The *l* and *r* were also, to some extent, interchangeable in the Egyptian hieroglyphic writing; and the same curious confusion subsists even now between *l* and *r* in the mouths of the Roman peasantry, who invariably say "molto" for "morto," and *vice versa*. Philological identifications are hazardous, and too frequently disputed; but I am, nevertheless, tempted to carry Edrisi's testimony a step farther, and to suggest that "Mer-en-Zal," though not yet found in the texts, would be good Egyptian for "Lake of Zal," and that "Mer-en-Zal" and Menzaleh are practically the same.

I do not forget, when proposing this identification, that the whole bed of Lake Menzaleh was a fertile pastoral district in ancient Egyptian days, or that the present lagune did not exist till many centuries after the ancient national language had ceased to be written and spoken. The "Mer-en-Zal" of the olden time would, therefore, in all probability, have been a minor sheet of water, fed by the winter rain-floods and the annual inundation. Several inscriptions quoted by Brugsch in his *Dict. Géographique* attest the existence of some such lake or pool in the vicinity of Tanis. This pool would naturally give its name to that part of the lake subsequently formed by the incursions of the Mediterranean; and so in time "Mer-en-Zal," or Menzaleh, would come to represent the whole of that watery desert which was once, according to Mas'oudi, one of the wealthiest and most delightful of Egyptian provinces.

I hasten to add that I submit this suggestion as to the name of Lake Menzaleh for, strictly, what it is worth. That, perhaps, may be nothing. AMELIA B. EDWARDS.

NOTES ON ART AND ARCHAEOLOGY.

SIR FREDERIC LEIGHTON has been elected a member of the Royal Society of Painters in Water-Colours.

THE long-expected Japanese exhibition—to which all the best-known collectors seem to have contributed—will open next week, at the Fine Art Society, in New Bond-street, though we understand that the catalogue may not be ready immediately. Mr. McLean will also have on view next week, in the Haymarket, a series of water-colour drawings, by Mr. Edward H. Bearne, made during a tour in Switzerland and Italy in 1887. Mr. Bearne was a Turner medallist of the Royal Academy.

MR. T. MATESDORF delivered the fifth of his course of six lectures on "Raphael," at Steinway Hall, last Wednesday evening. The South Kensington cartoons formed the main subject of the lecture, and were very successfully reproduced in lime-light illustrations. These illustrations have constituted a very attractive feature of Mr. Matesdorf's series. The concluding lecture—on "Cupid and Psyche"—is to be delivered on Wednesday, January 25.

MESSRS. BOUSSOD, VALADON & Co. have sent us the first number of *Paris illustré*, which appears in a new series with the new year. Among the contents are an article on the lately deceased painter, Gustave Guillaumet, a collection of whose works is now on view at the Ecole des Beaux-Arts; and an analysis of M. Alexandre Dumas' novel *L'Affaire Clémenceau*. Both these are illustrated by some process prints, the latter after a drawing by M. Meissonier. There are also two coloured illustrations, of which we can praise only the military sketch by M. A. de Neuville. We may add that in England no such expensively produced newspaper could live with so poor a show of advertisements.

MR. ARCHIBALD RAMSDEN writes to call public attention to the fact that two pictures

lent by him to the present exhibition at the Grosvenor Gallery somehow got "changed at nurse," and that the mistake was not discovered in time for correction in the first issue of the catalogue. As it stands, No. 117 is attributed to James Stark, and No. 185 to George Vincent; whereas, as a matter of fact, Vincent painted No. 117 and Stark painted 185.

THE STAGE.

STAGE NOTES.

MR. BUCHANAN's play, "Fascination," is to take, sooner than we had expected, the place of Mr. Henry A. Jones's admirable and admirably acted "Heart of Heart." Miss Harriet Jay is to be the heroine, and it is expected that Miss Vane will give a sufficiently clever reading of a very disagreeable character. Meanwhile, or at all events at first—Miss Kate Rorke, the accepted heroine at the Vaudeville—an admirable Sophia and excellent in "Heart of Hearts"—will take the holiday which she has long been without.

ONE of the last links that connects the stage of to-day with the stage of Edmund Keane is snapped by the death of the veteran, Mr. Chippendale. A mellow Sir Peter Teazle, a perfect Sir Anthony Absolute, a Polonius without rival, he yet knew how to take his part with amazing effect in such unfortunate rubbish as "Our American Cousin." Indeed, like Mr. Howe, he was long a pillar of the Haymarket. Yet the provinces saw some of the best of his representations, and saw them with enthusiasm. Mr. Howe, who is with Mr. Irving at Chicago, and Mr. Walter Lacy, who never leaves London we believe, unless it is to go to Brighton, remain as almost the sole representatives of our earlier stage. Both are many years younger than Mr. Chippendale was, yet neither is exactly in his first youth. Mr. Chippendale was eighty-six. He had a store of theatrical gossip, masses of newspaper cuttings, and he had the courage to live—like Mr. Henry Fawcett lived—"over the water," having taken up his abode in South London long before the comedian had got to deem it his first duty to be fashionable, and only his second to understand the requirements of his art.

MUSIC.

RECENT CONCERTS.

AFTER a short break at Christmas, the Popular Concerts recommenced last Saturday afternoon. Schubert's Quartette for strings in A minor is a never-failing attraction; and deservedly, for the composer never wrote anything more lovely, nor anything more thoroughly filled with the individuality of his genius. Mme. Norman-Néruda is also heard at her best when leading this work. Mr. C. Hallé played Beethoven's Sonata in D, commonly known as "The Pastoral." His interpretation was excellent, though we could not help thinking that he lingered too long over some passages in the first movement. Beethoven's Pianoforte Trio in D (Op. 70, No. 1) concluded the programme. Mr. Thorndike, who sang in place of Mr. Santley, was not in his best voice.

On Monday evening Mr. Chappell tried the experiment of beginning at 8.30 instead of 8 p.m. The constant late arrivals probably suggested this change. We, however, doubt the wisdom of it. The only result last Monday was that the late comers came later than ever, and of such there was an unusually large number. Beethoven's Quartette in D (Op. 18, No. 3) is a fine example of the composer's early manner; but a more interesting choice might, we think, have been made. Miss Fanny Davies made her

first appearance this season, and played Mendelssohn's Prelude and Fugue in E minor. Her rendering of the Prelude was brilliant, though at times it lacked the necessary *élan*. In the Fugue there was a slight want of power noticeable in the right hand, especially in the chords preceding the Choral. Miss Davies, however, played with her accustomed skill and intelligence. She was much applauded, but bravely resisted the *encore*. This is a good step in the right direction: the *encore* to the piano solo at these concerts was becoming a mere habit. Miss Fanny Davies also took part with Signor Piatti in Schumann's Märchenbilder. Signor Piatti played beautifully; but we prefer to hear these pieces with viola, as originally intended by Schumann. Then the effect, especially in the last, is more weird. The concert concluded with Mendelssohn's Quartette in B minor (Op. 3, No. 3), in which showy work for the pianoforte Miss Davies had full opportunity of distinguishing herself. Mr. Thorndike was again the vocalist, and was well received.

Mr. Henschel gave his eighth Symphony Concert on Tuesday evening. The programme contained a curious mixture of old and new music. Berlioz' wild but characteristic Overture to "King Lear" stood at the head. This was followed by some fantastic variations on the "Dies Irae," for piano and orchestra, which we feel inclined to call Liszt's masterpiece of ugliness. "It is extraordinary," said one lady to another, going out of the hall, "how any pianist can play such stuff." "It is more extraordinary," rejoined the second lady, "how anyone could have written it." So say we. Mr. Fritz Hartvigson played this "Todtentanz," full of perilous passages, in a skilful, sympathetic, and artistic manner, and was loudly applauded and recalled at the close. After all this sensational music came Beethoven's second Symphony—a calm after a storm. Mrs. Henschel sang with her accustomed fluency and charm Rameau's Air, "Rossignols amoureux," from his Opera "Hippolyte et Aricie." The flute obbligato part was effectively rendered by Mr. Svendsen. Then followed another specimen of old French music. Monsigny, a prolific and successful writer of operas in the eighteenth century, is now chiefly remembered by the quaint Chaconne and Rigaudon from "Aline," selected by Mr. Henschel. We believe these pieces were last given at the Crystal Palace. The concert concluded with Liszt's brilliant Hungarian Fantasia for pianoforte and orchestra, in which again Mr. Hartvigson showed how thoroughly he could enter into the spirit of Liszt's music.

J. S. SHEDLOCK.

AGENCIES.

London Agents, Messrs. W. H. SMITH & SON, 186 Strand.

Copies of the ACADEMY can also be obtained every Saturday morning in EDINBURGH of Mr. MENZIES; in DUBLIN of Messrs. W. H. SMITH AND SONS; in MANCHESTER of Mr. J. HEYWOOD. Ten days after date of publication, in NEW YORK, of Messrs. G. P. PUTNAM'S SONS.

SATURDAY, JANUARY 21, 1888.

No. 820, *New Series*.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscripts.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

Essays, chiefly on Poetry. By Aubrey de Vere. In 2 vols. (Macmillan.)

THERE is probably not one among the readers of the ACADEMY to whom Mr. Aubrey de Vere is altogether a stranger, and, therefore, it is almost a remark of supererogation to say that these volumes contain much good matter embodied in a pleasing and graceful form. They contain, indeed, so much that is admirable that it seems ungracious to tell the whole truth concerning them—the whole truth, including the fact that they leave behind (such, at least, is the experience of one reader) a vague but unmistakable feeling of disappointment. This feeling is, I think, partly due to the title which Mr. Aubrey de Vere has given to his work. It seems to be justified by the headings of the separate papers, and to be in itself about the most simple and obvious title which could have been chosen; and yet as we read we feel that we are not finding, or finding only in small measure, something which we naturally expect to find in large measure in a collection of essays, “chiefly on poetry.” This something wanting may best be described as literary interest. Poetry is a mode of thought or emotion which makes for itself a vesture, or rather a body, of expression; and adequate criticism of poetry must deal at once with its indwelling spirit and with its outward manifestation, which are in literature as indissolubly bound together as character and conduct in life. Much recent criticism has been noticeably partial and, therefore, defective. It has dealt almost exclusively with externals; has been eloquent upon metres while it has ignored morals; and has treated poetry as a mere art-craft in which expression counts for everything and the matter expressed counts for little or nothing. To those who know anything of Mr. Aubrey de Vere’s mind as it is revealed in his own verse it is needless to say that for him such a critical method has no charm—is, indeed, repellent as a wilful and perverse missing of the one thing needful. To him (vol. ii., p. 169):

“poetry is a practical thing, rooted in realities, embodying the complete mind of a nation, and corresponding with the estimate formed by that nation on every important subject—religion, philosophy, politics, art, science—as well as with its morals and manners.”

This is a broader and saner view than that of the mere aesthetic critic. But as a statement of the office of poetry it is wanting in completeness, or rather in definiteness; for what Mr. Aubrey de Vere says of the poetry of a nation is true also of its worthy prose—of its expression of itself in any literary form. The materials of poetry—observation, thought,

emotion—are the materials of prose as well; but they are handled by the poet in a different manner from that of the proseman, and the peculiar charm and value of poetry, as poetry, are found in this difference in the handling. Hence it is that disquisitions on metres, sound effects, use of imagery—all the things which go to make up what we call *technique*—are not mere intellectual trivialities. These are the means by which the poet attains the special end for the attainment of which poetry exists; and criticism misses its way not by regarding them, but by regarding them as ends instead of as means. Mr. Aubrey de Vere seems to me to miss his way by a too general disregard of them. Poetry has two elements of value—the thing said and the manner of saying it; and it is impossible to say that one is of greater value than the other, just as it is impossible to say whether the acid on the alkali be more essential to the composition of a salt, for without either the salt could not exist. In the majority of these essays Mr. Aubrey de Vere makes the mistake of supposing that he can render the essence of a poet’s work by describing what we may call the raw material of his thought and sentiment, whereas the poet’s peculiar power over his readers resides largely in the treatment to which this raw material is subjected in the mind’s laboratory. A writer who is himself a poet must implicitly acknowledge this. My complaint merely is that his explicit acknowledgements are wanting in frequency and force. Not that they are altogether absent. They appear several times in the course of the two essays on Wordsworth; there more clearly than elsewhere, perhaps because Mr. Aubrey de Vere’s delight in Wordsworth is so unalloyed and his admiration so intense that even the externals of Wordsworth’s treatment have an interest which the externals of poetry in general do not inspire in him. The passage in which he speaks of Wordsworth’s treatment of the details of nature is full of fine discrimination; and his remarks upon such a comparative triviality as the metrical scheme of the great “Ode on the Intimations of Immortality,” though a little more obvious, are as just as if they had been made by the most pious devotee of form. As a rule, however, Mr. Aubrey de Vere prefers the high places of the intellect to these lower literary levels, and is more uniformly philosophical than we expect any man to be who writes “chiefly on poetry.” A friend of mine, an enthusiastic Landorian, opening the second volume by instinct in the middle of the essay on Landor, was shocked to observe a sentence beginning with some terrible words about “that Fall which depraved the Will and subverted the order of man’s moral being”; and, like Paolo and Francesca, “read no more that day,” or, indeed, on any succeeding day. From Landor’s verse to the theological dogma of the Fall is certainly “a far cry,” but this is Mr. Aubrey de Vere’s way. He tells us (vol. i., p. 103) that “as a mountain is best described from the slopes of an opposite mountain, so poetry of a high order is best discerned in its true proportions when contemplated from the heights of a spiritual philosophy”; and this habit of testing all poetry by philosophical canons, while it undoubtedly imparts to his work one kind of

interest, deprives it of interest of another kind which unfortunately happens to be the very kind that we expect and want.

Then, too, Mr. Aubrey de Vere’s style, though fluent, correct, and dignified, is lacking in that grip which is given by the living expression of the vividly conceived thought in the apt word that such a thought always brings with it. It is expatiatory, and gives us no sense of inevitableness. The writer himself wisely remarks (vol. ii., p. 93) that “energetic truth forbids diffuseness, for it is through brief select expression that thoughts disclose their character. Clearness and intensity are thus found together, and to write with these is to write with force.” This is well put; but, if we apply these words to Mr. Aubrey de Vere’s own style, we are compelled to draw the inference that his realisation of the truth he has to expound is very insufficiently “energetic,” for he is frequently diffuse, hardly ever intense, and not always even clear. This last charge may seem to some readers perverse, and, perhaps, unintelligible, so I had better explain my meaning by a little elaboration. I must not be understood to say that Mr. Aubrey de Vere is ever obscure with that purely literary obscurity which makes any single sentence at all difficult to understand. The want of clearness inheres not in parts, but in the whole; and it evidently comes from the lack of that energetic dealing with truth which he so rightly admires. Thoughts can only be made readily and vividly apprehensible when they are conceived in outlines which can be grasped and retained by the perceptive intellect; but in these pages the outlines of thought are often altogether invisible. In one of the most ambitious of his essays, Mr. Aubrey de Vere has a good deal to say about poetic versatility, yet when we reach the close of his utterances upon this theme we cannot feel that we know what his conception of versatility really is. On one page versatility appears as simple flexibility of the intellect, on another it is identified with dramatic insight, on a third it is a merely imitative faculty; and the word never seems to bear the simple and obvious sense of variety of aptitude—such, for example, as was manifested by the late Lord Lytton, who made his mark as novelist, poet, essayist, politician, and playwright. There is in the same essay a distinction drawn between two classes of poets, in which the want of outline is so apparent as to make the classification really useless; but this essay abounds in instances of hazy thought and expression. “It is, of course,” writes Mr. Aubrey de Vere (vol. ii., p. 103) “in dramatic poetry that versatility is most needed, but all genuine poetry is in its spirit dramatic”; and on the same page we read that “sympathy is, in truth, versatility of heart.” To the lazy reader such sentences have a satisfactorily edifying sound; but, though the saying may seem severe, they really darken counsel by words without knowledge. If, for example, the word “dramatic” as applied to poetry means anything at all, it means the quality or qualities which distinguish a certain kind of poetry from all other kinds; and, therefore, to say that all genuine poetry—such poetry, for example, as Milton’s sonnet on his blindness, and Shelley’s “Skylark”—is in spirit dramatic is to use language as a mere

plaything. Nor is the second sentence more satisfactory. Sympathy in itself has no recognisable likeness to versatility, though catholicity of sympathy may have a certain analogy to that variety of endowment which characterises the intellect which we describe as versatile; but even with this correction the *dictum* wants relevance to the subject under discussion. One cannot help feeling that Mr. Aubrey de Vere has too often written *currente calamo*, allowing one thought to suggest another, rather than working on a previously laid-out ground-plan; and this is a method which can never have an outcome in really coherent and symmetrical performance.

The first of the essays—"Characteristics of Spenser's Poetry"—is rich in interesting matter, though it may be doubted whether Mr. Aubrey de Vere establishes his ingenious contention that the *Fairy Queen* is strong in human interest; and indeed in another essay (vol. ii., p. 116) he seems explicitly to abandon it by saying that "Spenser's fairyland will never be much frequented by those whose sympathies are exclusively with action, passion, and character," these being the three elements of which human interest is compact. The most valuable paper in the two volumes is undoubtedly that which deals with "The Genius and Passion of Wordsworth," and which is devoted to a demonstration of the truth often questioned even by Wordsworthians, that passion, so far from being absent in Wordsworth's work, is really "one of the primary notes of his genius." The fact is that the significance of the word passion and its derivatives has of late been narrowed and degraded, and Mr. Aubrey de Vere shows the applicability of such words to the poetry under consideration by restoring to them their true value. He writes (vol. i., p. 111):

"Passion is not appetite. It means profound and intense feeling, addressed first to all that relates to the human ties, and next to remote objects, whether above or around us, so far as they can be coloured by human imagination and emotion. Genuine poetic passion, when dealing with human themes, must show the depth and preciousness, nay, it must imply the infinitude, which belongs to all the divinely-created bonds of earthly life, and should not exhaust itself, as is now so disproportionately common, upon a single form of love—that form the claims of which the readers of verse require least to be reminded of. 'Love poetry' has been said to be 'poetry ready-made.' The great classic poets were never thus absorbed by a single theme. It is a sign rather of hard than tender natures if they can be touched by the most fiery stimulants alone."

And again (vol. i., p. 125):

"It [Wordsworth's poetry] has been admired for its wisdom, and doubtless it is wise; for its purity, and nothing can be more pure; for its truthfulness to nature, and it is ever true to her; but if it had been unmixed with passion, it would have lacked what is essentially characteristic of it. Remove from Wordsworth's meditative poetry the element of passion—not the passion which obscures and destroys, but that 'unconsuming fire of light' which kindles into a more radiant distinctness all that it touches—and much of it would sink into the merely didactic, that is to say, the prosaic."

This is the view which appeals to all who truly feel the power of Wordsworth; but his

passion is not that which perturbs and excites, but that which steadies while it inspires. Mr. William Watson, in his remarkable and penetratingly imaginative poem "Wordsworth's Grave" (*National Review*, September, 1887), after speaking of the poet's "impassioned argument" has the stanza

"Impassioned? ay, to the song's ecstatic core!
Though far removed were clangour, storm,
and feud;
For plenteous health was his, exceeding store
Of joy, and an impassioned quietude."

In this plenteous health, this store of joy, and in the quietude which comes from the possession of these great rare gifts we find, with Mr. Watson, the secret of Wordsworth's power to "heal and arm and plenish and sustain." His is not the passion of convulsive movement, but of healthy activity—the passion not of one emotion broken loose, but of all emotions in sweet co-ordination; the passion of a nature which, like the cloud, "moveth altogether if it move at all."

Mr. Aubrey de Vere's delightful "Recollections of Wordsworth" ought to be reviewed by means of quotation rather than of comment, and for quotation space is wanting. Nothing more interesting is to be found in these volumes, though since the first publication of the paper it has evidently been largely utilised by writers upon Wordsworth, and much of it has, therefore, lost the special interest which belongs to absolute novelty. The five essays on the successive volumes of Sir Henry Taylor's dramas and poems might, I think, with advantage have been re-written and condensed into one paper; as in their present form they contain too much merely descriptive matter—which long ago served its turn—to be of permanent interest. Of the three essays devoted not to poetical but to religious themes nothing must here be said, for they could not be treated adequately in half a dozen sentences. The essay on "The Subjective Difficulties in Religion" contains much that is well put, but as a fresh contribution to the thought of to-day is somewhat wanting in weight. There is much more that will really come home to most readers in the beautiful study entitled "A Saint," which deals with S. Aloysius Gonzaga; and in the equally beautiful imaginary letter of the hermit Ambrosius, written to illustrate the quality of "The Human Affections in the Early Church." Indeed there is scattered up and down these volumes much that cannot possibly be read without pleasure and profit; and I can only hope that in the strictures I have felt compelled to make I have not deviated into even seeming disrespect for a writer who, through a long and honoured life, has been loyal to the best and loftiest traditions of English literature.

JAMES ASHCROFT NOBLE.

On Parliamentary Government in England: its Origin, Development, and Practical Operation. By Alpheus Todd, Librarian of Parliament for the Dominion of Canada, &c. Second Edition, by his Son. In 2 vols. Vol. I. (Longmans.)

THE first edition of this valuable work has scarcely attracted the attention that it deserved. The first volume was in one sense prematurely published, with the omission of

certain chapters which ought to have formed part of it, in order that it might be laid before public men in Canada with a view to the settlement of various questions at the constitution of the new Dominion in 1867. Those chapters which were not sufficiently advanced were then relegated to the second volume, which was published two years later. The author seems to have been a sort of constitutional adviser to the statesmen and legislators of Canada. Parliamentary studies were to him a constant pursuit during an official life of more than fifty years spent in the parliamentary library at Ottawa; and even at the outset of his career, when he was only twenty, he had compiled, in advance of Sir Erskine May, a work on *The Practice and Privileges of the Two Houses of Parliament*, which still retains its place as an authority.

The present work now appears with its matter arranged for the first time according to the author's original design, and with very considerable additions to the text, as well as other alterations made by the author in MS. before his death. It is, in fact, almost a new work, and we propose to discuss its merits as if this were the original edition.

The editor has done well in his preface to call attention to "the eminently practical character of the work." For a truly scientific treatise on the English Constitution the time, perhaps, is not yet come. Assuredly we are accustomed to the most crude and ill-considered statements, even from writers who ought to know better, as to the principles of which that constitution is composed. But much has been gained, and a great step taken towards a more philosophic treatment of the subject, when facts and precedents relating to the working of the machine of government have been so admirably digested as is done in the work before us. For here we have the powers of each separate element in the constitution carefully examined by the light of an exhaustive historical survey. No case appears to have escaped the author's notice which is in any way material to the rights and prerogative of the Crown, the liberties of either House of Parliament, or the responsibility of public departments. The whole subject is carefully mapped out under distinctive headings, and the actual working of our political system in each particular point is illustrated by the most copious references in footnotes to instances by which the underlying principles may be clearly ascertained.

It is impossible to survey such a grand inheritance of laws, institutions, traditions, and principles of government, and to think of the happiness and freedom which have resulted from their smooth and harmonious working without a certain enthusiasm mingled with anxiety; and Dr. Todd makes it evident enough in his introduction that he feels strongly on certain points. We could have wished that he had kept politics a little more out of sight; but, like many other people, he dreads the spread of democracy, and his remarks on this head are none the pleasanter reading because the last Reform Act that he was able to criticise was that of 1867. He regrets the tendency, manifest even then, to extinguish the few remaining small boroughs, and to weaken still further the executive authority and the power of the House of Lords. Many will doubtless feel

with him on these points; nor, perhaps, does he greatly exceed the functions of an exponent of the constitution in pointing out the dangers which may arise from recent legislation. He is, however, on more questionable ground in suggesting remedies. He would claim as a right for the Crown and the House of Lords that they should be "adequately represented" in the House of Commons, and this, too, because, as he considers, "that branch of the legislature has now become the source and centre of political power." This is really such a tribute to democracy as no avowed democrat could pay; for if the two higher elements in the constitution cannot make their weight felt without being "represented" in the lower, it is clear that democracy is already come, and all else is empty form.

Now this is a conclusion which Dr. Todd would not have accepted; nor is it a natural corollary from the constitutional facts which he has been at so much pains to elucidate. Why should it be supposed that the Crown and the House of Lords are impotent, or that the influence of the Crown, at least, is not sufficiently felt in the lower chamber? In a certain sense, it is not desirable that it should be felt there at all. But I should rather say myself that one great reason why the lower chamber is strong is because when it is at issue with the upper it has generally the support of the Crown—that is to say, of the Crown's constitutional advisers. No one would think of passing through the Commons a measure likely to be distasteful to the Lords without government support, unless the party responsible for it were prepared to take the reins themselves, and so force it upon the acceptance of the Peers. Nor must it be supposed that even in such a case a change of government would ensue as a mere matter of course. For although the Commons have it generally in their power to compel the resignation of a ministry with which they are dissatisfied, the sovereign is by no means bound to accept a resignation so tendered. For the Commons, unlike the Lords, are a fluctuating body; and a dissolution may solve the difficulty, if a new parliament is found better disposed towards the existing government.

No doubt it is by the pressure they exercise upon the sovereign through the power they have of dismissing her advisers that the Commons in our day possess so much significance. Of old it was through the Lords only that a check could be put upon arbitrary power. The Lords really ruled the country, the Commons presented the grievances of the people. And as this was their real *raison d'être*—not to represent the second or third hand opinions of "the masses" on questions, perhaps, of European policy (which of course the said masses cannot understand), but simply to show how the interests of their constituents were affected by existing laws or proposed taxation, and possibly might be influenced for the better by new legislation—the Commons, before the days of the Tudors, were probably truer representatives of the people than they are now in the era of reform. The very fact that the House of Commons has become such an engine of government has really gone far to make it less of a representative body than it otherwise would have been; for since the Revolution of 1688

ministers have constantly endeavoured to control it, first by bribery, afterwards by caucuses, by reform bills and by floods of oratory studiously addressed to each new mass of ignorance that either has just been or is intended presently to be enfranchised.

The remedy for this state of matters—and for the concomitant evil of parliamentary obstruction—must ultimately be found not so much in any new measures for the improvement of our legislative machinery, as in a general recognition that the functions and representative character of the Lords have been too much undervalued. Dr. Todd would have some reform of the Upper House "to enable it to retain its hold on the national sympathies." The national sympathies will go with it, if it does its duty. Why should the nation not sympathise with a body of men who are called to council, for the most part, simply as being heads of families, not as successful orators, ambitious lawyers, and busy promoters of schemes which, whether for the public interest or not, are started for private gain? If we chose a number of heads of families by lottery throughout the kingdom, I imagine their opinions would be, on the whole, more genuine and more really representative of what the general public thinks than those of a trebly reformed House of Commons; and surely it is no drawback to heads of families that they have distinguished ancestors. The real danger to the state is in what we must be permitted to call the bad political ethics of the day, which we are sorry to see reproduced even in Dr. Todd's book, where he insists (p. 41) that it is "not the duty of the House of Lords" to continue a persistent opposition to the House of Commons. Not the duty! If he had said it was hardly in the nature of things possible he would have said the truth, for there are always legitimate means of bringing Lords and Commons gradually to agreement. But to put it as a matter of duty on the Lords' part always to succumb to pressure is simply to preach bad morality. For it is clearly the duty of all, peers or commoners, who have votes of any kind, to use them for what they conscientiously believe to be the best interests of the country; and there is no abstract reason why the Lords should not reject a Bill sent up to them ten times over if they conscientiously think it very mischievous. It is really by timid counsels in such cases, even more than from their dogged obstinacy of old (which was bad only so far as it sought to protect selfish interests and corrupt practices) that the Lords have lowered their prestige and become of little account in our days. They have a great chance now when the Commons have lowered theirs still more. But if we attempt by false morality to weaken their sense of duty we must not go on to blame them, as Dr. Todd does immediately afterwards, for remissness in the discharge of their constitutional functions.

That the Crown requires to be better represented in the Commons is surely a delusion; for it is shown by Dr. Todd himself in the volume before us that the rise of the Commons was greatly due to the fact that ministers of the Crown have continually sat among them ever since the Revolution of 1688. From that day cabinet government—till then

looked upon as a disreputable thing—became a recognised system; and a cabinet being once understood to be responsible for the King's acts, a new mode of intercourse was established between the Sovereign and the two houses, by means of which the affairs of this country have ever since been conducted. It is true, the *personal* power of the Crown is less than it was before; but that is just because the Crown really *is* represented in the House of Commons, which it never was under the old system of government by prerogative. To the immense advantage of the Sovereign herself, as well as of her people, her ministers are now compelled to satisfy the representatives of the latter that they are duly careful of their interests; and the House of Commons, having unlimited power of questioning her Majesty's representatives daily sitting among them, has in this way become a real engine of government, which it never was and never could be until this system was established.

These criticisms, however, affect only some remarks in the general view of the subject laid down in the author's introductory chapter; and I fear I have scarcely done justice to that "eminently practical character of the work" to which I have already alluded. This is indeed a thing which it is difficult to illustrate in a review like the present. A brief note of the contents of the volume must suffice. After the general introduction, the author gives a brief account of the development of parliamentary government, a valuable condensed history of the different administrations since 1782, showing the cause of the dissolution of each, and a tabular view of the same thing for more convenient reference, a lengthy chapter on the Sovereign and the royal prerogative, and others on the prerogative in its various aspects as regards Parliament, the church, the army and navy, honors, officers, taxation, and so forth, with separate chapters on the mode of control which Parliament has the means of putting in force in each of these departments. Under the head of the Sovereign there is an interesting chapter on the comparatively recent recognition of the right to employ a private secretary, and the difficulties which for a long time beset the recognition of that right. Here we may point out a slip on p. 295, which would make it appear that the Prince Regent was called to the throne in 1810. The author meant to refer to a thing done after the prince was appointed Regent, not after the Regent was called to the throne.

JAMES GAIRDNER.

The Imperial Gazetteer of India. Second Edition. In 14 vols. (Trübner.)

THE monumental work by which Sir W. Hunter has crowned his life of brilliant and useful labour is already well-known from the first edition published in 1881. That edition, however, had the disadvantage of having been prepared before the taking of the census which was effected in the same year; and this is in itself a sufficient justification for the appearance of the present reprint. More especially has it been necessary to revise the sixth volume, which, professedly an article on the word "India," forms a digest in which the distinguished editor of the *Gazetteer* distils—with his own hand—the essence of the whole work compiled by his colleagues

and himself. We can easily understand the statement in the preface, that it represents the fruit of a long period of continuous condensation. The appearance of the India Office's decennial statement of 1885, and the publication of many new works, principally German and English, on various portions of Hindu and Buddhist science and literature, have furnished a quantity of fresh matter. It would be impossible, in these columns, to indicate the extent to which the *Gazetteer* at large has benefited by the revision. Even in regard to the sixth volume we can only state very generally what are the latest results most ably summarised.

Many Indian subjects are—as the author, with the modesty of a genuine inquirer, admits—"still open questions." He has often had to content himself with recording conclusions, or even more general impressions, without entering into controversy. He has had recourse to the best authorities. Only on one topic—the history of Christianity in India—does he lay claim to having written "from original sources and local inquiry." The general plan of the work will be familiar to those who have studied the first edition. Passing from the physical features of the country to a description of the races by which it is peopled, the author proceeds to tell the history of the past. This he has done in a rapid, but readable, narrative, which leads one to hope that he may some day develop a more complete record which will take its place among the classical histories of our language. The book concludes with a statistical abstract, under appropriate classified heads. An excellent index completes the usefulness of the work.

It would not be extravagant praise to say that this one volume of 700 pages contains all that is likely to be required by ordinary students of Indian subjects. The historical portion is confessedly incomplete; but that somewhat incurious personage, "the general reader," is well known to have but moderate desires in the direction of Indian history. Indeed, so far as the Hindu period is concerned, there are hardly any materials forthcoming. The metaphysical tendencies of the Hindu mind, what we may, perhaps, summarily call its haziness and laziness, have prevented the preservation of any of those annals which, with most Oriental peoples, have furnished records for the use of the historian. It was at one time thought that this barren period might be measured by millenniums. Sir W. Hunter inclines towards the more moderate estimates usually favoured by modern writers. The earliest documents of Indian history are, in fact, the edicts of Asoka, the grandson of Chandra Gupta. The latter, having contrived to make himself master of the country known to modern times as Bihâr, contracted an alliance with Seleucus, the successor of Alexander the Great, and married his daughter. From the edicts of his grandson, cut on rocks and pillars on many widely distant sites in Northern India, we learn that Asoka was in some sort of relations with Antiochus II., with Ptolemy Philadelphus, and with Antigonus Gonatas; that in his day Buddhism became the state church over a vast extent of country; and that the seat of this Eurasian (?) empire was near Patna in the third century before the Christian era. From a few coins

and metal or stone inscriptions we gather that this empire was overrun by invaders from Central Asia after the destruction of the Graeco-Bactrian power in those regions. From the itineraries of Chinese travellers we learn that Buddhism held its own for some centuries, declining in the seventh century of the Christian era, and becoming utterly subverted, in its original seats, about two hundred and fifty years later. The land seems then to have broken up into a kind of heptarchy, to be again, perhaps partially, brought under a federal head, and ultimately conquered in detail by the followers of Islam. With the Muslim conquest commences a series of chroniclers, a few of whom finally attained to something like the dignity of true historians. A resting-place in the records of war and persecution is reached in the long reign of Akbar—contemporaneous with the period of the English Reformation. A genuine empire of Upper India was then formed; the fanaticism of Islam was curbed, and the connexion of state and church abolished for the time. For lack of representative institutions this Indian reformation mostly perished with its founder. Under his son and grandson a kind of equilibrium was maintained, but one that leant, more and more, in the direction of a Muhammadan revival. This tendency was completed under Alamgir—the third in succession, known in Europe as Aurangzeb. His long reign was wasted in struggles with the various branches of Hinduism, in which the empire eventually succumbed. But the Hindus had lost any power of organisation or administration which their race might have possessed in bygone centuries. The Mahrattas erected a sort of brigand-confederacy in the South; in the North the Sikhs began to lay the foundations of a powerful state. But nothing was ready in the hands of those hereditary bondsmen. Persians and Afghans swarmed down from the mountains, murdering and wrecking; the French and English fought fiercely nearer the sea-coast. Without the establishment of a paramount power, India would evidently have been lost to civilisation. Its arts—so patient and often so splendid—were in decay; its manufactures were suspended; its marts were closed. At length the English got the upper hand. Various alliances were made in the vain attempt to find a central authority, or create one if it could not be found. Dalhousie completed the work of Wellesley, and made British power the controlling element. Then came the revolt of the Bengal army, and the subsequent removal of the screen which the East India Company had been allowed to form between India and the British Government—"auspicio," as their motto ran, "Regis et Senatus Angliæ." Then the *Pax Britannica* became supreme over the vast peninsula and its twenty nations.

Such is the essence of Sir W. Hunter's story. With all his details no one will, perhaps, be expected to be in complete agreement, least of all anyone who has made its study the business of a lifetime. In one particular respect the author has done the writer of this review the honour of entering into a special argument in the present edition. His remarks will be found at p. 298. The following extract must suffice:

"Since the publication of this work the author

has received several communications from Mr. H. G. Keene, questioning the soundness of Mr. Thomas's conclusions."

He then, with proper candour, proceeds to repeat Mr. Thomas's views of the Mughal revenues at various periods, "subject to the considerations" arising out of the discussion. When it is observed that Mr. Thomas went so far as to declare that at one time the Emperor Alamgir collected eighty millions of pounds sterling, it will be seen that the subject is one of some importance. If the feeble machinery of those times was equal to such a financial exploit, it may well be held that the British do not do enough in respect of fiscal administration, and that the modern theories of the poverty of India must be taken with many grains of salt. This is not the place for a renewal of the controversy. In a paper lately printed by the Royal Asiatic Society, the present writer believes that he has made plain two of the principal errors that vitiate the conclusions of Mr. Thomas. The highest point ever reached by the revenues of the Mughal empire appears to him to be equivalent to thirty-four millions sterling; and even that is an enormous estimate in view of the value of money nearly two hundred years ago. Naturally, the writer is not desirous of posing as an authority, especially in antagonism to a numismatist so distinguished as Mr. Thomas; and the *casual* with which Sir William has reproduced the figures must be allowed to be all that was to be fairly expected in the circumstances.

Among the most valuable portions of the present work must be noted chap. xiii., which treats of the vernacular tongues of modern India, their past and present. Collecting with admirable research and skill the latest reasonings, Sir William establishes two most important conclusions—first, that the Aryan vernaculars are not derived directly from the Sanskrit (which is probably a purely literary and religious language), but from a synthetic dialect called Prakrit; second, that the proportion of words derived from the speech of the conquered aborigines is very small. This, of course, is in strict accordance with what happened in our own country, where the Celtic element has almost entirely disappeared from our speech.

The above must not be taken as an attempt to do justice to even one volume of the *Gazetteer*; but it may serve to stimulate the curiosity of some readers who desire to see the facts about India concentrated in a very able and interesting manner. Alone among English authors Sir William Hunter has acquired the well-nigh unattainable art of popularising this curiously unwelcome subject. Why India should be so repellent to the Western intellect is a question that would take long to answer. Sir William has been able to show that there is no rule without an exception.

H. G. KEENE.

Aucassin & Nicolette: a Love Story. Edited in Old French, and rendered in Modern English (with Introduction, Glossary, &c.), by F. W. Bourdillon. (Kegan Paul, Trench, & Co.)

Aucassin and Nicolette. Done into English by Andrew Lang. (David Nutt.)

"AUCASSIN & NICOLETTE"—there may be

readers even of the ACADEMY for whom the information will not be superfluous—is a short French romance of the thirteenth century, written partly in prose, partly in assonant verse. It is the history of a pair of lovers, whom the cruelty of fate keeps long asunder, carrying them into exile in different lands, but whose constancy is rewarded at last. Although some of our male *précieuses* have done what in them lay to damn it with their too emphatic praise, it is unquestionably a delightfully told story. Possibly it may owe a good deal of its charm to qualities to which time lends a value not their own; but the old writer's true poetic feeling and admirable instinctive art are too evident to be overlooked. It is curious that a work which is so widely known, and which offers such tempting opportunities for the display of a translator's skill, should, until now, never have been rendered into English. As it never rains but it pours, we have now two different versions published within a few weeks of each other. Before discussing the comparative merits of the two, it will be convenient to say, first, what is to be said anent Mr. Bourdillon's edition of the old French text, and the illustrative matter with which he has accompanied it.

The text given by Mr. Bourdillon is substantially that of Suchier's second edition, though the editor has occasionally preferred to retain the reading of the MS. where Suchier departs from it, and has sometimes adopted the conjectures of M. Gaston Paris, instead of those of the German scholar. Mr. Bourdillon's plea that his volume is designed only "for those who read for pleasure," may be accepted in excuse of some degree of laxity in his critical procedure. Still, I think it would have done no harm, and would sometimes have been useful, if he had in every case quoted the alleged reading of the MS. (which is said to be in a wretchedly illegible handwriting), and all the corrections which have been proposed by different scholars. This critical matter would not have occupied more than a page of small type, and might have been stowed away in some obscure place where no reader need see it unless he looked for it on purpose. As Mr. Bourdillon has in fact given "the principal variants" either in footnotes or on a separate fly-leaf, it seems a pity that he should not have gone just a little further and made his work complete. On the whole his critical judgments appear to be sound, but in one place he adheres to the MS. reading where there is ground for doubting its correctness. The opening lines of his translation are as follows:

"Who were fain good verse to hear
Of the aged captive's cheer,
Of two children fair and feat,
Aucassin and Nicolette.
What great sorrows suffered he,
And what deeds did valiantly
For his love, so bright of blee."

This is literal enough, according to the text of the MS.; but what is meant by "the delight of the aged captive" in the second line? There is no "aged captive" mentioned in the tale. Mr. Bourdillon says in a footnote: "This is the literal translation of the line. Its meaning is not quite evident, but it has been taken to refer to the author of the work, and his delight in writing it." This seems rather a lame explanation, but no

better is possible if we take the text as it stands. In his first edition (1878) Suchier proposed, instead of "Del deport du uiel caitif," as in the MS., to read "Del deport, du duel caitif." The resulting meaning may be expressed (adhering as closely as possible to Mr. Bourdillon's version) something as follows:

"Who to hear good verse were fain
Of the joy and grievous pain
Of two children, fair and feat,
Aucassin and Nicolette," &c.

It is right to say that M. Gaston Paris, whose authority I should be the last to disparage, has, though without giving his reasons, expressed himself unconvinced by this ingenious emendation; and, as neither Mr. Bourdillon nor Mr. Lang in any way refers to it, I am afraid that Suchier himself must have withdrawn it in his second edition, which I have not had an opportunity of consulting. Possibly there may be some difficulty of idiom or grammar which I am not competent to appreciate; but even if Suchier's proposal does not itself quite hit the mark, I cannot help suspecting that the ordinary reading must be wrong.

Mr. Bourdillon's introduction and notes are appreciative and sensible. It would have been better if he had not thought it necessary to apologise for the improper sentiments which the hero expresses with reference to the comparative attractions of Paradise and "the region not to be mentioned in polite assemblies." It seems he had some idea of omitting the passage in question from his translation; fortunately, however, a wiser second thought has saved him from such an absurdity. On the question of the relation between *Aucassin and Nicolette* and the similar story of *Floire and Blanceflor*, Mr. Bourdillon takes the rational view that the resemblances between the two are not due to deliberate imitation. What is common in the plots of the two stories may very well have been shared by a whole group of romances now lost. The remarks on "The Country of Torelore" are mostly to the purpose; but I think there is ground for the conclusion that this name was proverbial as that of a legendary "Topsy-turvyland." It is very unlikely that Lacurne de Ste. Palaye is merely drawing on his imagination when he says that "Pays de Turelore" was a popular nickname for Aiguesmortes, a place where, according to him, people gain their living by walking backwards; where rainy weather hardens the soil, and dry weather softens it; and where "plus il fait chaud plus il gèle"; all which statements are perfectly credible when they are understood. We need not, of course, adopt Ste. Palaye's conclusion that the Torelore of Aucassin was Aiguesmortes. As Mr. Lang says, "It is somewhere between Kôr and Lputa"—two countries, by the way, not quite equally renowned.

Mr. Bourdillon's glossary is intended to enable readers who only know modern French to spell their way through the text with the help of his translation. It, therefore, contains the principal inflexional forms as well as the dictionary forms of the words. I have observed no errors, and only one or two omissions. *Moullier* (wife) is not given; *caitif* is explained only in its figurative sense of "miserable, wretched," though its etymological sense of "captive" occurs more than

once in the tale; and the nominatives *quens*, *cuens* (count) do not appear in their alphabetical place, but only under the oblique case *conts*, which the unlearned reader understands without help. It might have been well to give a few hints as to the more puzzling of the peculiarities of the Picard dialect.

Mr. Lang is so obviously the right person to translate *Aucassin* that it would have been a surprise indeed if his version had not been decidedly the better of the two. Mr. Bourdillon's version, however, is a clever piece of work; and, in judging of its merit, it is fair to remember that it is partly designed to serve the modest purpose of a "crib" to the original. Notwithstanding the words "rendered into modern English" which appear on the title page, Mr. Bourdillon's aim, with regard to style, has been to produce a general impression of archaism, while not embarrassing the reader by the excessive use of obsolete words and idioms. The result is on the whole good, though now and then an incongruous effect is produced by the occurrence of an antiquated form of expression side by side with one that by contrast looks startlingly new. The only thing, however, that is open to very strong objection is the use of "Never a del!" as the equivalent of *nenil nient*. Although the phrase is not uncommon in writers of the fourteenth and fifteenth centuries, I am not aware that it is ever employed in this exclamatory fashion; and it is too antique sounding for its context. At any rate, the modern spelling *deal* should have been used. Mr. Lang's rendering "nay, not so" seems to me quite adequate. In the main, Mr. Lang's principle of translation coincides with that of Mr. Bourdillon, but his style is far more uniform, because, on the one hand, he has been somewhat more boldly archaistic in the general character of his diction, and, on the other hand, he has never gone back so far as Chaucer or Langland for models of expression, but has been content to aim at a sort of modernised echo of Malory. It is seldom that he uses a turn of phrase which has strong associations either with the nineteenth century or with any particular period later than Malory's own. Perhaps "sermon me no sermons" recalls Elizabethan comedy, or something still more modern, rather than fifteenth-century romance; but this is almost the only instance I have observed. There are a few passages of doubtful meaning, which the two translators have taken differently; but, so far as I have discovered, neither of them can be convicted of any unquestionable mis-translation (Mr. Lang apparently takes *li roi del siecle*, on p. 12, as a singular instead of a plural, but the fault is probably the printer's). Contrary to what might have been expected, it is not in the verse portions that Mr. Lang's superior skill is most clearly evident. Both translators have succeeded fairly well in imitating the careless ease of the original versification. In most passages Mr. Lang has come nearest the mark, but not always. The opening lines (of which Mr. Bourdillon's version has already been quoted) are rendered by him as follows:

"Who would list to the good lay
Gladness of the captive grey?
'Tis how two young lovers met,
Aucassin and Nicolette,

Of the pains the lover bore
And the sorrows he outwore
For the goodness and the grace,
Of his love, so fair of face."

Granted that "fair of face" is a little better than "bright of blee," the passage as a whole is not so close to the original as in Mr. Bourdillon's translation, and (not to mention the punctuation) its grammar is not altogether clear. The second line, too, is unintelligible without a note, and is not very felicitous in expression. "The aged captive" has a good deal said about him in Mr. Lang's introduction, which is rather unfortunate if he has been evolved out of a scribe's blunder. In the original the verse passages consist of from ten to thirty lines, all ending with the same assonance. I had half ventured to hope that Mr. Lang would have reproduced this peculiarity. It certainly would not be easy to write assonant verse which would make its own quality recognised by English ears; but the experiment, if tried by an accomplished master of verse, would be interesting. Mr. Bourdillon has adopted couplet rhymes, with only an occasional triplet; Mr. Lang has allowed himself more liberty in the arrangement of his rhymes, and in some passages with obvious advantage.

HENRY BRADLEY.

The Russian Church and Russian Dissent: comprising Orthodoxy, Dissent, and Erratic Sects. By Albert F. Heard. (Sampson Low.)

THIS volume is a very painstaking compilation from a considerable number of works directly or indirectly dealing with Russian Christianity—a list of which is given among the prefatory matter. The author was formerly Consul-general for Russia at Shanghai, and from internal evidence is an American citizen. His book has no charms of literary style, but brings together within reasonable compass a quantity of information otherwise procurable only in detached statements, scattered over many works. This, however, holds good rather for the latter part, dealing with the sects, than for the former, where the main course of Russian ecclesiastical history is traced, and where Mr. Heard has had little to do save to draw from Mouravieff.

The introductory chapter, on the causes which led to the separation of East and West in matters of religion, is clear and intelligent. The author rightly lays particular stress on the local influence of Byzantine Caesarism upon the Churches in union with Constantinople, as contrasted with the far larger share of autonomy enjoyed by the Latin Churches, first by reason of the withdrawal of the seat of empire from Rome, and later through the multitude of petty kingdoms into which Western Europe was broken up after the empire fell. None of these Western sovereigns could control more than a very small section of the clergy, or was powerful enough to resist pressure put upon him when, as sometimes occurred, they acted internationally as a single body, and he found himself face to face with those who owed him no civil allegiance. Mr. Heard does not forget to note also the contemplative and speculative temper of Oriental Christianity,

as contrasted with the practical turn of Western theology, which has, on the whole, concerned itself more with the bearing of dogma upon life and conduct than with its purely abstract character. The second chapter narrates the introduction of Christianity into Russia, and dwells especially on the conversion of Vladimir, ruler of Kieff, in 988. When mentioning the effect produced upon his mind by the religious pictures shown him by the Eastern missionaries, it would have been worth while to mention in a note that the very same means was chiefly instrumental in the conversion of Bogoria, King of Bulgaria, more than a century earlier (to be exact, in 853). There is a worrying typographical fault recurrent when the early Russian sovereigns are mentioned, in that each is named as the "great prince," which reads in every case as though a moral estimate of his personal eminence; whereas what is really signified is the official title, *Veliki Kniaz*, often translated "Grand Duke"—a meaning which capital initials would make evident to the reader at once. The immediately succeeding fortunes of the Russian Church are briefly chronicled in succeeding chapters, describing the processes by which independence alike of Constantinople and of Rome was secured by Russia; how a Patriarchate, admitted by the Eastern Church into the sodality of the four great Oriental sees, was set up in 1589, and lasted till thrown into commission by Peter the Great in 1721, when it took the form it has ever since held as the Holy Governing Synod. The efforts of the Latin Church to establish itself firmly within the Russian territory, and to subject the whole population to its sway, are also clearly described; and some space is devoted to the fortunes of the Uniat Church, which, though once powerful, and contending almost on equal terms for the allegiance of Russia, was virtually extinguished in 1839. Some details of this event, necessary for entire understanding, are lacking here, and might be supplied from Neale's *Introduction to the History of the Holy Eastern Church*.

As to the first beginnings of Russian Dissent, Mr. Heard points out that they were due to the temper of formalism, partly natural to the Slavonic mind, and partly engendered by the wholesale manner in which the conversion of the nation had been effected, rather in compliance with the commands of the ruling power than as the result of intelligent conviction. Hence, extreme importance was attached to the precise words and gestures of every ceremony or recital. When the Patriarch Nikon, in the middle of the seventeenth century, caused the liturgies and other sacred books to be purged from the manifold corruptions which had crept into the text, and also reformed the ecclesiastical ceremonies by recalling them to a more ancient standard, he was regarded by a large section of the clergy and laity as a revolutionary innovator and heretic; and every abuse he had assailed, every mistake he had corrected, was upheld as an integral and inseparable factor of orthodox belief and practice. As they could not make their opinion prevail with the Tsar and the nation generally, so as to retain the current usages, they seceded in a body, setting up the first important Russian sect, and styling them-

selves *Starobriaditsi*, or "Old Ritualists," a name they subsequently changed to *Staroversi*, or "Old Believers." Mr. Heard, who is for the most part apt enough in pointing out parallels between the Eastern and the Western sects, has omitted to do so in this instance, where his own country (as in several other cases) supplies the best analogy. The Cummisate sect in the United States, styling itself "Reformed Episcopalian," seceded from the Episcopal Church in 1873, because of the general return in matters of theology and ceremonial to a higher standard than that of the debased eighteenth century use previously current; and an offshoot has been planted in England also, for precisely the same reason.

There has been a marked divergence of sentiment on religious matters in Russia ever since the influx of Western ideas in the reign of Peter the Great; for while the bulk of the people remain still in the superstitious stage, the higher classes are widely sceptical and infidel. And since religion has played a more important part historically in Russia than in almost any other country—for it was the Church, whatever its faults, which saved the nation from being crushed out under the Tartar or the Polish yoke—this breach between the classes and the masses is of more serious import than in other lands, and has been a factor in the success of the wilder modern sects which have struck at the very foundations of morality and social order. The maleficent action of the all-pervading civil influence upon the Russian Church, and the usually low intellectual and social position of the popes or parochial clergy, are dwelt on by Mr. Heard as among the main sources of the strength of Dissent. Nor does he forget to explain the additional complications caused by the unlike temper and training of the black and white, or monastic and secular, clergy, the former of whom, more rigidly conservative than the latter, have usually been strong enough to prevent the success of necessary reforms, which might have averted many evils, not adequately foreseen or grappled with by the parochial clergy, themselves frequently affected by the spirit of innovation and experiment active among the quicker of their flocks.

The account Mr. Heard supplies of the leading sects is clear and readable, correct, too, so far as it goes; but it needs supplementing in a good many places with further details. For instance, when he is describing the substitutes for the Eucharist adopted by the *Bezpopovtchin*, or "priestless" dissenters, who have no regular ministry, he does not mention the very curious method employed by some of them—that of successive inoculations, so to speak, of the altar-breads they use, from one consecrated by a priest while the sect yet possessed them in its early life. A piece taken from this was inserted into another unconsecrated loaf, supposed to become consecrated by the contact, and the process has been continually repeated since. There are also some curious particulars concerning the *Doukhobortschi*, or "combatants in the spirit," which do not appear; and the points of resemblance between the newer emotional antinomian sects and the very similar bodies which have been developed out of American Puritanism deserve to be more fully brought out, though Mr. Heard has

by no means passed the matter over in silence.

The book is a good one now, and a little careful revision would raise it to the rank of excellence.

RICHARD F. LITLEDAL.

SOME PHILOSOPHICAL BOOKS.

Kant's Philosophy of Law. Translated from the German by W. Hastie. (Edinburgh: T. & T. Clark.) Kant's *Philosophy of Law* is one of his latest and, in this country, if not elsewhere, one of his least known writings. Published in 1798 under the title of *Rechtslehre*, it now appears for the first time in an English translation. Mr. Hastie has done his work in a very satisfactory manner. He had, indeed, a somewhat less difficult task than falls to the lot of those who undertake to translate Kant's more purely philosophical writings, for the style of this treatise shows a marked improvement on the great thinker's earlier efforts at composition. It contains pages which are not only clearly and forcibly written, but even make some approach to actual eloquence. The section on capital punishment may be referred to as an example. Still, at best it was no easy matter to turn Kant's German into such fairly readable English as is offered to us here; and, on comparison with the original, Mr. Hastie's version proves to be accurate as well as idiomatic. The result is the more gratifying seeing that the translator's preface gives one a higher idea of his juristic learning than of his taste in English composition, bristling as it does with such uncouth terms as "politicality," "certiorated," "foundedness," "antioriticism," "homologated," and "infutility." Passing from words to things, it may be doubted whether this *Philosophy of Law* has more than a historical or biographical value. The cry of "back to Kant" is dying out in Germany, and had never any reality in England, seeing that English thought never occupied the Kantian standpoint. Even in Germany it was the watchword of a reaction not against empiricism, but against the abuse of *a priori* reasoning. Curiously enough, the critic of pure reason, after demonstrating its constructive impotence, was one of the first to fall back on the old speculative methods; and his work on law betrays a certain tendency in this direction. He professes to deduce an entire system of private and public right from a single transcendental principle familiar to us as "the liberty of each bounded only by the equal liberty of all." I do not know whether this principle can be traced farther back than Kant, but it seems to have been certainly transmitted from him through the mediation of W. von Humboldt's work on government to the greatest living advocate of individualism, Mr. Herbert Spencer. But the notion of liberty developed in that philosopher's *Social Statics* differs widely from its *idée-mère*, and has given birth to a very different family. With Kant it means not permission to please oneself, but power to obey the Categorical Imperative—in other words, the power possessed by every rational being of acting in accordance with the dictates of reason, all promptings of pleasure or pain to the contrary notwithstanding. To deduce the primary rules of right from a fact our knowledge of which depends on the knowledge that there are some such rules seems a somewhat circular method of reasoning. Again, assuming free-will, in Kant's sense of the word, to exist, it cannot be made the basis of a code or a political constitution, since laws would be useless for the protection of that which is, by hypothesis, an indefeasible attribute of humanity. Moral constraint can only be exercised, if at all, through the agency of pleasure and pain; and these,

on Kant's theory, must always leave us free to obey the dictates of morality, while physical constraint cannot trench on the domain of an obligation that only obtains within the limits of physical possibility. The Greek philosophers were more consistent in holding true freedom to be independent of external conditions. The fatal objection to modern metaphysical systems is that in dealing with the world as it is they have led to no scientific discoveries, in dealing with the world as it ought to be they have suggested no social reforms. Their leading motive is invariably to furnish some new justification for the current views, either Conservative or Liberal. Kant supported the moderate Liberalism that had been in vogue for half a century before he wrote. He upholds the arrangements generally existing as to property and marriage, supporting them by arguments not always easy to follow, and sometimes a little grotesque. As usual, his own Categories furnish the framework of his systematisation. Real and personal right are brought under the heads of Substantiality and Causality; while Reciprocity satisfactorily covers the combined real and personal right which, according to him, is involved in marriage and the other domestic relations. It seems that long before the close of the eighteenth century the claims implied by such phrases as "compensation for improvements," "tenant-right," and "dual ownership," had already been mooted, and were approved by many. They are, however, peremptorily rejected by Kant. His reason is worth stating, if only as a curiosity:

"It is evident that the first modification, limitation, or transformation generally of a portion of the soil cannot of itself furnish a title to its acquisition, since possession of an accident does not form a ground for legal possession of the substance. Rather conversely, the inference as to the mine and thine must be drawn from ownership of the substance, according to the rule *Accessarium sequitur suum principale*. Hence, one who has spent labour on a piece of ground that was not already his own has lost his effort and work to the former owner. This position is so evident of itself that the old opinion to the opposite effect, that is still spread far and wide, can hardly be ascribed to any other than the prevailing illusion which unconsciously leads to the personification of things; and then, as if they could be bound under an obligation by the labour bestowed upon them to be at the service of the person who does the labour, to regard them as his by *immediate right*." (p. 97).

It might be interesting to know how Mr. Dillon's priestly supporters, trained, as they doubtless are, in the scholastic philosophy, would answer this wonderful argument. Perhaps they would regard the tenant's part as the substance, and the landlord's as a "separable accident." Mr. Hastie deserves our gratitude for having introduced a remarkable and little-known work to the English public. But he must not expect it to exercise any appreciable influence on English thought. The theory of natural right must be presented in a more modern form, and with a firmer grasp on the things of experience, before it can shake the jurists of this island in their allegiance to Bentham and Austin.

Formal Logic. By John Neville Keynes. Second edition revised, and enlarged. (Macmillan.) The general character of this work has been described by us in our notice of the first edition. There probably exists no more serviceable manual for teachers and advanced students of formal logic. Mr. Keynes excelled his contemporaries in his first edition. Does he surpass himself in his second edition? We do not feel able to answer this question with confidence in the affirmative. Some of the changes consist in using hackneyed words in new senses. It has been said that it is unadvisable to propose a new term, unless there is a fair chance of its being generally adopted. Can even Mr. Keynes's authority

give currency to the use of *Connotation*, *Intension*, and *Comprehension* in three different senses: the first to include only the attributes signified by the name, the second those attributes that are mentally associated with the name, though not entering into the definition of it; while the third term, *Comprehension*, is to include all the attributes common to all the members of the class denoted? Again, was it wise to make a new division between *Conditional* and *Hypothetical*—particularly as it is not very easy to seize the distinction drawn. "A hypothetical proposition expresses not a connexion between phenomena, but a relation of dependence between truths." Thus, "If God is just, the wicked will be punished"; this is a hypothetical proposition. But, "If a barometer is carried up a mountain, the mercury in it will fall," is conditional. Probably, the most important additions are those which have been made to the fourth part; where the author, leaving the beaten road, strikes out a new path in that comparatively untrodden region which Boole added to the province of logic.

The Anatomy of Negation. By Edgar Saltus. (Williams & Norgate.) Mr. Belfort Bax, in his recent work on the subject, tells us that the history of philosophy has generally been written on three plans. The first is "the compilation history, which consists in a collection of undigested anecdotes, facts, and bald, and for the most part loose, statements of opinion." This, which he pronounces with truth, "the most utterly execrable," seems to be very nearly the plan followed by Mr. Edgar Saltus. The title would be ill-chosen and pretentious, even did the work redeem its promise of conveying "a tableaux of anti-theism from Kapla to Leconte de Lisle," leaving out the English and American atheists. The book, as it lies before us, has as much to do with the anatomy of negation as a vamped-up volume of anecdotes about cats and dogs has to do with the anatomy of dentition. Moreover, Mr. Saltus's pages swarm with mistakes and misstatements, of which only a few examples can be given. We are told of Democritus that he may possibly have "sat at the Buddha's feet" (p. 37). Democritus was born some years after Buddha's death. Tertullian is not the most classical of Latinists, but he can hardly have been guilty of writing "*Animam nihil est*" (p. 132). It seems rather cruel to charge an Amsterdam guide with telling travellers that Spinoza, after escaping the assassin's dagger, kept his torn coat ever after, "by way of memorabilium" (p. 113); and the grammar here savours of the tourist rather than of the *valet-de-place*. "On his death-bed Hegel was heard to mutter, 'Only one man understood my philosophy, and he only half caught its import.'" (p. 169). It is hard to deprive what our author would doubtless call "ignorami" of their consolation; but the dying philosopher never made the declaration here attributed to him, and, by the way, incorrectly cited. We may repeat of Mr. Saltus what Kuno Fischer has wittily observed of another sciolist, that "he has only read one sentence of Hegel's, and that Hegel did not say." Mr. Saltus warns us in the preface that "no attempt has been made to prove anything." This was very wise on his part, as it would be rather difficult to establish such assertions as that "when spontaneous generation and the descent of man are substantiated, materialism will have proved its claim" (p. 191); or "that pain does outbalance pleasure is a fact too well established to need discussion here" (p. 176). Mr. Saltus is of course free to air his own pessimism with or without proofs, but he has no right to press Lucretius into the service by declaring that the great Epicurean "denied the existence of happiness" (p. 63); still less to assert that so bright and hopeful a thinker as Fichte "was

quite sure that for every-day purposes it [the world] was the worst one possible" (p. 165). Mr. Saltus writes a clear and lively, though too flippant, style, and might do better work could he renounce the ambition of becoming a philosophical Mark Twain. A modest magazine-article on Leconte de Lisle would at present suit his powers better than a general "tableau of antitheism."

Morality and Utility. By G. P. Best. (Trübner.) This is an ingenuous and, on the whole, well-considered protest against utilitarian ethics. The author's leading thought is the derivation of morality from equality or justice. He terms it "The Decoy which leads us to Virtue" and "The Ideal Condition of an Ideal State." The scope and powers of the author do not warrant us in placing his book on the high level of recent English contributions to the science of ethics; but Mr. Best is evidently a thoughtful and independent writer, and his book is worthy of study.

Matter and Energy, by B. L. L. (Kegan Paul, Trench, & Co.), is an answer to the query, "Are there Two Real Things in the Physical Universe?" The author replies, "Certainly not. Energy alone is the real thing of which we have no immediate experience, but experience only its results." The brochure is the work of a man conversant with the data of the problem he aims to solve, and is written with considerable ability. Most of its philosophic readers would be tempted to class it with Berkeley's Idealism, but the author deprecates such a classification. We are likely to hear more of this subject, probably, also, more of B. L. L.

We have also received *A Treatise on the Principle of Sufficient Reason*, by Mrs. P. F. Fitzgerald (Thomas Laurie). The sub-title of this work is "a psychological theory of reasoning, showing the relativity of thought to the thinker, of recognition to cognition, the identity of presentation and representation, of perception to apperception"; and we are further informed that its object is to show the rationality of faith, love, and hope. Mrs. Fitzgerald, we may add, published some little while ago an *Essay on the Philosophy of Self-Consciousness*, containing an analysis of reason and the rationale of love.

NOTES AND NEWS.

MR. W. F. KIRBY, who will be known to some as the compiler of the bibliographical appendix to Sir Richard Burton's *Thousand Nights and a Night*, has issued the prospectus of a complete translation into English of the Kalevala, or national epic of the Finns, which he proposes to publish by subscription. The Kalevala, in its latest recension (1849), by Lönnrot, who himself collected it from the mouths of the people, consists of about 22,800 lines, arranged in fifty runos or cantos. Mr. Kirby has translated it from the German version of Schiefner (Helsingfors, 1852), the metre of which fairly represents that of the original, and which possesses the additional interest of having furnished Longfellow with the model for the metre of "Hiawatha." This metre or rhythm Mr. Kirby has naturally followed. The whole will form two volumes of about five hundred pages each, large post octavo, and will be issued to subscribers only at the price of one guinea. Mr. Kirby's address is 3 Burlington Gardens, Chiswick, W.

THE work on *Practical Education*, upon which Mr. Charles G. Leland has been engaged for some time past, will be published shortly by Messrs. Whittaker & Co. In this the author expounds his views on the development of the

memory, training in quickness of perception, and the encouragement of the constructive faculties.

THE first volume of the "Statesman's Series," announced by Messrs. W. H. Allen & Co., will be *Beaconsfield*, by Mr. T. E. Kebbel. The volume will be ready about the end of January, and will contain a preface by the editor of the series, Mr. Lloyd C. Sanders.

THE next volume in the Badminton Library will be *Riding and Driving*. "Riding," including military riding and ladies' riding, is contributed by the Earl of Suffolk and Berkshire and Mr. R. W. Weir; "Driving," by the Duke of Beaufort, the editor-in-chief of the series and president of the Coaching Club, with contributions from Lord Algernon St. Maur, Col. H. S. Burley, Major Dixon, and Mr. A. E. T. Watson.

MESSRS. LONGMANS will publish shortly *Our Sentimental Journey through France and Italy*, by Joseph Pennell and Elizabeth Robins Pennell, with a map and numerous illustrations.

MR. F. YORK POWELL has written a little volume of *Sketches from British History*, which will be published, with illustrations, in Longmans' series of "Historical Readers," uniform with Mr. S. R. Gardiner's *Easy History of England*.

A Winter in Albania, by H. G. Brown, illustrated by C. H. Brown, will shortly be published by Messrs. Griffith, Farran & Co. Some portions of the work have already appeared in the *Globe*.

A Memoir of the Rev. G. M. Murphy (the originator of the well-known Lambeth Baths meetings for working-men), by his sister, is announced for immediate publication by Mr. Elliot Stock.

Chaldea, by Zénaïde A. Ragazin, will be published next week by Mr. T. Fisher Unwin, in the series of "The Story of the Nations."

A DICTIONARY of the Kentish dialect and provincialisms in use in the county of Kent, compiled by the Rev. W. D. Parish, chancellor of Chichester Cathedral, and the Rev. W. F. Shaw, vicar of Eastry, will be issued to members of the English Dialect Society as one of their series of "Original Glossaries," and also as an independent volume. The printers are Messrs. Farncombe & Co., of Lewes.

Take with you Words is the title of a mission book by Archdeacon Wynne, of Aghadoc, which will be published by Messrs. Griffith, Farran & Co.

MR. THOMAS GREENWOOD, author of *Free Public Libraries*, is now engaged upon a similar handbook dealing with local museums.

MESSRS. CASSELL & COMPANY are about to issue a new serial edition of *Paradise Lost* with Gustave Doré's illustrations.

THE two prizes offered for the best essays on "The Effect of the Effacement of Christianity," have been awarded to the Rev. John B. Nichols, The Fosse, Leicester, and to C. W. Dymond, Esq., Forefield Place, Lyncombe, Bath.

THE FORTHCOMING MAGAZINES.

AN important article on "Islam and Christianity in India" will appear in the next number of the *Contemporary Review*. The writer, a well-known authority on Indian matters, withholds his name so that his views on this question may be the more freely expressed. Mr. Gladstone, Dr. W. H. Russell, Dr. Walter C. Smith, and the Dean of Peterborough will also be among the contributors to the same number.

DR. SCHILLER-SZINESSY's attack on Raymond Martin's *Pugio Fidei* in the last number of the *Journal of Philology* will be answered by Dr. Neubauer in one of the forthcoming numbers of the *Expositor*.

MR. KINGLAKE's portrait—which, we believe, has never before been published—drawn by the sculptress of the bust of Fielding (Miss Margaret Thomas) will appear, with a memoir, in the February number of Mr. F. G. Heath's pictorial monthly, *Illustrations*.

THE *Century Magazine* for February will contain the following articles: "Ranch Life in the Far West," by Theodore Roosevelt; "Some Letters of Walter Savage Landor," by J. Russell Lowell; "Astrology, Divination, and Coincidences," by T. M. Buckley; "A Russian Political Prison," by George Kennan; "Pictorial Art on the Stage," by E. W. and E. H. Blackfield.

THE February part of *Art and Letters* will contain the following articles: "A Normalian," by Jules Simon; "Afloat," by Guy de Maupassant; "The Red Gendarme," by T. Gautier fils; "Whistler," by Theodore Duret; "Mme. Judio at Home," by d'Avrecourt.

A WRITER in *Cassell's Magazine* for February, will describe a visit recently paid by him to the little-known city of Wazan, the capital of the Shereef of Morocco. The same number also will contain a complete story by the author of "Who is Sylvia?"

St. Nicholas for February will contain: "Michael and Feodora," by Amelia E. Barr; "Sara Crewe" (concluded), by Frances Hodgson Burnett; "The Story of Old London Bridge," by Treadwell Walden; "The Astrologer's Niece," by Tudor Jenks.

THE Rev. Dr. Hugh Macmillan will contribute to the February number of the *Quiver* a paper entitled "God's Righteousness like the Great Mountains."

ORIGINAL VERSE.

A ROYAL SNUFF-BOX.

THE outside studded with gems;
Within a portrait fair
Of her who once ruled all France,
For the king it was painted there.
Open the box. See, her face
Seems to smile back at you again.
Is it fancy, or have the dark eyes
A shadow in them as of pain?
They say that Lewis himself
Twined those pearls in her sunny hair,
And vowed that none could be found
To match with that skin so rare.
She died ere his love grew cold,
So never to her there came
That darkest of all dark days—
The end of her glorious shame.
Died, while the wave of her fan
Meant triumph, or deep disgrace;
To her bent the mighty of France,
All eager for power or for place.
Close the box. You have gazed long enough
On the face that was once the pride
Of a monarch and all his court—
But 'twas happy for her that she died.

F. P.

MAGAZINES AND REVIEWS.

IN the *Revista Contemporanea* for December Edwardo Abela concludes his report on the Agriculture of Spain, showing that the turning of corn-land into vineyard has resulted in an over-production of wine, and demanding almost prohibitive duties on cheap foreign alcohols. Doña E. Pardo de Bazan has a charming little sketch of a visit to the Escorial. Ramon Jordana continues his account of the immigration of the

Chinese into the Philippine Isles, arguing that they are unduly favoured by the present laws. In two letters on the military history of Spain by Eugenio de la Iglesia and Luis Vidart, the former proves that Salazar's "Re Militari" is merely a translation of Machiavelli's "Arte della Guerra"; the latter that Tomás de Morla, in his "Tratado de Artilleria," published as his own a MS. of his predecessor, Vicente de los Rios, who died in 1779. Rodríguez Ferrer tells the story of Iradier Buffy, a Basque explorer in Western Africa; and S. Fatigati narrates his impressions of Navarre, dwelling on the singularly varied physical conditions of that province. Verses by Becerro de Bengoa on the Basque Christmas, and an anonymous panegyric on the Spanish Academy in Latin hexameters and Spanish verse are the poetical contributions.

THE *Poletin* of the Real Academia de la Historia for December is of more than usual interest. Besides several inedited Hebrew and Latin inscriptions, it gives two unpublished Bulls of Celestine III., dated June 4, 1192, and October 31, 1196. The former orders the Archbishop of Toledo to send a priest "latina et arabica lingua instructum" to the Christians living among the Moors in Spain; the latter releases the subjects of Alphonso IX. of Leon from their allegiance, if he continued to employ Moorish troops against the King of Castille. Manel Danvila prints the records of the Cortés of Madrid of 1649. The clergy could be taxed only after reception of a brief from the Pope; on signs of hesitation to grant this, Philip IV. threatens to recall the agent of the clergy from Rome, and that "if the brief be denied he will levy the contribution without it." The venality of the deputies is strongly shown in their petitions for pensions and places. Father F. Fita prints a more accurate text than that given by Amador de los Rios of the Edict of Ferdinand and Isabella decreeing the expulsion of the Jews, March 31, 1492.

CORRESPONDENCE.

COLTON'S "LACON."

London: Jan. 16, 1888.

In Mr. Morley's very interesting address on "Aphorisms" there is, as it seems to me, one passage, and one only, which his address would be better without. It is never worth while to mention forgotten books or forgotten people unless there is something to be learnt from them. But Mr. Morley mentions a book which has passed away simply to assert that it is worthless, to give in proof a worthless extract, very unfairly chosen, and to recall some facts about the author's life and death which may well be forgotten with his works. Sad, indeed, that the once famous and brilliant Caleb Colton should be summoned to point no moral, so far as one can see, except the very needless lesson that we had better not publish volumes of aphorisms!

For my part I see no reason why Mr. Morley should have spoken of Colton at all; but if he spoke he should certainly have been just, perhaps charitable. Colton's *Lacon* is not the absurd failure Mr. Morley would lead us to suppose. Colton was, indeed, right in doubting whether he should be known to posterity. His writing, he thought, might be too heavy or too light, and "it is as difficult to throw a straw any distance as a ton." In the *Lacon* there is, according to my judgment, not a little wit, but I do not find much wisdom, and the constant strain after point and antithesis becomes wearisome. To use his own words, in a vain attempt to be cutting and dry he often gives us what is cut and dried. And in such books when we come across anything especially good we doubt whether it has not often been said before.

Such a suspicion affects the following, an aphorism which long experience as a school-master has taught me to be of great value: "We should not be too niggardly in our praise, for men will do more to support a character than to raise one."

To one of his aphorisms the close of Colton's days gives a melancholy interest: "Suicide sometimes proceeds from cowardice; but not always, for cowardice sometimes prevents it; since as many live because they are afraid to die, as die because they are afraid to live."

R. H. QUICK.

THE METAPHYSICS OF SO-CALLED SAVAGES.

London: Jan. 16, 1883.

In the preface of Prof. Max Müller's *Biographies of Words* occurs the following passage:

"When we are told that the people of Mangaia look upon the universe as the hollow of a coco-nut shell, and that at the bottom of that shell there is a thick stem called Te-aka-ia-Roë, we seem to move in the very thick of dense savagery. But if the student of languages analyses Te-aka-ia-Roë, and tells us that it meant originally 'the-Root-of-all-Existence' our savages become suddenly metamorphosed into modern metaphysicians, and we learn that even the thoughts of a Herveyan islander may possibly have antecedents."

Perhaps one might have plausibly guessed, *a priori*, that the thoughts of a race in the Mangaian state of culture would have antecedents. But the question of early thought in its coarser, or mythical, and its finer, or metaphysical shapes, remains of much interest. How are we to explain the metaphysics, for example, of the Maoris? Their traditional hymns of the origin of things, as I have ventured to remark elsewhere, remind one of Socrates's remark about the speculations of Anaxagoras. Compared with the myths of the beginning among most people of their grade of civilisation, the hymns of the Maoris are like the utterances "of sober men among drunkards."

"The word became fruitful;
It brought forth Night."

"From the Nothing the Begetting": such things sound almost Hegelian. Yet the Maori myths of the beginning are of the ordinary kind—a medley of gods, and beasts, and men. Are we to think that the metaphysical hymns are the original and earliest guesses at philosophy, which were followed by the evolution of absurd myths? Or, are we to say that the myths are earlier, and that the hymns answer, more or less, to the Orphic hymns coming between Greek myths and the earliest physical conjectures? The same difficulties meet us in Mangaia. According to Mr. Gill—Prof. Max Müller's authority—the Mangaians have a reasoned theory, not exactly of the universe, perhaps, but of the world. Earth is conceived as like a coco-nut in form, that coco-nut tapers to a stem, to a point. The point is "a spirit or demon, without human form," and, as we have seen, is named "the-Root-of-all-Existence." But philology has not helped us so much as she might. "Root" is not "root" pure and simple, but "Roë=Thread-worm." The Mangaian philosopher, having to picture a beginning, a source and origin, thinks of it as "a quivering, slender, worm-like point, at which existence begins." Here, then, is Mangaian thought attempting to reach a pictorial conception of a *causa causans*. Above the worm comes a "stouter" demon named "Life," and above him, thicker yet, a part of the stem called "the long lived." All these are outside of the nut. As Roë literally means "thread-worm" not "root," it would be interesting to know exactly what Te-aka-ia-

literally signifies. "Existence" sounds rather unexpectedly abstract. This will be admitted when we learn that the next of the ascending forces, though called "the Very Beginning," is no more than "a woman, a demon of flesh and blood," who sits huddled up at the bottom of the coco-nut, and who made the first man by plucking a bit out of her own side. And he, like Oannes, was half a fish! Here we are in full mythology. Which conception was the earlier, in Mangaia—the metaphysical conception of a "Root-of-all-Existence," of "a Very Beginning," of "The Beginning and the Bottom," or the mythical conception of a thread-worm and a woman? Was the metaphysical idea first, and was it clothed in flesh of worm and woman to make it easier of belief? or did the myths of worm and woman come first, and did Mangaian philosophers gradually give them an abstract meaning? Or was the early attempt at abstract thought unable quite to reach its goal? and had it to clothe its conception, as it were, in concrete shapes of woman and worm? Similar questions meet the student of Greek myths and metaphysics as he compares Hesiod, the Orphic poems, and the first physicists. But we can hardly advance further than the mere statement of the problems, which are quite familiar to anthropologists. Myth has a tendency to glide into metaphysics. Metaphysics have a tendency to glide into myth. Both are mere stories we children tell ourselves to lull our curiosity, but the stories of myth are much the more amusing. Or shall we say that myths are the vivid morning dreams of the human mind—vivid, and over well remembered, when man awakens into perfect consciousness? A. LANG.

SUPERSTITIOUS PRACTICES IN SOUTHERN ITALY.

Nervi: Jan. 9, 1888.

The learned Pitré somewhere records that the days immediately preceding December 24 are passed in much trepidation by the people of South Italy; because they firmly believe that that day (or rather night) is, above all others, favourable to the working of miracles and wonders of every kind. Around this night centre the aspirations of young and old; of ambitious men and ambitious women; of those who have wrongs to avenge, or who lust after gold, as well as every condition of men disappointed in their hopes (lovers yielding the largest number)—who one and all secretly expect that this night of nights will see the realisation of their inmost longings. As might be expected, lovers and love-philts hold a conspicuous place; while the ingredients and adjurations employed are almost identical with those so minutely described by the Mantuan poet nearly two thousand years ago.

In obedience to the general belief of the potency of Christmas night, mothers anxious to secure good husbands for their daughters will besmear their faces with honey, accompanying this with time-honoured formulas, which must never vary and are carefully handed down from generation to generation. A word too many or too little would cause the charm to fail of its purpose. Christmas night, moreover, is supposed to yield up hidden or spell-bound treasures, which it would be idle to try to discover at any other time. A hillock of peculiar shape, some gloomy cavern, the ground under a gnarled tree or one struck by lightning, are generally fixed upon by popular fancy as likely receptacles of wealth, the smallest portion of which would satisfy the most grasping.

On this night the wives and sweethearts of mariners will repair to the seashore in the fond imagining that they are able to exorcise storms and shipwrecks from the beloved ones,

by keeping their gaze towards those points of the horizon which experience has taught them to dread most, while uttering the magic words which are to secure their husbands or lovers against the perils of the fickle element. It is on Christmas-night that the gift of witchcraft may be transmitted to any one willing to pay the cost, which is brought about in the following way. As the evening draws near, the two dames (they are generally women) retire within closed doors, there to await the fatal hour. At the first stroke of midnight the elder crone rises and begins her performance, which consists in revolving in a circle, describing fantastic figures that seem to have some relation to the signs of the zodiac, reciting the while consecrated formulas—a medley of mutilated Low-Latin, Arabic, and local dialect. These the younger must repeat word for word, without omitting a single syllable, under penalty of having to wait another year before she is allowed to make a new trial. The whole affair must be dispatched in the space of two minutes. When the neophyte has acquitted herself to the satisfaction of her instructress, she may begin on her own account to cure diseases and foretell the future, in virtue of the power conferred upon her, and conformably with the instructions previously received.

Black art, or witchcraft, by means of which incantations, charms, and so forth are performed, is called in Sicily the *power of binding*. The formulas employed are numerous, and vary according to the power invoked. A characteristic one is that addressed to the spirit of the three winds, or the "Star of the Young and True Light," "Star of the true light, spirit of the three winds, Hear me when I call (at the three voices) Go, make people go crazy." Another runs thus:

"Spirit, if in my house you wish to stay,
Go, bid my love return to my embrace.
Spirit, my words do not forget,
Speed on your course my love to bring.
Speed away, my behests to execute,
If (he should be) unwilling to come, bind him fast."

The larger proportion of these charms have love for their object. A very common one consists in procuring a few drops of holy water out of three distinct parishes, which must be in the proportion of two to one—i.e., two masculine and one feminine, or inversely, two feminine and one masculine. By masculine is meant holy water obtained from a parish under the protection of a male saint, and feminine that procured from a parish under the protection of a female saint. When the needful quantity of "elect" or "married" water, as it is called, has been provided, it is mixed together and secretly administered, either pure, or in the drink or food of the person whose love it is wished to win back. Another way for rekindling love is to attend midnight mass, when at the elevation of the host three knots must be tied with the left hand in a handkerchief, band, piece of ribbon, &c.

To enumerate all the old local customs which persist among the people, and which are often confined to single hamlets, would carry me beyond the present scope. I will confine myself to the mention of one that seems to belong exclusively to Chiaramonte in Sicily. In the space of time which elapses between the introit and the lesson, dwarfs are supposed to hold a fair sprung up by magic in a field near at hand, where every conceivable good thing—or thought so by the simple folks—is sold at ridiculously low prices. No words are spoken, transactions being carried on by mimicry, which all can understand. The whole affair only lasts a few minutes; for as soon as the priest begins to read the lesson everything vanishes into thin

air, except the good things which the rustics were fortunate enough to obtain for a few coppers.
J. GONINO.

THE GAWAIN-POET AND THE "WARS OF ALEXANDER."

London: Jan. 14, 1888.

Owing to delay in the delivery of a proof, my letter on this subject in the ACADEMY of to-day was printed without my corrections. The reader will be able to rectify for himself the obvious misprints in proper names and in Middle-English words, and will, I hope, make excuse for certain negligences of expression.

I wish, however, to cancel the sentence relating to the word *freke*; and to add the remark that the "Wars of Alexander" and the writings of the Gawain-poet not only agree in using words elsewhere unknown or rare, but also in using but sparingly certain words that are elsewhere common. Thus *dole* (*doel*, *deol*, *del*), grief, is quite a favourite word in "William of Palerne" (and the "Alisaunder" by the same author), in the Troy-book, and in the "Morte Arthure"; but in W.A. it appears only three times, and in G.P. five—three of them, it is significant to note, being in the poem called "The Pearl," the elegiac nature of which accounts for the fact that the writer in this instance used the word more frequently than was his wont.

HENRY BRADLEY.

THE "ISIS" AND THE "WASA."

Nottingham: Jan. 16, 1888.

I quite agree with Mr. de Gray Birch that "the only proper method" of discovering the etymology of a local name "is to start with the old name and work downwards to the current form." I have long held this opinion, and I am accordingly astonished to learn that my criticism upon Mr. Birch's discovery of an early form of the name Isis in the Old-English *wāse* "mud" is a good example of the reverse process. I may retort that Mr. Birch's identification is a good example of the danger of rashly assuming that two local names of different dates are identical because they bear some trivial superficial likeness to one another. In the present case the resemblance is restricted to the presence of the letter *s* in both words.

The only evidence that Mr. Birch can adduce in support of the extraordinary sound changes assumed in the derivation of Isis from Wasa is the suggestion: "May not the result stand thus:

Wasa=[w]ooze=[w]isis?"

This, I need hardly remark, is no proof at all. It was by the use of such means that Lemon and his predecessors succeeded in deriving the Teutonic words in the English language from Greek. In fact, one can prove anything by the use of such *formulæ* when one is perfectly unfettered by any laws of phonology. And Mr. Birch shows us, by his comparison of the Old-English *wāse* with the Modern High-German *Wasser*, how free he is from any phonological restraint. Yet he, singularly enough, appeals to "phoneticism" as one of the reasons for excepting his derivation from the ordinary rules of sound-lore. He also appeals to "dialecticism" as another reason for this exception. We are familiar with this hazy force as a beneficent power that is freely invoked by belated local etymologists of the pre-scientific school to help their limping etymologies out of the pitfalls of phonology. It has, for instance, been called in to explain the curious circumstance that the Celtic *uisge* has yielded such a variety of forms as Ock, Eocce, Ouse, Ose, Isis, Tham-es, and, I have no doubt some one will now add, Wasa within a few square miles of Oxford. Now, it is quite useless to plead

"dialecticism" unless one is prepared with evidence to prove that the dialect of the particular locality usually changed the sounds in the manner assumed by the etymologist. Thus, if Mr. Birch could prove that the Berkshire or Oxfordshire dialect generally, or even occasionally, dropped an initial *w* before a long vowel, and that it regularly changed an Old-English *ā* to *i*, then the derivation of Isis from Wasa might merit further consideration than it does when it is only backed up by a vague reference to "dialecticism."

Leaving the phonological arguments, I will now turn to those that will be more generally understood. Mr. Birch objects to my explanation of *wāse* as a swamp, bog, or stagnant pool, because a brook ran into or through it, and there was an island in it. Well, I suppose there are cases of brooks running through swampy ground; and as for the island, I hold that it was not an island in the modern sense, but a piece of high land surrounded by swampy ground. I have shown upon indisputable evidence, in *Notes and Queries*, 7th S. iv. 349, that this was not an uncommon meaning possessed by the Old-English *teg*, usually translated "island." This meaning may perhaps explain the process whereby the same word in High German, where it appears as *au*, has come to mean a meadow, &c., without any reference to an insular character.

Mr. Birch next urges that we should "expect naturally, indeed imperatively, to find the Isis appearing in some form or other in a detailed account of these [Fyfield] boundaries"; and he argues that, on these grounds, *wāse* must be the Isis. Mr. Birch is here too hasty. The Isis is mentioned; but, unfortunately for him, in such a way as forbids its identification with *wāse*. I have shown in the ACADEMY of December 31, 1887 (p. 441), that the portion of the river Thames that now bears the doubtful *alias* of Isis appears in the Abingdon charters only under its proper name of Thames. Hence, when the Isis or Thames is mentioned in the Fyfield boundaries, it is called by its real name of Thames. Now, the Isis has not to this day entirely displaced the more authentic name of the Thames at Fyfield, so that if anyone speak of the Thames at Fyfield, it is pretty clear that he is referring to what is, perhaps, more generally called the Isis. Mr. Birch says that he has "never said that the 'Wase and Thames were two names for the same river.'" But, if he has not said so in so many words, he says it in effect when he identifies the Isis or Thames at Fyfield with the Wasa. It is not open to him to argue that the Thames here means that portion of the stream below its junction with the Thame where it is unobscured by this confusing *alias* Isis.

The fact that the Thames is mentioned by name at Cumnor, Fyfield, and Appleton, and in such positions as preclude all idea of its identity with the *wāse*, disposes of another of Mr. Birch's arguments. And in the other case where *wāse* occurs, that of Buckland, the inference is very strong that the *wāse* was not, as Mr. Birch contends, the Isis or Thames. The boundaries proceed from a dene or valley to a mead, thence to the *wāse*, and from the *wāse* "out to the river or brook" (of *wisan út to éa*). This is surely not the way that the Isis or Thames would be contrasted with any other river or brook. It is not necessary for my purpose to assume, as Mr. Birch does, that the *wāse* that is mentioned at Cumnor, Fyfield, Appleton, and Buckland was "a ten-mile-long fen, ooze, or stagnant pool boundary." All that I assume is that the inhabitants of these villages used *wāse* to mean a swamp or bog or stagnant pool, and that there was a swamp, or a bog, or a stagnant pool, somewhere on the borders of each village. The first assumption is perfectly unobjectionable, for we have other

evidence that *wise* was used in this sense; and there seems to me to be nothing physically impossible in the second assumption.

As I hold that this *wise* is simply the Old-English *wise*, "mud," &c., I will not attempt to discuss Mr. Birch's idea that *Wasa* was the name of a river-god. Such evolutions of unrecorded deities from local names are about as unsatisfactory to an unimaginative man as a laboured resolution of an ancient tale into a distorted sun-myth, and they are susceptible of just as little proof. W. H. STEVENSON.

DANTE'S PUNISHMENT OF SIMONIACS.

Stanhoe Hall, King's Lynn: Jan. 16, 1893.

An interesting parallel to Dante's punishment of the Simoniacs in hell (*Inf.* xix. 13-27), which was doubtless suggested to him by the mediaeval "plantatio," or planting head downwards of assassins (cf. *Inf.* xix., 47, 81), is furnished by Sir Henry Layard in his recently published "Early Adventures," reviewed in last week's ACADEMY. Speaking of an administrator in Persia, Sir Henry says:

"One of his modes of dealing with criminals was what he called 'planting vines.' A hole having been dug in the ground, men were thrust headlong into it and then covered with earth, their legs being allowed to protrude to represent what he facetiously called 'the vines.'"

This form of punishment was common enough in mediaeval Florence, as may be seen by a reference to the old statutes of that city.

PAGET TOYNBEE.

"STEERMAN."

University of Cincinnati: Jan. 3, 1893.

Mr. J. H. Round demands (ACADEMY, Dec. 17, 1887) whether the Latin *stermannus* does not represent an English 'steerman'? Clearly it does. The word is found in Anglo-Saxon in *Aelfric's Hom.* (ed. Thorpe), ii. 560, l. 22: "Hera ðone steorman, ac na swa ðeah ærðan ðe he becom gesundful to þære hyðe," which I would render (more freely than Thorpe): "Praise the steerman, but not before he come safe to port." J. M. HART.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, January 23, 4 p.m. Asiatic: "The Jains," by Sir Monier Williams and Mr. Rang Lal.

5 p.m. London Institution: "Alexander the Great," by the Rev. W. Benham.

8 p.m. Royal Academy: Demonstration, "The Trunk," II., by Prof. J. Marshall.

8 p.m. Aristotelian: "The Philosophical Importance of a True Theory of Identity," by Mr. B. Bsanquet.

TUESDAY, January 24, 3 p.m. Royal Institution: "Before and after Darwin," II., by Mr. G. J. Romanes.

8 p.m. Anthropological: Annual General Meeting, Presidential Address by Mr. F. Galton.

8 p.m. Civil Engineers: "The Jubilee Bridge over the Hoochly," by Sir Bradford Leale.

WEDNESDAY, Jan. 25, 8 p.m. Royal Academy: Demonstration, "The Shoulder and Arm," by Mr. J. Marshall.

8 p.m. Society of Arts: "Theatres and Fire-proof Construction," by Mr. Walter Emden.

8 p.m. Geological: "Ailurus anglicus, a new Carnivore from the Red Crag," by Prof. W. Boyd Dawkins.

8 p.m. Society for the Study of the Geology and Physical Geography of the Cape Colony, by Prof. A. H. Green; "Two New Lepidodot Ganoidea from the early Mesozoic Deposits of Orange Free State, South Africa," and "Some Remains of *Squatina Cranci*, sp. nov., and the Mandible of *Belonostomus cinctus*, from the Chalk of Sussex," by Mr. A. Smith Woodward.

8 p.m. Society of Literature: "The Reliability of the old British Records and Traditions," by Mr. R. B. Holt.

8 p.m. Athenaeum Society: "Rude Stone Monuments," by Mr. A. L. Lewis.

THURSDAY, Jan. 26, 8 p.m. Royal Institution: "My Visits to America," by Prof. H. Herkomer.

4 p.m. Society for Preserving the Memorials of the Dead: "The Union of Sepulchral with Religious and Allegorical Art," by Mr. J. S. André.

6 p.m. London Institution: "Architectural Mouldings," by Mr. H. H. Statham.

8 p.m. Telegraph Engineers: "Safety Fuses for Electric Light Circuits and the Behaviour of the Various Metals usually employed in their Construction," by Mr. Arthur O. Cockburn.

FRIDAY, Jan. 27, 7.30 p.m. Civil Engineers: Students' Meeting, "Pumping Machinery in the Fen-Land," by Mr. L. Gibbs.

8 p.m. Royal Academy: Demonstration, "The Forearm and Hand," by Prof. J. Marshall.

8 p.m. Society of Arts: "The Public Health in India," by Mr. Justice Cunningham.

9 p.m. Royal Institution: "The Exploration of Masal-Land," by Mr. Joseph Thomson.

SATURDAY, Jan. 28, 8 p.m. Royal Institution: "Experimental Optics," II., by Lord Rayleigh.

8 p.m. Physical: "The Effect of Magnetisation on the Thermo-Electrical Properties of Bismuth," by Mr. Herbert Tomlinson; "The Influence of Magnetism and Temperature on the Electrical Resistance of Bismuth and its Alloys with Lead and Tin," by Mr. E. van Aubel; "A Water-Dropping Influence Machine," and "The Price of the Factor of Safety in Lightning Rods," by Prof. S. P. Thompson.

SCIENCE.

M. Annaei Lucani Pharsalia. Edited, with English Notes, by C. E. Haskins. With an Introduction by W. E. Heitland. (Bell.)

It is strange enough that the *Pharsalia*, which, in the eighteenth century, was a book much read and largely commented on, should have become, in the nineteenth, a comparatively neglected work. It might have been expected that a period so full of exciting revolutionary episodes as the past hundred years would have given to the incisive utterances of the single representative of Rome's freedom under the abominable tyranny of Nero a factitious interest which the merits of the work as poetry failed to inspire. It might have seemed inevitable that the palaeographical direction which Lachmann and Ritschl gave to Latin philology, and which has successively occupied itself not only with the greater Latin poets—Lucretius, Catullus, Vergil, Horace, Martial, Juvenal, Persius, but with those of the second class—Propertius, Tibullus, Valerius Flaccus, Ausonius, should hitherto have left Lucan almost untouched. The reason, however, is not far to seek. The MSS. of the *Pharsalia* are so numerous, so widely dispersed in most of the considerable, and many of the inconsiderable, libraries of Europe, that the task of discriminating good from bad, primary from secondary, is greater than in the case of any other Latin poet, except, perhaps, Ovid and Vergil. I say perhaps, because Ribbeck has practically shown that most of the mediaeval MSS. of Vergil may be dispensed with, owing to the fortunate accident of our possessing several codices of a period long anterior to the Middle Age; and because the separate works of Ovid have, in turn, been carefully examined from the critical standpoint—and, at least in the case of some of them, we know where to look for constituting the text on a secure basis. With Lucan this has not been done in any adequate manner, though C. F. Weber's edition was, for the time when it appeared (1821), a good and reliable guide; and Detlefsen's examination of some very early palimpsest fragments, the variants of which he has published in *Philologus*, showed how interesting the problem of Lucan's text is, as soon as it is handled in a large and (from our present standpoint) competent way.

Neither of the contributors to the present edition of the *Pharsalia* here help us at all. Mr. Heitland—a scholar whose edition of the *Pro Rabirio* shows his competence for the more difficult problems of historical and interpretative research—confesses that "it is no part of his plan to speak of the seventy-five or eighty MSS. (which he has

never seen)," and seems to put this on a level with "describing the numerous printed editions from 1469 to the present day." Similarly Mr. Haskins "makes no attempt to produce a critical text, but has followed, for the most part, that of Weise." Such indifference to the problem of the *Pharsalia* (for the scholars of the seventeenth and eighteenth centuries did a great deal for the mere interpretation of passages) seems to me more than astonishing—it is retrograde; and, coming as it does from two scholars of mark in a university avowedly devoted to the minute examination of the classical languages, alarming. For how can any real commentary on a difficult author be written till we have ascertained as distinctly as we can *what* he wrote? Had the editors done nothing more than give a complete collation of even one first-class MS., with Detlefsen's palimpsest variants, it would have saved them from the reproach of ignoring what Lachmann, Ritschl, Cobet, and Madvig have been preaching for the last fifty years incessantly—I mean the essential connexion of palaeography with interpretation. Mr. Heitland, indeed, greatly understates the multiplicity of the MSS. of Lucan, for the Bodleian alone possesses about twenty; and it might be said that this multiplicity is a valid excuse for reticence on a point of acknowledged complication. Yet, if the labour is great, it is not therefore to be shirked entirely; and if there are probably some hundreds of MSS., so much the more need to make out *something* about them. In a word, this Cambridge edition of 1887 leaves the problem of the text of the *Pharsalia* absolutely untouched.

Less unsatisfactory is the interpretation. It is true that Mr. Haskins, as he does not possess the preliminary knowledge of MSS. which I have for years believed to be indispensable to any adequate commentator, may be said, in a sense, to grope darkly in passages where knowledge would have permitted him to see, if not clearly, at least more clearly. It is true, too, that anything like real discussion of difficult points is not to be found in his notes—as, indeed, how could it, in the absence of one, and that the most necessary, condition of a perfectly satisfactory judgment? But so far as the explanation of a difficult writer can be thought to depend on translations which, if sometimes thin, are often neat (the illustrative parallels are mostly drawn from older commentators, especially Oudendorp); so far as a book highly useful for examination and tripos purposes can be thought to meet the demands of advanced scholars—to this extent the new Cambridge edition will not be thought disappointing. An undergraduate might read it through in a fortnight, and know a good deal about Lucan; nay, might flatter himself that he knew quite as much as he could ever wish to know. There is an absence from the notes of all matter which could in any sense be considered irrelevant—unless, indeed, the occasional citation of parallels from English poetry can be thought such.

It is, too, tolerably equal throughout, though the notes on the last two books are, perhaps, slightly less careful than the rest—an excusable fault in a poem which is a strain on the faculties from first to last, and which, perhaps, exhibits Lucan at his feeblest in

these books. Again, judging it as a whole, the commentary may be pronounced correct; at any rate, not marked by glaring or signal errors. But from this general estimate very large deductions must be made. The correctness is too often superficial; the meaning has not been thoroughly realised; and the English equivalents, if analysed, will be found either inexact or not sufficiently made out. Thus, in ii. 394—

"Haec placuit belli sedes, hinc summa mouenti
Hostis in occursum sparsas extendere partes,"

Mr. Haskins may be virtually right in explaining *summa mouenti* as ἐντεῦθεν ὁρμωμένῳ; but no one will accept his translation, "making this his headquarters," as satisfactory until he has proved it by other similar passages. And the doubt which the expression raises is not diminished by the fact that for *mouenti* other MSS. give *mouentis*, of which Mr. Haskins gives no hint whatever. Again, *ignibus atris* (iii. 98) is explained as "deadly," and compared with *atra tigris* (*Georg.* iv. 407); but (1) the meaning of *atra* there is, perhaps, only "fierce" (as Servius); (2) fires, when elsewhere called *atri*, are not "deadly," but dark with smoke-clouds, as in ii. 299.

In ii. 179,

"toto quamuis in corpore caeso
Nil animae letale datum,"

it is as impossible that *datum* should mean "inflicted" as that *dabantur* in 126 should mean "were committed." In both places *dare* has its proper force, "no mortal blow conceded to the life"—i.e., to escape by, "it was not that everything was given up to the humour of one," "that one man was permitted to control everything." In ii. 171,

"Omnia Sullanæ lustrasse cadauera pacis,"

"examined" is very far short of the significance of *lustrasse*, "made the round of." 356,

"gradibusque adclinis eburnis
Stat torus,"

"resting on" is hardly right for *adclinis*, which (if this is the true reading) would seem to mean "leaning against," as in the passage cited from Val. Flaccus. In 397, the difficulty of *nullo*, as in 408, is, perhaps, best got over by translating "nowhere." In 426.7,

"umbrosae Liris per regna Maricae
Vestinis impulsus aqua,"

it may be doubted whether *impulsus* is more than "struck by"—i.e., encountering, and in

"nullasque uado qui Macra moratus
Alnus"

moratus does not mean "concerning itself with," but simply that the Macra does not admit any boats on its shoaly water, and obstruct their advance thereby. In 514, *uel* is not "even," but "or again." In 519, it is incredible that Mr. Haskins should reject the reading of most (? all) MSS., *cui* in favour of *cui fit*, which is unlike the ordinary style of Lucan, and to refer which to *pudori* involves an improbable prosopopoeia. In iii. 39,

"nihil est animis sensus a morte relictum,"

he says, "by means of death," not "after death"; neither is exactly true. In iii. 132, "Pacis ad exhaustae spoliū non cogit egestas," the translation "poverty does not compel you to drain peace for spoil" seems

very doubtful; the natural sense is certainly "to despoil the exhausted resources of peace"; for, in such proportion as these resources were exhausted elsewhere, in such proportion was Caesar likely to be determined in securing the few unexhausted treasure-stores he could still find. In iv. 719 "Hoc solum metuens, incautus ab hoste timeri,"

Mr. Haskins translates "fearing only this that, through want of caution on his own part, the enemy should be struck with fear of him—i.e., should take the alarm and retreat." But (if *incautus ab* is the right reading) the epigrammatic style of Lucan suggests that his meaning is not this, but "fearing that his [Juba's] unguarded advance might yet rouse Curio's fears" and thus his intended surprise be frustrated, in spite of the hasty march which he (Juba) was making and his natural expectation of coming down upon Curio before he had taken the alarm.

Nor are there wanting passages in which the new editor, paralysed, so to speak, by the difficulty of conflicting views, ends with leaving his reader in a state of perplexed confusion; readings have not been sorted, or history investigated; the judgment of great critics is ignored, that of insignificant critics is preferred; finally, a view is put forward which is against all the probabilities, or even possibilities, of the Latin language. Such a passage is ii. 126-128, where the greatest of English scholars has written an admirably clear note; yet the name of Bentley is not even mentioned, and an impossible translation of *uiolata* is given on the authority of—Weise.

As might be expected, from the superficial character of the commentary and the complete indifference to MS. research which the editors both profess, emendation, even where obviously necessary, is resolutely put out of sight. It may be doubted whether either Mr. Heitland or Mr. Haskins has thought it part of his duty to cast even a look at Withof's *Encaenia Critica*, a clever book, though its main position—that the recurrence of the same word in lines closely following each other always suggests some corruption in the text—cannot be safely assumed for the *Pharsalia*. Mr. Heitland, indeed, might have given to this point, which, critically speaking, is the most difficult of all the doubtful questions which Lucan's epic raises, more consideration than he has thought fit to extend to it in his generally excellent introduction. Withof, however, is only one of a host of scholars who have successively dealt with the text of the *Pharsalia*. Grotius, Bentley, Guiet, Corte, Burmann, Waddell, and Bishop Wordsworth may be mentioned. Anyone who cares to pursue the subject will find ample materials in Jortin's *Miscellaneous Observations* (1731) and D'Orville's *Miscellanea Critica* of a date somewhat subsequent. Let it not be said that emendation is wasted toil in the conjecturer, distraction of mind to the student. Some of Bentley's conjectures are now ascertained to be right by Detlefsen's publication of the early MS. fragments mentioned above. I may mention *tenet* for *timet* in the notable passage v. 372; *tenet* is found in the Naples palimpsest. Even higher, as a critical effort, is Bishop Wordsworth's correction

of ix. 569, "An sit uita nihil, det longa an differat aetas" for "et" of MSS., "Is life nothing? Does long life give good things to men, or does it defer them? by postponing death, which to the wise man is, perhaps, better than life" (*Conjectural Emendations*, by Christopher Wordsworth, p. 31). Admirable, too, is Withof's *incolumis* for *tunc olim*, (ix. 604):

"Ecce parens uerus patriae, dignissimus aris,
Roma, tuis: per quem numquam iurare pudebit,
Et quem, si steteris unquam ceruice soluta,
Incolumis factura deum."

Not one of these restorations is mentioned, yet each of them clears up a passage where all was dark before. ROBINSON ELLIS.

TWO LOCAL IRISH FLORAS.

The Flora of Howth. By H. C. Hart. (Dublin: Hodges, Figgis & Co.)

A List of Plants found in the Island of Aran. By H. C. Hart. (Same publishers.)

ONE of the pleasantest tasks in science is certainly that which sets a man to write a local flora. Unhampered by baggage or instruments, for he requires nothing but a London catalogue, he takes his way to his tract of country; and the more thoroughly he examines it, enjoying the varied pleasures of loch or plain, sea or mountain, the better will his work be done. If he be sent by fate or government to explore wild regions,

"Sive per Syrtis iter aestuosas
Sive facturus per inhospitalem
Caucasum,"

he has the interest of foreign travel and the charm of the unknown before him. Even within our own group of islands it is not yet by any means impossible to find a rare flower in a hitherto unknown station, or even to add a new species to the British list. Our Potamogetons have grown in number of late years, owing to more careful search into pieces of fresh water; and it is improbable that the mountains of Scotland and Ireland have yet yielded up all their treasures.

Mr. Hart has had under observation two small areas on the East and West coasts of Ireland respectively, and has very considerably improved our knowledge of the distribution of Irish flowering-plants and ferns. The promontory of Howth gives a far larger and more varied list than we should have expected from a place so near Dublin. No doubt it owes its superiority over the commonplace flora of London to the sea and to its hills, but still we wonder that it does not suffer from finger-blight. The islands of Aran (in Galway Bay, not the Arran of Donegal), while they make a yet better defined natural area, are less easy to get at and less agreeable to stay in. It is likely that they come nearer than most Irish districts to representing the natural flora, undamaged by extirpation and unincreased by importation of species. Mr. Hart confesses to having himself introduced several species at Howth. Yet even there changes come about. *Matthiola sinuata*, found on one of the smaller islands, has not been seen since 1835. Luckily, we need not expunge it from the British list, since it is still to be found in North Devon and the Channel Islands.

CORRESPONDENCE.

THE MESSIANIC IDEA AMONG THE EARLY BABYLONIANS AND ASSYRIANS.

London: Jan. 14, 1888.

In the *Proceedings* of the Society of Biblical Archaeology for January 1885, in an article

treating of the Babylonian kings of the mythical period, I published the following paragraph:

"One of the tablets published in *W. A. I. iv.*, and bearing the following colophon: '2nd tablet (of the series beginning) . . . lul, lord of deep wisdom,' is a remarkable and very important text. It begins with the reflections of some ancient hero who, looking on the land and the people around him, saw on all sides nothing but evil. The ruler (as it seems) broke off prayer and discontinued supplication, did not teach his people reverence and honour, and did not himself call upon God. He, however (the speaker), was wise: the day for the worship of the gods was the delight of his heart, and the prayer of a king—that was joy. The writer goes on for several lines in the same strain, and speaks of one who had learnt the glorious path of the god who 'in the earth lived, died, renewed (himself).' The writer then seems to speak of some misfortune which overtook himself; his goddess had not mercy on him, and did not go by his side. But suddenly his tone changes: 'Open the high place,' he says, 'they have granted my prayer (?): until there be no more death, and weeping cease,' and after a few more lines the tablet comes to an end. This was considered by the Assyrians or Babylonians important enough to have a kind of running glossary, in which all the difficult or unusual words are explained by others better known; the system being to write the whole line, and then take the difficult word or words, and writing them down separately, put beside them the explaining words, sometimes separated by the division-mark, sometimes not."

The first of the italicised phrases runs, in the original text, as follows:

"*Ēkāmī ilmadu dlakti lū āpātī, ʾā ina āmmat iblutu, imūt, āldeš.*"

"How has he learnt the glorious path of God (or, the God), who in the world lived, died, renewed?"

The second phrase, which reminds us of the well-known passage in Revelation, xxi. 4, is as follows:

"*Ādī lā mitulima bikiti gamrat.*"

"Until there be no death and weeping cease."

Of course, in the first of the above extracts, the words cannot have a prophetic significance, because they are in the aorist, not the future tense. They are important, however, because they show an idea (which originated in Babylonia, and probably in Assyria also, at a very early period, perhaps 3,000 years before Christ) in which a divine being, whose path was glorious and worth following, is spoken of, apparently, as having lived in the world, died, and risen again—a prototype of the Messiah.

I hope, at some future time, to publish the complete text and translation of this most difficult, but highly interesting, tablet.

THEO. G. PINCHES.

SOME FINNISH ETYMOLOGIES.

London: Jan. 14, 1888.

Mr. Robert Brown, in the ACADEMY of January 14, seems to suppose that the Lapp *sarva* (a), "elk" or "stag," is connected with a Finn *kauris*, "goat"; and further that the words *vuohi* and *kutlu* are merely variants in "accord with the laws of Turanian letter-change." The F. equivalent of L. *sarva* is *tarvas*, "stag" or "elk," its precise application being uncertain. They are possibly related to the F. *sarvi*, "a horn," though certainly not to *kauris*, old form *kāpris*, Liv. *kabr*, Lap. *habres*, the original for which Prof. Ahlquist finds in an Indo-European stem—in Lat. *caper*, O.N. *hafr*. He believes that *vuohi* is only F. *unhi*, "a ewe," with *v* prefixed and a transfer of meaning, deriving the latter from the Lith. *avis* or Lett. *avs*, "a sheep." He is inclined to see in *kutlu* the O.N. *kid*.

In the ACADEMY of November 12, 1887, Mr.

R. Brown rather hastily bracketted F. *tie* with Hung. *isten*, Sum. *dingi*, &c., though the word only means a "path, a road," a meaning very remote from "create," "sky," "god." Again, to couple a Yakute word for "sacred" and an Akkadian and Assyrian word for "heaven" with a F. *suavanto*, Kalevala 18.109 (not 36.237), meaning "the still water between rapids," seems to require reconsideration.

So, too, as far as meaning and derivation are concerned, there is no sort of connexion between F. *kave*, stem *kapehe*, dim. *kapo* and *kuu*, "the moon." *Kave* is not an uncommon word in the older poetry, and is used in various connexions. It occurs as a parallel word to "woman"; as a parallel word to "creator"; coupled with the word for horse as a parallel word to "camel-foal"; coupled with the word for forest, to mean forest "creature"; with sea to mean "fish"; with great to mean "a human being" *par excellence*, &c. Prof. O. Donner compares it with the Esth. *kabe-ne*, "a woman," *kabo*, "a girl"; N. Lap. *gaba*, "a woman," Sw. Lap. *kuopes*, "a witch." JOHN ABERCROMBY.

SCIENCE NOTES.

THE Seismological Society of Japan has recently issued a new volume of its *Transactions*, a large part of which is occupied by a paper by Prof. John Milne, on "Earth Tremors in Central Japan." It appears from the author's observations that most of these tremors are produced by the action of the wind upon the earth's surface, and that the movements thus excited may often be propagated to distant localities where wind disturbances have not occurred.

MEETINGS OF SOCIETIES.

NEW SHAKSPEARE SOCIETY.—(Friday, January 13.)

THE REV. W. A. HARRISON in the chair.—Mr. R. G. Moulton read a paper on "Some Canons of Character Interpretation," premising that, in dealing with this subject, the inductive method was particularly clear. The true interpretation of a character was not the noblest or most interesting conception that could be formed of it, but simply the view of the personage in question which most fully took in all the details connected with him. It was, in fact, a scientific hypothesis, the purpose and test of which was to account for all the particulars to which it has application. Mr. Moulton then suggested the following practical canons of interpretation, which he had found by experience to be useful in analysing character: (1) Interpretation must take in not only the direct but also the indirect elements of character. Indirect elements (i.e., the impression made by personages on others, or by others on them) are evidenced in the case of Brutus, the strength of whose mind is shown by the way he sways even the strong mind of Cassius, while the delicacy of soul hidden beneath stoic impassiveness is seen in the influence which the gentle Portia has over her husband. (2) Difficulties in interpretation may diminish by multiplying, i.e., when a single inconsistency is a stumbling-block, many inconsistencies resolve themselves into a new consistency. (3) Interpretation must have regard to the extent to which a character is displayed by the action. Ophelia's apparent negativeness is due to the fact that she is only allowed to appear in negative situations; her strength of character being chiefly shown in her influence on Hamlet. (4) In interpretation, force of character must not be confounded with force of poetic expression—a canon which may be illustrated by the case of Polonius. (5) Care must be taken to distinguish between what belongs to the character of a personage, and that which belongs to his position in the action of the play: a good example of this being found outside Shakespeare, in Marlowe's Mephistophiles, who is commonly taken to be an arrant coward, whereas he is really supposed by the poet to have come from behind the curtain of the unseen world, and to know all its horrors, while Faustus persuades himself of its non-existence. (6) Characters are often best interpreted

in groups. It is often difficult to catch the individuality of a character when considered by itself, when it would at once assume consistency and distinctness when considered in relation to some other character in the same play.

EDINBURGH MATHEMATICAL SOCIETY.—(Friday, January 13.)

W. J. MACDONALD, Esq., president, in the chair.—Mr. R. E. Allardice read a paper on Stirling's approximation to factorial *n*, when *n* is large.—Mr. A. Y. Fraser described a mechanical device for the analysis of intervals and chords in music.—The conversation on the teaching of arithmetic, adjourned from last meeting, was resumed, and a committee was appointed to collect suggestions which might be printed and circulated among the members.

FINE ART.

GREAT SALE OF PICTURES, at reduced prices (Engravings, Chromos, and Olographs, handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—GEO. REES, 115, Strand, near Waterloo-bridge.

THE ROYAL ACADEMY.

II.

TWO works of small dimensions, but—in very different styles—of exceptional beauty of execution, must here be mentioned, though perhaps a little out of their natural order. The one is Mr. Holman Hunt's "St. Sebastian" (143)—a nude figure of the martyr bound to a tree, shown in strong relief against a background which is of lurid splendour in its darkness. It is impossible to agree with the attribution of this precious little panel to Velasquez; for the brush-work, frank and vigorous as it is, is not that of the great Spanish master at any stage of his practice. The conception is, it may be owned, deeply tinged with a passionately earnest realism, such as we are accustomed to associate with the Spanish school of the seventeenth century; but the execution has many passages which suggest rather a Flemish hand under the influence of the manner of Caravaggio. The problem is one for which we cannot at present venture to suggest a definitive solution. It is well worth serious consideration. The other little picture which we unwittingly passed over on a former occasion is an exquisite specimen of the middle style of Rubens, somewhat awkwardly styled by its owner "Cupids and Fruit" (82). These *bambini* have a marked resemblance, both as regards conception and execution, to the wingless angels in the "Vierge aux Anges" (428 in the Louvre); while the garland of fruit and the ornamental sculpture, seen in luminous half-shadow, show that silver-brown radiance which is the master's own secret. To complete the list of omissions, let us point out Lord Normanton's exceptionally fine "View in Dresden" (145), by Bernardo Canale (called also Bernardo Belotto), which places before us the quaint eighteenth-century market-place of that city literally flooded with sunshine. In its happy admixture of accurate detail with picturesque breadth, it almost rivals the fine productions of a Van der Heyden; but the sky, on the other hand, is treated in the conventional and insincere fashion common to the Venetian painters of the school of Canaletto.

There are no two finer specimens in England of the astonishing brush-power and vivacious conception of Frans Hals than Sir Richard Wallace's famous "Laughing Cavalier" (75), and Mr. Gibbs's later and not less characteristic "Portrait of a Dutch Gentleman" (146). The former example, which bears the date 1624, is, as regards technique, somewhat an exception among the productions of the same period, since the face is modelled and painted with a subtlety and care which veil the usually untrammelled vigour of the master's hand; this, however, finds full scope in the incomparable

rendering of the hair and moustache, as well as of the lace and rich embroideries, which bravely set forth this splendid young Dutch nobleman. Here, as elsewhere, we find the master aiming rather at the realisation of exuberant life and fleeting expression, than at the suggestion of an intellectual personality taken as a whole, and divined with sympathetic insight. Mr. Gibbs's picture—the presentment of a sober, middle-aged burgher of sour and determined aspect, with the date 1639—is a perfect specimen of the daring power of execution and disdain of colour which mark the period of complete maturity of the Haarlem *chef d'école*. To cite only a minor detail: the rendering of the long buff gloves which the sitter holds loosely in his hand might well fill with despair any painter whose aim is unlimited mastery over the legitimate secrets of the brush. In connexion with these exceptional works must be mentioned two very fine portraits by that scarce and little-known painter Johannes Verspronck. These are the half-length portraits of Thomas Wyck and his wife (61 and 65), contributed by Mr. David Sellar. We have here evidently an avowed follower of Frans Hals; but at the same time a painter most capable of looking at humanity with his own eyes, and one whom it would be unjust to class as a mere schoolman, catching the tricks without the essential merits of his master's manner. Verspronck has a large measure of the frankness of execution of his prototype, with a greater hardness and precision in the heads, and an exaggeration of the harshness of Hals's colour and of the opacity of his shadows. These signed works are further of considerable interest, as enabling us to restore to their rightful author some interesting portraits; and among them that of a lady, which is No. 175 in the Gallery of the Stædel Institut at Frankfurt, and is there given to Hals, though German connoisseurs have long since more than suspected that it rightly belonged to Jan Verspronck. The "Dutch Lady" (72), by Ferdinand Bol, is a characteristic specimen of a capable but second-rate painter; the "Nativity" (37), by another of Rembrandt's pupils, Gerbrandt van den Eeckhout, is chiefly interesting as being authenticated with a signature, and as showing how vast is the interval which separates Rembrandt everywhere from his most noted imitators. Another painter issuing from the same school, Nicholas Maes, once more vindicates his right to a place in the foremost rank among Dutch masters. The most important picture from his hand is the Duke of Wellington's "The Listener" (52)—a work of first-rate technique, in which we should be inclined to think that the artist had well-nigh equalled the skill of Peter de Hooch in the rendering of different qualities of indoor light, were it not that that magician of the brush is himself here hard by—represented by an incomparable masterpiece which fully asserts his supremacy. This is the well-known "Music Party" (53), from the same choice collection. In a room of noble appearance, richly though sparsely furnished, is seen a company of splendidly-attired men and women—the former apparently of high rank, and the latter evidently of much complaisance—diverting themselves with music, dance, and conversation. The waning light of afternoon has been almost entirely shut out by drawing closely across the windows, save in one instance, huge red curtains, through which the light filters. Yet in the dim varying atmosphere thus created—partly revealing, partly concealing the groups and the architectural features of the room—the painter has, in the lowered key necessarily adopted, preserved the relative values of tone with such exquisite justness that he gives the required force and contrast to every portion of the com-

position; imparting depth and variety even to the glimpses which he permits us into nooks bathed in the deepest gloom. The achievement is, in its peculiar way, hardly equalled from a technical point of view—certainly not surpassed—in art. The mastery exhibited would, however, be all the more enjoyable, were it not so evident that the painter has deliberately set himself the problem which the peculiar subject involves, and that he revels in the realisation of the *tour de force* for its own sake, and not as a means to an end. Even here, the limits of de Hooch's wonderful power are very clearly defined. He fails to impart individuality or realistic charm to his personages, and is only partly successful in the suggestion of life and movement. Another notable, though hardly very sympathetic, specimen of his technical power is Lord Wantage's well-known "Court-yard of an Inn" (95). Among numerous examples of the consummate handiworks of Teniers the younger may be singled out the so-called "Philosophes Bacchiques" (102), from the same collection—a tavern interior painted with that silvery clearness and sharpness which are all the painter's own, while the subject is treated not quite in that perfunctory and superficial fashion to which he has too much accustomed us. By that far greater, if less showy, artist, Adrian van Ostade, there is at least one first-rate little work at Burlington House—the "Kitchen Yard" (112), from the same collection. One passage of this *nature morte*, in which is shown in a luminous half-gloom a recess in the richly toned brick-wall, is treated with supreme skill. Rarely, indeed, has the less-appreciated Isaac van Ostade been seen to such advantage as in the "Country Inn" (99), another precious possession of Lord Wantage. This charming landscape with figures is rendered with a gaiety, with a happy brilliancy of illumination, which Adrian himself has hardly surpassed, though the touch is more conventional in its sharpness and the modelling of the figures less true and less solid than his. Several important specimens of the art of the prolific Jan Steen claims our attention, commanding admiration for the straightforwardness and brilliancy of the technique—marred, nevertheless, by a certain hardness and monotony of texture—while they disgust, not only by the unrelieved and tiresome grossness of the scenes represented, but still more by the want of real invention betrayed by the painter, who contents himself with one facial type of inexpressive bestiality, and fails to realise varying shades of expression, even in the strange category of human manifestations which he chiefly affects. This same drawback detracts to an almost equal extent from even the finest works of that great and subtle luminaire Adrian van Ostade, and indeed, mars our enjoyment of the productions of most of the Dutch and Flemish humoristic masters of the time—with the exception of those who, like Metsu, Terburg, and some other kindred painters, study less the manners of the people than those of the nobility and the higher bourgeoisie. A singular exception, however, to this rule is to be found in some of the *payanneries* of that penetrating observer, Karel Dujardin. Of the Jan Steens to be seen at Burlington House, the Duke of Wellington's "Wedding Party" (59), is a first-rate example of the painter's manner, happy in arrangement, in the skill with which it is lighted, and full of genuine animation; while Mr. Sellar's large "Merrymaking" (55), is in every sense markedly inferior. Mr. Crews's "The Fight interrupted" (107), is, on the other hand, in technical respects a very fine rendering of the revoltingly brutal subject chosen for representation. The admirable and well-known "Family Group," by Gonzales Coques (49), should by no means be passed over.

The great Dutch schools of landscape are this winter very happily illustrated, though certain great names—including Philip de Koninck, of whose work Lord Wantage possesses so fine an example, Paul Potter, A. Cuyp, A. van de Velde, K. Dujardin, and many others—are unrepresented. Mr. C. Roth contributes an exquisite little Van Goyen (69), painted in what is now almost a silvery monochrome; the far distance has an exquisite delicacy and suggestiveness which hardly any other Dutch landscapist could have attained by the same means. Mr. M. Colnaghi sends a charming Van de Capelle (91), showing—an unusual subject for this artist—a winter canal-scene, in which the sombre atmosphere, heavily charged with snow, and the dark transparent ice, overshadowed by bare trees, are rendered with a mastery such as Aart van der Neer never attained in this, one of his favourite subjects. The same collector contributes an admirable "Interior of Delft Cathedral" (92), by E. de Witte—rich and luminous in its sobriety of colour, and without a trace of the dryness so hard to avoid in such subjects. With the river-piece of Van Goyen should have been mentioned that of his imitator, Salomon van Ruysdael (103), which, however, in the rendering of storm-clouds and agitated water, comes unusually near to the manner of his more famous nephew Jacob. The far-distance, lit up with a brighter light than the over-shadowed foreground, is sufficiently characteristic of the elder master to justify the attribution to him. Of the numerous specimens attributed to Jacob van Ruysdael, Lord Wantage's noble landscape (67) is, we think, notwithstanding its signature, a fine Everdingen; especially characteristic of that painter are the pervading grey-buff tint of the whole, and, above all, the spongy texture of the rocks. It would be difficult to render with more subtle and unobtrusive truth a frothing cascade and the complicated eddies produced by its fall into the pool beneath. Fine and undoubted specimens of J. van Ruysdael's art are Nos. 76, 106, and 111. A famous Hobbema is Lord Wantage's "Water-mill" (71), which has all the merits and drawbacks characteristic of a sympathetic and highly-skilled master, whom it has of late years been somewhat the fashion to overrate. There is here, as in many other instances, a lack of unity and concentration in the composition; but nothing could well be finer than the pool which receives the overflow of the mill-stream, with its exquisite reflections of red-roofed cottage, sombre trees, and splashing water.

We pass over, for lack of space, examples of the art of Philip Wouwerman and Jan Both, besides a whole group of remarkable works by Fyt, Hondcoeter, and Jan Weenix the younger.

The examples of the schools of France are, as usual, few though interesting. The sixteenth and seventeenth centuries are illustrated; but of that prolific eighteenth century, which there is still in England a certain tendency to under-rate and to misinterpret, there is absolutely nothing in the galleries. Lady Lindsay's so-called "Isabella of Portugal" (56), attributed to François Clouet, is an unusually good specimen of the school of that master. The rendering of the wonderfully delicate, almost diaphanous, hands closely recalls a striking feature of the famous portrait representing Charles IX.'s consort, Elisabeth d'Autriche—one of the two or three absolutely authenticated specimens of the art of Clouet III. which adorn the Louvre. But, on the other hand, the execution in many passages, and especially in the elaborate costume, has not the exquisite firmness and finesse which alone would constitute a justification for the attribution to the court-painter of the Valois. Claude Lorrain has hardly ever been seen to greater advantage at Burlington House than on the present occa-

sion. Those jealous for his glory must, however, feel impelled to deny the authenticity of Sir W. W. Wynn's "An Embarkation" (136), the sky of which is altogether preposterous in its opacity and hastiness of execution; the picture, being indeed, in every respect unworthy of the master. The "Enchanted Castle" (137), contributed by Lord Wantage, is a masterpiece of cool silvery brightness and atmospheric truth, especially in the middle and far distance; that passage of the picture which shows rocky hills and woods, in a luminous haze, extending far away towards the sea, has never been surpassed by the painter. It is on such ground that Claude, seeing with his own eyes, and thoroughly convinced—though he may and does idealise and even conventionalise, according to the fashion of his age—rises superior to his great posthumous rival, Turner; while the latter, when he discards emulation and imitation, and bases his painted poems on a solid substratum of realistic truth, towers, at his best, above competition, both as a craftsman and an imaginative artist. The Queen's "Europa" (130), from Buckingham Palace, is a Claude of more than average excellence, which might command our admiration were it not completely overshadowed by the work just mentioned. Lord Landsdowne's small "Seaport" (133) is brilliantly, if somewhat sharply, lighted. It bears a very close resemblance to a similar sea-piece of much larger dimensions in the National Gallery. CLAUDE PHILLIPS.

EGYPT EXPLORATION FUND.

M NAVILLE'S LECTURE ON "BUBASTIS AND THE CITY OF ONIAS."*

THE mounds of Tel-el-Yahoodieh, near the railway-station of Shibeen-el-Kanater, have already attracted the attention of several explorers. Whence did this name come? To what time belonged the tradition from which it originated? Such are the questions which occurred at once to their minds. Several distinguished archaeologists, Mr. Grove, Mr. Chester, Dr. Grant, and Prof. Hayter Lewis (to the last of whom we owe a very interesting description of the place) were also led to make researches there by the remarkable discovery of inlaid fragments and enamelled tiles of which the British Museum has a large collection. The only excavations of any importance made there are due, however, to Mr. Emile Brugsch-Bey, one of the keepers of the Boolak Museum, who discovered the remains of the buildings from which the fellaheen had broken the decorative fragments which are still sold in great numbers by the dealers of Cairo.

Mr. Brugsch has lately published the results of his investigations in a paper called "On and Onion." The conclusion to which he comes is that Tel-el-Yahoodieh was, as its name indicates, a settlement of Jews who fled before the persecution of the king of Syria, Antiochus Epiphanes, and who were well received by Ptolemy Philometor and his wife-sister, Cleopatra. The king gave to their leader, the high-priest designate, Onias, a territory in the Heliopolitan nome; and the settlement was called, from his name, Onion. Mr. Brugsch goes further. He considers that Tel-el-Yahoodieh was a Heliopolis, and, in fact, the true city of that name—the other, near Cairo, having been destroyed by the Hyksos and not rebuilt.

The obscurity of these various questions induced me to begin my excavations last winter with Tel-el-Yahoodieh.

Travellers going from Cairo to Suez see in the distance, near the third station from

Cairo, the high mound of Tel-el-Yahoodieh, which it is unnecessary to describe anew. It is enough to say that it has all the appearance of a fortress. Its length is about half a mile from east to west, and its width a quarter of a mile from north to south. The eastern side towards the Ismailieh canal consists of two artificial hills higher than the rest, behind which the sand of the desert seems to have been purposely heaped up. In the middle is a deep hollow or trench, which certainly was an entrance. From the two hills start the walls of the enclosure, which are double, the space between having been filled in with sand. They seem to have had limestone basements, most of which have been quarried out by the natives. No mound in Egypt seems to have been so thoroughly ransacked as Tel-el-Yahoodieh. While we have still some remains of walls which may be forty or fifty feet high, in other parts the digging for "sebak" top-dressing has gone down to the very sand of the ghezireh, or island, on which the city was built. There must have been very different levels in the city inside the enclosure, the part near the eastern hills being considerably higher than the site of the ornamented chamber of *Rameses III.* Unfortunately, nearly everything has been destroyed by the fellaheen, and there is hardly anything left of the monuments indicated on the plan in Prof. Hayter Lewis's paper. The most interesting objects found in the course of Brugsch's excavations were dug out of a small mound in the longer axis of the city, but more towards the western side. The mound was from 24 to 30 feet in height, and near it the Arabs had found fragments of columns and pillars, and traces of an alabaster pavement. Having cleared as much as remained of the pavement, Brugsch found a great number of tiles and porcelain fragments, and nearly 4,000 of the enamelled disks which are the style of ornament peculiar to the place. The whole was unfortunately thrown into such confusion that it was impossible to recognise the original plan. When I went there last winter, the destruction had been carried still further, and the mound had nearly disappeared. All which remained was the mud platform on which had stood the building of *Rameses III.*, and a great number of the alabaster paving-blocks, besides a few bases of columns in red granite bearing the cartouche of *Rameses III.* I cleared the platform all round, and I cut through it in order to see whether it rested on an ancient construction; but without any result.

The building which stood on that small platform must have been of a very peculiar character. It was entirely decorated with those beautiful enamelled and inlaid tiles of which only fragments are now left. The subjects which they represented were either purely ornamental (plants or animals) or they were historical, i.e., they were inscriptions with the name of *Rameses III.*, representations of his feats of war, and of the prisoners whom he brought to Egypt. The disks, of which there are such a considerable number, seem to have adorned the friezes of that small chamber, which must have been a magnificent piece of art. When was this chamber made? Here arises a very difficult question. It is a fact that a great number of these disks bear Greek letters on the back, especially A and E, while others, and especially the tiles, have purely Egyptian signs. The Greek letters clearly indicate foreign workmanship, which cannot be attributed to an earlier date than that of the *Saites*, and very likely the *Ptolemies*. On the other hand, it is clear that the monument was erected by *Rameses III.* The bases of columns which are still extant, and the inscribed fragments which are met with on the Tell or in the houses of the neighbouring village, not only bear the name of *Rameses III.*, but also the character of the

monuments of his period. It would have been extraordinary that *Saites* or Greek kings should have built with such care and, apparently, at a great expense, so beautiful a monument to one of their predecessors. My conclusion is, therefore, that the famous enamelled chamber of *Rameses III.* was built by himself; and that, as it probably suffered in some of the numerous wars or invasions which swept over the Delta, it was repaired, and the ornamentation was renewed in the same style under subsequent kings, perhaps even of Greek origin. It is remarkable how very like some of those tiles are to the monuments which have been lately discovered at Susa. However, that style cannot be considered as of foreign importation. I remember having purchased at Khataanah in the Delta part of a cartouche of *Seti I.*, which was worked in enamel in exactly the same way.

In going to Tel-el-Yahoodieh, I desired to solve two historical questions—How was the city named in Egyptian? and how far could the tradition be trusted which considered it as the site of the city built by the high priest *Onias*? Unfortunately, the scanty hieroglyphic remains which were found on the Tell do not give us any name. Most of the monuments are arranged on a line going from east to west, where the mound is lowest, and where I should not wonder if there had been an avenue leading to the temple of *Rameses III.* The most ancient are of *Rameses II.* One is a single statue of natural size without any head-dress. It was on the left side of a door. The inscriptions speak of the king as the friend of *Set*. The name of the god has been erased, but is still visible. The other is a monument consisting of two figures, where *Rameses II.* is seen with a solar disk on his head. The head of the other statue has been broken off, and carried by a fellaah to his house in the village, for a doorpost. Neither entreaties nor promises of *bakshish* would induce the man to take it out of the wall and let me read the inscription. However, there is no doubt that the head was that of *Harmakhis*, the Rising Sun, and that it is he who pronounces the following words: "King *Rameses*, giver of life, I am thy venerable father, the lord of the beauties . . . thou art prosperous like *Tum* in the Great Hall . . . (like) *Khepra* every morning crowned on the throne of *Ra* in the vestibule of *Tum*. I am protecting thy limbs every day; thy might and the power of thy sword is above all lands. Thy hand is never opposed in all countries, King *Rameses*, friend of *Harmakhis*, the great god."

Besides the monuments of *Rameses II.*, there are blocks which may have supported sphinxes with the name of *Rameses III.*; and towards the east, where there was very likely a doorway, is a column with the name of *Menephtah*, the son of *Rameses II.*

It was in this part of the Tell that I made the best discovery. I noticed a block with hieroglyphs, the corner of which stood out of the rubbish; and when I had cleared it, I found that it bore the name of a king who at present is unknown in the hieroglyphical lists. This king clearly belongs to the family of the *XXIIInd* Dynasty (*Bubastites*). The form of both his names points to it. This red granite block, the surface of which is rectangular, about one yard square, the height being about half of the side, was certainly destined to bear the statue of a king or of a god. On the front side, the king is twice represented kneeling, facing his cartouches, which are in the middle. He is making offerings of oil, and of the "ut'a" (the holy eye), to the god or king who was above, the name of whom is not given. On each side there are two men with raised hands in the attitude of worship, each having under his arms one of the cartouches of the king. These cartouches are the following:

* Delivered in the large room of the Society of Arts, December 23, 1887.

Ra user ma setep en Amen, which is his coronation name; and *Aouput Si Bast Meramon*, which is his proper name. This coronation name was borne by several kings of the XXIInd and XXIIIrd Dynasties, and especially by the most powerful of them, Osorkon II.; while the qualification of *Si Bast*, in the proper name, points to a Bubastite origin. We know two princes of the name of Aouput. One is the high priest of Amon, first general of the king, the son of Sheshonk I., the first of the Bubastites. This Aouput is the priest who took part in the restoration of the royal mummies found at Deir-el-Bahri. His name has been found once or twice. He may be the king of Tel-el-Yahoodieh, but I think it is not likely. I believe we have to consider the new king as one of the local princes who fought against the Ethiopian invader, Piankhi, B.C. 750. The conqueror in his inscription mentions all the petty kings who made war against him, and one of them is called the king Auput, who occupies the cities of Tentremu (the fish-city) and Taan, neither of which have yet been identified. His name is always included in a cartouche, as well as that of Osorkon, the prince of Bubastis, and that of Namrath—three names of the family of Sheshonk; a fact which indicates that Piankhi considered them as being of royal blood.

Who was the founder of the city? Although we have found no cartouche of that epoch, it is likely that the first settlers belonged to the time of the XIIth Dynasty. It is a curious fact that a considerable number of the small pots which are found by the natives in different parts of the Tel are exactly of the same pattern as those discovered at Khataanah two years ago, and which, from the style of the scarabs found with them, have been attributed to the XIIth and XIIIth Dynasty. I must say I do not feel so confident about the age of those small black pots with white ornaments as I did at Khataanah, because at Khataanah there were monuments of the XIIth Dynasty, and especially the remains of a temple; while at Tel-el-Yahoodieh there is nothing pointing to such an early epoch. However, at Tel-el-Yahoodieh, it is very possible that the monuments may have disappeared like many which were seen a few years ago. Brugsch noticed, for instance, several stones inscribed with the name of Seti I., of which I did not see even a trace. However, one thing seems certain—it is an important point to which I shall refer further—there are no remains of the XVIIIth Dynasty, that line of great kings and conquerors. There is no more trace of them than at Bubastis.

It is a curious fact, also, that it was impossible to discover the name of the ancient city. The only geographical names found there are those of Heliopolis, to the name of which it undoubtedly belonged. Generally speaking, geographical names occur much more abundantly on monuments of later date—especially on tablets of the Ptolemies—than in inscriptions of the Pharaohs. Besides, we have no monuments of a character likely to furnish us with the name of the place, such as dedicatory statues of priests and officials. The Pharaohs, like Rameses II., prefer in their religious inscriptions to mention the great gods like Amon, Tum, or Set, rather than the local divinity of each individual place. Thus, at Tel-el-Yahoodieh we have Set (who is found everywhere in the Eastern Delta) and Harmakhis, who was the god of Heliopolis and the god of the nome. If we had discovered a Ptolemaic inscription, we should certainly have found the local god mentioned, if there was one.

DR. SCHLIEMANN'S EXPLORATIONS IN CERIGO.

We learn that Dr. Schliemann will leave Athens, on January 27, for a three months' journey of exploration in Egypt, in company with Prof. Virchow. Before the arrival of the latter, Dr. Schliemann intends making a thorough study of the topographical points of the old town of Alexandria.

A report on the remains of the ancient Temple of Aphrodite in Cerigo has been sent by the discoverer to the Berlin Society of Anthropology. A fuller description, with plan and sketches, will appear in the *Mittheilungen* of the German Institute for Archaeology at Athens. Meanwhile, we are enabled to state that the site of the old temple is identical with that of the Church of the holy Kosmas. It is situated nearly in the centre of the enclosure walls of the old town of Kythera; and it appears that the stones of the ancient sanctuary almost sufficed for the erection of the church. The temple was a closed structure made of tuff-stone, with two rows of Doric columns, four on each side, of extremely archaic style. They are all still preserved in the church, with their capitals and ornaments; but only two of them, as well as the base of a column, are now *in situ*. The columns, also, are of tuff-stone.

On a hill-top in the neighbourhood, which is about thirty metres higher, there are remains of Cyclopean fortifications. Dr. Schliemann thinks they cannot be older than the seventh century B.C., seeing that he did not find there any potsherds for which a higher age could be attributed. All former excavators have sought for the temple of Aphrodite on the lower terraces of the hill-range, but in vain. When digging there, Dr. Schliemann laid bare a mass of large building stones; but these appear to belong to a wall-tower of the Macedonian period. The great enclosure wall ("peribolos") of the town, which is formed of the same material and is in the same architectural style, evidently dates from that epoch. For a long time this wall has been used by the inhabitants as a convenient source of building material; nevertheless, there are still considerable remains in several places.

In the old harbour-town of the island, at Skandeia, Dr. Schliemann also made excavations, but without finding anything of interest. There are nowhere else any artificial mounds to be seen in Cerigo.

OBITUARY.

ROBERT HERDMAN, R.S.A.

WE regret to record the very sudden death of Mr. Robert Herdman, one of the best known and most accomplished members of the Royal Scottish Academy, which occurred at Edinburgh on January 11.

Born about 1829, a son of the minister of Rattray, Perthshire, he was designed for the Scottish Church, and, with this view, attended a theological course in the University of St. Andrews. But, his attention having been turned to art, he came to Edinburgh, and studied in the Trustees' Academy under Robert Scott Lauder, to whose instruction many of the best recent and living Scottish painters owe so much. In 1854 he won the Keith prize and the bronze medal of the Scottish Academy; and that body acquired a series of studies from the old masters which he executed during a residence of studentship in Italy which followed.

Mr. Robert Herdman was a liberal contributor to the exhibitions of the Royal Scottish Academy, of which he was elected associate in 1858, and full member in 1863; and his works were also frequently shown both at Burlington House and at the Grosvenor Gallery. They include subject-pictures, mainly from Scottish history; cabinet-works, usually of single

figures, idyllic or classical, treated with great delicacy and transparency of colouring; and a few landscapes, chiefly in water-colour, besides a considerable number of flower-studies. Mr. Herdman was, however, perhaps best known as a portrait-painter; and, in this department, he was most successful in his renderings of female grace and beauty, though such male portraits as "Dr. David Laing," in the Scottish National Portrait Gallery, and "D. O. Hill, R.S.A.," in the library of the Royal Scottish Academy, are thoroughly successful works. He is represented in the National Gallery of Scotland by a painting of a Roman peasant mother, and by an important subject-picture of a dying Covenanter, "After the Battle." His style was characterised by well-considered composition, careful execution, and by pleasing, sometimes powerful, colouring.

Personally Mr. Herdman was a man of wide information, and very considerable and varied culture. In manner he was singularly urbane and courteous; and certainly both Scottish art and Scottish society have suffered a severe loss by his death.

NOTES ON ART AND ARCHAEOLOGY.

MR. W. B. RICHMOND, painter; Mr. E. Onslow Ford, sculptor; and Mr. Arthur W. Blomfield, architect, have been elected associates of the Royal Academy.

It is proposed to form a Scottish Archaeological and Historical collection in connexion with the International Exhibition to be opened at Glasgow in May of the present year. This collection will be twofold—(1) general, of objects illustrating the history and development of Scotland from the earliest times, including prehistoric implements, armour, early printed books, historical portraits, &c.; and (2) special, of objects associated with the Stuart family and with the city of Glasgow. The collections will be placed in a fireproof building, separate from the main exhibition, and will not be open after dusk. All expenses connected with the transit of objects lent will be defrayed by the committee, of which the secretary is Mr. James Paton, Corporation Galleries of Art, Glasgow.

A GENERAL meeting of the Society for Preserving the Memorials of the Dead will be held in the rooms of the Archaeological Institute, Oxford Mansions, on Thursday next, January 26, at 4 p.m., when Mr. J. Lewis André will read a paper on "The Union of Sepulchral with Religious and Allegorical Art," illustrated by cartoons.

M. CHARLES COUSIN, author of the *Voyage dans un Grenier*, announces another volume of similarly luxurious character, to be called *Raconters illustrés d'un Vieux Collectionneur*. It will contain fifty plates representing etchings, photogravures, and coloured reproductions of pottery, rare bindings, &c., as well as numerous autograph letters. The book—which is issued in three editions, the cheapest at 150 francs—will be published in the course of the present month by the Librairie de l'Art.

A MEETING of the Chester Archaeological Society was held on Monday, January 16, at the Grosvenor Museum, when a paper was read by Mr. E. P. Loftus Brook on "The Bearing of the Recent Discoveries of Roman Remains upon the Question of the Age of the City Walls." The paper was succeeded by a discussion. Mr. Brook mainly followed the line of argument which he has adopted in his correspondence with Mr. Watkin in the ACADEMY. Mr. Watkin, who was present, did the same, as far as the limited time (fifteen minutes) allotted to each speaker would allow. He was supported by Mr. Shrubsole and Prof. McKenny Hughes, and to a considerable extent by Dr. Hodgkin

of Newcastle. On the other hand, Mr. W. de Gray Birch supported Mr. Brock, chiefly drawing attention to what has been styled the "ecclesiastical" stone. Sir J. Pictou was cut short, owing to the limited time, in the midst of reading a written reply to Mr. E. W. Cox, on a redoubt on the Roodeye. Several gentlemen in the body of the room asserted that the section of the walls, as shown by Mr. Brock, was entirely erroneous and misleading, though the city surveyor claimed its correctness. The general opinion was that the question of the walls remained *in statu quo*.

THE STAGE.

STAGE NOTES.

FOR the artistic world, much more distinctly than for world of "mashers," *Frankenstein* at the Gaiety is the show of the Christmas season. We do not say that it is the show for the "earnest person," or for the academic student, or for the purely intellectual who can never unbend. But it is a delight to the eyes—if your eyes happen to be cultivated. There are beautiful colours in it, and pleasant song, and exquisite dance. And if the words are not always very witty, and if the thread of story is exceedingly slight—and we confess the piece's weakness in both of these matters—the true dramatic talent of the company as a whole, the admirable fooling of such men as Mr. Lonnen and Mr. Charles Ross, must be set to the good in the account. And then there has still to be reckoned what we may call the main features of the entertainment. These are, first, the genius (for it is hardly less than genius) of Mr. Leslie, distinctly the most varied burlesque actor since Robson, the most infinite in resource, the most endowed with the humour that is close to pathos; then the extreme piquancy of Miss Nellie Farren, who gets younger, it would seem, every five years or so, and must be a favourite with the next generation, as she has been a favourite of the last; then the singing of Miss Marion Hood, which has style and feeling in it; and the dancing of Miss Sylvia Grey, who is below her mark only in the first act, but who, later on, dances a dance the execution of which Lancret's Mdlle. Sallé—the great dancer of the time of Louis Quinze—might have envied, and Taglioni's father (who was the most "difficult" person in the world) might have praised. Then again there are the dresses. The audacity of Mr. Percy Anderson (who designed, by-the-bye, the dresses for the Queen's *tableaux vivants* the other day) is remarkable; and still more remarkable is his success. We mean this as regards colour, but it is about as true of line, for where drapery has to be employed it is disposed exquisitely; where withheld, it is withheld rightly. It is impossible to describe to the lover of beautiful things—any more than to the public which does not look at these things with the real eye—even a small part of what this gentleman does in the way of unfamiliar, and yet, as it proves, justified, combinations of colour. Doubtless he would consider Miss Sylvia Grey's dress of deep canary, wreathed with masses of violet flowers, one of his very simplest effects. It is, however, very lovely, and worth mentioning. The success of the piece is assured, though we do not know that it is the best things in it which have contributed most to its popularity. It will run until the London season is very far advanced.

MUSIC.

RECENT CONCERTS.

LAST Saturday afternoon Haydn's Quartet in A (Op. 20, No. 6) was given for the first time at the Popular Concerts. The set, published in

Paris as Op. 20, but in Berlin as Op. 16, are called in Germany, from the picture of a sun on the title-page, the Sun Quartets. The last three finish up with fugues, one in two, one in three, and one in four subjects. Haydn, who had studied Fu' Gradus from early youth, knew how to combine themes, and how to invert them in all sorts of ways. And on one side with his learning, on the other with his geniality, he wrote fugues pleasing alike to pedagogue and to dilettante. The fugue is ordered to be played *sotto voce* until the fourth bar from the end, when "a sudden forte and a vigorous unison" give us an excellent sample of the master's humour. The performance of the whole work by Mdlle. Norman-Néruda, and Messrs. Ries, Straus, and Piatti, gave the utmost satisfaction. Miss Fanny Davies performed Beethoven's Pianoforte Sonata in D (Op. 10, No. 3). There was some very good playing in the first and last movements; but the wonderful largo was at times rough, and the minuetto taken at too rapid a rate. Mdlle. Henschel was the vocalist, and her singing, together with Mr. Henschel's pianoforte accompaniment, was much appreciated. The programme concluded with Beethoven's Septet.

On Monday evening a Pianoforte Trio in E minor by Mr. J. A. Dykes, son of the late well-known Rev. J. B. Dykes, Mus. Doc., was produced. The composer, who is quite young, studied at Frankfurt under Mdlle. Schumann and the late Herr Raff. There is spirit in his music, and—what one would naturally expect—strong traces of the influence of the masters of the romantic school. The first movement contains clever writing, but it is somewhat dry. The Scherzo appears to us the most successful movement, but over long. The adagio is only an introduction to the finale, which is very light and not altogether free from the commonplace. At the close of the performance the composer was summoned to the platform. His future career will be watched with interest. The work was interpreted by Miss Fanny Davies, Mdlle. Norman-Néruda, and Signor Piatti. After a song, sung by Miss Bertha Moore, the rest of the programme was devoted to Schubert's Octet. There was a good attendance.

On Monday afternoon, Mr. V. de Pachmann gave a pianoforte recital at St. James's Hall. He opened with a Bach Fugue in A minor. His reading of it was free from affectation, and his technique clear and crisp. He next played Beethoven's seldom heard Sonata in F (Op. 54). His interpretation was, on the whole, good; but he was evidently too much bent on making his audience hear and feel every nuance. It was, however, the best piece of Beethoven playing which we have heard from him. A graceful Romance by Mdlle. Pachmann was given with exquisite finish. After Mendelssohn's Scherzo à Capriccio, and a few short pieces by Chopin, the pianist performed for the first time Chopin's Allegro de Concert (Op. 46). This formidable piece was given a short time ago by Mr. Max Pauer, but we could find little to admire in it. Mr. Pachmann, however, presented it in quite a new light. For him the mechanical difficulties seemed child's play; and the technical or virtuosic element no longer preponderating, one could catch the spirit of the music. It is not one of the composer's happiest inspirations, but what there was to bring out was fully brought out. Mr. Pachmann showed himself in all his strength, and more than sustained his great reputation as an interpreter of Chopin. The applause at the close was most enthusiastic, and well he deserved it. Another success was his rendering of Hensel's "Danklied nach Sturm," a wonderful piece of pianoforte playing both as regards tone and mechanism. The least satisfactory performance of the afternoon was

Schumann's "Warum." The reading was false in sentiment. After concluding his programme with Liszt's Polonaise in E, Mr. Pachmann remembered that he had forgotten Hensel's Toccata; so he sat down and dashed it off with wonderful grace and lightness.

M. Gustave Pradeau gave the first of four Schumann Recitals at Prince's Hall on Tuesday afternoon. The programmes comprise all Schumann's great works, besides many of the shorter pieces. The first included the Sonata in F sharp minor (Op. 11) and the Fantasia in C major (Op. 17), so that the pianist was determined from the outset to show the extent of his powers. Of M. Pradeau's previous career we know nothing. He may be an excellent teacher and a fair musician. But until he can play a piece without rushing along like a war-horse, without making false notes at almost every step, he will be wise not to play in public. At first we were disposed to make every allowance for possible nervousness; but there was no improvement, and the second movement of the Fantasia was simply excruciating. M. Pradeau is either unconscious of his defects, or cares not what may be said of him. Our duty is plain. In the interest of the public we feel bound to say that this first Schumann recital was a painful exhibition.

Mr. Henschel introduced at his ninth concert on Wednesday afternoon an early work of Brahms. This was the Serenade in D (Op. 11) for orchestra, begun in 1859 and produced in 1861. Dr. Deiters, in his biographical sketch of Brahms, tells us that the composer had now sown his (musical) wild oats, and that this work represents his first serious attempt at being moderate. He is careful as to form, that it shall be clear; as to development, that the parts shall be well balanced; and the reminiscences of Haydn and of Beethoven show how earnestly he must have taken these men as models. The Serenade consists of six movements. In the opening allegro we have simple themes, careful elaboration, and a highly effective coda. This is the strongest of all the movements. There are many interesting things in the following scherzo, but the effect as a whole is patchy. The adagio, very Beethovenish at times, is full of graceful thematic treatment and delicate orchestration *à la* Schubert. The minuets, or really minuet and trio, are simple yet characteristic. The second scherzo is Beethovenish to an extreme. The final rondo is full of life. Father Haydn's spirit is felt in many a passage. There are connecting links harmonic and melodic between this rondo and the opening movement which lend to the whole work an apparent unity. The Serenade must be considered remarkable in many ways, but specially interesting as it shows us the composer at an early stage of his career just as we are about to hear the latest work from his pen. We refer to the Concerto for Violin, Violoncello, and Orchestra, by Brahms, to be produced by Mr. Henschel next month. The performance of the Serenade was not always so careful in phrasing or delicate in tone as one could have wished, but some parts were good. The programme included a Bach Overture, a Molique Concerto, played to perfection by Signor Piatti. Mr. E. Lloyd sang an air from "Euryanthe" and "Lohengrin's Farewell to Elsa" with immense success.

J. S. SHEDLOCK.

MUSICAL PUBLICATIONS.

The Technics of Pianoforte-playing, &c. By H. Germer. (Novello.) The author, commencing with five-finger exercises, gradually leads the pupil up to the Chopin-Liszt stage. In less than one hundred pages, he manages to give an immense quantity of most useful material. A good teacher would, however, still

be necessary to select the exercises, and to say when they should be changed. The second part of the book treats of musical ornamentation; and, besides explanations, there are illustrations. Here the student will find great profit without the assistance of a teacher. Herr Germer, in the section on "Trills," says, with respect to a certain passage in Beethoven's Op 35, that it *must* be played as he indicates. Dr. Bülow, however, who is also an authority, plays it in a different manner. The third part of the book deals with tone-production. The translator's note, giving explanation of some new terms, must be carefully studied; without this, many of the sentences would confuse the reader. Indeed, the translation itself is not all that could be desired.

The Opera Guide. By E. Barker. (Griffith, Farran & Co.) This little book professes to give a concise description of the plots of over sixty operas. Moreover, the names of some of most important, or most admired, personages in each are named, with, occasionally, a line or two of musical comment. The idea is a good one, but, unfortunately, the guide proves unsafe. Mr. Barker tells us that Mozart was eighty years old when he wrote "Die Zauberflöte"; that "Siegfried" is the second part of Wagner's Tetralogy; that in "Fidelio," "Fidelio and Rocco are set to dig the grave." So much for his facts. He tells us that "Fidelio"—which seems to be condemned by the nature of the music—will always receive the admiration of connoisseurs; that "it would be difficult to mention any part of the score of 'Lohengrin,' the merit of which is upheld by general consent"; that the passage most generally admired in "Siegfried" is the scene in which the hero joins the broken pieces of his father's sword. So much for his opinions. He writes Glück for Gluck; Tafner for Fafner. So much for his spelling. From these specimens, it will be seen that Mr. Barker is, as we have said, no safe guide.

MUSIC NOTES.

A FUND is being raised to found a scholarship at the Royal Academy of Music bearing the name of its late Principal, Sir G. A. Macfarren. The first list of subscriptions, including many names of well-known musicians, has been published. Mr. Alfred H. Lyttleton, 1, Berners-street, is hon. treasurer.

THE Crystal Palace concerts will recommence on Saturday, February 11. Several interesting novelties are promised for the remaining concerts of the series, viz., a Violin Concerto and a new Symphony by Dvorák; Brahms' new Concerto for violin, violoncello, and orchestra; a Cantata by Mr. C. T. Speer; a Ballad for chorus and orchestra by Mr. Hamish MacCunn; and "The Minstrel's Curse," ballad for declamation, with orchestral accompaniment by Mr. F. Corder.

STEPHEN HELLER, whose *Etudes* and short pieces for the pianoforte are universally known and admired, died last week at Paris. He was born in 1813. He was known at one time as a brilliant pianist. He settled in Paris in 1838, where he continued to live till the time of his death. He visited England in 1862, and played with Mr. C. Hallé at the Crystal Palace. In 1885 he was stricken with blindness, and was presented with a testimonial. Like Chopin, he wrote exclusively for the pianoforte; and his music is distinguished for grace, charm, and purity of style. It is not often heard in concert rooms, but all teachers know its value, and it forms part of every pianist's library.

HENRY HERZ, the once famous pianist and composer, also died last week at Paris at the advanced age of eighty-six.

LITERATURE.

Virgil in English Verse. Eclogues and Aeneid i.-vi. By Sir Charles Bowen. (John Murray.)

NEARLY three decades have elapsed since, among other triumphs, the Arnold prize essay on "Delphi" exhibited the scholarship, learning, and eloquent style of Mr. Bowen of Balliol; and now, after becoming a Lord Justice of Appeal, and visitor of his old college, he reverts to the perennial fountain, and translates half, and promises to translate the other half, of the works of Virgil. "Qui a bu, boira." It is a fresh and satisfactory proof that the love of classical masterpieces yields (as Mr. Goschen would say) "neither to Time nor to Crime," neither to the receding decades nor to the experiences of the judicial bench.

In a short preface, marked by great felicity of expression, Sir Charles Bowen reviews the fortunes of Virgilian translation. In his view, translators such as Dryden and Conington fail chiefly in the loss of Virgilian form. Of the former, he says that

"he has taken Virgil into his powerful grasp, crushed him into atoms, and reproduced the fragments in a form which, though not devoid of genius, is no longer Virgil's. The silver trumpet has disappeared, and a manly strain is breathed through bronze."

That is true, in the main; only, now and then, Virgil mastered Dryden, made sweetness come forth out of the strong, and caused some of his translator's lines to haunt the ear like his own. Of Conington, he says that

"when the first sensation of despair and novelty is past, a strong and lasting sense is borne in upon the student, as he progresses, of Conington's great literary skill, and of the finished accuracy with which Virgil's points and meaning are seized, understood, and rendered. But the sweet and solemn majesty of the ancient form is wholly gone. All that is left is what Virgil might have written if the Aeneid had been a poem of the character of 'Marmion' or the 'Lay of the Last Minstrel.'"

There is, perhaps, something more to be said for Conington, however far from final his version may be. Poems like "Marmion" or the "Lay" are the delight of boyhood and early youth; the taste for Virgil comes later. Yet I believe there is a closer affinity between the two tastes than might at first sight appear. Even for youth, the charm of Scott was not purely Homeric. It went beyond "the joy of eventful living," of battles and border-raids; there was an undertone of sadness thoroughly Virgilian. The hand that drew Dido and Turnus might well have clasped that which drew Constance Beverley and the Master of Ravenswood; for some of Virgil's dreamiest sighs—such as

"Te nemus Anguitiae, vitrea te Fucinus unda,
Te liquidi flevire lacus"

—I think Scott presents closer parallels, even in

form, than it would be easy to find elsewhere. And, holding this, I respectfully think that more, even of Virgil's form, may survive the loss of his metre, in Conington's version, than Sir C. Bowen allows. But I do not at all contest his view that much is irreparably sacrificed.

For an equivalent for the Latin, Sir C. Bowen turns his eyes—the late Lord Derby notwithstanding—to the English hexameter, of which he thinks that a combination of the skill of Lord Tennyson and Mr. Swinburne would make, "even in a prolonged poem, more than has as yet been deemed possible." But, if I mistake not, the latter poet has called English hexameters "ugly bastards." Be this as it may, Sir C. Bowen ventures upon the English hexameter, but with an important twofold modification. It must, he thinks, rhyme, if it is to attract the ears of English readers; and, if this be granted, the final spondee must be abbreviated into one long accented syllable. Only thus can we avoid the difficulty of making double rhymes dignified, and finding them in sufficient numbers. His hexameter, therefore, is an accentual hexameter catalectic. He illustrates it by changing Coleridge's well-known specimen:

"In the hexameter rises the fountain's silvery column,"

into

"In the hexameter rises the fountain's silvery spray";

which, as he justly says, is very easily dealt with in rhyme; and, he adds that

"habit has taught an English ear to extract a pleasure from rhyme which is appreciable and valuable. Rhyme adds to our sense of adjustment and of nicety, and awakens in the reader an interest in the fortunes and success of each single line," &c.

This is undoubtedly true, but the question remains: Is the charm thus gained a Virgilian charm? Does the rhyming hexameter really remind one more of Virgil for its rhyming? Readers of the ACADEMY will judge for themselves from specimens shortly to be given. To me it appears that Virgil, except in a few passages, mostly in the Eclogues and Georgics, goes uncomfortably into couplets. The hardly avoidable pause produces a cadence very unlike the original; and a rhymed epic is apt to be fatiguing and monotonous in a way in which neither Virgil nor Homer, *qua* metre, ever are. The attraction of the Virgilian rhythm is very great, so is that of rhyme to an English ear; but they are attractions that cannot be combined. Hence, to some people, the cadence of (say) Canon Thornhill's blank verse translation will always seem to approach Virgil's more nearly than does that of Sir C. Bowen's delicately adjusted and graceful hexameter couplets.

There is no denying—sometimes, no resisting—the grace and beauty of many parts of his translation. Here is a passage from Eclogue x.—all of which Eclogue shows the translator at his best; Eclogue iv. ("Pollio"), though not without merit, is, on the whole, disappointingly rendered—it is the final farewell of Gallus to Lycoris:

"Thou—yet far be the fancy—remote from the land that is thine,
Lookest on Alpine snows—cold heart—and the winters of Rhine,

Lonely, without my love. May frosts thy feebleness spare!

Oh, may the splinters icy thy delicate feet forbear!

I will away; and the verses I wrought in the Chalcids mould

Set to the pipe and the music of Sicily's shepherd of old.

Rather had I in the forest, the wild beasts' caverns among,

Bear what awaits me, carving my love on the trees that are young,

So, as the trees grow upward, my love shall grow with them too.

There, meanwhile, with the nymphs I will roam great Maenalus through,

Hunting the savage boar. No frosts of th' winter shall make

Me and my hounds cease ranging the high Parthenian brake.

Over the rocks, methinks, and the ringing covers I go,

Sweeping already in chase: with joy from the Parthian bow

Winging the Cretan arrow; as though this medicine healed

Love like mine! or the Love-god to human sorrow would yield!"

The fifth line appears flawed by the unnecessary spondee in the fifth place. Omitting "the," would not "Chalcidian" be better? But the rest gives thorough pleasure, and, so far as couplets permit, Virgilian pleasure too.

Now let us test the translator by another passage, where Virgil reaches the very acme of power, in Dido's final curse (pp. 213-14):

"Far from the land of his fathers, and torn from the arms of his child,

May he in vain ask succour, and watch his Teucrian band

Dying a death untimely! And when this warrior proud

Under the hard conditions of peace his spirit has bowed,

Neither of monarch's throne nor of sunlight sweet let him taste;

Fall ere time overtakes him, and tombless bleach on the waste.

This last prayer, as my life ebbs forth, I pour with my blood;

Let not thy hatred sleep, my Tyre, to the Teucrian brood;

Lay on the tomb of Dido for funeral offering this! Neither be love nor league to unite my people and his!

Rise, thou Nameless Avenger, from Dido's ashes to come,

Follow with fire and slaughter the false Dardanians home!

Smite them to-day, hereafter, through ages yet unexplored,

Long as thy strength sustains thee, and fingers cling to the sword!

Sea upon sea wage battle for ever! Shore upon shore,

Spear upon spear! To the sires and the children strife evermore!"

What is wanting, here? I think, a sense of unity in the curse. Virgil's is "linked" vindictiveness "long drawn out." His translator gives us a string of curses in succession, each an after-thought, so to speak. His rhyming hexameters are written in lines, not paragraphs. There is not, there could hardly be, sufficient *enjambement* of them.

Lastly, let us ask the translator to guide us down to the spirit-world with the Sibyl and Aeneas (p. 275):

"So unseen in the darkness they went by night on the road

Down the unpeopled Kingdom of Death and his ghostly abode,

As men journey in woods when a doubtful moon has bestowed

Little of light, when Jove has concealed in shadow the heaven,

When from the world by sombre Night Day's colours are driven.

Facing the porch itself, in the jaws of the gate of the dead, Grief, and Remorse the Avenger, have built their terrible bed. There dwells pale-cheeked Sickness, and Old Age sorrowful-eyed, Fear and the temptress Famine, and hideous Want at her side, Grim and tremendous shapes. There Death with Labour is joined, Sleep, half-brother of Death, and the joys unclean of the mind. Murderous Battle is camped on the threshold. Fronting the door The iron cells of the Furies, and frenzied strife, evermore Wreathing her serpent tresses with garlands dabbled in gore."

Here there are some minor flaws; "joined" and "mind" are not satisfactory rhymes. "Labour" has hardly, in English, that double sense of *πῶρος* which "labos" bears. But ll. 6-9 are excellent, and the whole passage finely pictorial and not unworthy of the original; indeed, there is more sustained power in the version of book vi. than elsewhere.

The language of the translation is, on the whole, singularly well chosen. If anything, it is a little too cautious and unadventurous. Not without some risk and effort can an English equivalent, in sound and sense, be found for

"Venit summa dies et ineluctabile tempus Dardanisee.

There are many worse renderings than

"Troy's sun sets, and the hour no mortal strength can avoid

Comes on the land of the Dardan."

Yet one feels that a better one would be possible to a bolder hand; and this, I think, is an impression which will often occur to the reader of a piece of work which it is quite superfluous to call scholarly and fine.

What a strange fate has befallen the most modest and self-depreciatory of poets! The poem, whose merits he so deeply distrusted, is an epic of the most artificial kind; its inspiration is not its own story, but the inferential glory of Rome and the imperial throne; its hero, if he occasionally shows something of Hector's quality, shows quite as often the spirit of Mr. Pecksniff; its debt to Homer, when all is said, exceeds the due license of borrowing; it is unfinished, unequal in everything except its management of the metre—and to give even a shadow or echo of it has been, and continues to be, the dream of gifted minds. Divines, professors, laureates, great lawyers, great statesmen—all have contended to be the mouthpiece of Virgil. And rightly; for, with the one exception of Shakspeare, he stands alone in his power to give voice to the feeling that underlies all poetry and all love of poetry—"the sense of tears in human things."

E. D. A. MORSEHEAD.

Social Aspects of Christianity. By B. F. Westcott. (Macmillan.)

THERE is a great demand at the present time for the opinions of the leaders of thought upon social questions. There is in the air a certain impatience, almost a disdain, of the functions of artist, poet, and priest, unless these servants of God can clearly prove themselves servants of men also, and servants not of some men only but of all men. And the

social questions which the spirit of the age will allow no one to neglect obtain their imperious claim to our attention from the existence in our midst of an obstinate mass of poverty and wretchedness. Whether this mass is proportionally greater or less than it has been previously in the world's history is not of consequence. The important fact is that the necessity of its existence is in our own day challenged by the conscience of the community, and men of all classes and professions come forward to declare that at all costs the scandal must cease.

Canon Westcott has never ignored this important sign of the times. "I know," he has said, "that there is about us the deep swelling of a noble discontent ready to sweep away much that mars the surface of society," and he has indirectly preached much on the subject. But the volume before us is the first of his which directly deals with the question; and as such is of very great interest. It consists of two series of sermons: the first, on "Christian Elements of Social Life," contains five discourses on the foundation, the family, the nation, the race, and the church; the second, on "Christian Organisation of Social Life," contains four discourses on the kingdom of God, mediæval efforts—the Franciscans, modern efforts—the Quakers, and present problems. An appendix is added on "Types of Service."

It is characteristically wise of Canon Westcott to define the elements of society before proceeding to organise it. He has said that "in life there is no fresh beginning, in life there is no possibility of repetition." The first series of sermons is addressed to reformers who would construct life afresh, the second to those who would repeat obsolete methods. For the teaching of the first series Canon Westcott is largely indebted to Comte's *Politique positive*, and to Maurice's *Social Morality*. Of the former he says:

"I found in it a powerful expression of many salient features of that which I had long held to be the true social embodiment of the Gospel, of a social ideal which the faith in Christ is alone, I believe, able to realise."

Of Maurice's book he tells us:

"I should find it hard to say how much I owe to it directly and by suggestion."

Now there is more than a noble Catholicity in this appeal to such opposite guides. It is admirably politic; it reminds those who regard the preservation of the family as unimportant, and not vital to social life, that they have against them not only the priest-ridden and old-fashioned; and it reminds the religious world how holy and sacred this question of social organisation has ever been felt to be by the wisest minds. The sermons are the result of a careful and thorough study of the work of Comte and Maurice in the same field; and it is therefore not surprising that they present us in a narrow compass with an admirable analysis of the elements of social life—an analysis which is specially needed at the present time, because orthodox economists think it outside their province. Canon Westcott's terse and earnest sermons will convince many that a hatred of "the spirit of isolating competition, which is eating away the old repose and nobility of English life," has no

necessary connexion with an imperfect appreciation of the value of the family and the nation.

But it is the second series of sermons that will be found most interesting by the majority of readers. The two sermons on Francis of Assisi and George Fox are exquisite examples of the union of learning and eloquence, equally valuable as historical criticisms and spiritual exhortations. It is impossible to detect which hero Canon Westcott himself prefers. In the work of St. Francis, whom he describes as "a living *Imitatio Christi*," he discovers three lessons—"the capacity of simple humanity for the highest joys of life," "the necessity of taking account of the fulness and variety of life in our endeavour to hasten the kingdom of God"; and "the importance of the mission of the laity." "We sorely need all three lessons now," says the preacher, but goes on to point out why the Socialism of Francis failed. "He disregarded the sacred individuality of men," and forgot that "the living God seeks the service of living men"; and this criticism is followed by a noble sermon on the individualism of the Quakers. George Fox "made clear beyond question the power of the simplest spiritual appeal to the consciousness of men," and established the fundamental fact that "no organism, however delicately constructed, can summon to itself the principle of life." But although "no religious order can point to services rendered to humanity more unsullied by selfishness or nobler in far-seeing wisdom," yet Quakerism failed, because it "left wholly out of account the larger life of the Church and the race," because it "disinherited the Christian Society," and "maimed the Christian man." It is the opposite one-sidedness of St. Francis and George Fox which caused their failure, and it is such a one-sidedness which the sermon on "Present Problems" warns us against. This sermon proposes a special method of meeting our present difficulties. The work of the Franciscans and Quakers proves the power and necessity of organisation; and Canon Westcott calls for the creation of "some fellowship which shall strike the imagination," and sketches, not the rules, but the "main characteristics" of the proposed order. The fellowship must be natural, "must not depend for its formation or its permanence on any appeals to morbid or fantastic sentiment"; it must be English; it must be comprehensive; "must banish the strange delusion by which we suppose that things temporal and spiritual can be separated in human action"; it must be social, open, rational, and, above all, spiritual. The statement of the evils such a fellowship would combat precedes the sketch we have summarised, and affords a notable example of the right treatment of national politics in the pulpit. One short paragraph we will quote: "We are suffering on all sides, and we know that we are suffering, from a tyrannical individualism. This reveals itself in social life by the pursuit of personal pleasure; in commercial life by the admission of the principle of unlimited competition; in our theories of life by the acceptance of material standards of prosperity and progress. . . . The 'great industries' have cheapened luxuries and stimulated the passion for them. They have destroyed the human fellowship of craftsman and chief.

They have degraded trade, in a large degree, into speculation. They have deprived labour of its thoughtful freedom, and turned men into 'hands.' They have given capital a power of dominion and growth perilous above all to its possessor."

It is impossible to criticise Canon Westcott's proposals adequately in a short review. His two series of sermons cover their ground so thoroughly, are so condensed in themselves and necessary to each other, that it is almost hopeless to summarise them. No book Canon Westcott has yet published displays so clearly his varied gifts, and unites so happily the student's knowledge and love of the past with the prophet's interest in the present and insight into the future. He has, moreover, the essential prophetic grace of humility. To ardent young reformers whose ignorance is their confidence and their inexperience their strength, how surprising will the words seem: "I know how utterly unworthy I am to speak of such a fellowship when I look back upon a life of fragmentary efforts and barren convictions." But it is Canon Westcott's comprehension of the magnitude and difficulty of his problem which makes his teaching vital and valuable, and his assurance full of encouragement, that what "seemed a dream in my own early youth has been, I believe, brought now within the reach of accomplishment." RONALD BAYNE.

The Tshi-speaking Peoples of the Gold Coast of West Africa. By A. B. Ellis, Major, 1st West India Regiment. (Chapman & Hall.)

If not the most entertaining, this is certainly the most mature and valuable of the various works Major Ellis has found sufficient time and energy to devote to the peoples of West Africa amid his professional duties in that enervating climate. In several respects it recalls Mr. im Thurn's excellent book on the Indians of British Guiana, both being permanently useful studies of aboriginal tribes at a low state of culture, especially from the psychological standpoint, executed in the light of the new philosophy. The principles laid down by such leaders of thought in this field as Spencer, Lubbock, Tylor, and Waitz are here applied with striking effect, although these writers are by no means blindly followed in all their speculations. Indeed, Major Ellis shows considerable originality in his treatment of natural religion, with which much the greater part of the book is occupied.

Nowhere is this more conspicuous than in the chapter on fetishism, regarding which so many misconceptions are still prevalent even among sound thinkers. It is here made evident that fetishism is neither the degraded outcome of some pure form of theism originally revealed to primitive man, as strangely argued by Max Müller; nor yet an initial phase of religious belief, as more generally assumed. It holds, on the contrary, a sort of intermediate position between crude spirit-worship and the later polytheism of the more highly cultured peoples. But to understand this it is necessary to understand what fetishism really is, not what it is supposed to be from the vague statements of travellers and missionaries, themselves deceived by the still vaguer and more incoherent statements of the

natives. It is Major Ellis's signal merit that, brushing aside all preconceived notions, he has gone direct to the primary sources of information and solved the riddle by intelligently questioning on the spot all the circumstances associated with this widespread form of belief. So difficult is it to get at the inner workings of the untutored savage mind that it took him years of patient inquiry to get rid of his own prejudices and at last arrive at the truth. Speaking of the so-called "fetish-tree," which, like all other observers, he long supposed to be something worshipped for itself, but afterwards discovered was merely planted as a shade for the local deity, he remarks:

"This explanation was so much at variance with my former ideas, and with all I had heard and read upon the subject, that I received it with extreme caution; and it was only after a series of inquiries extending over some months that I suffered myself to be convinced. Still, my first opinion had not been formed hastily. Although it was the opinion generally held by Europeans, I had made numerous inquiries on my own account; and it was only after an acquaintance with the Gold Coast extending over some four or five years that by a mere chance I was led to doubt its correctness. Nor was this the only time such a thing has happened to me. Time after time I have thought I had grasped the native idea concerning a religious matter, and have gone on working thereon only to find, perhaps months afterwards, that I had misconceived it most materially, and had gone off completely on a wrong scent. In fact, a man who has only the acquired customs of human nature to guide him constantly and necessarily fails to understand the ideas and motives of savages, until he has learnt by practice the instincts of savage nature."

The final inferences of an observer of this calibre cannot fail to inspire confidence; and even the most sceptical will at least listen with respect to what he has to say on the origin and general aspects of fetishism as clearly summed up in the subjoined passage:

"I must confess that I do not believe that fetishism, as understood by the advocates of the necessity of a primordial fetishism, ever existed. I do not believe that man first gained or formed a conception of the existence of superhuman or supernatural powers from a stone, or any such object, which he picked up at random or by choice. Certainly if this theory be based upon the supposition of the existence of such a state of things among the negroes of the Gold Coast, or of West Africa generally, it has, I think, no foundation whatever. Nor do I think that fetishism, the worship of tangible and inanimate objects, is at all characteristic of primitive peoples, or of races low in the scale of civilisation. It is arrived at only after considerable progress has been made in religious ideas, when the older form of religions becomes secondary, and owes its existence to the confusion of the tangible with the intangible, of the material with the immaterial; to the belief in the indwelling god being gradually lost sight of, until the power, originally believed to belong to the god, is finally attributed to the tangible and inanimate object itself."

Another point here well brought out is the primordial and fundamental difference between morality and mere religion, as shown, for instance, by the distinction between crime and sin, perfectly understood by the Gold Coast people. The gods are concerned only with sin, such as blasphemy or the neglect of their

service, being perfectly indifferent to the most atrocious crimes, such as murder, theft, arson, cowardice before the enemy, which affect the individual and the well-being of the social system alone. Hence the apparent anomaly that the lower forms of religion have not furthered but retarded human progress, which as it slowly advanced reacted favourably on the religions themselves, as well as on morals, by developing the sense of duty as a higher motive for rectitude than the hope of rewards or the fear of punishment. Hence also the still more curious anomaly, that in its own interest the priesthood at first and for a long time fostered the grossest superstitions, and instead of promoting morality was itself mainly corrupt. Like the Roman augurs of old, the West-African priests and priestesses are here shown to be clearly impostors, preying on the credulity of their votaries and openly leading licentious lives. Thus, the medicine-men are frequently called in to compass the death of persons hostile to the suppliants, the aid thus obtained being justified on the ground that in such cases the gods appealed to naturally side with their special votaries, in return for their homage and offerings. In this way is created an obliquity of mental vision as regards right and wrong, while

"besides the ordinary obstructing influences to progress exercised by most religions, and especially by those of the lower races, the religion of the peoples of the Gold Coast, by its direct authorisation of human sacrifices and ordeals, and the consequent frequent spectacle of scenes of bloodshed and cruelty, has produced among the natives a want of human sympathy, and a callousness at human suffering which is shocking to contemplate."

The gods of the Gold Coast natives, of whom a classification, or hierarchy, as it were, is here given, are shown to have all been originally malignant. A fresh illustration is thus given of the old saying that "timor fecit deos," where it would be more frank and honest to read "daemones" for "deos." At all events these so-called "gods" act much more like foul fiends or horrible monsters than divine entities, such as are worshipped by more refined or more highly civilised peoples. All are essentially anthropomorphic, and cannot be regarded as supernatural or superhuman beings, but only praeterhuman, mostly, but not always, invisible, and in varying degrees more powerful than ordinary mortals. The idea of the supernatural is a sublime conception, far beyond the capacity of the savage mind; and, until this obvious truth is thoroughly grasped, we shall never arrive at right conclusions regarding the origin and early growth of religious beliefs. Instead of trying to put themselves in the position of primitive man, most writers on the subject unwittingly judge him from their own immensely higher standpoint, and thus read into his infantile mind abstract notions which he can neither realise in thought, nor express in his concrete speech.

A short chapter is devoted to the Tshi language, of which two distinct varieties are current: one among the Fantis, Ahantas, and other coast tribes; the other, of more archaic type, among the Northern Ashantis, Gamans, and other inland peoples stretching for an unknown distance in the direction of

the Kong highlands and the Mandingan domain. Its structure is extremely simple; and, like all primitive forms of speech, it serves to throw some light on the development of the higher agglutinating and inflecting languages. Thus from the form *ekru-mu*, contracted to *ekru-m*=land-interior=in the land, it is easy to see how certain case-endings may have grown out of originally independent words. There is, of course, a great paucity of abstract terms, and only three colours—white, black, and red—are distinguished by special names. On the other hand, the facility of composition is considerable, many compound words being extremely clear and simple. Thus a "guide" is *akwancherifo*, literally a road-show-person; a creditor *adzifirifo*=property-lend-person, and so on.

Reference is made to the curious "drum-language," which is much more widespread, and applied to many more uses than might be supposed from the account here given. The Ba-Kwiri and other tribes of the Cameroons, for instance, use it not only for festive or warlike purposes, but also for the rapid transmission of ordinary news. It is a true language, very difficult to learn, which is never taught to slaves and seldom to the women, and which no European appears to have yet succeeded in mastering. To the initiated it is as intelligible as ordinary language, into which it is translatable; and, by its means, reports of all kinds are easily and rapidly communicated from tribe to tribe to the remotest extremities of the land.

A. H. KRANE.

The Merchant of Venice. Edited by H. C. Beeching. (Rivingtons.)

MR. BEECHING'S *Julius Caesar* was not only an excellent school-book, but a model of good Shakspeare editing for all readers; and his *Merchant of Venice* is no less. The result of his work is an accurate and interesting commentary. Not that he deals less liberally with philology than do most of his predecessors, for he apparently has all the latest information, and gives it whenever it is needed; but his notes preserve the right proportion, and the concordance is quoted only when it is necessary to throw light on the text. The fact is that Mr. Beeching understands his task to be, not the editing of merely the text of the "Merchant of Venice" or of "Julius Caesar," but the "Merchant of Venice" and "Julius Caesar" themselves, as plays—not overlooking their importance in relation to great laws of dramatic construction, their importance as works of art, representations of actions complete in themselves, nor neglecting to make clear by historical and comparative philology the language in which the story tells itself.

It is, of course, one thing to like a play and make it liked, and another thing to use it as an instrument of education. Mr. Beeching does everything to stimulate the interest which any reader might feel in the "Merchant of Venice" as a story, encouraging him to think as well as enjoy, without inviting him to a de-appetising feast of dry bones. The first business of an editor is to make his author's meaning clear. The editor of this book has certainly laboured well to that end

His notes leave nothing to be desired; and his glossary is full and even interesting, which is not the wont of glossaries.

One would like to see prefixed to all editions of Shakspeare's plays the "advertisement" written by Mr. Beeching to "Julius Caesar." It would be at least worth the while of any teacher or lecturer to give his students the substance of it. The same editor's introduction to "The Merchant of Venice," and his comments on the development of the play, are suggestive applications of his own enlightening method. Commentators and introduction-writers often seem to think that many generalities and much mock-subtlety of German-like criticism of "characters" are enough to remove the reproach of an excessive and paralysing devotion to philology. The editor in the present case gives briefly and clearly the history of the story, examines its fitness for dramatic purposes, its use as a means for the representation of character, its *décor*, *lûsis*, *περίπτεία*, and the rest, and its *differentiæ* as a work of art that is dramatic. Nothing more is needed, and nothing less. It is quite satisfactory treatment even when, as may be the case here, a reader may differ from his editor in matters of character-interpretation. For instance, I cannot help feeling that Mr. Beeching has misread Shakspeare's Antonio and Shylock by adopting what was undoubtedly the interpretation of the author's contemporaries, but has not lately been fashionable, except with a certain kind of Conservatism. But, while one may reasonably differ from Mr. Beeching in his interpretation, his points are so put that they easily suggest the considerations that may be regarded as refuting them.

It is not worth while, in reviewing a book of this kind, not primarily meant as an essay in interpretative criticism, to examine at length the editor's opinion in such matters. I feel free, however, to express my regret that the admirable Appendix I., which gives briefly all that is necessary of the elements of Shakspeare "scansion," should have been followed by Appendix II., which is a hardly desirable and certainly *ex parte* statement that can only be made quite harmless by its proper complement—any good "modern" history of the Jews. This is, however, a small matter, and in no way affects the general excellence of Mr. Beeching's book, which is all that his previous work led those who knew it to expect. P. A. BARNETT.

The Irish in Australia. By James Francis Hogan. (Ward & Downey.)

FOLLOWING to some extent the lines of *The Irish in America*, Mr. Hogan goes more into the beginning of things than did Mr. Maguire. Of course, Mr. Maguire spoke of the emigrants from Ulster (mostly Presbyterians) who were driven out by the doubled-edged persecution of the eighteenth century, and whose share in the War of Independence has not yet been fully set forth. I do not think he said more than a word about Maryland and the earlier settlements of Irish in the South. His book, indeed, was almost wholly taken up with the period during and since the great famine.

Mr. Hogan could not write about New South Wales without reminding us of the

hundreds of Irish who, under martial law, were sent over after '93. The history of their sufferings—of the worse than middle passage, which, in some cases, was fatal to three-fourths of the human cargo; of the insurrections, repressed with cruelty born of fear; of the idle talk of French invasion—has yet to be written. Mr. Rusden said far too little about it. Mr. Hogan is sure, "from closer inquiry into facts" (p. 229), that "Colonial Vinegar Hill" was no more "Irish" than was the outbreak of Ballarat miners in 1854, the former being due to the brutality of heartless overseers, as the latter was to the insulting way in which the licence-fee was enforced and all hearing of grievances pook-pooked by Sir C. Hotham. I have not the facts. When Mr. Rusden's book was published I made an effort to get from Dublin some official record of the circumstances under which the '98 men were transported; but I was told I was asking an impossibility: "They were, in most cases, convicted without ordinary trial, all that was done contrary to law being covered by an indemnity passed for the purpose." Such being the case, and "General" Holt's Memoirs being, therefore, the only available supplement to the Colonial archives, I feel that, if there had been no "Colonial Vinegar Hill" it would have been a marvel almost past belief. No true Irishman "fears to speak of '98"; and no Irish-Australian should endeavour to belittle the attempts of the '98 exiles. Happily those attempts, whatever they amounted to, were fruitless. It is far better for Ireland, for England, and for the world that a greater Ireland, perfected through suffering, should have grown up at the antipodes, and should now be a powerful agent in proving to England that the Irish are capable of self-government, than that either France should have become a power in Australia or that Ireland should be a French dependency. But, when priests like Father Dixon and Father Harold, of Dublin, were among the convicts, though they had used all their efforts to restrain their flocks; when, to celebrate mass was made penal, and the punishment for not going to church was twenty-five lashes for the first offence, fifty for the next, and so on; when, as late as 1817, Father O'Flinn, to whom Bishop Ullathorne (who came to Australia in 1835) bears such high testimony, had to keep in hiding like an English priest in Elizabeth's reign; when "it was fifty lashes to speak a word of Irish," one could not be astonished at the wildest hopes and the most frantic efforts. Happily (I repeat the word) the energies of the Irish in Australia were soon turned into more profitable channels. Thanks (says Mr. Hogan) to the representations of an Irishman, Bishop England, of Charleston, the government sent out, in 1819, two salaried and accredited priests, who were grudgingly allowed to say mass, though Governor Macquarie still managed to keep them from meddling with orphan schools. Non-convict Irish emigrants, too, began to arrive; though for a long time the prejudice against the Irish was so strong that it had to be met by subtlety. Even in the assisted Queensland emigration the Irish were boycotted up to 1861. Father Dunne, who emigrated 500 King's County evicted tenants, had to buy his "land orders" without saying

for whom he required them. From South Australia, where the Irish have since been so successful, they were, under the Gibbon Wakefield scheme of 1836, rigorously excluded. Even during Mrs. Chisholm's work, the Melbourne city council prayed the Queen to stop the immigration of Irish girls—the very girls in whose favour Mr. Sala testifies that the “no Irish need apply is reversed at the antipodes”! However, the past is past, and may well be left to the historian. The rapid growth of the island continent has already made it an old, old story. The existence of this greater Ireland is a fact; and for those who face the matter honestly there is no menace, but a sure consolation, in the certainty that in Australia, even more unmistakably than in America, this greater Ireland is now strongly anti-separatist, while at the same time it is Nationalist to a man.

That is why I hope Mr. Hogan's book will be widely read by English people, because he shows, not only that many Irishmen have done splendidly in Australia, but that of the great mass of Irish emigrants it may be affirmed (in the Hon. Michael O'Grady's words to A. M. Sullivan) “they are all doing well—a credit to the old land”; that (as Mr. Hogan says, p. 346) “the signal all-roundability they have displayed in the work of both local and general government is little less than marvellous, considering the previous absence of any adequate training for such positions of authority and responsibility.” Of course his book will be popular with those of his own blood. They will enjoy his crisp, racy style. The very absence of “authorities”—of that apparatus of quotations which is such a comfort (sometimes such a snare) to us country critics—will be a recommendation to many. He has assimilated his facts, and need not therefore be at the pains to show us how he came by them. They will delight in the grand history of “the Church in the Colonies.” Archdeacon M'Encroe, Father Therry, Archbishop Goold, Bishop Quinn, and scores more, are men whose ability and organising power, not to speak of their zeal and self-devotion, would be a credit to any church; nor will the Nationalist forget that not only Archbishop Walsh, but also Archbishop Croke, is a present to the old country from the antipodes.

If any think that Mr. Hogan (like Mr. Maguire before him) says more than he need about the Catholic Church—its orphanages girdling every city, its new sisterhood (of St. Joseph), its glorious metropolitan church, &c.—let him reflect what their church has been to the Irish in new lands—all that the “Saggarth aroon” ballad expresses and much more. One slander Mr. Hogan is able triumphantly to refute. Nobody dreams of denying the marvellous self-denial of the Australian Irish and their sacrifices for the old country (they sent £50,000 for the famine of '79). The Catholic churches, which are such a feature in the Ireland of to-day, owe much of their beauty, in some cases their very existence, to Australian contributions. Much rent has till quite lately been paid with Australian remittances. But those to whom it is gall and wormwood to have to confess that any good thing can come out of Ireland console themselves for the undeniable fact that much good has come back to Ireland from her children on the other side of the world

by insinuating that the Irish over there are simply “hewers of wood and drawers of water,” herding in Irish quarters, counterparts of the old “rookeries” at home. Anthony Trollope *was told* of such an Irish quarter in Melbourne. He did not trouble himself to see it. Mr. Hogan proves that, far from herding in one quarter, the Melbourne Irish are so spread over its dozen municipal districts that every council has three or more Irish members. It is the same everywhere. Perhaps the most Irish district in Australia is Kilmore, a fertile valley on the way from Melbourne to Sydney; and Kilmore, which sent Sir John O'Shanassy to Parliament, is as far removed as possible from being a “rookery.” It is only the invincible ignorance of the English Philistine that can speak slightly of a race which turns out men like Sir Redmond Barry, Chancellor of Melbourne University, and Mr. E. G. Fitzgerald, thirty years Melbourne town clerk—not to speak of politicians like Sir C. Gavan Duffy, the Hon. P. Lalor (ex-leader of the insurgent miners at Ballarat), Mr. W. C. Wentworth, Judge Casey, of the Lands' Department, Mr. W. O'Carroll, of Brisbane, and many even more notable than these. The Orangemen, indeed, have given trouble in Australia as in Ireland; but much may be expected from the conscientious carrying out of the Peace Preservation Act. With the disuse of party emblems, we may hope for the decay of party spirit; for, in the words of Rev. J. Milner (chaplain of the *Galatea*, who witnessed the Orange riots at Melbourne on the occasion of the Duke of Edinburgh's visit in 1867),

“it is a question whether the constant irritation and annoyance inflicted on their enemies by Orangemen in their noisy celebrations has not had a much greater effect in producing Fenianism than all other grievances, fancied or real, put together.”

HENRY STUART FAGAN.

NEW NOVELS.

A Breton Maiden. By a French Lady, Author of “Till my Wedding-day.” In 3 vols. (Hurst & Blackett.)

An Actress's Love-Story. By Eva Ross-Church (Mrs. Victor Stevens). With a Preface by Florence Marryat. In 2 vols. (White.)

The Heir of Linno. By Robert Buchanan. In 2 vols. (Chatto & Windus.)

A Nest on a Hill. By John Dunning. (Sonnenschein.)

The Pride of the Paddock. By Hawley Smart. (White.)

Dead, yet Speareth. By Dr. Saks. (Bristol: Arrowsmith.)

Whose Wife shall She be? the Story of a Painter's Life. By James Stanley Little. (Spencer Blackett.)

BUT for the assurance of the title-page, we should certainly have supposed the novel which stands first on our list to have been the work of a native of Brittany; as it is, it is evident that the author has made the province, with its people, manners, and customs—those manners and customs which, alas, are fast becoming matters of mere history!—the subject of close and careful study, for she

writes as one to the manner born. The plot is laid during the early days of the Terror. In fact, the action begins before the murder of Louis XVI.; and the attitude of both peasants and nobles, when all refused to believe that the rebels could ever stand against the royal power, is cleverly described. While, as the story pursues its gloomy course through the subsequent horrors of fire, sword, and rapine, considerable dramatic force is shown; and we become absorbed in the destinies of the various actors, gentle and simple, all of which are strongly marked and living creations, even down to the very soldiers of the insurgent forces. Renée de Kerguennec, the last of her ancient line, could hardly be surpassed as a heroine of romance. Beautiful, spirited to the verge of daring, yet thoroughly womanly withal, she engrosses our love and compassion from the first; and all must rejoice when her trials come to a happy ending. Nothing could be better in its way than the scene in which she and Loik save the old *curé* from the men who are in search of her escaped lover, unless it be her escape through the woods, when, in gratitude, she gives the young officer the kiss which she would not suffer him to snatch. De Valvourgs, the sprightly Provençal gentleman who wins her first affections, is also a good study. It seems a pity that he could not have been spared; but we suppose that there was no other way of releasing Renée from her betrothal vows, and, of course, it was necessary to clear the stage for Rohan de Carnoët, the real hero of the piece. He is a splendid fellow—a mixture of prudence and impulsiveness as regards his public life, and the very model of a fine gentleman in his private conduct. What could be more noble and pathetic than the way in which he crushes down his own heart, lest, even in thought, he might wrong the friend who trusted him, but had unwittingly robbed him of the one love of his life? The other characters are equally well drawn in their degree, notably the peasant-priest and his family and the faithful Ivon—a noble picture of a true man bearing obloquy and disgrace without a murmur, for the sake of fidelity to his trust. It is a striking situation in which, on All Souls' night, Renée accidentally discovers the truth. But time and space alike would fail us to note the many fine points of this admirable novel. We must content ourselves with drawing attention to the midnight mass at sea—had they a special dispensation, or was it merely the pressure of necessity that made the function quasi-lawful?—the storming of Kerguennec, the game of the *Souls*, and the peasant wedding. These last-named are specially noteworthy as picturesque descriptions of Breton customs in the past; and, in fact, whenever kindred topics are touched upon throughout the novel they are treated with singular vividness. The native chants and songs must have interest for all lovers of old lore, as in the instance of the lament for De Pontcalec. Altogether, this is a book which nobody ought to miss. We could have dispensed with the rather turgid eulogium on the “Marseillaise”; and there are one or two funny verbal slips, as when the people are said to have been “thankful at last to *staunch* their thirst with water”—of course, the author meant *quench*. But these are but trifling blemishes in a fine work.

Pleasure, not unmixed with sadness, must be the feeling on laying down *An Actress's Love-Story*. It is such a pretty and touching little romance of modern life, and replete with so much promise for the future, that one cannot but add a sigh to the thought that that future was never to be realised. Even had it not been for the specially pathetic circumstances under which the gifted author of the preface gives her lost daughter's work to the world, no competent judge of fiction could have hesitated for a moment in saying that it bears all the marks of inherited talent, and has but little of the crudeness which might have been reasonably expected in a first production. Both Maurice Inglewood and Myra Kenneth are sympathetic figures in the little drama in which they, together with Gerald Conyers, play the principal parts; and, even if the reader cannot quite forgive the heroine for her conduct as regarded her marriage, great allowances are to be made for one acting from a sense of duty, however mistaken, and all will wish pretty Myra happiness. Apart from the more sentimental interest, there is genuine humour in the conception of the merry, kind-hearted actress, Cherry Boyne; and we are not going to quarrel with the plot by which she secured her friend's stage success, even if it was a trifle immoral. The story is one to be read, and its interest is enhanced by the facts relating to its authorship. We think the general verdict will be that in Eva Ross-Church the world has lost one who might have become as noteworthy in fiction as all who had the privilege of the dead girl's acquaintance knew her to have been good and gracious in private life, and in her own walk of art.

Mr. Robert Buchanan has just missed writing an unusually good novel; and, as it is, there is enough in his latest effort to raise it far above the average run of modern stories. The descriptions of Scottish life and character at the middle of the present century are taking and lifelike; Robin is quite satisfactory enough as a hero; Marjorie is a pleasant, loveable heroine; and the half-crazed enthusiast, Willie McGillvray, is a distinct creation—it seems by no means impossible that he may have been drawn from the life. The plot turns upon one of those cases of illegitimacy which were the almost inevitable result of the lax state of the old Scottish marriage laws. The hard-hearted laird of Linne refuses to do justice to the girl, Lizzie Campbell, whom he had wronged under promise of wedlock. She and her boy start for Canada, and are supposed to be lost on the voyage; but, as all novel readers will anticipate, Robin turns up, after long years, just in time to witness his repentant father's death, to marry Marjorie, and to gain his own, thereby ousting a most objectionable nephew of the deceased, who had fancied himself sure of the inheritance. It seems more than doubtful whether, at the time of the hero's birth, such cohabitation as was admitted to have taken place would not have rendered his mother the laird's wife in the eyes of the law. And we should rather like to know how the surname of one brother came to be Mossknow, and that of the other Linne. There may be a satisfactory explanation, but this ought to have been given. The story is somewhat hurried up at the end. What

became of poor, deserted Mary? Did she follow her scoundrelly husband?

A well-intentioned, but rather dull story, turning on the existing state of agricultural affairs, is that by Mr. Dunning. He states, in an introductory preface, that it was intended "to meet what appears to me to be the pressing need of our time," and a few lines further on, that "All practical men, to whatsoever political party they may belong, recognise the fact that the power of the democracy is increasing and irresistible." We will not stop to inquire whether this latter statement does not partake somewhat of the nature of a *petitio principii*. The chief point to be considered is that Mr. Osmund Broughton's farming schemes and experiences are uninteresting to read about, and not particularly well described, while the author obtrudes his own personality far too much. By-the-bye, was Mr. Broughton's Christian name Osmund or Oswald? It appears in both forms (pp. 36, 38, 39).

Messrs. F. V. White & Co. seem to make quite a speciality of sporting novels; and, while they can give us such good ones as Mr. Hawley Smart's last, there is no reason why they should not continue in their chosen line. Perhaps some readers may be getting a little satiated with descriptions of runs with the hounds; but the most *biased* must enjoy the account of the meet at Tapperley, with the perilous adventure of Harrington Brook, in which Miss Beatrice Bridgeman so nearly came to fatal grief. To many the chief interest of the story will centre in the loves of that young lady and Harry Beringer, and in her jealousy of pretty Rose Rawlinson. "The Pet of the Paddock," we may mention, was a certain ill-looking, thoroughbred mare, bought for a song from a distressed farmer, which turned out worth her weight in gold. How came the author to make such a slip in his French as at p. 82? He must know that the proper phrase is *à outrance*!

At the close of his little budget of improbabilities, Dr. Saks describes the whole affair as "griely and horrible"—had he added "preposterous" he would have been quite within limits. It is about as trashy a specimen of the shilling dreadful as ever appeared. Here is a worthy and genial old country doctor who, to oblige his scapegrace son, murders his own brother (it is not stated how); contrives to substitute the latter's mangled remains for the corpse of a newly buried tramp, without being observed; and then dies of fright on being found out, while the tramp turns out to have been a "long-lost brother" to both the murderer and his victim. The style is about on a par with the matter; and we would fain hope that the author is ignorant of the meaning of the word he uses at p. 146—in the interests of the morality of the good ladies of Scarsdale.

We do not profess to understand the title of Mr. Little's story, and are sorry that we can say but little in its favour. Ralph Legh, the hero, is rather a commonplace young gentleman, and the adventures he goes through are not particularly amusing; even the episode of the lovely but treacherous Mignon does not rise above the level of old-fashioned melodrama. The chief thing that strikes one is the singular prevalence of

sudden death among the characters. Setting aside Lady Le Thorpe, who had a short preliminary illness, the author disposes in that manner of Capt. Brentnall, old Sir John, Webster Clayton, and Grace Harland, while Ralph himself must have had as many lives as a cat. There is far too much talk—talk in the book. When we are reading a story we do not expect, or wish, that the author should at any moment set to work and preach at us for a page or more.

B. MONTGOMERIE RANKING.

SOME HISTORICAL BOOKS.

"A Sketch of Universal History." In 3 vols. —Vol. I., *Ancient History*, by George Rawlinson; Vol. II., *Medieval History*, by G. T. Stokes; Vol. III., *Modern History*, by Arthur St. George Patton. (C. W. Deacon.) There is perhaps something tempting to ridicule in the idea of an outline of "universal history" in the compass of about eleven hundred smallish octavo pages; but there are at least two widely differing plans on which such a book might usefully be written. It might deal merely with broad and general facts, omitting all mention of any individual events except such as were extensively operative as causes or illustrative of widely extended effects, but dwelling on these with sufficient minuteness to bring out something of their true significance. A book so written, with sufficient skill and fulness of knowledge, would obviously be of great interest and value; but it is a boon scarcely to be hoped for. The other plan is to make the book a mere orderly collection of the dry bones of universal history—a mere setting forth of its framework of names and dates, reigns of kings, battles and treaties, and so forth. Such a skeleton of history would not be readable, but it would be helpful for occasional reference, especially to those engaged in the study of a portion of the history of a particular country. The latter method is, on the whole, that which has been followed in the work before us. The publishers, indeed, in their prefaces (which are rather commercial than literary in style), appear to anticipate that people will read the volumes through. We do not think anyone is likely to do so (in this present world, at least); but for purposes of reference the work may be recommended. The modern history volume is the most bulky, and—perhaps partly on that account—is decidedly the best. It is not a book from which to learn history, but it is the kind of book which a journalist should have constantly at his elbow. Prof. Stokes's volume is a disappointing one. It is well known that the author is both a scholar and an interesting writer; but neither fact could be guessed from this sample of his work. Apparently he has been oppressed by the necessity of making his epitome as concise as possible, and as the result we get such sentences as the following:

"The best known Western authors of this period were Boethius, Junilius [?], Jornandes (Jordanis), Gildas, Columbanus, Pope Gregory I., Isidore of Seville, Gregory of Tours, Cassiodorus, Adamnan, Bede, Alcuin, and Paul the Deacon, the historian of the Lombards."

Simply this, and nothing more, about the Western literature of the period from 476 to 814. The selection of names is not much amiss, though several are omitted that are better worth mention than Junilius; but it would have been well worth while to add a brief indication of the nature of each author's works and his nationality. Inaccuracies in names and dates are frequent throughout the book. In many instances the fault is no doubt primarily the printer's, but that does not make the errors less misleading. The Gothic King of Italy in 540

is called "Theodebald" instead of Hildibad ("Hilbæter"); Odoacer is designated "the Herulian"; the first Theodoric the Visigoth is said (after Gibbon) to have been a son of the great Alaric. In the Index Jornandes is said to have been an author of the *thirteenth* century! The name *Deira* twice appears as "Devia." Other blundered spellings are "Olybryus," "Omniade," "Macrobrus," Malcolm "Clanmore," "Hafurstford," and "Pelago" (for Pelayo or Pelagius). Altogether the volume strikes us as a perfunctory piece of work. The ancient history volume, on the other hand, is not badly done. We never heard anyone call Canon Rawlinson an attractive writer; but his contribution to the work, in spite of its condensation, is now and then almost readable. The chronological tables seem scarcely adequate. The index, however, is copious, though disfigured by a few curious departures from alphabetical order.

Domesday Book: a Popular Account of the Exchequer MS. so called. By Walter de Gray Birch. (S. P. C. K.) This volume, considering its small size, contains a great deal of information, put together with considerable skill. It is, however, disfigured by many extraordinary blunders of detail. Several of these have already been pointed out by correspondents of the ACADEMY; others are due to the author's unfortunate propensity for meddling with questions of etymology, with which he is not competent to deal. Mr. Birch's deliverances on matters requiring a knowledge of Anglo-Saxon are of such a nature as to inspire us with astonishment at his courage in undertaking to edit a *Cartularium Saxonicum*. He does, indeed, reject the absurd notion that *hida*, as the name of a land measure, is the same word as "*hide* of an animal"; but he does so merely on the ground of its historical improbability. His own suggestion is philologically quite as impossible as that which he discards. He "refers *hida* to the Anglo-Saxon word *hyd*, a house or habitation, from *hydan*, to hide or cover"; and goes on to connect the word with *hut* and *hat*! On the same page he states, quite correctly, that another form of the word is *higid*; and afterwards he mentions that "King Alfred translated the Latin word *familia* by *hydeland*"; but he is unable to see the etymological bearing of these facts. He thinks that the local name Henbury (*æt bære hēan byrig* = at the high borough) is derived from the Welsh *hēn*, old. The name of "Kennewilkins Castle," which apparently contains a corruption of the personal name Cynewell, he supposes to be a compound of *Cuno*, a frequent initial element in ancient British names, with "the territorial name of Hwinca." He follows Spelman in regarding the word *burgheristh* as of the same meaning as *burgh-breche*, which he further confounds with *borh-bryce*, and erroneously explains to mean "breaking the peace of the borough." The fact is that *burgheristh* is a peculiar spelling for the Anglo-Saxon *burh-riht*, "borough-right"; the combination *ih* is in *Domesday* not unfrequently rendered by *ist*, as in *radchenistres* for *radonisthas*, *Chenistetune* for *Oniht-tūn* (Knighton), *Bristric* for *Brihtic*. Not content with these and other similar performances on Anglo-Saxon ground, Mr. Birch makes occasional excursions into Romanic philology, with equally strange results. He proposes to derive *manerium* from *manus*, and maintains that *carruca*, the Late Latin word for a plough, is formed from the numeral *quatuor*. In support of the latter novel speculation, he adduces a list of nine Romanic words in which the syllable *car* has a similar etymology. So far as these words are concerned, he is quite right, except that he imagines *carrière*, "career," to be the same word as *carrière*, "quarry." But any Romanic philologist would have told him that if the initial *c* of *carruca* had represented an

original *qu*, its descendant in modern French would have been *carrue*, instead of *charrue*. This wild piece of etymologising seems to be intended as an argument against Canon Taylor's contention that the team of a plough in early English days consisted normally of eight oxen. If Canon Taylor had no more formidable antagonist than Mr. Birch, he would not need to feel much anxiety about the fate of his theories. Mistakes such as those we have pointed out are not of quite so serious consequence as they would be if the volume were intended, or were likely to be used, as a text-book for students. But it is a pity that even a popular book should be needlessly incorrect; and, if Mr. Birch should write anything further about *Domesday*, we would advise him to consult some qualified scholar respecting those parts of the subject which lie outside the range of his own knowledge.

"Epochs of Church History."—*The Church and the Puritans, 1570-1660.* By Henry Olney Wakeman. (Longmans.) We have here a scholarlike and intelligent sketch written from the high Anglican point of view. As to the statement of matters of fact there is nothing to complain of. The interpretation of them is another matter. The fog is gradually lifting; and Papist and Puritan, Calvinist and Arminian, are now treated by all but the very shallow or the very ignorant as if they were once human beings, not mere pawns on a chessboard whereon the great religious warfare of the past was carried on. Mr. Wakeman, though he is, we should gather, a disciple of the Laudian theory, is never bitter or unfair to his antagonists. He sees that there was something to admire in the narrow Calvinism of the Elizabethan era; nay, that it was a necessary provisional mode of thought for those who had broken away from Rome and yet desired to have some sort of scientific basis for their beliefs. The best part of the book is that which treats of Archbishop Laud. His is one of those characters to which it has commonly been found impossible to do justice. The man who was so upright and steadfast surely deserves some sympathy notwithstanding his narrowness of mind. In all matters of thought he had wider views than the Puritan theologians, inasmuch as he had grasped the idea that history had something to say on the then present controversies. If the position he took, with regard to the Calvinists at home and all the religious bodies of the continent, was, from our point of view, utterly untenable, he was at least honest, and certainly not more given to using the arm of flesh in support of his opinions than were the fanatics on the other side. Had Cartwright or Prynne ever had the evil fortune to grasp the power that Charles's archbishop for a time possessed we may be sure that they would have dealt with those who offered resistance in a manner equally uncompromising. There are some few passages in which the author gives a wrong impression. When he speaks of England standing forward under Elizabeth "as the champion of liberty of thought and action" (p. 62) against Spain, he presents us with a picture almost the reverse of the truth. "Liberty of thought and action" was the very last thing the great queen would have struggled for. What England bent her energies to resist, under Elizabeth, was the domination of Spain and the spiritual rule of the pope—two things which seemed one and the same to all but a few Catholics whose voices were unheard. We question whether Mr. Wakeman is quite accurate in speaking of the English Church in the latter part of the sixteenth century as having "for the time deposed the sacraments from their place in the Christian system" (p. 43). If he means that the sacramental theories or rather denials of Zwingli were accepted by a great body among the

clergy, we agree with him; if, however, we are to understand that the two rites which the English Church had retained were not administered as the Prayer Book directs, we believe him to be in error. So far as relates to the Lord's Supper the evidence of many churchwardens' account-books forces on us the belief that the rubrics were obeyed. Mr. Wakeman has been unfortunate in reading his proofs. In the quotation (p. 58) of a curious passage from Spenser he prints "weave" for "weare," which entirely perverts the sense.

Chronicles of an Old Inn. By Andrée Hope. (Chapman & Hall.) The old inn is not the "Tabard," nor some ancient hostelry on the road-side, but the well-known Inn of Court which still perpetuates the memory of its ancient owner, Lord Gray. Its gardens (said to have been laid out by Francis Bacon, when treasurer of the inn) retain some of their old beauty, though year by year the ranks of the noble elms are thinned, and the rooks, reduced in number, find increasing difficulty in securing resting-places. Mr. Hope gives a tolerably long list of birds, including the goldfinch and the lesser redpoll, which still frequent the gardens, and notes, among rarer visitors, the redwing and the great titmouse. But the denizens of the inn which have given it its chief lustre belong to past times. The two brothers, Anthony and Francis Bacon, are specially associated with the history of Gray's Inn, which claims also to have been the home of such eminent lawyers and judges as Sir Anthony Fitzherbert, Sir William Gascoigne, Sir John Fortescue, Sir Edward Coke, and Sir John Holt. This is a roll of illustrious names of which any society might be justly proud; and if the additions to it in later times have been comparatively few, it must be borne in mind that fashion and convenience influence students in their choice of an inn, and that in these respects Gray's Inn is at a disadvantage. Mr. Hope's book is pleasantly written and well got-up. It would have been improved if the author had put his memoirs in chronological order, and had corrected little errors like Meantys for Meautys. Perhaps, too, the reader might have been spared the moralisings and reflections which perhaps occupied some of the vacant hours spent by the author in court or chambers.

Dene Forest Sketches, Historical and Biographical, founded on Family Records and MSS. By S. M. Crawley Boevey. (Maxwell.) This is a bold venture on the part of Miss Crawley Boevey. For a writer to attempt the reproduction of the thoughts, language, manners, and ways of times so remote as those of King Stephen, King John, and the third Henry much study is needful as well as much courage, nor will a fertile fancy and a fluent pen supply the former requisite. We must candidly confess that we do not ourselves lay claim to such exact historical knowledge as would qualify us to criticise minutely the author's pictures of these periods; but it is obvious to anyone that the proportion of fact to fiction is much about the same as sack to bread in Falstaff's bill. We shall, therefore, dismiss the earlier stories in the volume with the remark that they are simply stories, rather cleverly written, with a little local colour and a faint flavour of antiquity. The latter sketches are more substantial, and to their construction it is evident that the muniment room of Flaxley Abbey has proved largely useful. For ourselves we should have preferred a selection of the original documents, with such notes as might be necessary to make their meaning or their purpose clear; but it is possible that there are readers whose tastes are of less simple character, and who would reject such dry food. The last story in the book—"The Gipsy's Foster-

ling"—is, from our point of view, the best, inasmuch as it deals most with actual circumstances. The dispossessed heiress, Eleanor Wiseman, is a real character, and those who plotted against her and those through whose agency she gained her rights are likewise real; while we have no reason to doubt that the course of events corresponded, on the whole, with the writer's narrative. Whether Sir Harry Vane, Mr. Pepys, and Harry Martin were ever in the company of Mr. and Mrs. Boeve we have no means of knowing; but we presume that Sir Paul Vanore (whose name occurs repeatedly in the book) is Sir Peter Vanlore, of whose family there is an excellent account in Nichols's *Herald and Genealogist*. A chart or chapter devoted to the descent of the Flaxley Abbey estate and its owners would have added greatly to the value of these sketches.

MESSRS. MACMILLAN have issued a new edition of the late J. R. Green's *Short History of the English People*, "thoroughly revised" by his widow, who has, in the main, limited her task to correcting minor slips and incorporating the views expressed by the author in his larger History. At the same time, she has availed herself of all authoritative works subsequently published; and she acknowledges the help of many friends. Current events have not been carried later than where Green left them—in 1874. Marginal notes and dates are now given for the first time. We gather from the advertisements that this famous book has now reached its 129th thousand. It is yet more interesting to learn from the note on the verso of the title page that no less than four reprints were called for in the first year after its appearance, and an average of one reprint in each year that has followed. Does even the historic cheque paid to Macaulay attest a greater success?

NOTES AND NEWS.

MESSRS. LONGMANS will publish in the middle of next month Mr. Edward Clodd's *The Story of Creation: a Plain account of Evolution*, illustrated with more than seventy woodcuts and diagrams. The author claims to have given for the first time a popular account of the hypothesis—somewhat modified from Herbert Spencer—which explains the origin not only of life forms, but also of the entire cosmic system by one and the same process of development. Special attention is given to the view which seeks for the beginnings of life in the polar regions, to Darwin's theory of natural selection, and to "social evolution" or the growth of mind, society, morals, and theology.

MESSRS. SAMPSON LOW announce for publication by subscription another handsome work by Dr. P. H. Emerson on the Eastern Counties. It is entitled, *Pictures of East Anglian Life*; and will consist of a series of chapters mainly descriptive of the peasantry and fisherfolk, illustrated with thirty-two plates and fifteen woodcuts from the author's own photographs. The book will be in folio form, and will be issued only in a limited edition.

THE second volume of Prof. Henry Morley's *English Writers*, embracing "From Caedmon to the Conquest," will be published by Messrs. Cassell & Company early next month.

MR. GEORGE REDWAY will publish in a few weeks *Charles Dickens and the Stage: a Record of his Connexion with the Drama as Playwright, Actor, and Critic*; by Mr. T. Edgar Pemberton, author of *Dickens's London*. The book will contain chapters on "Dickens as an Actor," "Dickens as a Dramatist," "The Stage in his Novels," and "The Stage in his Letters," and will be illustrated with three character portraits of Miss Jennie Lee, Mr. Irving, and Mr. Toole.

The Counting-out Rhymes of Children, their Antiquity, Origin, and Wide Distribution: a Study in Folklore, by Mrs. Carrington Bolton, will be published immediately by Mr. Elliot Stock.

Crane Court: a story of Country Life, by A. M. Munro, author of "The Beautiful Lady Chichester," will be published shortly by Messrs. Griffith, Farran & Co.

FROM the report of the Hunterian Club, Glasgow, we learn that a second instalment for the eighth year is immediately to be sent out to members as follows:—Part 61, Bibliographical Index to Thomas Lodge's Works, and Memoir by E. Gosse; Part 62, *Ave Caesar*, by Samuel Bowlands (1603). The index, glossary, and title-pages to Lodge, completing the collected edition of his works issued by the Hunterian Club, and Part 1 of the prefatory matter for the Bannatyne MS. are ready; and the Council proposes to call up at once so much of the ninth year's subscription as will pay for these and finish the Bannatyne MS. It does not intend to carry on the work of the club further. An undertaking is given that none of the publications of the club on hand will be allowed to find their way into the remainder market, or will even be sold at reduced prices; and members are therefore asked to supply themselves, at an early date, with any of the issues which they may require. It is also stated that, for the ninth year, the number of copies printed will correspond to that of the paid subscriptions only. The Council expresses its regret at the long delay which has taken place since the last issue, mainly through the illness and death of the late Hon. Treasurer and Secretary, Mr. John Alexander, to whose memory a warm tribute is paid for his untiring interest in all the affairs of the Hunterian Club.

THE prize of fifteen guineas offered by the Froebel Society for the best essay on "The Ethical Teaching of Froebel, as gathered from his Works," has been divided between Miss Lyschinska, Kindergarten Instructress to the London School Board, and Mrs. Claude Montefiore, a former scholar of Girton College, Cambridge. The judges were the Rev. H. R. Quick, Prof. Meiklejohn, and Miss Snell. The two prize essays will be published in the March number of the *Journal of Education*.

THE FORTHCOMING MAGAZINES.

THE unpublished letters from Mendelssohn to Moscheles, which will appear in *Scribner's Magazine* for February, have been in the possession of Felix Moscheles, the son of the composer, for many years. They will be illustrated with portraits of Mendelssohn and his family, and also with several reproductions of his drawings. The same number will also contain Mr. R. L. Stevenson's second paper, entitled "The Lantern-Bearers," after a sport in which the author took part when a boy in a Scottish fishing village. His memories of this place form a picturesque introduction for a protest against realism in fiction.

THE February number of the *Antiquary* will open with an article by Mr. Charles Roach Smith on "The Roman Walls of Chester, and the Discoveries made in them." To the same number Mr. Henry P. Maskell will furnish a paper (with an illustration) on "Emanuel Hospital," in which he pleads for the preservation of this excellent and interesting old foundation.

THE next number of the *Classical Review* will contain a long notice by Mr. F. B. Jevons, of Gruppe's "Die griechischen Culten und Mythen in ihren Beziehungen zu den Orientalischen Religionen," in which one of the most important of recent contributions to the history of religions will, for the first time, be made

known to English scholars. Mr. E. S. Roberts will discuss the Gortyna Inscription; and the Rev. H. F. Tozer, in "The Native Land of Horace," will describe a visit to the neighbourhood of Mount Vultur.

THE February number of *Time* will contain articles on "Mr. Mackonochie and the Ritualistic Movement," by Mr. G. W. E. Russell; "The Pedigree of Natural Rights," by Prof. W. Wallace; an instalment of the new "Work and Workers" series on "Members of Parliament," by Mr. G. Osborne Morgan; together with contributions by Mrs. S. A. Barnett, Mdlle. Y. Blaze de Bury, Mr. Richard Dawson, and others, including a paper on the Crown Prince ("Unser Fritz"), by "One who knows him."

AMONG the articles in the February number of the *Scots Magazine* (into which the *Scottish Church* has now developed) will be "The Border-land"; "Organisation of Secondary Schools," by Prof. Laurie; and "Scottish Literature in the Stuart Period."

UNIVERSITY JOTTINGS.

SIR FREDERICK ABEL has been appointed Rede lecturer at Cambridge for the present year.

PROF. GEORGE DARWIN, of Cambridge, will deliver a public lecture at Oxford, on the invitation of the Ashmolean Society, on Monday next, January 30, upon "Saturn's Rings."

IT will be proposed at Oxford next week to confer the degree of M.A., *honoris causa*, on the Rev. Dr. L. H. Mills, of New York, editor of part of the Zend Avesta, and of the Gathas in the "Sacred Books of the East."

THE Rev. G. F. Browne, the newly appointed professor of archaeology at Cambridge, will deliver his inaugural lecture on Tuesday next, January 31. He has taken for his subject, "Sculptured Stones of Pre-Norman Type in the British Islands."

MR. J. H. MIDDLETON, the Slade professor of fine art at Cambridge, will deliver a course of six lectures this term on "The Reformation in its Relation to Parish Churches in England."

THE annual meeting of the Cambridge Philological Society was held on Thursday, January 26, when Dr. Peile, Master of Christ's, was elected president, and the hour for future meetings was changed from the evening to the afternoon. Dr. W. Robertson Smith read a paper on "The Sacrifice of a Sheep to the Cyprian Aphrodite, with an Emendation of the Text of Joannes Lydus *De Mensibus*, iv. 45."

HERR JOACHIM is announced to visit Oxford on February 14, when he will take part in Beethoven's Quintet in C major (Op. 29), Haydn's Quartet in G major, and Spohr's Duet for two violins. The concert will be given in the Sheldonian Theatre; and Herr Joachim will be supported by Messrs. Ries, A. Gibson, W. F. Donkin, and C. Ould.

IN connexion with the teachers' training syndicate, Dr. F. Warner will deliver a course of six lectures at Cambridge during the current term, on "Growth and Development of the Intellectual Faculty."

THE managers of the Craven Fund at Cambridge have made a grant of £40 to Mr. M. R. James, for archaeological research in Cyprus.

THE Syndics of the Cambridge University Press have undertaken the publication of a collected edition of the mathematical papers of Prof. Cayley. These papers, originally contributed to the Royal and other societies, and to various mathematical journals, will be arranged for publication by the professor himself, who will add notes containing references

to the writings of other mathematicians on allied subjects. It is expected that the edition will extend to ten quarto volumes; and it is intended to publish two volumes each year until the completion of the work.

WITH reference to Prof. Ray Lankester's removal from the office of examiner at Oxford last summer—against which he has appealed to the courts of law—we may mention that his case is elaborately stated in a correspondence with the vice-chancellor, printed in the *Oxford Magazine* for January 18.

THE Senatus Academicus of St. Andrews will probably elect to the Gifford Lectureship in the course of next March. The appointment is for two years, and the lecturer will be required to deliver not less than twenty-five lectures each year, two being given in one week. The subject is Natural Theology in the widest sense of the term; and the lecturer may belong to any religious denomination, or to no denomination at all.

BISHOP BERKELEY (research) fellowships, at Owens College, Manchester, have been awarded to E. G. W. Hewlett (Trinity College, Cambridge), in classics and philology; to William Bott, in chemistry; and to O. H. Latter (Keble College, Oxford), in zoology; and renewed for a second period to Henry Holden, in physics, and to William A. Shaw, in history.

ORIGINAL VERSE.

THE BYRON CENTENARY.

(January 22, 1888.)

LET not the heart of England grieve to-day
That by an alien race, in alien tongue,
The memory of her poet son was sung
Alone. Than his lov'd Hellas who could pay
A more befitting homage? No dimmed ray
Shines round his brow for her who still hath clung
To him so fondly. Dwells there us among
A greater love than here? Who—who dare say?
For him then who would wish a higher lot
Than to be thus remembered by her
To whom he gave the best things of his heart—
The noblest, purest? Who will now aver
'Tis not enough that by this better part
He triumphs—that his Greece hath not forgot?

E. M. EDMONDS.

OBITUARY.

DAVID MAIN.

THERE are many outside the circle of personal friends who will hear with sincere regret of the death of Mr. David M. Main, editor of the *Treasury of English Sonnets*, which took place on Thursday, January 19. Mr. Main was a comparatively young man, being only in his forty-second year; but in June, 1886, severe symptoms of congestion of the brain made themselves manifest, and rendered inevitable a complete withdrawal both from business and social life. From the first, complete recovery of his mental power was more than doubtful, but during last summer there seemed to be a slight improvement in his condition. The faint hopes thus raised were unfortunately doomed to speedy disappointment, for at the beginning of winter he became unmistakably worse, and on the day above mentioned he passed away.

So far as I know, the *Treasury of English Sonnets* is his sole literary legacy; for Mr. Main, though an ardent lover and unwearied student of literature, displayed a remarkable—indeed, in our days, almost unique—indifference to the kind of fame which is the meed of the successful literary producer. Though his intellect was keen and active, his taste perfect, and his literary style so singularly facile and graceful

that he might, one would think, easily have won a solid reputation by what is ordinarily known as original work, he was more than content to be a collator and commentator; and, though he had the passionate appreciation of poetry which in the short, or the long, run makes versifiers of most of us, I believe that his entire poetical product consists of two charming sonnets, which are to be found in the last edition of Mr. Sharp's collection. His *Treasury*, however, constitutes a sufficient claim to the grateful remembrance of all lovers of literature. It is a monument of industry, care, and fine discrimination; and among sonnet anthologies it is—and probably will long remain—*facile princeps*. Not a sonnet was transcribed until the anxious editor had personally examined not only its first-published form but all succeeding forms, in order that the text might be pure and all variations taken due account of. In his labour of love neither time, exertion, nor expense was spared; and I have known him more than once spend all three by taking a long railway journey, involving three days' absence from home, to verify a single reading. I remember well his anguish—the word is hardly too strong—when he found that, in spite of all these pains, some few misprints had crept into the published work, and his amusement when he found these misprints transcribed by successors in the field, who made a great parade of original research, but who had not even taken the trouble to refer to his list of *corrigenda*. Of the notes which occupy half of the large volume I must not speak at length, though they constitute the only portion of the work which conveys to the general reader any adequate impression of the extent of the labour to which some seven years were devoted. The thoroughness of their scholarship is apparent to every competent judge, but it is scholarship warmed and irradiated by high enthusiasm which redeems it from all "dry-as-dust" associations.

Mr. Main will live long and pleasantly in the recollection of all who knew him. He was of medium height and light complexion, and had a peculiarly frank and winning expression of countenance. He was a conspicuously neat dresser; indeed, neatness in everything seemed a natural instinct—his MS., for example, being as beautiful to look upon as that of Thackeray or Edgar Poe. His manner had an easy and courtly gentleness, which was singularly charming, though he betrayed at times a humorous fondness for Landorian strength of epithet, and was wont, I remember, to speak of a well-known editor, of whom exactitude is not the strong point, as "that inaccurate beast —."

In Mr. Main's youth his father—Mr. Robert Main, of Doune, a well-known and highly respected Scottish banker—provided his son with all needful opportunities for beginning a successful commercial career; but his passion for literature would not be controlled, and for long his sole occupation was the gathering and arrangement of materials for his beloved *Treasury*. Shortly after its publication he began business as a bookseller in Royal Exchange Square, Glasgow, numbering among his clients many collectors and connoisseurs, who were glad to profit by his remarkable knowledge and discrimination. He had, of course, his periods of anxiety, and when they came was apt to become, perhaps, unduly depressed; but the venture was, in the main, successful, and would doubtless have been increasingly so had health and life been spared to him. This, however, was not to be. He has gone; and all that remains of him on earth are pleasant memories in the hearts of many friends, and the *magnum opus* into which he threw so much of the action and passion of his prime. I have written hastily and, therefore, inadequately. I wish it had been otherwise; but I am above all things

anxious that such a worker for letters as David Main should not remain uncommemorated.

JAMES ASHCROFT NOBLE.

WE regret also to announce the death of Dr. Emil Lehmann. A brother of the artist, Rudolph Lehmann, he was well known throughout Germany for his translations, chiefly from the English. Among these are several works by George Eliot, Bulwer, Dickens, also Sir Theodore Martin's *Life of the Prince Consort* and Seeley's *Life of Stein*. Dr. Lehmann was connected with the Hamburg press, and was a prominent figure in that city, where he was much respected for his indomitable energy in spite of blindness, to which he was a victim for many years.

MAGAZINES AND REVIEWS.

THE *Fortnightly Review* for January has an article by Prof. Tyrrell, entitled "The Old School of Classics and the New," which, under the guise of a dialogue between the shades of Madvig and Bentley, is in substance an attack upon Prof. Sayce. It is not our business to defend Prof. Sayce from the charges of grammatical inaccuracy and rash speculation; still less would we presume to contest the authority of the Dublin regius professor of Greek on questions of scholarship. Still, we may point out that a large part of the controversial matter introduced is not new. It is now more than four years since Prof. Tyrrell wrote for *Hermathena* a severe criticism of the book which he finds it convenient to style Prof. Sayce's "edition of Herodotus," but which Prof. Sayce himself called "The Ancient Empires of the East"; and the discussion then stirred up passed through the stages of reply, rejoinder, and sur-rejoinder in the same learned journal. Prof. Tyrrell's rejoinder then ended with the words: "I do not intend to write again on this subject." But, as he has himself reopened the controversy, we may be allowed to comment upon one of the most effective counts of his indictment, which he thus presents in the *Fortnightly*:

"Indeed the neglect of the last-mentioned distinction [between *πλείστα* 'several' and *τὰ πλείστα* 'the most part of'] enabled our editor of Herodotus to draw from his text as proof of the fondness for silver prevalent among the Hittites, by translating *ἀργύρου ἀναθήματα ἔστι οἱ πλείστα ἐν Δελφοῖσι*, 'most of the silver offerings at Delphi were his.' When such distinctions are pointed out the editor ignores the correction in quite a superior way: 'It is with Herodotus as a historian, rather than as the subject for the dissecting knife of the grammarian, that I have had to do.'"

Now, on this passage three remarks suggest themselves. (1) Prof. Tyrrell omits a material word in the Greek, which runs in full

ὅσα μὲν ἀργύρου ἀναθήματα ἔστι οἱ πλείστα ἐν Δελφοῖσι

In his first paper in *Hermathena* Prof. Tyrrell had exclaimed "Get thee to a dictionary, go!" On following his advice we have been surprised to find in Liddell and Scott (s.v. *πλείστος*) this very passage cited as an example of *ὅσα πλείστα*—"the most possible." Surely Prof. Sayce may be pardoned for erring in the company of these eminent lexicographers. (2) Prof. Sayce did not draw from the text a "proof of the fondness for silver prevalent among the Hittites," but merely appended the following note:

"Silver seems to have had a special attraction for the Hittites, whose monuments in Asia Minor are usually met with in the neighbourhood of old silver mines, and their fancy for the metal may have been communicated to the Lydians."

Whatever this note may be worth, it is not greatly affected if Gyges contributed only "a very large number," and not "most," of the silver offerings at Delphi. (3) Any one reading

the paragraph quoted above from the *Fortnightly* would suppose that Prof. Sayce, when challenged with misunderstanding *ἁλίστα*, replied "It is with H. as a historian," &c. As a matter of fact, those words come from Prof. Sayce's original Preface, in quite a different connexion; and what Prof. Sayce really said in *Hermathena* regarding this precise point was: "I must admit that my periphrasis allows of a false interpretation, and am grateful to my critic for having pointed it out."

CORRESPONDENCE.

DEAN PLUMPTRE'S "DANTE."

London: Jan. 18, 1888.

In the interesting "Estimates of Dante," appended to the last volume of his great work, Dean Plumptre has, I think, fallen into a slight error in admitting (p. 429) the possibility that Dante is referred to by Spenser under the phrase "sad Florentine," which occurs in the thirteenth sonnet of his little youthful version of the "Visions of Belay." These visions, in their rhymed form, appeared first among the *Complaints* (1591), and are accompanied (as they were in the blank verse original publication of 1569) by a rendering of Petrarch's Canzone, "Standomi un giorno," third in the series after the death of his Lady Laura. Spenser has divided the twelve-line stanzas of Petrarch into sonnets; and the second of these, beginning

"After, at sea a tall ship did appeare,"

is clearly what, in the thirteenth Belay vision, is intended by the lines:

"Much richer than that vessell seem'd to bee
Which did to that sad Florentine [i.e. Petrarch] appeare."

It would seem probable that a man so well read as Spenser cannot have been unacquainted with Dante. Yet he is not named among the poets followed by Spenser, in the epistle by E. K. prefixed to the *Shepherd's Calendar*; and it should be remembered that in Spenser's time the study of Dante, as the Dean points out (p. 423), had much declined in Italy—while the admiration of Petrarch was at its highest. The conjecture (p. 430) that Shakspeare might have heard of Dante "through Sidney or Spenser," must also, I fear, be dismissed. We have no evidence that, at the time of Sidney's death (October, 1586), Shakspeare had even quitted Stratford; while the theory which discovers allusions to him in Spenser, thus rendering their personal intercourse more or less probable, cannot, I think, be tenable.

I would also ask the Dean's consideration of two small points in the very curious epistles which passed between the Bolognese Joannes de Virgilio and Dante. In Dante's first letter, the text printed by Fraticelli (Florence, 1834, p. 290) gives

"Quum mundi circumflua corpora cantu
Astricolaque meo, velut infera regna, patebunt."
This is rendered (p. 332):

"When in my song the sea-girt mountain high,
And those who dwell within the starry spheres,
Shall be revealed, as now the realms of Hell."

The poet is here alluding to the future publication (such as publication was in MS. days) of the "Purgatorio" and "Paradiso." It might be expected that he should here name both divisions of his great work; and Fraticelli's note on the first line above quoted accordingly glosses *mundi* as *purgatorii*. Yet it is surely more natural to understand the *circumflua corpora* as indicating the planets which in the "Paradiso" circulate

round the central world, than the spiral terraces of the mount of Purgatory. Dr. Plumptre's translations are, however, so generally accurate that it must be supposed he has here followed some other text which justifies his reference to that section of the *Commedia*. On the other hand, it may be argued that the gift which Dante, in his character of Tityrus, proposes to send is rather ten cantos of the "Purgatorio" than, as the Dean here writes, of the "Paradiso." This, I infer from the mention of "the vast rock" (l. 84), which Fraticelli interprets as meaning the Purgatorial Mount.

As it is to be hoped that these volumes will be so far popular that a second edition (and, oh, in a less inconvenient size!) may be required, let me ask the author's pardon for two or three more suggestions. Like the preceding, they are but small in themselves; yet, in case of a poet so imperial as Dante, and (it may be added) of a *Corpus Dantescum* so valuable as Dr. Plumptre's, no aid to completeness is insignificant. In the *Life* (p. cxxii.), the anecdote of Dante's repartee, turning upon the name "Can Grande," is spoken of as "not improbable." The story, however, appears to be only an ancient Joe Miller. The dog has had its day, and a very long one. Its pedigree is traced backwards in Dunlop's *History of Fiction* from Cinthio to Poggio, thence to an old French Fabliau, finally to Josephus, who places it at the table of one of the Ptolemies. By oversight it must be that the Dean, in his second section of English estimates of Dante, has failed to notice Hallam's admirable criticism in the concluding chapter of his *Middle Ages*. Nor, again, is the poet "simply conspicuous by his absence" from Wordsworth, whose stately sonnet on the "Sasso di Dante" by the Duomo of Florence, with the passage from Hallam, might with advantage be substituted for Carlyle's somewhat patronising praise and the rhetorical ingenuities of Lowell, together with the thoroughly misplaced political digression on p. 460, when Dr. Plumptre's work reaches its well-deserved re-issue.

F. T. PALGRAVE.

Wynfrid, Clevedon: Jan. 23, 1888.

In reference to the notice (ACADEMY, January 14, p. 20) of the inference of the Dean of Wells, that Dante alludes to the clock in his cathedral from having seen it there, allow me to say that the current history is that it belonged to the Abbey of Glaston until the suppression, so that it could not have been at Wells, if Dante had been there. It may be suspected that such clocks were not so uncommon in former times as now. There is one with the procession of knights at Lübeck, as well as that at Strasburg. The one in Exeter Cathedral is also noticeable.

THOMAS KERSLAKE.

THE METAPHYSICS OF SO-CALLED SAVAGES.

Oxford: Jan. 22, 1888.

Mr. Andrew Lang, who has done so much to make the study of anthropology attractive and popular in England, has called attention, in the ACADEMY of January 21, to one of the most perplexing problems which the student of anthropology has to deal with, and on which I had touched in my *Biographies of Words*. How are we to account for the strange mixture of folly and wisdom, or, if you like, of myth and philosophy, in the ancient traditions of so-called savages? Mr. Andrew Lang very properly says "so-called savages," for one feels ashamed to call people savages when they have almost risen to the height of Hamlet's monologue. But putting aside the word savage, which, being undefined, has done as much mischief in anthropology as heretic in theology, the question returns to us in all its perplexity,

How are we to account for the Greeks enraptured by the wisdom of Heraclitus, and yet believing in the Homeric fables? How can we explain the Vedic poets trying to fathom the past, "when neither aught nor nought existed," and yet in the same breath celebrating their god Indra reeling from the draughts of Soma which he had quaffed? What are we to say to collections of Maori songs, written down in the language of the old priests, and containing by the side of the most hideous stories of their gods such poems as:

"For thee, O Whai, my love is ever great.
From germ of life sprang thought,
And god's own medium came:
Then bud and bloom; and life in space
Produced the worlds of night— . . .
'Twas Nothing that begat
The Nothing unpossessed,
And Nothing without charm.
Let the priests attention give,
And all I state dispute.
I may be wrong: I but rehearse
What was in Whare-Kura taught.
'Twas Rangi who with Atu-tahi
Brought forth the Moon.
And Rangi Wero-wero took,
And, yet unseen, the sun produced.
He, silent, skimmed the space above,
And then burst forth the glowing eye of heaven
To give thee light, O man,
To wage thy war on fellow-man."

Or, again (p. 152):

"Seeking, earnestly seeking in the gloom,
Searching, yes, on the coast-line,
On the bounds of light and day,
Looking into night.
Night had conceived
The seed of night.
The heart, the foundation of night
Had stood forth self-existing
Even in the gloom.
It grows in gloom—
The sap and succulent parts,
The life pulsating,
And the cup of life.
The shadows screen
The faintest gleam of Light.
The procreating power,
The ecstasy of life first known,
And joy of issuing forth
From silence into sound.
Thus the progeny
Of the Great-extending
Filled the heaven's expanse;
The chorus of life
Rose and swelled
Into ecstasy,
Then rested in
Bliss of calm and quiet."

These are not the airy inventions or dishonest embellishments of travellers and missionaries which often make the study of anthropology so disheartening. They are scholar-like translations by Mr. John White, who has been living for the last half-century among the Maoris; and who, by the side of his translations, has published the texts in the original, as written down

"while his native friends, sitting under a shady tree, on the outskirts of a forest, and remote from the abodes of men, rehearsed the sacred lore of their race, and in solemn dread slowly repeated the sacred incantations, or performed the ceremonies and rites as they had been taught by those of past generations."

These are, therefore, genuine outpourings of metaphysical thought among the Maoris. Yet the same Maoris tell us that

"an aquatic plant growing in swamps was the procreating power which engendered the red clay seen in landalips, whence came the first man. This man was discovered by one of the gods before light had dawned on this world. It was the grand-

son of this man who separated heaven and earth and caused light to be, and divided the world of light from the world of darkness."

And again we are told that

"The first man took a tree as his wife, and his offspring were trees, and not men. He therefore went and obtained soppy mud, and mixed it with sand, and made it into the shape of a woman for himself," &c.

How such weeds and such flowers can grow on the same soil is, no doubt, a puzzle. Still, if the Maoris had conquered England, and had collected among the ruins of London or in the caves of Wales the stories told by the last frightened survivors of the Anglo-Saxon race, might they not possibly have collected a similar medley of odds and ends of Berkeleian wisdom and Neo-Buddhist folly? Is it always right to ask which came first and which came last, whether folly was evolved into wisdom or wisdom revolved into folly, when we see both walking hand in hand in Church and State, in schools and universities? Is not the *Nebeneinander* a far better theory than the *Nacheinander* here as elsewhere in the science of man as well as in the science of language? Sometimes, no doubt, when we have the ancient mythological and philosophical documents in their original texts before us, language will enable the critical scholar to say what is modern and what is old. In the famous hymn of the Rig Veda, beginning:

"Nor aught nor nought existed; yon bright sky
Was not, nor heaven's broad woof outstretched above;
What covered all? what sheltered? what concealed?
Was it the water's fathomless abyss?"

in this hymn the one word *tadānim*, then, is sufficient to warn us against ascribing it to the most ancient stratum of Vedic thought and language. But where are the scholars to perform the same critical dissection on the language of the Maoris? They will come in time, and the sooner the better. But until they have come, and until they have performed their work patiently and valiantly, Mr. Andrew Lang will probably agree with me that the anthropologist often feels like Mignon performing the egg-dance, and fearing at every moment that she may break the brittle shells among which she has to perform her inspired movements. F. MAX MÜLLER.

F.S.—May I take this opportunity of showing by another instance how indispensable the science of language is to the science of mythology, and how carefully it ought to be studied by every anthropologist? In my *Biographies of Words* (to which Mr. Andrew Lang's remarks refer), the first place is occupied by the biography of *Fors Fortuna*. It contains my mythological arguments why *Fors* cannot have been from the beginning so meagre a deity as *Dea quae fert*. But in answer to the question addressed to me by another reviewer, why the word *Fors* cannot be derived from *ferre*, the science of language returns a clear answer. The root *bhar* is an *ē* root, and in Latin this original *ē* remains unchanged before *r*. See Brugmann, *Vergleichende Grammatik*, p. 53.—F. M. M.

WASA, ISIS, OCK.

British Museum: Jan. 28, 1888.

IN my letter to the ACADEMY of January 14, I pointed out the occurrence of *Wasa* as an important item in the boundaries of four Anglo-Saxon sites granted to Abingdon Abbey, and situated in Berkshire, pretty nearly contiguous to each other, along the southern bank of the river Isis for upwards of ten miles, upon a ridge of high ground running along, at no

very unequal distance throughout that length from that river and aloping to it. I argued that the Anglo-Saxon *Wasa* is now represented by *Isis* (which latter is not "a spurious name," as Mr. Stevenson alleges) from the above facts, and from the absence of any known "fen, ooze, or stagnant pool," common to these four parishes.

Let us now examine the evidence which may be obtained in support of that argument.

Throughout the whole range of Anglo-Saxon horography *Wasa* is, so far as my observation goes, confined to these four examples alone—a fact of the highest inferential value in this present enquiry. Phonology here must yield to fact, as it often does in ancient words—as it does in the original name of Fyfield.

I find in B. Clarke's *British Gazetteer* (1852), the writer of the article "Oxford" states: "This . . . is said by some to take its name . . . from *Ouseford*, derived from the ancient name of the river *Isis*." He was, I believe, quite correct, although the fact is not apparent, for, if we could but find the use of "Ouse" for *Isis* well established the enquiry ends; and it is, therefore, important to know where the writer found authority for this statement.

Prof. Rhys, in his *Celtic England*, p. 289 (S. P. C. K.), sees in *Osney*, near Oxford, the old form *Use* or *Usa* for *Ouse*, the continuator, as he says, of *Ansa*, a Celtic spirit or divinity. This seems to corroborate my suggestion of a spirit's name. Among the many *-eye*, *-eyots*, or islands, clustering about Oxford, at or near the confluence of the *Isis* and *Cherwell*, viz., Binsey, Botley, Hinksey, Ifley, Osney, Oxey, Pixey, &c., there are two, viz., *Osney* and *Oxey*, which manifestly enshrine this river-name. The *x* in the above examples probably had the Continental *sh* or *j* sound in ancient days, and not the modern *ks* sound; and this root can thus be widely traced in such place-names as the *Wash*, *Washbourne*, *Washbrook*, *Washfield*, *Washford*, and so forth.

There appears to have been the same ambiguity of use in the tenth century of the words *Isis* and *Thames* for a certain section of the water-way as there is now. For example, the mappist Collins calls the river between Oxford and Wallingford the *Isis*, other cartographers call this part of the river the *Thames*. The Ordnance Survey uses both names. I incline to consider that the river was properly *Wasa* down to the confluence of the *Thame* at *Dorchester*, and from that point to the sea properly *Thames*. But, from some laxity or uncertainty, those who wrote down the boundaries for the Abingdon charters, being better acquainted with the *Thames* than with the tributary *Wasa*, incorrectly used the former word where they should have employed the latter.

With regard to the *Ock*, may not this word also be, like *Avon*, *Aber*, *Cern*, *Wye*, *Wandl*, *Dour* (intensified in *Stour*), *Trent*, and other words, a generic equivalent of *river* or *water* in one of the remotest languages of England? If this be so, *Uxbridge*, in *Middlesex*—anciently *Woxbridge*, *Waxbridge* (Lewis, *Topogr. Dict.*)—situate now on the *Colne* river, but in such a language known as an *Ock* or *Uck*, can be explained. Similarly, we may examine the name of *Ockbrook*, a village in *Derby*, between the rivers *Derwent* and *Trent*; *Uckfield*, in *Sussex*, on the *Ouse*; *Ockham*, in *Surrey*, on the *Wey*, &c. Then there is *Chideock*, in *Dorset*, on a small stream, now falsely renamed *Chid*, but in great likelihood originally *Ock*; and *Wenlock*, in *Cheshire*, on the river *Wenlock*, a reduplicated word comparable with *Wendover* (*dour*, *water*); *Wandsworth* on the *Wandle*; *Windsor* (*Windles-ora*); *Windrush* (old form *Wenrisc*), a village and river in *Gloucestershire*, &c. The places *Ouseburn* and *Ousefleet*, in *York*, are analogous in formation; but it is worthy of

* *The Ancient History of the Maori: his Mythology and Traditions*. By John White. (Wellington, 1887.)

notice that Great Ouseburn stands on the Ure, Little Ouseburn and Ousefleet on the Ouse.
WALTER DE GRAY BIRCH.

"COTEMPORARY."

Cork: Jan. 23, 1888.

In Mr. Dunlop's interesting review of "Three Books on Irish History," in the *ACADEMY* of January 14, he says, in reference to Dr. Romney Kane's edition of Prof. Richey's lectures:

"I cannot help wishing that he had found courage to exclude that mongrel word 'coteremporary,' which had as peculiar a fascination for Prof. Richey as it seems to have for Irishmen in general."

Poor Ireland, everything that belongs to it is associated with barbarism and ignorance!

No doubt Mr. Dunlop has read Bishop Fitz Gerald's edition of Bishop Butler's *Analogy*. Bishop Fitz Gerald tells us, in his preface, how very careful he was to record every word that could be associated with the immortal Bishop Butler; and Bishop Fitz Gerald expressly names the "barbarism" *coteremporary* as the one word he ventured to correct. Most literary men know that Bishop Butler was an Englishman and that Bishop Fitz Gerald was—may I say it?—an Irishman. GEO. WEBSTER.

STRONG PRETERITES.

Dublin: Jan. 22, 1888.

I have just heard from the mouth of a Dublin fisherman a strong preterite which is new to me—"rew" for "row": "My father told us to row, and we rew in." T. K. ABBOTT.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, January 30, 4 p.m. Royal Academy: Demonstration, "The Neck, Head, and Face," by Prof. J. Marshall.

6 p.m. London Institution: "The Ptolemies," by the Rev. W. Benham.

8 p.m. Royal Academy: "The History of Architecture, III," by Mr. G. Aitchison.

8 p.m. Society of Arts: Gantor Lecture, "Yeast: Its Morphology and Culture," I., by Mr. A. Gordon Salamon.

8.30 p.m. Geographical: "Explorations in British North Borneo," by Admiral R. C. Mayne.

"Exploration and Survey of the Little Andamans," by Mr. Maurice Portman.

TUESDAY, January 31, 8 p.m. Royal Institution: "Before and after Darwin," III., by Mr. G. J. Romanes.

8 p.m. Society of Arts: "Monumental Use of Bronze," by Mr. J. Starkie Gardner.

8 p.m. Civil Engineers: Discussion, "The Erection of the Jubilee bridge carrying the East Indian Railway over the Hooghly," by Sir Bradford Leale.

WEDNESDAY, Feb. 1, 4 p.m. Royal Academy: Demonstration, "The Figure," I., by Prof. J. Marshall.

8 p.m. Society of Arts: "The Sweating System, or the Functions of the Middleman in Relation to Labour," by Mr. D. F. Schloess.

THURSDAY, Feb. 2, 2.30 p.m. British Museum: "The Languages and Races of the Babylonian Empire," I., by Mr. G. Bertin.

8 p.m. Royal Institution: "Art Education," by Prof. H. Herkomer.

6 p.m. London Institution: "Atlantic and British Weather," by Mr. R. H. Scott.

4 p.m. Archaeological Institute: "Bradbourne Cross, Derbyshire," by the Rev. G. F. Browne.

"English Ornamental Leadwork," by J. L. André.

"Additional Saxon Work in Oxford Cathedral," by Mr. J. P. Harrison.

8 p.m. Royal Academy: "The History of Architecture," IV., by Mr. G. Aitchison.

8 p.m. Linnean: "Ferns of Simla," by Mr. H. F. Blanford.

"Fertilisation of *Cuttyla labiata* var. *Mossiae*," by Mr. H. J. Vetch.

"Descriptions of Species of *Galerucinae*," by Mr. J. S. Baly.

8 p.m. Chemical: Election of Fellows; "The Range of Molecular Forces," by Prof. A. W. Rüchler.

8.30 p.m. Antiquaries.

FRIDAY, Feb. 3, 4 p.m. Royal Academy: Demonstration, "The Figure," II., by Prof. J. Marshall.

7.30 p.m. Geologists' Association: Annual Meeting.

8 p.m. Philological: "Pall Miscellanies," by the Rev. Dr. R. Morris.

9 p.m. Royal Institution: "Ancient Microscopes," by Mr. Frank Orlip.

SATURDAY, Feb. 4, 8 p.m. Royal Institution: "Experimental Optics," III., by Lord Rayleigh.

SCIENCE.

DIPLOMATIC REPRODUCTIONS OF OLD WELSH TEXTS.

The Text of the Mabinogion and other Welsh Tales, from the Red Book of Hergest. Edited by John Rhys and T. Gwynogvryn Evans. (Oxford: Privately Published.)

THE point of departure in historical philology is to have good texts. Of all the old literatures now studied the Welsh is, perhaps, the worst off in this respect, and the last to respond to the critical spirit of our times. We do not on that account desire to understate the merit of those Welsh patriots whose brilliant works shine like beacons in the history of Welsh literature—the authors of the *Myfyrion Archaeology of Wales* (1801), Lady Charlotte Guest and her Mabinogion, and the editors of the volumes of the Welsh Text Society. They published their texts as was the custom of their time, being preoccupied with the meaning rather than with the words themselves, not hesitating to settle the text according to their notions, without warning the reader of the alteration. The defect was that of their age rather than their own, and it would be unjust to reproach them with it. For we moderns, who have been taught in their school, and who benefit to this day by their labours, would thus—to adopt the simile of a French writer—be like lusty children that turn and beat the mother from which their own strength is drawn.

The editors of our own time can be more justifiably criticised. Mr. Skene's intention, in *The Four Ancient Books of Wales* (1868)—a book that, despite its faults, possesses a value for which the erudite Scot deserves our gratitude—was to reproduce the text letter for letter. The desire was excellent. Unhappily Mr. Skene has often misread the MSS. The next volume that Mr. Gwynogvryn Evans promises—the "Black Book of Carmarthen"—will correct the work of Mr. Skene, so far as one of the "four" ancient books of Wales is concerned. The MS. being difficult to decipher and also unique, Mr. Evans disarms criticism in advance by using photography to reproduce it. "Solem quis dicere falsum audeat?"

In this chronicle of Welsh philology Canon Robert Williams is less innocent, if we may not say more guilty, with his *Welsh Texts from the Hengwrt MSS.* (1874-5). At that period the rules for the publication of a text were recognised—to indicate in a precise manner with press-mark the MS. one publishes; to fix its date; to mark on the printed pages the corresponding pages of the MS.; to distinguish the hands of different scribes; and record faithfully the original text of the MS. wherever modified. Canon Williams did not observe these rules; and it is not even certain that he always copied his MS. faithfully. Yet his publication, which was left unfinished, is not without its use in the general history of literature. Being formed from texts principally translated from Latin or French, it enables us to follow the "gulf stream" of the literature of the Middle Ages; but it does not furnish a safe text for philologists—such a text as carries on its face its own verification.

It is this state of disorder in Welsh phil-

ology that inspired Messrs. Rhys and Evans with the idea of the present edition, of which the *Mabinogion* of the "Red Book of Hergest" forms the first volume. The general title of the collection is "Diplomatic Reproductions of old Welsh Texts," and a series of nine volumes is announced as being in preparation. The system adopted will apparently lead to much repetition. Thus, after having reproduced in this first volume the text of the *Mabinogion* from the "Red Book," the third volume will contain another version of several tales from other MSS. Then vols. v. and vi. will be devoted to a critical text of the *Mabinogion*. For ourselves, vols. v. and vi. would have sufficed, especially if they recorded the readings of the several MSS. Critical editions of Greek and Latin texts have been made in this way, and their editors generally kept to themselves the copies they had made of the originals. The editors of the "Welsh Texts" have elected to spare neither their own time nor the money of their subscribers. From the extreme of negligence Welsh philology thus passes to the extreme of minutiae. Having made this criticism on the plan of the work, we ought to recognise that the plan chosen has been most admirably executed.

At the end of the last century, or at the beginning of this, the celebrated Owen Pughe prepared an edition and a translation of the *Mabinogion*, of which fact we are surprised not to find mention made in the preface of the volume now under review. Homage paid to our predecessors does not dwarf the merit of the living. That edition remained unpublished among the papers of the Owen family (see the *Cambrian Journal*, vol. iv., 1857, pp. 132, 197, and 285). This fact explains why, in his dictionary, Owen Pughe gave numerous examples taken from the *Mabinogion*, then still unpublished. The first portion of the Mabinogi of Pwyll, Prince of Dyfed, was published anonymously (text and translation) in the *Cambrian Register* of 1795 and 1796, but it was reprinted with the name of Pughe in the *Cambro-Briton* (vol. ii., 1821, p. 271 and following). Nevertheless Lady C. Guest's edition (1838-39) must be regarded as the *editio princeps* of the *Mabinogion*. Her English translation, though open to criticism in certain details, can yet charm like the original; while the commentary, exceedingly rich and interesting in its literary aspect, makes it a work that cannot be superseded. The name of Lady Charlotte Guest will always be associated indissolubly with this pearl of Welsh literature. But, despite the care with which the text had been copied for Lady C. Guest by the Rev. John Jones (Tegid), it contained some evident errors, and these errors cast suspicion on the rest (see Zeuss's *Grammatica Celtica*, 2nd edition, p. 139). Yet the Mabinogion have been till now the chief text we possess for the history of Middle-Welsh.

This edition of Messrs. Rhys and Evans will remedy these imperfections. It is meant for philologists, and its object is to supply them with a copy of the text as faithful as can be obtained without having recourse to facsimile. In order to mark the different peculiarities of writing the editors have had recourse to nine sorts of characters. As soon as it was decided to give a diplomatic edition all these minutiae

became needful; for the form of the letter, in MSS. where various signs are employed to represent the same letter, is an important point in the restorations of verbal criticism. The system followed by Messrs. Rhys and Evans is complicated, and must have cost them no little trouble to carry out; but in its result it has produced an edition which, if the MS. were to perish, would make up for the loss.

This edition being for philologists, we have not to speak of the Mabinogion in its literary aspect. Still, we may venture on the remark that this new edition will contribute to make these poetic tales better known and appreciated. Not only is there an index of the names of men and places, which fills a void in Lady C. Guest's book, and permits us to follow better the history and action of the personages; but a more correct text facilitates the sense in several passages. We will only give one example, taken from the opening scene of "Kulhwch and Olwen." The Queen (mother of the hero) is at the point of death. We quote Lady C. Guest's translation:

"Therefore I charge thee that thou take not a wife until thou see a briar with two blossoms upon my grave. And this he promised her. Then she besought him to dress her grave every year that nothing might grow thereon. So the queen died. Now the king sent an attendant every morning to see if anything were growing upon the grave," &c.

Lady C. Guest has translated the text as it was given to her; but half a line had been omitted, and this, when inserted, gives the following sense:

"This he promised her. After which she summoned her confessor, and bade him dress her grave," &c.

In this way all becomes clear and reasonable, at least so far as it is reasonable in a woman to prevent her widowed husband from marrying again. The action of the husband, at least, becomes more rational.

Did space permit, we might have much to say on the Mabinogion themselves, at a time when the comparative study of literature has made such progress, and the science of folk-tales or storiology is being slowly built up. In particular, the careful and searching studies of Mr. Alfred Nutt deserve to be honourably mentioned. But we must not prolong this article. It suffices to have emphasised the value and originality of this publication. May Messrs. Rhys and Evans accomplish the series which they promise us! They will have rendered a great service to Welsh philology, and to comparative literature.

HENRY GAIDOO

CORRESPONDENCE.

EARLY BUDDHIST MISSIONARIES IN CHINA.

Wark, Northumberland: Jan. 18, 1888.

I accidentally saw Prof. Lacouperie's letter in the ACADEMY for December 31, relating (*inter alia*) to the name of the first Buddhist missionary who came to China from India.

His name in the original is *Chu-fa-lan*—that is, *Fa-lan*, which I think can only be restored to *Saddharma*.

It cannot be equivalent to *Dharmaraksha*, as Mr. Nanjio surmised, because that name is uniformly equated in Chinese by *Fa-hu*. Nor can the member *Fa* be a phonetic ideogram,

because in No. 38 of Nanjio's Catalogue (*not* 37) the symbol *fu* is restored to *Tan-mo*, which is undoubtedly equal to *Dharma*. We know that the interpretation of *Fa-lan* is *Fa-ch'ing*, and this on the lines of *Yin-Ching* (indisputably equal to *Sadvaha*, or *Sadvahana*) can only be restored to *Saddharma*.

The term or member *lan* in *Fa-lan* simply points to pre-eminence or excellency, as Wells Williams states *sub-voce*. S. BEAL.

SCIENCE NOTES.

MR. G. J. ROMANES has been elected Fullerian Professor of Physiology at the Royal Institution. He intends to devote the three years of his professorship to one continuous course of lectures on "Before and after Darwin." This year's course—"Before Darwin"—will give an historical survey of the progress of scientific thought and discovery in biology from the earliest times till the publication of *The Origin of Species*. Next year's course will be on "The Evidence of Organic Evolution," and the third year's course on "The Factors of Organic Evolution."

At a meeting of the Liverpool Literary and Philosophical Society, on January 23, Mr. C. E. Bewsher, of the Mauritius, read "A Few Notes on the Seychelles Islands and the Coco de Mer, illustrated with coloured drawings by the late Gen. C. G. Gordon." It appears that General Gordon—whose personal friendship Mr. Bewsher enjoyed—believed the Coco de Mer to be the forbidden fruit, and the Seychelles Islands—on two only of which it grows—to be the site of the Garden of Eden. So strongly was he persuaded of the truth of this idea that he had soundings of the surrounding sea taken for the purpose of tracing the courses of the four rivers, and in the results of the soundings found confirmation of his view. Of course he imagined the land to have been depressed until only the tops of the mountains now appear above the sea as islands. The drawings, which were beautifully executed, were contained on two large sheets of paper; and among them was a small pen-and-ink sketch of the serpent on the tree, and Eve standing beside it.

My Telescope is the title of a little astronomical work by "A Quekett Club-Man," whose kindred volumes on the microscope have been so successful. It will be issued in a few days by Messrs. Roper & Drowley.

DR. MURRELL's *Massage as a Mode of Treatment* has been translated into French by Dr. Oscar Jennings, with a preface by Dr. Dujardine Beaumetz, of Paris.

THE last number of the *Essex Naturalist* contains a valuable "Report on the Denehole Exploration at Hangman's Woods, Grays, in 1884 and 1887." The report has been drawn up by Mr. T. V. Holmes, the President of the Essex Field Club, assisted by Mr. W. Cole, the hon. sec. The general conclusion seems to be that these deneholes were probably used for the secret storage of grain in British or Romano-British times. The report is well illustrated, and is supplemented by several appendices contributed by specialists.

WE regret to hear, on the day of going to press, of the death of Dr. A. de Bary, professor of botany at Strassburg, whose standard works are so well known in this country through the translations issued by the Clarendon Press. Next week we hope to give an account of his services to botanical study by one of his former pupils.

PHILOLOGY NOTES.

THE late Prof. Key, in the preface to the first edition of his *Latin Grammar* (1846), an-

nounced his intention to prepare forthwith a Latin Dictionary for schools, arranged, like the Grammar, on the crude-form system. By the time when his *Short Latin Grammar* came out (1852) he had already made considerable progress in the execution of this plan; but he had also found it advisable to add to it the preparation of a dictionary arranged as usual; and, the matter growing under his hands, he at last (about 1856) undertook a work which might satisfy the requirements of mature scholars, and discontinued the smaller work. The MS. of this larger dictionary was left unfinished at Prof. Key's death in 1875. When the publication of the latter was first undertaken by the Syndics of the Cambridge University Press, it was intended that it should be completed by another hand. But, after a lapse of time, the loss of which is greatly to be regretted, this ultimately proved impracticable, and it was decided to print the author's MS. as nearly as possible as he left it. Happily, incomplete as the work is, its value as a contribution to the study and understanding of the Latin tongue is almost as great as if Prof. Key had lived to complete it; since, from the time when he foresaw the improbability of his doing so, he adopted the plan of applying himself primarily to those words throughout the alphabet which he considered to require novel or special treatment, leaving the less important portion to be added afterwards; and he himself states, in reference to the dictionary, in the Preface to his book on *Language* (1874), that he had "incl. del therein nearly all those words in which he thought himself able to make some improvement." Although, therefore, only part (especially the letter A) has been filled in, and can be regarded as complete, or approximately so, yet the work may be taken to embody in a very large measure the results of a lifetime mainly devoted to the study of Latin.

THE second number of Prof. Viator's new periodical, *Phonetische Studien*—which, we are glad to hear, has found a large number of subscribers—will be issued in February. The articles by M. Passy ("Kurze Darstellung des französischen Lautsystems") and Herr Walter ("Der englische Anfangsunterricht auf lautlicher Grundlage") will be concluded; and there will also be "Beiträge zur Statistik der Aussprache der Schriftdeutschen" (I.), by the editor; "De l'accent de groupe en français," by M. Leveque, and several shorter contributions, reviews, notes, &c. The first volume will be completed by a third number, to appear in April.

MEETINGS OF SOCIETIES.

GRAMMATICAL SOCIETY.—(Saturday, January 14)

THE REV. T. B. ROWE, head master of Tonbridge, in the chair.—After a brief statement by the hon. sec. (Mr. E. A. Sonnenschein, of Mason College, Birmingham), as to the origin and constitution of the society, the following motions were proposed and carried: (1) that a name be selected to describe all sentences which are not simple (Miss Cooper, head mistress of the Edgbaston High School); (2) that the four names, "compound," "composite," "complex," "non-simple" be submitted to the society (chairman); (3) that further sub-divisions of the non-simple sentence be described by means of the terms "co-ordinate clause" and "sub-ordinate clause" (Prof. Moriarty, of King's College, London); (4) that the distinction between abstract and concrete as applied to nouns, and similar distinctions, do not fall within the province of grammar (the Rev. E. F. M. MacCarthy, head master of King Edward's Branch School, Birmingham, and Mr. F. Ritchie, of Sevenoaks); (5) that, for the purposes of schematisation a double name for each tense is required, the one part of the name describing the time, the other the state of the action (chairman); (6) that Miss Haynes's scheme of tenses be submitted to the society (Mr. C. M. Dix, Oratory School).

PHILOLOGICAL SOCIETY.—(Friday, January 20.)

PROF. SEAR in the chair.—Dr. J. A. H. Murray gave his yearly report on the progress of the society's dictionary. During the past year above 100,000 slips had been sent in by readers: 40,000 by Mr. N. Douglas, 25,000 by Mr. T. Austin, 10,000 from Emerson by Mr. A. Shackleton, 4,372 by Mr. Henderson, 3,000 by Dr. Mayow; less numbers, though often most valuable, by Mr. C. Grove, Prof. Chester, Mr. A. Beesley, Mr. Prosser (early uses from Patents), Mr. Colland, Miss Edith Thompson, Rev. J. T. Fowler, Cecil Deedes, E. Peacock, E. S. Wilson, B. R. Wilson, &c. Consulting helpers were Mr. Thistleton Dyer for botany, Mr. Corbridge for coal-mining, Mr. Martineau for rare books in the British Museum, Mr. J. T. Platts for Persian and Eastern terms, Prof. Pollock for legal terms, Prof. Rhys for Celtic words—about 1 per cent. of so-called Celtic derivatives are really so—Prof. Rieu for Persian and Turkish. The greatest helpers were the sub-editors: Mrs. Hunt, Mrs. Woods, Miss Browne, Messrs. Anderson, Beckett, Bousfield, Brandreth, Browne, Green, Henderson, Hallstone, Löwenberg, Mount, Nichols, Peto, Sugden, Schruppf, Simpson, Smallpiece, Woods, &c. Part IV. of the Dictionary was all in proof to "Carbon," finale to "Candle," copy in hand to "Carry." Vol. I. would end with B, though Part IV. would also open Vol. II., which would contain C and D. Mr. Henry Bradley had been appointed joint editor of the Dictionary, and had begun E. He would be responsible for Vol. III. Henceforth each editor would have to produce a part of 350 pages a year; that means four columns a day, four sent to press, four corrected and revised, and four returned in final. This speed must, to some extent, lessen research. No longer can twenty letters be written and much search taken to get six lines and find what "cadogan," an eighteenth-century way of officers' dressing their hair, exactly meant. Some words had taken a long time to settle the development of their meaning; "carry" was three days' work. The sub-editor gave it seventy-nine senses. These had to be grouped and reduced to sixty-three, with sub-headings. "Canon" was a hard word to work out, from the monk to the cathedral official. "Cantilevre," "cant" (a corner), "cabel," "cabinet," "calvered salmon," "campaign," "can," with all its meanings and inflexions, had also given much trouble. More good sub-editors were wanted, and more readers of early trade and art books in the Museum, and of modern novels and American authors, like Hawthorne and Lowell, whose promised readers in the United States had failed.—A special vote of thanks was passed to Dr. Murray for his report. Hope was expressed that Mr. Bradley's appointment and the regular publication of one part a year would be of great benefit to the Dictionary.—The hon. sec. wanted four editors of the work instead of two. Incompleteness was the necessary condition of such a book on its first issue; but, till it was out, no one had anything to work at in order to perfect it. Though the Dictionary was, and must be, defective, it was still the best in the world.

ARISTOTELIAN SOCIETY.—(Monday, January 23.)

SHADWORTH H. HODGSON, Esq., president, in the chair.—A paper was read by Mr. Bernard Bosanquet on "The Philosophical Importance of a true Theory of Identity." Believing that the theory of identity is the only fundamental question at issue between thinkers interested in German speculation and those of the distinctively English school, the writer was anxious to state the question precisely, and to trace its far-reaching consequences. Attributing to English thought the view that it is the ideal of identity to exclude difference, he first pointed out the nature of this principle in the province of logic, referring in particular to Hamilton, Mill, Jevons, and Herbert Spencer, and explained the truer doctrine of recent logic to the effect that an identity or universal is a meeting-point of differences, and that identity in judgment is incompatible with tautology. An analogous contrast of principle shows itself in psychology, especially in the question whether association by similarity can be reduced to a principle more like that of contiguity, and in atomism or individualism and the opposite conceptions in ethical and

political science. Brilliant as has been the history of British philosophy, it reveals a certain insensibility to the organic and coherent aspect of man's spiritual achievement, as the mere inspection of the range of British philosophical literature seems to demonstrate. There may be historical causes of this defect, which does not appear to be rooted in the national character, and which participation in the present movement of European culture, including among many elements an attempt towards a more sympathetic and vital philosophy, is tending to remove.—The paper was followed by a discussion, in which Mr. R. B. Haldane and others joined.

FINE ART.

THE MONTICELLI EXHIBITION.

THE MESSRS. DOWDSEWELL have at present on view in their galleries, New Bond Street, along with other things of interest, a comprehensive collection of the works of Adolphe Monticelli—a painter as yet not widely known in this country, though a small but well-selected series of his works was included in the Edinburgh Loan Exhibition of 1886. That he was at least an artist of the most pronounced individuality will be apparent to every visitor to the exhibition, though there may be more diverse opinions as to whether his especial individuality was legitimate and a thing to be praised.

The works now brought together represent several periods of his art, each clearly marked and distinguished by qualities of its own. At first he was academic, and aimed at classical correctness of clearly defined form. Ingres was then his master, the far-off divinity before whom he bowed. Of this period, No. 56, "La Jeune Mère," is fairly representative—a work of extreme interest, but interesting solely as a link in the painter's career; interesting, in relation to his future work, for its almost total lack of artistic value, or even of artistic promise—a work dull and formal in the definition of its masses, commonplace exceedingly in the character of its figures, feeble in the colouring of its grey-green wooded distance, and worse than feeble in the ruddy touches, so isolated and unrelated, which express the flowers that cluster round the vase. In No. 1, "La Fénaison," we find a distinct advance. This has clearly been done under the influence of Diaz. It is rather cold in general effect, there is a want of half-tones, its shadows sink too suddenly into absolute blackness, and its passages of warm colouring are still somewhat patchy and isolated; but it is, on the whole, a craftsman-like and pleasing work, the production of a man who is speedily gaining the power of doing what he will in his chosen medium. No. 14, "Dames et Enfants aux Champs"—especially in the treatment of its figures—connects itself more definitely with the first-named picture and its period. Yet its colouring—the vivid and sunny green and gold of its landscape—points, with sufficient distinctness, to the Monticelli of the future—to the Monticelli whose fully developed manner we know and value. In the productions of the next period—typically represented by works like No. 6, "La Harpiste"; No. 9, "Dolce far niente"; No. 10, "L'Invocation aux Dieux"; No. 41, "Fête dans le Jardin d'un Palais"; and No. 46, "Au Clair de Lune"—the painter may be said to have "found himself," to have asserted his artistic individuality, and at length spoken in his own artistic tongue. The subjects of this period are commonly parties of ladies, seated or reclining on the turf of gardens, on the sward of forests, or on the rocks of the seashore. Already the painter has reached the fullest subtlety of his colouring, though in his later works he frequently deals with more potent tones and combinations; the landscape

surroundings are broadly treated; the classical draperies of the figures are gracefully but vaguely generalised; and in each case the heads and faces are handled with much refinement and delicacy, with a beauty of dexterous finish which derives an additional piquancy from its contrast in method to the other portions of the work. We next pass to subjects like No. 19, "L'Entrée du Manoir," and No. 24, "La Musique." Here passages of delicate detail are wholly absent; but we find a certain definite blocking out of each figure, and frequently the most skilful and swiftly synthetic suggestion of form and action, along with greater force and power of ardent colouring than distinguished any former phase of the artist's work. Finally, we have a period of Monticelli's art where he seems to have abandoned form altogether, in which he blends tint with tint, and opposes pigment to pigment without any reference at all to "the thing signified," with no more aim to represent the qualities and appearances of natural things than we find in a Rhodian plate or a Persian carpet—a time when he seeks to be an exponent of the pure sensuous delightfulness that lies in colours subtly combined, and of this alone. "Finally" we said; yet it is hardly so, for there is in Monticelli's art a more ultimate finality still, a "last scene of all," a phase in which his work shows that his colour-sense had at length deserted him, and that in losing this he may be said to have lost all artistic value. Fortunately this phase—one sad enough to contemplate—is wholly unrepresented in the present collection.

"A colourist—that certainly," will probably be his characterisation by those who have made the round of this gallery lined with his work. "A great colourist," it might be added, without fear of serious question. And a colourist of a curiously exceptional range and variety. For almost all the greatest colourists of the past and the present, whether they have aimed at delicacy or at force, whether they have been Correggio or Titian, Orchardson or Watts, have in a sense been mannerists; for their works show constantly recurrent combinations of colour, certain definite harmonies and contrasts of hue which are habitual to each master, and by which his productions are recognisable. But, in the case of Monticelli, it is not too much to say that, if he sought for little else, he has at least taken all colour "for his province"; that his colour-schemes are exceptionally varied, and their range unusually wide; that he passes at will from colour potent and startling as a trumpet blast to colour delicate and cool and silvery as the sound of a stream rippling beneath the moonlight; and that his productions are recognisable as his, less by any recurrent and habitual combinations of hue, than by peculiarities of touch and handling which—as was to be expected—are sufficiently well marked in the art of a painter who, in much of his most typical work, seems to have discarded the time-honoured intervention of the hog's hair-brush, to have had a prejudice in favour of applying his pigments directly and undiluted from the mouth of the metal colour-tube. The variety of his colour is excellently emphasised by the arrangement of the present gallery, where No. 57, "Scène du Jardin," with its greys and blues opposed by blacks and reds, is placed beneath the glow of potent orange, culminating in fullest crimson and paling into delicate gold, of No. 58, "La Dame au Péroquet"; and the wan effect of dying day, with the dusky temple, and blue-clad suppliants, in No. 10, "L'Invocation aux Dieux," is set beside the ruddy joyous warmth of No. 9 "Dolce far niente," with its white dominant sculptured shape and the whiter necks and breasts of recumbent women flashing in points against the embrowned tones of herbage and of forest trees.

But a deliberate examination, a comprehensive criticism of Monticelli's work, will disclose that it contains much of worth besides that which relates solely to colour. His treatment of form is admittedly arbitrary and capricious; but it is nearly always most skillfully selective, and suggestive in a quite singular degree. As examples of this, we may instance the female forms to the right and left of No. 24, "La Musique." How expressive they are with all their slightness; how admirably, how rightly and thoroughly, each figure is felt beneath its robe! Or—to turn to works even more summary in their handling—take the dogs in No. 52, "L'Avenue," and No. 51, "La Cadeau de Fleurs." Is not each touch here laid with the most definitely calculated intention, with the most complete success? Could touches as few as these have placed the creatures before us more vividly, more completely? Does selective work like this not prove that the painter is no sloven or blunderer, but a man who in his youth had mastered form in its elementary, its academic and strictly measurable sense, and won medals—many of them—for such student work, and then passed on, quite deliberately and with clearly seen purpose, to a far subtler and finer perception and portrayal of form? Again, in his landscape work, Monticelli frequently attains great excellence in truth of tone and relation, and in rendering of atmosphere. As illustrative of these qualities, we may indicate the light grassy bank to the right of No. 36, "Paysage—Automne"; No. 32, "L'Arohe," which is filled and flooded with such a sense of clear, silvery, morning air; and No. 55, "Sur la Terrasse," with the amplitude and vastness of its space of sky.

We are far enough from asserting that Monticelli has said the last word in art. Painting has other and higher things within its range than he ever aimed at; but none more typical, or in stricter harmony with its own especial genius. And in these days, when the boundaries of the arts are so frequently confused, when graphic art so often tends to become merely literary—to be a narration, or a "preachment" of moralities—there is room enough, and need enough, for a painter like Monticelli, who concerns himself so exclusively with the things proper and peculiar to his own chosen craft, and contents himself with manifesting to us the most subtle and exquisite delights of colour, at which no other art than the painter's can do much more than vaguely hint.

J. M. GRAY.

NOTES ON ART AND ARCHAEOLOGY.

THE recent Academy elections were in no way a surprise, and they show, upon the whole, the tendency of the Royal Academy to pursue a popular course. Thus, the election of Mr. W. B. Richmond was (seeing how very little Mr. Richmond has contributed to the Academy) a tolerably prompt recognition of a fashionable portrait painter, who is a trained draughtsman, and will be of use in the schools. The election of Mr. Bloomfield was a concession to the claims of architects. This gentleman is not a young man; but his work deserved recognition long ago, and there was no reason why, because acknowledgment of its merits had long been delayed, it should be delayed for ever. Perhaps the strongest step—and the step most certain to be justified by good work still to be done—was the election of Mr. Onslow Ford, whose delightful bronze of "Folly" was one of the best purchases out of the funds from the Chantrey bequest, and whose labours are in every case of high dignity and sometimes of profound charm. But though, as will be seen, not much is to be said against any one of these elections—as times go—it is yet the fact that several justly

prominent artists remain outside. Not to speak, for the moment, of Sir James Linton—whose position as one of the chief upholders of English water-colour, does not, it would seem, commend him to the graces of the Royal Academy—there are yet waiting for tardy recognition such a master of the decorative painting of the figure as Mr. Albert Moore, and such a serious and accomplished and poetic student of landscape as Mr. Alfred Hunt. Then, again, among younger artists, there is the engaging landscapist Mr. Alfred Parsons, and Mr. J. C. Sargent—an individuality as brilliant as he is difficult to define. The two last-named gentlemen have already been the subjects of those Chantrey honours which now often precede election.

SIR JAMES LINTON is putting the last touches to the beautiful water-colour—"Waiting"—a single girl's figure, with puffed white sleeves and big brown hat; on the whole not only a lovely composition, but a splendid harmony in brown, green and gold. Sir James—with whom oil pictures are now quite the exception—has finished a striking portrait of a young American lady of great beauty of feature and distinction of carriage. She stands with extended hand holding a silver-tipped staff before curtain and landscape. The line of the back of the head and of the nape of the neck down towards the shoulder is of especially dignity and suavity. The lady's expression is agreeable. We have already said that she is handsome; and she wears a magnificent brocaded gown fitting lightly to an excellent figure. It is an extremely attractive portrait.

THE works which Mr. Haynes Williams has brought back from Fontainebleau, and will exhibit at Goupil's next month, are of a kind that will do him good with everybody, and most good of all with the most artistic. In a picture at the Grosvenor Gallery—perhaps some three or four years ago—this accepted painter of picturesque incident revealed a quite peculiar capacity for dealing with the charm of rich interiors in which no event passes at the moment, but which are charged for the imagination with historic and romantic association. Mr. Haynes Williams has now made about thirty chiefly finished pictures of all that is most engaging in the palace—in its finest galleries and in its prettiest *salons*—François Premier architecture, Louis Quinze decoration, furniture of the Directory, furniture of the Empire, pictures by Van Loo, wonderful hangings, precious objects of rock crystal, and the like. Mr. Williams has evidently been in thorough sympathy with the gorgeousness and art among which, for now nearly two years, he has worked; and when his exhibition opens we shall be able to realise much of the fascination he must himself have felt.

THREE courses of two lectures each on Sculpture will be delivered at the Royal Academy during the month of February. Mr. Alfred Gilbert will lecture on "The Arts immediately dependent on the Plastic Art"; Mr. A. S. Murray on "Sculptures recently discovered in the Acropolis of Athens," and on "Ancient engraved Gems"; and Prof. J. H. Middleton on "The Christian and Pagan Element in Mediæval Sculpture."

The Dudley Gallery Art Society will open next week an exhibition of watercolours at the Egyptian Hall, Piccadilly.

THE National Museum at Washington has undertaken the formation of a collection of casts of Assyrian and Babylonian antiquities in association with the Johns Hopkins University. The museum stands ready to make facsimiles and casts of Assyrian and Babylonian antiquities. An attempt is first being made to obtain copies of Assyrian antiquities preserved in

America. The Johns Hopkins University will attend to the proper arrangement and cataloguing of the collection, under the supervision of Dr. Paul Haupt, Professor of Semitic Languages, and Dr. Cyrus Adler, assistant in the Semitic courses, who will also co-operate in the work of forming the collection and of securing the loan of objects to be copied.

MESSRS. BUCK & REID—encouraged, doubtless, by the success of the etching of "Worcester," after Gainsborough, which they published last year—have now issued a companion to it called "The Way to the Mill." Both of these etchings are from "Gainsborough's Camera"—a screen filled with transparencies painted by himself, which is now itself to be seen at Messrs. Buck & Reid's. These landscapes on glass were painted by the artist for his own amusement, and are all beautiful in composition. The etching of "The Way to the Mill," which is by M. Brunet Debaines, shows a country road with some trees on the left, and a pond and bank on the right. In the centre and middle distance is a small hill with the mill perched on the top, and showing its profile against the sky. The peaceful charm of the composition is admirably rendered by M. Brunet Debaines.

THE STAGE.

"PARTNERS" AT THE HAYMARKET.

MR. BUCHANAN'S "Partners," produced at the Haymarket, and already, I was glad to find, a good deal amended and shortened since the first night, is really a very free adaptation of what is perhaps after all Daudet's best novel. The play owes more to *Froment jeune et Bistrot aîné* than Mr. Buchanan thinks. In the record of his obligations he aims to be very precise, but he ends by being insufficient. What he has not managed to transfer or convey is the brightness of the story. The whole Delobelle group, for instance—tragic actor who has nothing in him, devoted wife, and that daughter, Desirée, who is as a figure torn from a page of Dickens—is but poorly represented in "Partners" by the single character of Mr. Bellair. Mr. Buchanan may say it does not aim to be represented at all, yet the idea of the neglected tragedian who has no value is assuredly from Daudet at a distance. But the originality of treatment which Mr. Buchanan, in his "Author's Note," endeavours to imply, refers chiefly, we suspect, to the fact that whereas M. Daudet let his heroine go over the precipice, Mr. Buchanan is careful to pull her up on the brink. Hence, greater acceptability, no doubt, to the British public; and hence, too, some loss of naturalness in the story. Mrs. Borgfeldt's substantial innocence would have been in all likelihood established much sooner in real life than in Mr. Buchanan's fiction; and—not to speak of anything else—in real life that letter which attests her incorruptibility would not have taken so long to open as it does at the Haymarket Theatre. Mr. Buchanan may nevertheless have something to say in defence—even in artistic defence—of the course he has pursued. Unfortunately, however, he cannot rebut the accusation of having produced a piece which, even now that it is shortened, has about it too large a measure of dulness. Interest of a kind it has also—one character is thoroughly studied—the sombre-ness is at certain times very effective. There are two or three fine scenes. But, on the

whole, it must be uphill work for the actors; and without the aid of some very good acting indeed, the piece would have fallen to the ground. At present, what keeps it going is the impressive, and at times affecting, performance of Mr. Beerbohm Tree, and the admirable support which he receives from two or three of those who are associated with him. How long these things will suffice with a public moved by so many impulses—affected now by caprice, now by fashion, and now, one hopes, for a change, by sober reason—it is safest not to venture to prophesy.

Let us address ourselves to what is most interesting and what will be remembered the longest—the manner of the performance. And first we will point out its defects. Mr. Brookfield, a very skilled character-actor, plays Bellair, the tragedian—the Delobelle of Daudet. Delobelle in the French novel has no blood relationship whatever with the Froment and Risler, here the Derwentwater and Borgfeldt, group. Mr. Buchanan makes him the father of the erring, or almost erring, wife, and of the wife's well-behaved sister. Accordingly, there is even less room than in the French story for his obviously farcical carriage, and, at the present time of day, for a get-up presumably in imitation of a portrait of one of the Kembles by Lawrence, say, or Hoppner. At Mr. Brookfield's performance we smile, and yet grieve. In the critical slang of the moment, the "note" is "forced." The note is forced every bit as much by Miss Gertrude Kingston as Mrs. Harkaway, "a woman of fashion." The playwright represents Mrs. Harkaway as jealous and disgustingly vindictive, but still "a woman of fashion." Miss Kingston remembers the jealousy and vindictiveness, but not the bearing that would have compelled at all events a partial concealment of them. The lady's place in the drama is that of one who is not looked upon as offensive by her associates—of one who, with well-bred people, takes a fair rank. But the actress so represents her that she could hardly for the second time be with well-bred people at all. You would watch not only your reputation, but every pocketable nick-nac in your rooms, while you talked to her. To be so obviously distasteful requires skill on Miss Kingston's part, no doubt; but it is skill misplaced. Mr. Cantley's Charles Derwentwater is, I daresay, a little colourless. It has no worse fault, and the part itself may compel that. Lady Silverdale's part is sympathetic, and only wants in Miss Le Thiere a sympathetic voice. Heartiness she contrives to give it. A little child, Minnie Terry—Mr. Charles Terry's daughter, I believe—is so entirely unconventional as Mrs. Borgfeldt's little daughter that it is a pity Mr. Buchanan has not withheld from her the seemingly inevitable line from the good child to the depressed mother, "Mamma, why do you cry so?" Miss Marian Terry is, indeed, one of the most famous of tearful actresses; and she is here provided—after Borgfeldt's quite unreasonable refusal to listen to his wife's explanation—with all the motive and the cue for weeping which it would be possible to desire. She is somehow not at her strongest—the unnaturalness of the situation we may assume to be the cause of it—when she is listening to reproaches she is not permitted to answer,

because if she answered them, the play would end too soon. But Miss Terry—who never actually fails in the accepted business of the stage—is individual and convincing in at least two passages: the first, where Mrs. Borgfeldt bids to her husband a hysterical adieu—an adieu charged with a secret; the second, where the brute passion of Derwentwater (whom the feeble wife so foolishly idealises) is, as it were, upon the very point of overcoming her. The part of Alice Bellair (Mrs. Derwentwater's sister)—played by Miss Janet Achurch—is not a good one, but it is a mistake to say—as has been said somewhere—that it is the part of an *ingénue*. The *ingénue* assents to everything, and has no views of her own. Alice Bellair takes sides very distinctly, and carries her thought into action; and so Miss Achurch—always singularly real—is right in giving to the representation decisiveness as well as charm. Mr. Kemble's performance of a part more telling, since more varied, leaves—it can hardly be disputed—as little to be desired. He is the confidential, high-toned servant of a great house, perfectly; exaggerating nothing, doing justice to every word.

I have left Mr. Beerbohm Tree to the last, because, as Mr. Buchanan has managed things, his information alone can be elaborate and important enough to be the *raison d'être* of the play. If it errs at all, it is through over-elaboration, over-lengthiness, that it errs. But I am not inclined to blame it. It has humane and homely touches. It has its pleasant suggestions of comedy. It is obviously forcible where poor Borgfeldt has to suffer horrible things in his unwillingness to listen to explanations which might have cleared everything up. And it has, among its several satisfactory, its one original and finely exciting effect: the moment at which—convinced of his wife's falseness—the steady old merchant, loyal always to his "house," addresses himself, in the house's difficulty, with tearful valour, to the ledger. On the night I was in the theatre, that was done quite admirably. After all these details, is one to give one's general impression of "Partners"? That would be, probably, that the piece has but a few merits; its performance but a few defects.

FREDERICK WEDMORE.

STAGE NOTES.

WE understand that a drama by Mr. Hall Caine, based upon his own novel, *The Deemster*, has been accepted by Mr. Wilson Barrett for early representation.

WE hear that Mr. Benson—whose travelling company has perhaps the best and the largest repertory of any company that goes about the provinces—hopes, within a twelvemonth or thereabouts, to be established in London. When he comes we trust he will have sufficient confidence in his present method of proceeding to dispense with costly scenery, and never to dream of long runs. What is wanted most of all in London is a manager who will audaciously rely upon the attraction of the art of acting as the single attraction to his theatre.

AT the Olympic the "Ticket of Leave Man"—almost the first of dramas which were at once "realistic" and sensational—takes the place of "Held by the Enemy." Mr. Henry Neville and Mrs. Stephens resume the parts

they played nearly a quarter of a century ago; and the part of Jem Dalton, played by Mr. Willard, must acquire new importance. The Olympic, it may be remembered, was the original home of the "Ticket of Leave Man."

MUSIC.

RECENT CONCERTS.

MR. DANNREUTHER gave his second concert at Orme-square last Thursday week. The programme included a new Sonata in C minor for piano and violin (Op. 45) by Grieg. The opening allegro is of considerable length, and is full of the composer's peculiar harmonies and rhythms. Each detail is interesting in itself, but the effect produced by the whole piece appears scarcely satisfactory. It needs to be heard more than once before one could say how much matter lies hid behind the manner. The second movement (allegretto) in E is in Grieg's more simple style; there is less effort and greater charm. The lively middle section, in E minor, contrasts admirably with the gently-flowing theme of the commencement, and also with its last presentation. The finale is animated, skilfully constructed, and perhaps healthier in tone than the opening movement. The sonata was well interpreted by Messrs. Gompertz and Dannreuther. The programme included Schumann's magnificent D minor Trio and Dr. Parry's clever pianoforte Trio in B minor. Miss Lena Little sang songs by Franz and Tchaikowski.

THE West branch of the English Goethe Society gave a musical evening at Queen's Gate Hall, South Kensington, last Saturday evening. Liszt's "Faust" Symphony was played on two pianos by Mr. G. Henschel and Mr. W. Bache. So far as we are acquainted with Liszt's works, this seems to us by far the most interesting. The "Faust" movement, with its tones of despair, its visions of love, and its moments of enthusiasm, is powerful. The "Margaret" section depicts Gretchen's love and devotion in strains which could scarcely be surpassed for tenderness and refinement. The "Mephistopheles" movement, though clever, is too realistic. The ending, however, for tenor solo and male chorus is fine. The solo part was sung by Mr. W. Shakespeare, and the chorus by some members of the "Liederkrantz" Society, under the direction of Mr. Martin Müller. The Symphony is most skilfully orchestrated, but in transcription the colour is lost. Still the arrangement for two pianos by the composer himself is effective, and the two pianists deserve the highest praise for their intelligent and sympathetic playing. Mr. Bache is of course known as a devoted disciple of Liszt. Mr. Henschel, whose accompaniments we have often admired, is decidedly a gifted pianist. The hall was crowded, and the performance much appreciated.

MDLLE. JANOTHA was the pianist at the Popular Concerts last Saturday, and again on the following Monday evening. Her Saturday solos were five numbers from Schumann's Kreisleriana, and they were carefully rendered. The young lady did not, however, present them with sufficient charm and feeling. On Monday she played three pieces. First, Schumann's Novelette in F, in too hurried a style, and with coldness, especially in the trio; Mendelssohn's Venetianisches Gondellied, from Fifth Book of "Lieder ohne Worte"—not the one marked in the programme-book—was given with much delicacy. Chopin's B minor Scherzo enabled Mdlle. Janotha to show off her excellent technique; but here, again, she was too impetuous. On both occasions she was encored. On Saturday Beethoven's Quartet in C was given, and on Monday Haydn's Quartet in A,

with the "whispering" fugue, was repeated. At the former concert, Madame Norman-Néruda played Handel's Sonata in D, and at the latter Vitali's Chaconne in G minor. Mr. Santley and Miss Carlotta Elliot were the vocalists. The latter was not in her best voice.

MR. HENSCHEL gave his tenth concert on Tuesday evening, and the programme contained many features of interest. It is some time since Mozart's "Haffner" Serenade was performed in London. This delightful work was written in 1776, to celebrate the wedding-day of Elise Haffner, daughter of a worthy Salzburg burgermeister. It is scored for a small orchestra; and the music, as befitted the occasion, is bright and lively. The wedding guests at Salzburg needed no analytical programme-book to help them to understand the simple construction of the allegro, or to follow the graceful andante, with solo violin part, the simple minuet and trio, and the merry rondo. It was the golden age when music could be left to speak for itself. Have we advanced since then? There are moments when even the staunchest admirer of latter-day music must wonder whether his musical heroes will stand the test of time as well as the old masters have done. The performance of the Serenade was good, though a little heavy at times; and the solo violin part was brilliantly interpreted by Mme. Norman-Néruda. She took the rondo at a pace which would probably have surprised Mozart. Mr. Henschel was wise not to play the remaining movements. Another revival was Bizet's orchestral suite, entitled "Roma." It was originally produced by Mr. Weist Hill at a Covent Garden concert, and afterwards performed by Mr. Manns at the Crystal Palace. The music is decidedly pleasing and the orchestration clever. It contains the number of movements usual in a symphony, but the opening one is not in strict form, and this, together with the light character of the "Carnival" finale, probably induced the composer to call it a Suite de Concert. But there were two novelties. An overture, "Morte d'Arthur," by Dr. Bridge, written in 1885, was given for the first time in London. Tennyson's poem has, of course, furnished the subject. We leave those who are so disposed to discover the "Arthur" the "Lake" motives, &c.; but we prefer to look at it as abstract music, and see in it a very creditable effort of an English composer. It is perhaps a little spun out, and the influence of Weber is, at times, very strong; but it is well constructed and well scored. The second novelty was an Aria by Beethoven, lately published, sung by Mr. Henschel. The words are from Goethe's "Claudine von Villa Bella." The song is lively, but it is very early Beethoven, and might even pass for Mozart's. It was well rendered.

MR. AND MRS. HENSCHEL gave the first of a series of three vocal recitals at Prince's Hall on Wednesday afternoon. The programme was varied and interesting, and included songs of many schools and styles. Mrs. Henschel, though not in her best form, sang with perfect taste some of Schubert's songs, among which "Die junge Nonne," and the seldom heard "Dass sie hier gewesen." Mr. Henschel gave with much feeling a simple but pleasing aria from Hayden's "Orfeo," and with humour the quaint scene from "Il Maestro di Musica" of Pergolesi. Loewe's "Erl-King" proved an attractive novelty. Schubert's "Erl-King" has of course ousted it from popularity; but it is, nevertheless, a setting of Goethe's words of some power, and as a dramatic conception perhaps equal to Schubert, and, at the close, even finer. The concert-givers also sang duets by Handel, Henschel, and Saint-Saëns. There was a good attendance. J. S. SHEDLOCK.

MACMILLAN & CO.'S LIST.

NEW POPULAR EDITION, Crown 8vo., 6s.

JAMES FRASER, Second Bishop of Manchester: a Memoir, 1818-1885. By THOMAS HUGHES, Q.C. With a Portrait.

The MAKERS of VENICE: Doges, Conquerors, Painters, and Men of Letters. By Mrs. OLIPHANT, Author of "The Makers of Florence," &c. With numerous illustrations. Medium 8vo., 21s. The *World* says:—"A book full of information of all kinds and from all sources, with illustrations, moreover, and—in short, with everything handsome about it—a worthy companion to her 'Makers of Florence.'" The *Morning Post* says:—"Brightness and attractiveness are not wanting, but the book possesses also a solid value for the amount of information and discriminating comment which it contains. The illustrations are for the most part excellent."

BY THE EARL OF SELBORNE.

CHURCHES and TITHES, ANCIENT FACTS and FICTIONS CONCERNING. By ROUNDELL, EARL OF SELBORNE, Author of "A Defence of the Church of England against Disestablishment," &c. Crown 8vo., 7s. 6d.

NEW NOVELS.

THE SECOND SON. By Mrs. OLIPHANT, Author of "The Curate in Charge," "A Country Gentleman," &c. 3 vols. crown 8vo., 31s. 6d.

FOUR GHOST STORIES. By Mrs. MOLESWORTH. Crown 8vo., 6s. [Next week.

PAUL PATOFF. By F. Marion Crawford, Author of "A Roman Singer," "Mr. Isaacs," "Marzio's Crucifix," &c. 3 vols. crown 8vo., 31s. 6d.

The *Academy* says:—"Did space permit we should like much to quote many wise passages in this delightful book." The *Daily Telegraph* says:—"It need hardly be said there is witty dialogue and bright description in the novel." The *Globe* says:—"The excellent literary finish of the story will be generally recognised. Moreover, the various personages in the tale are cleverly limned, a few are drawn with special power, and some of the situations are really stirring."

A TREATISE ON ALGEBRA. By CHARLES SMITH, M.A., Fellow and Tutor of Sidney Sussex College, Cambridge, Author of "Elementary Algebra," "Conic Sections," "An Elementary Treatise on Solid Geometry," &c. Crown 8vo., 7s. 6d.

PRACTICAL PHYSICS for SCHOOLS and the JUNIOR STUDENTS of COLLEGES. By BALFOUR STEWART, M.A., LL.D., F.R.S., late Professor of Physics, Victoria University, Owens College, Manchester, and W. W. HALDANE GEE, B.Sc. (Lond.), Demonstrator and Assistant Lecturer in Physics at the Owens College. Globe 8vo. Vol. I., ELECTRICITY and MAGNETISM. 2s. 6d.

PRIMARY FRENCH AND GERMAN READERS. Edited by G. E. FARNACOTT.

FLORIAN.—SELECT FABLES. Selected and Edited, for the Use of Schools, with Notes, Vocabulary, and Exercises, by C. YELD, M.A., Head Master of University School, Nottingham. Illustrated. Globe 8vo., 1s. 6d.

MACMILLAN'S MAGAZINE

No. 340,

- For FEBRUARY, price 1s., contains:—
1. EARLY DAYS OF DARWINISM. By Professor NEWTON.
 2. MR. KINGLAKE'S INVASION OF THE CRIMEA. By Colonel MAURICE.
 3. THE REVERBERATOR. By HENRY JAMES. CHAPS. I. and II.
 4. VIRGIL IN ENGLISH VERSE. By J. W. MACRAIL.
 5. BURFORD.
 6. A NIGHT IN THE JUNGLE.
 7. ROBESPIERRE'S LOVE. By EDMUND KNOX.
 8. CHRIS. By W. E. NORRIS. CHAPS. 7-9.

FOWLS, BY HARRISON WEIR, with Illustrations. See

THE ENGLISH ILLUSTRATED MAGAZINE

For FEBRUARY. Profusely Illustrated, price 6d., by post, 8d.

1. OLD LADY. From the Picture by Rembrandt. Frontispiece.
2. THE MEDITATION OF RALPH HARDELOT. By Prof. W. MITCHELL. (Chaps. 14-17.)
3. THE WEAVER and his FAMILY. By BENJAMIN SCOTT. With Illustrations by Bryan Hoek.
4. THAT GIRL IN BLACK. Part IV. By Mrs. MOLESWORTH. (Concluded.)
5. FOWLS. BY HARRISON WEIR. With Illustrations by Harrison Weir.
6. COACHING DAYS and COACHING WAYS: "The Portsmouth Road." By W. OUTRAM TRISTRAM. With Illustrations by H. Ralston and Hugh Thomson.
7. ET CETERA. By H. D. TRAILL. Ornamental Frontispiece, Headings, Initial Letters, and Tailpieces.

MACMILLAN & CO., BEDFORD STREET, LONDON.

PUBLISHED BY ELLIOT STOCK.

Now ready, tastefully printed in imperial 4to, Copiously illustrated, handsomely bound in cloth gilt, price £7 7s.; or in best crimson turkey morocco, £8 18s. 6d.

DEDICATED BY SPECIAL PERMISSION TO HER MAJESTY THE QUEEN.

THE GREAT SEALS OF ENGLAND,

Arranged and Illustrated from the Earliest Times to the Present Day.

with Descriptive and Historical Notes, By the late ALFRED BENJAMIN WYON and ALLAN WYON, the former and present Chief Engravers of Her Majesty's Seals.

This sumptuous work gives a descriptive, illustrated, and historical account of the Great Seals used by the Sovereigns of England from the earliest times, with many curious and interesting particulars as to their general history and the laws concerning them. It sets before the reader the few Royal Seals which are known to have existed in Saxon times; and with the Reign of Edward the Confessor commences a series of seals which continues unbroken down to our day. An Autotype Facsimile of each of the 180 Seals is given, accompanied by a description of the Seal and its design, a statement of the period during which it was in use, with references to the date of the Charter or other document to which it is still attached.

Many extracts from the Records of the Privy Council concerning the Great Seals are now published for the first time. A list of the Lord Chancellors and Keepers of the Great Seal from the time of Edward the Confessor to the present day is added; and also a list of officers attending the Great Seal in olden times, with particulars of their duties and emoluments, which furnish much curious information.

Among the Seals represented and described are some of considerable interest as having only recently been discovered, while others are but little known to antiquaries.

"This handsome work is a literary gift, at once interesting to the artist and the antiquary."—*Standard*

"A magnificent work. The execution of the plates is perfect, and the descriptive letterpress leaves nothing to be desired."—*Globe*.

Three Hundred Copies of "The Great Seals of England" only have been printed; of these 215 will be for sale in England. Each Copy is numbered and signed.

SECOND EDITION, REVISED, WITH MAPS. In small 4to, tastefully printed and bound in cloth, price 6s.

CÆSAR in KENT. An Account

of the Landing of Julius Cæsar, and his Battles with the Ancient Britons. With some Account of Early British Trade and Enterprise. By the Rev. FRANCIS T. VINE, B.A., Rector of Eastington, Gloucestershire, lately Rector of Patricbourne-um-Bridge, Kent. Dedicated by permission to the Marquis Conyngham.

"A masterly treatise on a subject of no small interest to the historical student."—*Illustrated London News*.

Tastefully printed in demy 8vo, price 6s.

HAARLEM the BIRTHPLACE of

PRINTING, not MENTZ. By J. H. HESSELS. "Written from a wonderfully minute knowledge of early bibliography, and with a scholar's care in the examination of evidence, and may be cordially recommended to the attention of everyone interested in its subject."—*Scuteman*.

In cloth, 31s. 6d.; Roxburghe half-leather, 36s.; large-paper Roxburghe, gilt top, £3 8s.

A CENTURY of BALLADS.

Illustrative of the Life, Manners, and Habits of the English Nation during the Seventeenth Century. Collected and Edited, with very numerous and Quaint Illustrations taken in facsimile from the Originals, by JOHN ASHTON.

"People who 'love a ballad but even too well' will be grateful to Mr. Ashton for his 'Century of Ballads.' The book contains a pleasant and representative assortment of the literary ware vended by flying booksellers, like Shakespeare's Autolycus."—*Daily News*.

In crown 8vo, cloth, 4s. 6d.; on hand-made paper, Roxburghe, 6s. 6d.; large-paper, 11s.

HOW to WRITE the HISTORY

of a FAMILY. By W. P. W. PHILLIMORE, M.A., B.U.L.

"Unassuming, practical, essentially useful, Mr. Phillimore's book should be in the hands of everyone who aspires to search for his ancestors and to learn his family history."—*Athenæum*.

London: ELLIOT STOCK, 63, PATERNOSTER-ROW, E.C.

THE LEISURE HOUR.

A Monthly Magazine for Family and General Reading.

Commenced a New Volume with the JANUARY Part.

The FEBRUARY Part (Now ready) contains:—

- PRINCESS SARAH. Chaps. I.—III. By JOHN STRANGE WINTER, Author of "Bootsie's Baby."
- WHAT IS TO BECOME OF THE GIRLS? By the Author of "The Occupations of a Retired Life."
- GREAT GRANDMAMMA SEVERN. By LESLIE KEITH, Author of "The Chilotes," &c. Illustrated.
- THE STORY OF GLOUCESTERSHIRE. By the Rev. Canon CREIGHTON, Professor of Ecclesiastical History at Cambridge.
- AN ADVENTURE with a HIGHWAYMAN. By A. E. ORPEN.
- THE REMINISCENCES of a REIGNING PRINCE. By the Rev. JOHN KELLY.
- FORBIDDING the BANNS. A Ballad for the People.
- SINGING the MARSEILLAISE for the FIRST TIME. With Engraving after Painting by ISIDORE A. PILS.
- THE HEALTH of our BOYS and GIRLS. By ALFRED T. SCHOFIELD, M.D. Infants, Growth of Children, Children's Hygiene, Exercise, The Spine in Children, A Little Anatomy, Mental Development.
- THE QUEEN'S HOMES. Kensington Palace. By CHARLES EYRE PASCOE. With Illustrations.
- THE LITHOGRAPHIC STONE QUARRIES of SOLNHOFEN.
- AMONG the IRONWORKERS. A Visit to Barrow. By W. J. GORDON. With Illustrations.
- WHAT CAN BE DONE with old SARDINE BOXES.
- THE KARENS of BURMAH. By Major-General MACMAHON.
- VARIETIES. The Sweaters Sweated, A Thrifty Labourer, &c. Frontispiece—"WAITING for FATHER." By PERCY TARRANT.
- Sixpence Monthly, of any Newsagent.

THE SUNDAY AT HOME.

A Family Magazine for Sabbath Reading.

The FEBRUARY Part (Now ready) contains:—

- MARCUS STRATFORD'S CHARGE; or, Roy's Temptation. By EVELYN E. GREEN, Author of "Barbara's Brothers," &c.
- THE IMPOSSIBILITY of PLEASING GOD without FAITH. By the Rev. JOHN MORRO GIBSON, D.D.
- MY GRANDCHILDREN at CHURCH. Illustrated. By the Rev. RICHARD WILTON, M.A.
- THE PROBLEM of the POOR. The Glasgow Foundry Boys. By W. J. GORDON.
- A TRUE MOTHER of CHARITY. Some Recollections of Madame André-Walker.
- IN NEWNESS of LIFE. By MARY BOWLES.
- MODERN ISLAM. By the Rev. WILLIAM JOSEPH SMITH, M.A.
- FOR BETTER for WORSE. By RUTH LAMB.
- "I WILL NOT LET THEE GO." By SYDNEY GREY.
- THE WORKERS of DAILY WORK. By the Rev. ALFRED ROWLAND, LL.B.
- PERSECUTION in the LOYALTY ISLANDS.
- THE PARABLES of OUR LORD.—II. By HESBA STRETTON, Author of "Jessica's First Prayer," &c.
- PARIS at the TIME of the REFORMATION.—II. By RICHARD HEATH.
- MISSY. A Story for the Young. By E. A. CAMPBELL.
- ANCESTRAL NAMES.
- "IN the DAYS of our FATHERS." By ISABELLA FVIE MAYO.
- THE LIFE of SAMUEL MORLEY.
- PICTURES from the POETS. THE DIFFERENCE.
- BIBLE NOTES and QUERIES. THE SICK CHILD.
- SAUBATH THOUGHTS. THINGS NEW and OLD.
- SCRIPTURE EXERCISES. MONTHLY RELIGIOUS RECORD.
- Illustrated Frontispiece—"THE SICK CHILD." From the Painting by JOSEPH CLARKE.
- Sixpence Monthly, of any Newsagent.

THE RELIGIOUS TRACT SOCIETY, 56, Paternoster-row, London.

GOOD WORDS.

Sixpence Monthly, Illustrated.

Contents for FEBRUARY:—

- SAVED as by FIRE. IV.—VI. By E. M. MARSH.
- "THE STAR of BETHLEHEM." By Prof. C. PIAZZI SMYTH.
- THE CHARM of WINTER. By the EDITOR.
- A MASAI ADVENTURE. By JOSEPH THOMSON.
- A NIGHT in the HOUSE of COMMONS. By WM. WOODALL, M.P.
- ON CHILDREN. By the BISHOP of ROCHESTER.
- THROUGH HUDSON'S BAY to WINNIPEG. By Captain A. H. MARKHAM.
- COLLEGE and CLERICAL REMINISCENCES. By the Rev. HARRY JONES, M.A.

LITERATURE.

The Forest of Essex. By W. R. Fisher. (Butterworth.)

THERE is always a flavour of romance about the story of an ancient forest, even when it has come to be associated in modern times with the idea of an Epping hunt or the humours of an August bank-holiday. Mr. Fisher's treatise on the Forest of Essex, more commonly known as Epping Forest, will find many readers who are interested in all that concerns the history of sport and the chase of the wild red deer.

The greater part of the work is concerned with the varying boundaries of the forest, the origin and development of the common-rights which were so successfully vindicated by the Corporation of London, and the curious customs of "lop-wood" or privileges of cutting fuel from pollards at certain seasons of the year, which lasted at least in one village until all inconvenient rights of that kind were bought up under the provisions of the Act by which the forest was devoted to public recreation. But the reader will also find a store of woodcraft and plenty of old lore about vert and venison. The forest, according to the lawyers, was a district apart, outside the common law, and governed by a quaint code, drawn up by men "who loved the tall deer like their father, and let the hares go free." It was a territory with great woods for the secret abode of wild beasts and fruitful pastures for their continual feeding, "kept for the princely pleasure of the king to hunt with his nobles for his recreation, when wearied with the burden of cares for the common-weal." In reading of the poachers with their cross-bows, the troubles of the purlieu-men with the deer in their corn, and the burlesque decisions at the verderers' court or justice-seat, the fancy goes back to Merry Sherwood and the dun deer in "Robin Hood's Larder"—the foresters pass with hounds in leash, and talk of the chase of the boar and bull, of a rout of wolves or a riches of martens to be chased; the hays and nets are set in a labyrinth of ambushes, an army of beaters is posted, and "bowmen through the groves glide, for to kill the deer." There seems to have been very little sport of the modern kind. The main object was to get the venison either by chasing the game with deerhounds, or killing them with arrows, crossbows, or handguns, with the aid of buckstalls, deerhays, and stalking-horses. The poachers, we are told, used "engines called wyers," and trammel-nets, and sometimes a "thief-net, baited with bottles, flowers, and looking-glasses," which seems to have been a device "for practising on the curiosity of the deer." The hunters used greyhounds and "brachets" or "brachs,"

something like the modern hounds, though not so strong, perhaps. Mr. Fisher quotes the song of the brach whose feet are sore: "I cannot follow with the pack a-hunting of the boar." The boar, however, was usually chased with a "long-legged hound," called *veltrarius* in the Exchequer records, descended, perhaps, from the ancient British dogs "strong enough to break the neck of a bull," which were well known even in the Roman arena. The name "veltrarius" is as old as the days of Martial. This hound is sometimes confused with the mastiff, which appears to have been a mediaeval importation from Central Asia. Mastiffs are often mentioned in the proceedings at the Forest Courts in company with other breeds which it is not easy now to identify, such as the "rain-hound," which keeps watch by itself in rainy weather, and the "stuckle-dog" or stone-hill dog, which is probably the "agassaeus" of the ancients, the "petrunculus" of the Burgundian Laws, and the terrier of modern times. In Justice Dodderidge's well-known judgment as to badgers being vermin in the eyes of the law, it was held that to dig a brock out of a neighbour's land is a trespass, "but he might have got him out either by smoking him out or by using of tarriers." The harriers of modern times appear as early as the sixteenth century. Dr. Caius describes them thus:

"We may know these kind of dogges by their long, large, and bagging lippes, by their hanging ears reachyng down both sydes of their chappes, and by the indifferent and measurable proportion of their making."

In the old "Charter of Peperkin" (which professed to date from Edward the Confessor, and was really thought worthy of enrolment among the public records of Edward II.), there is a grant of "hounds good swift and bould, four greyhounds and six raches for hare and fox and wild-cattes"; and the document contains other information or suggestions as to the early state of the forest. The grantee was to have the keeping of the forest within certain limits,

"With hart and hind, doe and bokke,
Hare and fox, catt and brocke,
Wylds foule with his flock,
Partriche, fesaunt-hen and fesaunt cock,
With green and wyld, stob and stock."

The last phrase refers, it would seem, to stubbed-ground and wood-ground, or fields and woods, and not, as Mr. Fisher suggests, to the right of having a gallows and pair of stocks. The hart and hind, always counted in separate classes as having different hunting seasons, take the first place, the hart being described as "a goodly beast, full of state in his gait and view, and among beasts of chase the chief for principal game and exercise"; the fallow-deer is merely counted as "a worthy beast," coming far short of the stateliness and boldness of the native red deer. Fallow-deer and pheasants are both considered to have been introduced by the Romans. Hares, after some uncertainty, were adjudged to be "venison," and included among the beasts of the forest; but in Lord Coke's time it became usual to treat them as being animals of warren. Rabbits, for which most warrens were instituted, are not mentioned in the document, and appear to have been very scarce in old times, owing, probably,

to questions of weather and drainage. Pheasants appear in connexion with Epping Forest as early as the Norman Conquest. It is said that the monks of Waltham had their choice of a magpie or half a pheasant apiece for their dinner on a holiday occasion. Pheasants were taken with the falcon, or called into a net by the fowler; partridges were taken either with the falcon or short-winged hawk, or netted, or caught with limed sticks.

Epping Forest was stretched soon after the Norman Conquest so as to cover almost all the county, except a small piece to the north-east of the Roman road from Colchester. Even that town itself was under the grinding laws of the forest, until the burgesses bought their freedom from the verderers' exactions and a right to kill vermin within their liberties. It seemed likely at one time that all England would be turned into a hunting-ground under the prerogative claimed by the Norman kings of making new forests wherever they pleased. Fortunately the practice was stopped by the great Charter of the Forest, which stayed the boundaries of the royal forests at the limits that existed under Henry II. Another great alarm arose under Charles I., when it was proposed by the high-prerogative lawyers to go back to the limits legalised by the charter, notwithstanding their shrinkage during centuries of inclosure and cultivation. The complaint is well expressed in a letter in the Strafford correspondence. "The justice-seat in Essex hath been kept this Easter-week, and all Essex hath become forest; and so, they say, will all the counties in England but three—Kent, Surrey, and Sussex." The revival of the obsolete laws turned out to be only a trick for increasing the revenue; and, after a good many people had been heavily fined, an Act was passed in 1640 defining the bounds of all forests as those which existed by common reputation in the twentieth year of James I. Thus ended the great controversy; and soon afterwards, the game being destroyed in the Civil War, and men's minds having been changed on many obsolete matters, the whole apparatus of Norman forest-law fell into deserved neglect and oblivion. CHARLES ELTON.

Sketches in History and Poetry. By the late John Campbell Shairp. Edited by Prof. John Veitch. (Edinburgh: David Douglas.)

THE late Principal Shairp was seen at his worst and weakest in his study of Burns for the "English Men of Letters" series. He is probably seen at his best in this volume of papers, which are very appropriately termed "Sketches"—unless, indeed, a claim for superiority be put in for the patient Wordsworthian photography of certain passages in his poetry, in which he almost succeeds in bending the bow of Thomas Aird. His criticism is pretty superficial ploughing, though good and honest of its kind. After his own fashion he loved Scotland, and Scotch history and poetry, although he had no sympathy with the disreputable, heretical, alcoholic, and Jacobinical elements in either. In this book there are no such revelations of his almost spinsterish likes and dislikes in the matters of taste and morality (Shairp's likes and dislikes, however, were those of one of Miss Ferrier's

blue-hooded refined spinsters of the old Scotch school) as disfigured, and yet gave a certain amusing piquancy to, his biography of Burns, whose hat was somewhat too large for his head. Yet even here, and when, as in his essay on "The Ettrick Shepherd," trying elaborately to do justice to Burns, he must needs give us his socio-political creed, for he tells us that

"Burns, with his genial fellowship, has a large leaven of social discontent and bitterness against the classes above him. Hogg, while his mind was as independent as that of Burns, had no quarrel with the gradation of ranks and the social order, though he found himself at the bottom of the ladder."

To regard, as simply so much naughtiness, any discussion of "the gradation of the ranks and the social order," to talk of "bitterness against the classes above him" in connexion with the poet who, in his "A man's a man for a' that," regarded "class" distinctions as altogether artificial, and destined to be obliterated by time—the naïveté of all this is not more remarkable than the capacity it indicates for rendering cloistered seclusion impervious to the deepest murmur of the world of to-day.

But in dealing with these "Sketches," there is, happily, almost no need to consider the late Principal Shairp's socio-political creed, but only his faculty for telling an old Scotch legend or historical incident agreeably, for investing Scotch antiquities with picturesqueness, for giving an air of something like beauty to the courteous commonplaces of conventional criticism. Five out of the ten essays, lectures, and addresses, which compose this volume, treat of subjects of the classes indicated, such as "St. Columba," "The Earliest Scottish University," "The Early Poetry of Scotland," "King Robert Bruce in St. Andrews Cathedral," and "The Ettrick Shepherd." Three in particular, "St. Columba," "The Earliest Scottish University," and "The Ettrick Shepherd," are probably better than anything that has previously been written on the same topics. Columba, indeed—

"with countenance so ruddy and hilarious, that even when worn with long toil and fasting, 'he looked like one who lived in luxury,' large stock of natural genius, quite herculean energy, by nature irascible and explosive, yet unselfish, placable, affectionate, full of tenderness for those about him, and most compassionate to the weak"—

Shairp seems to have regarded as a sixth-century Norman Macleod, and to have loved very much as he loved Macleod. In "The Earliest Scottish University," he works out very carefully the late Dean Stanley's "Mine own St. Andrews" enthusiasm for the Scotch university town which combines the charms of Oxford and Margate. In it, too, are given as good, though brief, biographies of John Knox and Andrew Melville as any ordinary English reader requires. Shairp does not show to such advantage when he deals with St. Andrews worthies nearer to our own time than Knox or Melville. Take, for example, what he says of the late Prof. Ferrier:

"Revolting from the traditional Scotch psychology, he grappled with questions which it had never dreamt of, and set the idealistic

philosophy on a line along which it still is travelling. And then he clothed his subtle speculations in a style that, for lucidity and incisiveness, recalled the charm of David Hume's."

To begin with, this passage is too suggestive of the eulogistic eloquence of an obituary notice in a provincial newspaper. Then, when a writer says that Ferrier "grappled with questions" which the traditional Scotch psychology "had never dreamt of," one is inclined to ask what of the contempt of the Scotch philosophy for Berkeleyanism, what of Reid, and, above all, what of Ferrier's ridicule of Reid? There is no question as to the high quality—"charm" seems a little affected in this connexion—both of Hume's style and of Ferrier's. But in what particular does Ferrier's "recall" Hume's?

Principal Shairp seems, however, to have put his very best into "The Ettrick Shepherd," the last lecture, it appears, that he delivered at Oxford in his capacity of Professor of Poetry. It "recalls"—to repeat his own rather dubious phrase—what Prof. Veitch has written on the same subject; but it is compacter, less effusive, and at once more truly critical and more genuinely appreciative. But for Shairp's desire, manifested rather than directly expressed, to elevate Hogg to a higher moral position than that occupied by Burns—by the way, was Hogg's drink-bill very much smaller than Burns's?—it might be said that this essay is, in its way and for its subject, not only just but perfect. Shairp does not ignore Hogg's obligations to some of his contemporaries, and he can scarcely be said to exaggerate when he says that

"in all literary history there is no nobler example of a strong man's holding out a hand to struggling genius than the bearing of Sir Walter Scott to Hogg from the first day he saw him till the last—such sound-headed, true-hearted magnanimity, which no insult could alienate, no failure discourage."

Further, Principal Shairp takes a sensible view of the secret—which was no secret—of Hogg's strength:

"No other poet, in our language, has ever described fairyland so well, or embodied the whole underwork of ghosts, spectres, wraiths, brownies, water-kelpies, dead-lights, with such an eerie sense of reality; and the reason was this—that to him they were real existences. He had reached full manhood before he felt the atmosphere of the nineteenth century, and began to disbelieve these things."

WILLIAM WALLACE.

Tenerife, and its Six Satellites; or, the Canary Islands Past and Present. By Olivia M. Stone. In 2 vols. (Marcus Ward.)

THIS book appears at an opportune moment, though published rather long after the author's actual journey. The Canaries have just lately come into wider repute and favour in Europe as a good resort for those who are compelled to, or can, avoid a Northern winter. Many people thus looked forward to Mrs. Stone's work, being the best substitute for a practically non-existing guide book. The author and her husband had great advantages over the ordinary traveller, and as yet no English people have followed in their steps. Mr. Stone took photographs even in the outlying islands;

and his botanical knowledge, it was thought, might lead to additions being made to Berthelot and Webb's carefully compiled lists of plants. Possibly, also, there might be some new scientific facts or theories upon the groups. Hence, for several reasons, curiosity was aroused among those connected with the Canaries.

Mrs. Stone may receive congratulations, when her volumes have been read through, for the pluck and energy that led her to "rough it" for many weeks, not only ashore under canvas, or with not over-clean surroundings, but afloat in the small island schooners, which were certainly never intended to carry English ladies. The outcome of it is an interesting and readable account of the Canary group that will, no doubt, be welcome to those wishing to learn something of a region and people that they previously knew nothing of—in most cases, we may say "absolutamente nada," as the Spanish phrase runs. Mrs. Stone, in speaking of her predecessors' writings on the islands, points out how short a time most of them stayed, and how "insufficient and misleading" their descriptions are. Such is a fair judgment on many of the English and French books; but there are several German writers whose accounts may be consulted with advantage, and generally without fear of inaccuracy. Mrs. Stone, however, cannot claim any great superiority over her predecessors, though she does seem, more than once, to imply it. She herself spent only about three weeks in Tenerife, the same time travelling and going about in Grand Canary (or Canaria, as she always formally calls it), while the remaining five islands were each allowed only a week. In such an allotted time, only part of each island could be seen. Even with note-book at work on horse or camel-back, and speaking fluent Spanish with intelligent *islenos*, we could hardly have expected from any lady traveller more than a readable and graphic journal of what she saw and heard. Such we have, with many pages of interest on places and on people and their ways. Probably some of these will seem strange reading to those who are unfamiliar with Spanish conservatism in an island province.

But to students of the history, topography, and science of the Canary Islands, or to the educated Spanish gentry, these volumes will cause disappointment. In the preface, we are led to expect great things; but, after diligent search through the space of something like 900 pages, we fail to find them. If, however, the following notes of criticism appear to bear harshly on a lady-author, whose health has been weak during the compilation of her MS., we willingly apologise to those concerned. Our only guide has been the cause of truth and true science; and, as we write within view of the Peak of Teide, with capable referees at hand to supplement much personal study and experience of the interesting *Islas Canarias*, we can disclaim any "cant of criticism," or mere love of fault-finding.

We have first to deal with a statement contained in the preface, which runs thus:

"I have, I believe, consulted all the works treating, however remotely, on the subject which have appeared, whether in English, Spanish, French, or German."

A lady writing thus may certainly maintain

the courage of her belief that she did really consult *a/l*, and even *remote works* on the Canaries in the four languages mentioned. If she did, and still retains the list of authorities, she would confer a boon on students, continental as well as English, by publishing such a desideratum. But we venture to challenge the accuracy of this belief. If Mrs. Stone had told us that she consulted all accessible works, there would be nothing to say on our part. Anyone, however, who has seriously investigated the bibliography of the Canary Islands will soon find the obstacles to be no light ones which he has before him, ere he can consult the whole of the literature, either historical or scientific. An additional reason for thus doubting the author's exhaustive research is to be found in the fact that the authorities with which she occasionally troubles us are well-known to previous writers. We may count the exceptions on one hand.

We are further led to ask the pertinent question, Why is the first volume so disfigured with misprints and mistakes in even common Spanish words? "Los pobres bestes," "reales de Avilion," "manto," "huerto," "tertulla," "higos-pigos," and the constant use of "del" before plurals, as "Pico del Muchachos"—these are flagrant instances that we select among the many. But the same want of care is shown in regard to topographical names. It is, of course, difficult for entire strangers to write correctly the names of places given by guides. In the case of Tenerife, however, we have an excellent map by Fritsch, correct so far as it goes. Mrs. Stone's researches might have helped her here. For Tenerife has no such village or hamlet as Tamino, its name being, as given by Fritsch, Tamaimo. So, too, with the Valley of Cauca (i. 127, &c.). Cauca seems to have been Mrs. Stone's mishearing of the probably Guanche name of Ucanca. She adopts the old spelling of Villa Flor in place of the modern name of Vilaflor. The pronunciation of the name is strictly according to the spelling of to-day. Then, in speaking of the bold crest of lava rock which overlooks the pretty little town of Vilaflor, like a watch-tower, we are sure that Mrs. Stone has been mistaken. It is called the Sombrero, not Sombrerita; and the real Sombrerito lies on the same ridge of the Cañadas Cliff, but to the westward of the Sombrero. These errors are not to be found in the text alone, but have been transferred to an improved map of Tenerife. From personal knowledge of the localities in question, we, therefore, venture to warn cartographers against transcribing new names from the maps in Mrs. Stone's work. The maps of Canary, Gomera, and Hierro are based partly on Fritsch's accurate topographical sketch-maps, but they are poor reproductions. Neither in the map of Gomera, nor in that of Canary are the peculiar physical features brought out clearly enough. We think the map to be most trusted is that of Fuerteventura, for which the author was indebted to a most intelligent, pleasant young Spaniard. But its orographical detail, as reproduced, is in part vague.

Mrs. Stone is rather confused in her description of Sta. Cruz de Tenerife as to the position of the Anaga mountains. She speaks of

them twice over as being on the west side of the bay or roadstead. It is hardly necessary to point out the impossibility of this, when reference to any chart shows them to be north-east and east of the town. Again, in speaking of the direction of the Barranco del Infierno, on the south-west side of Tenerife, the author tells us that this grand gorge runs in a north-east direction. Now this is assuming water to be capable of running uphill, for do we not always take the course of a river or valley from its head downwards? There can surely be no other opinion than that the Barranco del Infierno runs in a general south-west direction.

We have many other faults to find, such as the inaccuracy of historical dates and the misspelling of proper names. The town of Garachico was overwhelmed in 1706, not 1705; the date of Pope Clement VI.'s bull to Don Luis de la Cerda was 1344, and Alonso Fernandez (not Ferdinando) de Lugo landed in Tenerife on May 1, 1494. The name of the Guanche King of Anaga was Beneharo, and a Spaniard would be unable to recognise Donna Ignes Peraza as being intended for Doña Inés Peraza. Such are samples. There is neither time nor space to point out more. We have purposely omitted to discuss a few personalities and matters of doubtful taste. The "quality of mercy" is not always remembered by lady-writers quite as it should be.

Mrs. Stone asserts that her friends in the islands have kept her informed of all changes. There is one change, however, that she is not apparently aware of, and that is the abolition of the old *sereno* or watchman. Her table of expenses will prove useful to those who contemplate making a similar tour in the lesser-known islands. The meteorological tables for Port Orotava, which are quoted in the appendix from a recently published pamphlet by Dr. Öhrvall, of Upsala, are a good guide; but Herr Hermann Honegger's observations, extending over more than ten years, would have served better. *Apròpos* of meteorology, Mrs. Stone's name for the hot Sahara wind, "tiempo de abajo," is so rarely used in Tenerife that her statement must be taken with considerable reserve. "Tiempo del sur," or "south weather," is the common expression.

We have thus found Mrs. Stone's book satisfactory and unsatisfactory. As a work of authority on the Canaries, or as superseding former books, it has no place; but as a narrative of travel, pure and simple, it will be read with pleasure. In the absence of a good up-to-date English work on the islands, it is a pity that inaccuracy in every way should so characterise and stamp the volumes under notice.

GEORGE F. HOOPER.

Tertium Quid. By Edmund Gurney. In 2 vols. (Kegan Paul, Trench & Co.)

THE essays collected in these two volumes range over a considerable variety of topics—moral, metaphysical, and aesthetic; but the most cursory examination will show that they are marked throughout by the same predominatingly critical and controversial character. Single-handed, Mr. Edmund Gurney encounters one after the other such champions as Mr. Frederic Harrison, the author of

Natural Religion, Mr. Mallock, Mr. Arthur Balfour, the late Prof. Clifford, Prof. Pollock, Mr. Swinburne, Mr. Alfred Austin, the opponents of "psychical research," both parties to the vivisection controversy, the devotees of Wagner, and, finally, in defence of his own musical theory, Mr. James Sully and Prof. Stumpf. In each instance he shows perfect knowledge of the subject under discussion, perfect mastery of dialectical fence, perfect good temper and good taste. To all who enjoy an exhibition of fine intellectual sword-play, the spectacle must be exhilarating; to all who take sides in the questions under discussion it may be also exciting.

Nevertheless, it would be a mistake to suppose that Mr. Gurney is nothing if not critical, although it may well be that with him positive opinions are most powerfully developed under the stress of opposition and negation. Moreover, being of an independent and original turn of mind, he has worked out certain views on questions of the day which bring him alternately into conflict with both parties to the dispute. It is this attitude that the title of his book is meant to indicate. The truth does not lie with either side, nor, perhaps, even between them, but in some third point that both have overlooked; or, again, their reasonings have been wasted in the attempt to analyse and explain some essentially inexplicable, irrational, irreducible element, revealed to feeling but inaccessible to logic. Were not the word aesthetician already appropriated to artistic perception, it would admirably describe the attitude of one who occupies this point of view.

As is natural with one who attaches such importance to feeling, Mr. Gurney professes himself an uncompromising utilitarian. Pleasure and pain are for ever recurring in his pages as the great standards of reference in opinion, in action, in taste. The central essay of the whole collection, that from which all the others seem to radiate, is entitled "The Utilitarian 'Ought.'" Its object is to supply a well-known and long-felt want in the ethical system of Bentham and Mill—to supply it with a theory of moral obligation; to show that, assuming happiness to be the sole end, and a larger quantity of it better than a smaller, then each of us *ought* to sacrifice his own happiness to the greater happiness of another or of others. It is rather remarkable that in this one instance Mr. Gurney should reduce to logical compulsion what almost everybody else looks on as a unique and, at least to our immediate consciousness, inexplicable feeling. For the rest, I quite agree with his theory, so far as the consciousness of moral obligation in any individual instance is concerned; that is, I hold that when we perform a disagreeable action because it is right, we are in much the same mental state as when we admit a disagreeable proposition because it has been proved to be true. And I can also see that anyone who once allows happiness in general to be desirable, must also allow that a greater quantity of it is more desirable than a less, even if the less quantity happens to be his own and the greater someone else's. But I cannot follow Mr. Gurney when he contends that the disinterested desire for another's happiness is equivalent to an admission that happiness in the abstract is desirable. It

seems to me that to help another because not to do so would involve a painful feeling for oneself is carrying disinterestedness as far as it ever goes; and that the wish to keep off that painful feeling has reference not to another's happiness but to one's own. But if so, it may yield to pressure exercised by the fear of pain from some other quarter; and, so far, I fail to see how the feeling of logical necessity comes into play on one side more than on the other.

It is easier, if not more interesting, to discuss the applications of hedonism than its logical foundation. Mr. Gurney is one of those who hold, as I think rightly, that happiness depends far more on the avoidance of pain than on the acquisition of pleasure; and that equal quantities of pain are equally to be avoided, whether the sufferer be a human being or some other animal. It is not he who would say with Charles Austin that we cannot give up field-sports because life is already so poor in pleasures. He further maintains—again, as I think, with justice—that the torture of one is too heavy a price to pay for the relief from moderate pain of any number of others. These principles are applied in two very interesting and ably written papers to the ethics of vivisection—perhaps the soundest, and certainly the most temperate, contribution yet made to the literature of that much-disputed question. Whatever may be thought of the practical suggestion to which it leads up—namely, that the granting of licences for experiments on living animals should be entrusted to a board of *savants*—it would be difficult, on utilitarian principles, to dispute a single position defended by Mr. Gurney; although his exposure of the fallacies advanced by each of the contending parties in turn is likely to draw down on him the bitter hostility of both.

A thinker so pre-occupied with the transcendent, incommensurable importance of pain cannot but take a somewhat gloomy view of this world, filled as it has been throughout the past with misery, and pregnant as it is with illimitable possibilities of misery in the future. Accordingly our critic, while on some points highly appreciative and sympathetic, has little patience with the author of *Natural Religion* when he offers us the physical universe as a fitting object for our devotional feelings; and not much more with Mr. Frederic Harrison's enthusiasm for the prospects of humanity. In both instances his arguments, powerful as they are, seem to be vitiated by the assumption that the feelings of adoration and rapture to which those writers appeal have never in reality been aroused by the contemplation of nature, or by the vista of future progress; and it seems also to be forgotten that the historical religions by which such feelings were confessedly fostered were at all times open to similar objections. Certainly, it is not for the purpose of rehabilitating any of those religions that Mr. Gurney comes forward; nor, assuming this to be the only world, will he accept the extreme pessimism of Mr. Mallock, against whom some of his most annihilating criticism is directed. The peculiarity of his own position—the *tertium quid*—lies in this, that a single miserable existence suffices to spoil the whole universe, and forces us to admit that it had better not have been. But, as Mr. Gurney

apparently does not agree with E. von Hartmann in thinking that the abolition of the universe is a feasible operation, his motive for publishing such an unexpected and cheerless view was probably to win a favourable hearing for his own doctrine of a future life, based on such evidence as the Society for Psychical Research may hereafter collect. He contends, with even more than his usual energy, and, I think, with all his usual force of reasoning, that men of science and disbelievers in the supernatural are not justified in refusing to examine the alleged spiritual manifestations which he and his colleagues have recently investigated. But, whatever else these gentlemen may succeed in proving to the general satisfaction, there is one point that their method of observation and experiment can never possibly establish, and that is the immortality of the soul. Let it be shown—what will be hard enough to show—that a disembodied consciousness, or a consciousness embodied in some finer sort of matter, survives its earthly tenement, there is still not the faintest presumption that it is bound to exist for ever. Again, the mere prolongation of existence beyond our present life carries with it no implication that the existence will be happy. Reasoning by analogy, one would rather say the contrary. Therefore, so far, Mr. Gurney's arguments for enlarging the possibilities of existence simply go to enlarge the possibilities of pessimism. It is otherwise, of course, with those who believe in a personal God of infinite goodness and power; but, if I understand Mr. Gurney aright, he has left that belief behind him. At any rate, his merciless dialectic leaves it with the bottom knocked out (vol. i., pp. 140-143). On the other hand, it is not easy to understand how the lives of certain persons can be "painful and inexplicable enigmas" to them, unless they start with the belief in a personal creator; so that from his own point of view our author's attempt to dissociate the two great elements of modern religion—God and immortality—must be held to have failed.

It was, perhaps, in the interest of his own psychical theory that Mr. Gurney undertook the searching criticism of Prof. Clifford's metaphysics, which fills the greater part of the essay entitled "Monism." So far as concerns that one particular mode of monism, the work of refutation is very neatly and effectively done. Clifford was most assailable when he left the solid ground of science and morality; and Mr. Gurney is strongest when he limits himself to negation. Still, Clifford's contention, that there must be some reason for the connexion between mind and brain, remains untouched, and suggests a strong presumption that the connexion is a necessary one.

I have little space left to notice the aesthetic discussions that make up Mr. Gurney's second volume, full as they are of interesting criticism. Moreover, the greater number of them relate to music—a subject on which I have no competence to speak. It may, however, be mentioned that here, as well as in his great work on the Power of Sound, even such unmusical people as myself can follow the author's reasonings with considerable intelligence and appreciation. At any rate, by sweeping away the old association theories, he helps us to understand why we do not enjoy the "quint-

essential" element of music; and, arguing from the known to the unknown, I conclude that his instructiveness for persons with an "ear" must be something enormous, or, rather, would be if they would read him, which he complains with bitter humour they will not. May I add a wish that the book had been written throughout in as clear and polished a style as these musical essays?

The two papers on poetry are charming. It is a singularly felicitous idea that the sound-pleasure in verse is not something added to the imaginative pleasure, but something multiplied into it; so that if, for example, we rate the former at 5, and the latter at 100, "the resulting pleasure is not 105, but 500" (vol. ii., p. 161). Elsewhere we find a most valuable protest against the view that poetic or literary beauty can be permanently divorced from morality. Mr. Gurney's utilitarian principles enable him to dissolve away the supposed antithesis; and this notice of what is essentially an ethical work cannot more fitly conclude than with his own admirable words:

"Once perceive that beauty has no merit or meaning save as a means of happiness, and it becomes immediately clear that, so far as 'beauty' is used in an *exclusive* sense—embracing some happiness-giving elements and not others—it has no claim to be considered the sole end or criterion of poetry. That it is the *dominant* quality . . . I have been doing my best to urge; but this clearly allows us to hold that not beauty in any exclusive sense, but happiness is the end and the criterion. . . . To those, then, who hold, as most who think at all do now hold, that morality in its widest meaning is the great progressive force of the world, and that 'joy in widest commonality spread' is the goal to which it tends, it is impossible, *ceteris paribus*, but that that poetry should convey most spiritual wealth, and involve the greatest number of enriched minutes, which is in recognisable harmony with these sentiments, rather than poetry which is markedly self-centred or markedly visionary and fantastic" (vol. ii., pp. 231-234).

ALFRED W. BENN.

The Life of Samuel Morley. By Edwin Hodder. (Hodder & Stoughton.)

THERE cannot fail to be much that is interesting in the biography of a man whose sagacity, enterprise, and energy were the means of acquiring great wealth, which his benevolent feelings led him to expend in behalf of his fellow-men. Among the citizens of London and of other great towns there have always been many such; and among our own contemporaries Mr. Samuel Morley is entitled to rank even above his neighbour, Mr. George Moore, whose profits were similarly made and similarly employed.

But Mr. Morley was something more than a successful man of business and munificent citizen. He occupied an almost unique position in the Nonconformist world, where his influence, if not paramount, was extraordinarily great. To his credit be it said that it was exercised with moderation; and that, as life advanced and experience widened, his appreciation of those who differed from him on some religious matters showed a steady growth. It was late in life that he frankly admitted:

"Dissent, or Catholicism, or Methodism, or

Unitarianism, or Calvinism—in all these there may be more or less of error, but they who hold them are our brethren battling against the same evil."

Samuel Morley belonged to an old Nottingham family of substantial farmers and hosiers which had long been seated in the suburban village of Sneinton. As trade developed, it was found expedient to open a branch house in London, and its management was entrusted to John Morley, who became the head of the firm established in Wood Street and the founder of the fortune which his son Samuel inherited and enlarged. In 1860 the entire control of the Nottingham house also passed into the same hands; and thus Mr. Samuel Morley "stood at the head of the greatest concern of its class in the United Kingdom." He was a liberal and considerate employer, giving fair wages (paid in cash), and, by means of pensions and allowances, securing the permanent goodwill of those who had been in his employment.

Wealth is the avenue to power. As early as 1857 Mr. Morley was urged by Cobden and others to enter Parliament. Although deeply interested in the representation of Nonconformists and in the question of religious education then before the nation, he felt he could do better work outside than within the House; but, at the General Election of 1865, his friends prevailed upon him to stand for Nottingham, and, after a hard and bitter fight, he was returned at the head of the poll. The triumph, however, was shortlived. He spoke, indeed, in favour of the Church Rates Abolition Bill and on the Tests Abolition Bill, but was soon afterwards unseated on petition; and, although at a later date he re-entered the House as member for Bristol, his services were rather useful than conspicuous. He was not a brilliant speaker, nor had he any special charms of manner or choice of diction. Men listened to him because he spoke only when he had something to say, and something worth attention. His best speeches were on religious and social subjects; by such his sympathies were called forth. For controversy, political or other, he had neither inclination nor aptitude; and the general impression which one derives from his biography is that the philanthropic spirit in him was too predominant to allow him to be a strong partisan. No man had a firmer belief in the power of the press. He was one of the chief proprietors of the *Daily News*, and took a keen interest in its success; while among those who shared in his munificent and unostentatious gifts were not a few struggling authors and journalists.

Mr. Hodder in his preface justly remarks that Mr. Morley's career was deficient in striking incidents. In spite of this defect, he has compiled an interesting biography, and one from which many useful and valuable lessons may be drawn.

CHARLES J. ROBINSON.

Liberty and Liberalism. By Bruce Smith. (Longmans.)

THEORETICALLY a literary journal can have little claim to deal with politics, least of all with politics in the sense of party government. "Parties may come and parties may go, but letters flow on for ever." Nevertheless,

politics, like most other subjects of human concernment, cannot dispense with literature. Its arguments, whether in a newspaper article or in an ampler treatise, must be held amenable to literary criticism. Similarly, style, language, arrangement, are so many qualities on which literature has a right to pronounce judgment. It is from this standpoint of literary criticism that I venture to deal with Mr. Bruce Smith's contribution to present-day politics.

The object of the work is twofold—(1) historical, (2) practical. Under the first head the author enters at considerable length, and with undeniable insight and ability, into the rise and growth of what he terms Liberalism, meaning by the word civil liberty. Step by step he traces its course from the Norman Conquest to the Ballot Act of 1872. Since that time the gradual "broadening down of freedom from precedent to precedent" has, according to Mr. Bruce Smith, come to a halt. Nay more, the flowing tide has begun to recede, and a disastrous ebb has already made no inconsiderable regress. At this point the practical part of the treatise comes in, and it seems to me difficult to overrate either its interest or importance. The author adroitly leads the way to its consideration by erudite and well-reasoned chapters on "Spurious Liberalism," "Some Infirmities of Democratic Government," &c. By an overwhelming induction of instances he shows that whenever Liberalism has transgressed its natural limits by violation of large economic principles, by artificial restraint or stimulation either of industries or their products, by hurried, partial, or merely class legislation, the result has been always disappointing, oftentimes disastrous. English Liberalism of a former day recognised, according to Mr. Bruce Smith, these wise limitations, and did not, on the whole, attempt to encroach upon them; but the Liberalism of our own time has latterly taken an opposite direction. Recent illustrations of this retrogression are so well known that they will readily suggest themselves to well-informed readers. Its apparent aim is to establish by false notions of equality unequal social conditions. Mr. Bruce Smith, however, is not content with skimming the surface of politics by watching overt acts of legislation and their respective results. He occasionally penetrates into the first principles of his subject by considering the functions of the state and their relation to the true wellbeing of the citizen. Under this head, also, he warns his readers against spurious and retrogressive Liberalism, enforcing his warning by his belief that "the invaluable principle of individual freedom is in imminent danger of being lost to us at the very hour of its consummation."

It is needless to point out that Mr. Bruce Smith's very able work deals with subjects of a controversial nature, on which much has already been said and written, and of which we are doubtless destined to hear more in the near future. For this reason the book has a special and most opportune interest. It also possesses a value wholly independent of the political views of which it is so admirable an exponent. Its erudition is so great, its method so clear, its style so luminous and direct, its spirit and tone so ingenuous, and, so far as possible, free from the least taint of

political bitterness, that even opposing politicians may well have recourse to its pages, though they will in my opinion find its accumulated result rather a difficult nut to crack.

I may add, in order to remove a possible misapprehension, that, although the book follows the main lines of the Liberty and Property Defence League, and is described in a sub-title as "a protest against the growing tendency toward undue interference by the state with individual liberty, private enterprise, and the rights of property," it was, at least in its origin, a private undertaking. The author's experience of "advanced Liberalism" in the colonies, as well as in England, gives him an undoubted right to speak on the question.

JOHN OWEN.

NEW NOVELS.

An American Penman. By Julian Hawthorne. (Caseell)

Uncle Bob's Niece. By Lealie Keith. In 3 vols. (Ward & Downey.)

A Fair Crusader. By William Westall. In 2 vols. (Hurst & Blackett.)

Young Mistley. In 2 vols. (Bentley.)

By Virtue of his Office. By Rowland Grey. (Kegan Paul, Trench & Co.)

Lost Identities. By M. L. Tyler. In 3 vols. (Sonnenschein.)

Caught by the Tide. By Alison L. Garland. (Sonnenschein)

"HAPPY is the nation which has not lost faith in its detectives!" is the exclamation which will rise to the lips of every observant reader of Mr. Julian Hawthorne's *An American Penman*. We never ourselves have shared the opinion of those pessimists who treat the Great Republic as prematurely aged. It is young, very young; and we have never met a greater proof of its youth than the "Inspector Byrnes," who is the hero, the real hero, of this legend. Inspector Bucket is deplorably insular. The creations of French genius in this respect resemble their great original Vidocq in being not insular, but stagy. Inspector Byrnes is not insular; he is not stagy: he is of a type which never was on island or on stage, or anywhere except in youthful imagination. His idea, however, of setting up in his own business a young Russian who had been "run in" for stealing from the person, and who told him an admirable, but rather long, story of destitution and victimising was, on well-known principles, not unworthy of success, and it quite succeeded. If Count Fedovsky (whose real history has yet to be told, we feel sure of that) was what we suspect, he must have chuckled; but his punishment in marrying a young woman who could spell the pretty name of "Sally" as "Sallie" was, probably, equal to any offence. It is almost unnecessary to observe, as we have indicated the nationality of Count Fedovsky, that the wicked heroine is called Vera. It is well known that all Russian young women are called Vera, especially when they are bad, or good, or, in short, anything. And it is said, though not known (we hope that it is not true), that there are persons wicked enough to wish that detectives and Russians

were (as regards the novel only) swept into one vast grave whence neither had the least chance of emerging. As these wicked ones are confronted with a much larger public which loves detectives and Russians in novels, *An American Penman* is sure of an audience.

We remember *The Chilcotes* with pleasure, and the remembrance has not been dashed with anything unpleasant by *Uncle Bob's Niece*. The character which is our favourite is possibly not the author's favourite—indeed, she has taken but little trouble with her, and left her not only unwedded but unwooed. Yet Honoria Walton, friend of the heroine of this book, a partially emancipated young woman, who abides tranquilly in boarding-houses and surveys man and womankind, is a new and a good figure. The boarding-house itself, too, is something new in boarding-houses so far as novels are concerned. It is not the old shabby-genteel, or less than shabby-genteel, "Todgers's," but something quite different and very well touched in. The main personages are a little more hackneyed, and the main story—to us, at least—is a little less interesting. We have known the rough-diamond *oncle d'Amérique*, and his shy, and beautiful, and beneficent niece, and her good lover, and her bad lover (who is the good lover's cousin), and her lady patroness, who takes her up and puts her down, and all the rest of them—we have known them (we cannot say and loved them) long and well. But Honoria Walton is new, and we are glad to meet her. Still, it must not be imagined that even Miss Leslie Keith's more familiar persons are dull or tiresome. If we do not experience positive rapture at meeting them again, we can make our nod or bow to them, and even stay in their company, without discomfort or a longing to depart. Now that is really a great deal to be able to say, even if we had not Honoria (about whom, it is as well to add, there is no romance whatever) to console ourselves with.

It will soon be, if it is not already, as idle for a critic of novels to say that it is really a pity that such and such a novelist will write so much as for a critic of art to make a certain remark about "pains." But both remarks will remain true, for all that. With one veteran exception, we know no novelist to whom the criticism already suggested applies so well as to Mr. Westall; and the pity of it is, in his case, that, unlike the veteran person referred to, he has never given himself time to do anything really good yet. He has never done anything quite bad, it is true; but that is not the same thing. *A Fair Crusader*, for instance, is evidently a thing hastily cobbled up—a thing *hâclé*, to use one of those untranslatable words which wise writers always borrow and foolish critics always hold up their hands at. Take a prosperous brother home from the Indies; a stay-at-home ditto who has wedded a French governess in second marriage; a sister with a clever, but drunken, husband; a beautiful Salvationist in a poke-bonnet and an entanglement; some stories, which have nothing to do with the plot, about the Indian Mutiny; a "native" of the useful, but not harmless, kind; a little attempted poisoning and so forth, and you have *A Fair Crusader*. It is not uninteresting; it is not unreadable; it is very far from being either.

The author might indeed have made at least some of his characters talk rather more like gentlemen and ladies—for instance, the unlucky possession of a drunken husband is not a sufficient cause why a lady should talk like a barmaid; and his Salvationist or "Crusader" gives occasion to some writing about theological matters which is neither wise nor in good taste. But these things might have been excused if there were not marks of haste and roughness all over the story.

We referred—of course without expressing any approval of them—to the revolutionaries who wish that all detectives and all Russian counts and countesses (in novels) had but one throat. We believe, still without expressing any approval, that they would add secret societies to their wish, were it not that, given your detective and your Russian, a secret society is a mere development. *Young Mistley* deals in secret societies, and wicked Russian agents who try to assassinate patriotic Englishmen, and explorations of a diplomatic military kind in Central Asia, and what not. Now all this makes very interesting material, if it is treated with the right pen; but we fear the pen of the author of *Young Mistley* is not the right pen, though it is a pleasant pen enough in its way. You want for such a purpose, a feather of the same bird whence came that other pen that wrote "Trop loud!" when the grotto of Locmaria closed on Porthos, and we see not a trace of such a feather here. But there is an agreeable dog in the story, and a tolerable young woman Nihilist, and a journalist of extraordinary moral qualities (for which who among us is so rude that he will not salute the author of *Young Mistley*?), and other pleasant properties.

Why is a kind of modified villainy fated to the name of Stephen in novels? There was a Stephen who was not at all a nice person in one of the books of our youth, we forget which; there is Stephen in *The Mill on the Floss* who is certainly not quite what he should be, though he is more sinned against than sinning, and there is an awful "tiger" called Stephen Glade in *By Virtue of his Office*. This, however, is remark, not criticism. There was not a little merit in *In Sunny Switzerland*, and there is more in "Rowland Grey's" present venture. As very often happens in books written by ladies (it is not, we believe, denied that "Rowland Grey" is a lady), the naughty, heartless, prosperous heroine, who marries the bad lord, is nicer than the good, amiable, persecuted heroine, who marries the virtuous baronet; but that does not matter. The story is told with liveliness and good taste—two admirable things and, alas, by no means always found together, or even separately in the modern novel!

As we get to the end of our list, it is not for complimentary adjectives that we have to look. The three volumes of *Lost Identities* are, we regret to say, three volumes of something very like trash. When we say that the author, at nearly the beginning of her book, makes a dying soldier, half blown to pieces by a shell, dictate, as he lies under fire on the ground, a letter about four printed pages long to his father in this vein—"Her sweet face—I can see it now—will plead better," &c., "You will say with the kind

of smile I have seen in your face when you spoke to me about my mother," &c.—we shall have said nearly enough to convey to the wise what manner of book they have here. And we need only add that the three volumes live up to their first pages with a noble and unchanging constancy.

Caught by the Tide is a better book than *Lost Identities*, inasmuch as it is in one volume, not three. It is also apparently, if not certainly, a first attempt; while Miss Tyler has written "Anne Boleyn: a Tragedy," besides " &c." It is also, though the imbrolio is not well managed, fresher in its elements of mystery. *Lost Identities* deals only with the stale story of changing babies in cradles so as to secure a heritage; while *Caught by the Tide* gives us at least some brigands, and one decidedly strong situation. It must really be unpleasant to find a young person whom you regard as "an angel upon earth," and of whom you have rashly "made sure that she loves you," in the arms, and apparently quite comfortable in the arms, of your own discarded steward, who has made himself additionally disagreeable by assuring you that you are the wrongful possessor of somebody else's property.

GEORGE SAINTSBURY.

SOME BOOKS FOR THE COUNTRY.

The Farmer's Friends and Foes. By Theodore Wood. (Sonnenschein.) Ranging through birds, beasts, and insects, and furnished with a good index, this handy compilation is exactly what most farmers need. It makes no pretensions to relate any new facts, but marshals in a pleasant way what is known to the credit or disadvantage of the different wild creatures with which the farmer is necessarily brought into contact. All country lovers will naturally find much that is of interest in this book. It would be better, as regards its form, were it furnished with a table containing the heads of the chapters. Mr. Wood attempts to balance the evidence for and against each creature as a friend or enemy to agriculture; and, with a naturalists' love for them, we are thankful to see that he generally finds mitigating circumstances in the case of all. Wood pigeons and bull-finches alone, he is compelled, by the strength of the evidence against them, to relegate to the list of avowed foes, and we must needs agree with him herein. The former can be shot and eaten, however, and might thus be called friends, as reducing the farmer's butcher's bill, while the latter can be snared and sold to the bird catchers. The author is not likely to conciliate farmers by telling them at the outset of his book that the very efforts they have made to rid their fields of insect enemies have greatly helped to ruin them, alluding to the expense of top-dressings to guard against the ravages of turnip-flies and the like. It is to be feared, however, that the following paragraph, which soon succeeds, will effectually cause many of his *clients* at once to close the book. If anyone is conservative in the matter of his meals, it is the British farmer. Judge, therefore, of his horror at finding his counsellor and guide writing

"I may here remark that, but for the influence of prejudice, which prevents us from availing ourselves of much wholesome and palatable food, these stack and barn-fed rats might be profitably employed for culinary purposes. From much personal experience, I can assert that the flesh of the rat is both delicate and well-flavoured, and that, when prepared in the same manner as that

of the rabbit, it forms a dish in every way superior."

The farmer has sunk low, but he has hardly come as yet to this point. There are some excellent pages on the life-history of aphides; but we must demur to accuracy of detail being obtained in the case of the common sparrow from exact calculations of the number of grains of corn which a sparrow consumes daily contrasted with the exact number of insects which it eats per hour, or of grains of corn which those insects would have devoured. Dr. Johnson, in a nicely-balanced case of sentimental morality, once said, "Nay, sir, the woman is in the wrong, and there's an end of it;" and we shall certainly say of the sparrow, knowing its many misdeeds and the few insects it does devour (when it can get anything else), "the sparrow is a mischievous bird, and there's an end of it." The citation of Mr. Morris as authority for a large number of vermin once destroyed on a Highland estate should be amended. Mr. Knox published the original list so far back as 1830. Every here and there the author indulges in a little special pleading for his favourites. The sparrow-hawk will save the wages of boys to protect the corn, the pheasant eats the grubs of *tipula*, and so forth. Our own predilections bid us wink at such arguments. After all, farmers too often err on the side of destructiveness. Mr. Wood's book need not be too closely scanned. It is sure to please every lover of rustic life, and, we hope devoutly, will stop much wanton, ignorant slaughter of the lower animals. In some future bird-city the grateful inhabitants ought to erect a statue in honour of their benefactor.

Nor'ard of the Dogger; or, Deep Sea Trials and Gospel Triumphs. By E. J. Mather. (Nisbet.) This book is interesting from three circumstances. First, it gives an excellent account of the work and perils of the 12,000 East Anglian fishermen who are generally tossing on the wild North Sea in order to provide cod and turbot for English dinner tables. Next, it relates from the very beginning a venture of faith which, originating with Mr. Mather's strong desire to do good to these men, has during this last year grown into a regular Mission to Deep Sea Fishermen, with a council, sub-committees, eight mission ships, and a floating hospital. Thirdly, and in strict accord with Her Majesty's well-known sympathy, especially for all her sea-faring subjects, the Queen has materially aided the mission, and graciously accepted the dedication of Mr. Mather's record of it. The Dogger Bank itself extends for some 170 miles long by 65 broad between England and Holland. Most of it is covered by very shallow water; and, in consequence, the seas which are raised by strong winds are tremendous. By means of the trawl some 400,000 tons of fish are annually gathered from it. Our readers may have admired the navy of trawling smacks at Grimsby, the metropolis of this kind of fishing, where a dock is set apart for these vessels. At this town, too, may be seen thousands of fish landed morning after morning by the steam carriers from the smacks out at sea—"prime" fish, as soles, turbot, halibut, and brill are called; "offal," under which name come plaice, haddock, cod, ling, conger, whiting, gurnard, and skate. The perils of this fishery are very great. A sudden storm may arise and wreck many of the smacks—excellent sea-boats as they all are. Thus, in March, 1883, a fearful gale drowned no less than 360 smacksmen and boys, and caused great damage to property. As the men generally stay at sea for a couple of months at a time, the results of their nightly catches are next morning sent on board a steamboat which carries the fish to Grimsby or Yarmouth; and this transference, which has often to be effected

in a heavy sea, is fraught with much labour and danger. In addition to this, until the last year, "coopers"—floating grog shops—have been allowed to corrupt the men. Mr. Mather's narrative shows how completely his energy checkmated these pests; how, by first aiding the bodies of the sick and those who had met with accidents, he found the way to these rugged fishermen's souls; and, finally, the exertions by which he has paved the way to regular missionary work being carried on at the Dogger Bank during the intervals of toil. The results of his labours are most cheering. Lucidly written and told without affectation or display, this book tells a remarkable story of wise perseverance. It is no common volume to be recommended in ordinary phrases. It is a book of deeply interesting tidings, illustrating a mode of life and a system of mission work comparatively unknown. And it tells the tale that can never be too often repeated, how self-denying love and brotherly sympathy will win the hearts of men—such hardened and thoughtless yet heroic men as fill the trawlers on the Dogger. No one who reads this book will henceforth despair of any section of the human family.

Practical Hints on Shooting. By "20-Bore." (Kegan Paul, Trench & Co.) The contents of this book answer to its title. It is extremely practical, and in all connected with guns, dogs, and game, shoots straight to the mark. For young sportsmen it is just the book to be put into their hands. The rules given for handling firearms, and providing against accidents during shooting, are admirable. The author condemns the pernicious practice of shooting over another's head while he "ducks"; and we are thankful that he denounces the massacre of our sea-birds during early August round the coast by excursionists and holiday-makers. Much as he commends the old practice of starting with two or three friends after breakfast for a long day's shooting over dogs, with the certainty of a small but tolerably miscellaneous bag, "20-Bore" fully explains the mysteries of battues, shooting grouse from mantlets, every department in short of modern sport with the gun. As old sportsmen, we demur to his advice to hold the left hand far down the gun's stock while shooting, and always to carry the gun on full cock when expecting game; but these are the new customs induced by breech loaders and repeating guns. The mechanism of the new guns and of John's shrapnell shells is fully explained with diagrams. Wild fowl shooting comes in for its quota; indeed, whenever we have tested this book it is full, lucid, and useful. An angler will be amused at the author's sentiment, "Were it not for shooting, hunting, coursing, and *perhaps fishing*" (the italics are ours), "life, indeed, were not worth living." In the second part of the book, which treats of the natural history of game, the author is hardly so happy. That "the pheasant was introduced into England by Jason," is as amusing a statement as Walton's grave dictum that fishing was invented by Noah. Again, there are certainly not "three kinds of woodcock" in England, though there may be two or three varieties. The curlew cannot be called "a small bird"; peewits are plover, whatever "20-Bore" may say; and the curious reason "which may account to a certain extent for the paucity of ptarmigan in England," that "they deposit their eggs on the open ground, thereby causing the loss of great numbers," is much like Tenterden Steeple causing the Goodwin Sands. "20-Bore" might surely find better and more recent authorities on birds than Mudie and Mrs. Mary Trimmer. "Rara aves" may be charitably put down as a misprint; the more so, as the first part of this book deserves high commendation, and ought to take a high rank among manuals of shooting.

The Silver Trout, and Other Stories. By Sir Randal H. Roberts. (W. H. Allen.) In spite of the author's modest disclaimer in the preface, that these ten little sporting essays are of any further value than *pour passer le temps*, we shall venture to grumble at their publication. A dozen equally good, or equally indifferent, papers of this kind, appear weekly in the sporting papers. There was no possible reason to reprint these particular essays from the *Field* and *Land and Water*. Neither the "Silver Trout" story, nor that of "The Man with the Green Box" possess any constructive power. The paper on "Trout-Fishing in the Rhenish Provinces," to be of much use to tourists, ought to have been dated. As it is, the state of matters it describes may be as they were last year, or as they were ten or twenty years ago, which makes all the difference in the world. The whole collection has a vague chronological aspect. The author catches a big pike, but the locality is carefully concealed, and it happened "when his companion was the late Mr. Francis Francis," who lived to a tolerable age, and has been dead more than a year. An account of the celebrated Waterloo run with the Pychley hounds on February 2, 1866, is the best paper in the book. Perhaps this volume might please the sportsman who wished "to pass away a weary hour," but he might easily find many books of much greater interest, and written in a more commendable style.

NOTES AND NEWS.

MESSRS. SMITH, ELDER, & Co. announce a new and uniform edition of the complete works of Mr. Robert Browning, to be issued in monthly volumes.

MESSRS. GEORGE BELL & Sons will publish immediately an important work on *The War of the Succession in Spain (1702-11)*, by Col. the Hon. Arthur Parnell, of the Royal Engineers, based on unpublished MSS. and contemporary records. The volume will be illustrated with maps and plans.

A VOLUME on the "History of the Foreshore" will shortly be issued by Mr. Stuart Moore. It will treat of the subject from Saxon times downward, and will show the origin of the claim of the crown in the time of Elizabeth, the attempt to enforce the claim in the time of Charles I., which was one of the causes of the great rebellion, the dealings with the foreshore, and the law relating thereto down to the present time. The work will comprise an unpublished treatise on the subject from a MS. in the handwriting of Sir Matthew Hale, and a new edition of the treatise by Hall, together with a review of the crown proceedings in the present reign, and the practice in crown suits. From the author's long experience of the public records, it is expected that the book will be of much interest independently of its legal value.

MESSRS. BELL have in the press a Memoir of the late Dr. Steere, for eight years Bishop in Central Africa. The volume has been compiled by the Rev. R. M. Heanley, the editor of the Bishop's Sermon Notes, and will contain copious extracts from his letters, including a thirty years' correspondence with Lord Justice Fry.

THE next volume in the series of "Great Writers" (Walter Scott) will be *Burns*, by Prof. J. S. Blackie.

MR. DAVID NUTT will publish, in the course of the spring, the selected poems of Mr. William Ernest Henley. Besides the ordinary edition, there will also be a limited issue on large paper. In the "Bibliothèque de Carabas," Barnaby Rich's translation of the Second Book of Herodotus, faithfully reprinted

from the original (1584), with introduction by Mr. Andrew Lang, and illustrations by Mr. Graham Tomson; also Sir Thomas North's English version of the *Kalila wa Dimna*, "The Morall Philosophie of Doni, Englished out of Italian," a verbatim reprint of the edition of 1570, with introduction by Mr. Joseph Jacobs, and illustrations reproduced from the Italian original (1552); an English version of the Coptic Orders of Baptism and Matrimony, by Mr. B. T. Evetts, of the British Museum; and, in the series "English History from Contemporary Writers," Strongbow's Conquest of Ireland, Extracts from Giraldus Cambrensis, Regan, and other Anglo-Norman sources, as well as from the Annals of the Four Masters, the Annals of Innisfallen, and the remaining Irish annals, selected and translated, with introduction, notes, appendices, map, and illustrations, by F. P. Barnard, Head Master of Reading School.

Confessions of a Publisher is the title of a new book by the author of *Boote's Baby*, which will be issued shortly by Messrs. F. V. White, & Co.

MESSRS. ISAAC PITMAN & SONS will publish in a few days the *Transactions of the International Shorthand Congress*, held in London last autumn. The volume will contain a full report of the joint celebrations of the jubilee of phonography and the tercentenary of modern shorthand.

WITH reference to the special efforts now being made to promote technical education, a new and revised edition of Cassell's *Technical Educator* is announced for issue in serial form. The first monthly part will be published on February 24.

MR. D. W. DOUTHWAITE has been appointed assistant to his father, the esteemed librarian of Gray's Inn.

SIR W. W. HUNTER will give an address on "Recent Indian Movements," on March 3, at Willis's Rooms, on the occasion of the annual meeting of the National Indian Association. Lord Hobhouse will preside.

MR. FREDERIC HARRISON will deliver a lecture on "Humanity as a Religious Centre," at the South Place Institute, Finsbury, on Sunday next, February 5, at 4 p.m. Admission is entirely free.

PROF. C. HUBERT H. PARRY will, on Thursday next (February 9), begin a course of four lectures, at the Royal Institution, on "Early Secular Choral Music, from the Thirteenth Century till the beginning of the Seventeenth" (with illustrations).

THERE is to be sold in Paris at the Hotel Drouot, one day in February, an extraordinary collection of autograph letters and historical documents, of which the most remarkable portion consists of no less than a hundred and thirty-two letters from Cardinal Richelieu, addressed to Claude de Bouthillier, between the years 1629 and 1642, at which period that Secretary of State for Foreign Affairs and "surintendant des finances" withdrew from Court employment. These Richelieu letters are written from Abbeville, from Amiens, from Soissons, from Reims—from the many places to which it was the business of the great minister, especially during the wars, to follow the king. For the most part they are written by his secretaries, Cherré or Charpentier. Some of them have been published. Others—eighteen in number—have never seen the light. Now and then, on the most private matters, Richelieu wrote with his own hand. Thus there is an epistle penned by him "two hours after midnight," on August 8, 1630, which bears, after its signature, the direction "Burn this letter after having read it to 51 and 52."

Who were designated by the numbers 51 and 52 has not, we believe, been discovered. The letter was probably read to them; but it is evident that, however this may have been, it was, after the manner of very confidential letters, not burnt afterwards, but carefully retained, in the most private of places, since here it is to-day, in very good condition, one of the most valuable in a dossier of peculiar interest.

MR. KARL BLIND has received from an old friend a curious version of one of "Grimm's Tales" in the speech of the Shetland people, which varies in details from the German.

SOME confusion seems to have arisen with regard to the "library" edition of Tennyson, now in course of issue by Messrs. Macmillan. Curiosity was naturally aroused by the announcement of the publishers that it would "contain everything that the author has published." Misled, perhaps, by this statement, a bold reviewer in the *Times* (January 27) undertook to single out and comment upon "a dozen or more of pieces, with which, if they have ever been previously published, we own to having no acquaintance. Among these is included the familiar lines "On a Mourner," as well as the still better known sonnet upon Bonaparte. As a matter of fact, the first volume of "Early Poems," published by Messrs. Macmillan last month, is not only identical in contents with the first volume of the edition issued by the same publishers in 1884, but is actually printed from the same plates. The sole novelty is the portrait, which apparently represents the poet at the time when most of these early poems were written; but unfortunately no information is given about this portrait—not even the engraver's name. It may be as well to add that Messrs. Macmillan's editions of the "Early Poems" (1884 and 1888) differ from that published by Messrs. Kegan Paul, Trench & Co. in the "Parchment Library" in 1883 only by the inclusion of three new pieces—"Leonine Elegiacs," "Supposed Confessions of a Second-Rate Sensitive Mind," and "Rosalind"—and by the transfer of "Mariana in the South" from a later place to follow immediately after the famous "Mariana in the Moated Grange."

WE venture to go out of our usual course to mention a letter by Dean Plumptre in the *Guardian* of last week, in which he has felt it necessary to protest against the imputation (conveyed in a notice of his work on Dante in the *Church Quarterly Review*) that his own translation of the *Paradiso* is indebted to that previously published by Mr. F. H. Haselfoot.

UNIVERSITY JOTTINGS.

THE results of agricultural depression, long suffered in private, have at last come into public importance at Oxford. St. John's College has found itself compelled to ask the consent of the university to an alteration in its statutes, by which the duty of augmenting the salary of the Laudian professorship of Arabic (now vacant) by £450 a year is indefinitely postponed.

THE Senatus Academicus of the University of Edinburgh has appointed Dr. Hutchison Stirling to the Gifford Lectureship on Natural Theology for a period of two years. Dr. Stirling will probably enter on his duties in the course of next winter session.

THE Barlow lecturer on Dante (the Rev. Dr. Moore, Principal of St. Edmund Hall, Oxford) proposes to deliver a course of six lectures at University College, London, on the following Wednesdays and Thursdays at 3 p.m., viz., February 15, 16, 22, 23, 29, and March 1. The opening lecture of this year's course, on February 15, will be on "The Tomb of Dante." The remaining lectures will be occupied with a

critical discussion of selected passages, chiefly from the *Paradiso*.

WE understand that among the candidates for the vacant chair of botany at Edinburgh are Prof. I. Bayley Balfour, of Oxford, the son of a former professor; and Mr. George Murray, of the natural history department of the British Museum.

SIR F. A. GORE OUSELEY, the professor of music at Oxford, will deliver a public lecture in the Sheldonian Theatre, on March 2, upon "English Church Music of Purcell and his Contemporaries," with illustrations.

MR. H. F. PELHAM, the newly appointed reader in Roman history at Oxford, is lecturing this term upon "Italy under the Emperors."

MR. F. MADAN is continuing, in the *Oxford Magazine*, his careful hand-list of recently published books, pamphlets, &c., relating to Oxford. He has now finished the year 1886.

THE Clarendon Press have just published, in large quarto form and printed in their boldest type, the text of the Laudian Code of Statutes (1636) and additions to 1767, edited by the late Dr. John Griffiths, for many years keeper of the archives, with an introduction by Mr. Charles Lancelot Shadwell, who ought—in the opinion of many—to have been Dr. Griffiths's successor. This introduction contains an interesting account of the steps by which the university recovered the power of legislation, of which it has lately made such abundant use. The volume is illustrated with a facsimile of the signatures of the heads of houses, &c., on the original MS. of the Code.

A TRANSLATION.

VITTORIA COLONNA, "RIME SACRE," SONNET VII.

THAT nestling hungerful, who sees and hears
His mother towards him flying through the wood,
And knowing that she comes to bring him food,
Loving the food and her, in gladness cheers;
But as she flies, struggles, with sudden fears
And quick desire to follow if he could,
Then pours forth song, as if he knew he would
But poorly thank her, though he sang for years;
So I, when the Divine and living ray
Which warms my heart, from my great Sun above,
Is lit up into richer, fuller day,
Spurred by affection, quick my pen I move,
And, not perceiving what myself I say,
I write the praises of the One I love.

LENA A. MACHRAY.

OBITUARY.

WE regret to hear, by private telegram from Rome, of the death of Mary Howitt, which took place there on Monday last, January 30.

For many years past she had lived at Meran, in company with her unmarried daughter, Margaret; and, after the death of her husband, she followed the example of her daughter in joining the Roman Catholic Church. She had gone to Rome to take part in the celebration of the papal jubilee, and was the first pilgrim presented to the Pope on that occasion. Mary Howitt, whose maiden name was Botham, was born (we believe) at Uttoxeter before the present century began, and had almost reached her ninetieth year. She was married to William Howitt in 1823. It would be impossible for us to enumerate the vast number of books which she produced both alone and in collaboration with her husband. No pair of writers were ever more popular, or better deserved their popularity; and both lived to a green old age.

MAGAZINES AND REVIEWS.

THE *Expositor* for February opens with a learned paper, by Dr. Neubauer, entitled "Jewish Controversy and the *Pugio Fidei*." The gradual development of polemical relations between the Synagogue and the Church is exhibited with a fulness unknown in any accessible book, and will spare future historians of religion many hours of research. The author himself is led into a controversy on Raymundus Martini by the strong language of another writer in the *Journal of Philology*. Mr. Horton gives a thoughtful paper on Christ's use of the Book of Proverbs. The influence of the old Jewish Wisdom certainly deserves to be traced more carefully in both Testaments. But even if sayings of Christ in the Synoptic Gospels do suggest passages in the Septuagint additions to Proverbs, may we at once assume that He knew them in the Greek? Do we know the condition of the Hebrew text of the Bible used by Christ? Prof. Whitehouse summaries the critical views of Delitzsch (i.e. of the new Delitzsch) and Dielmann on the Pentateuch. He hits English scholars hard; but why should English scholars grudge their American colleagues the first start in a critical crusade against Graf, Kuenen, and Wellhausen? English scholars were certainly the first to write on the questions raised by Graf and Kuenen; and have not those American controversialists who are as yet most prominent made a false start? Prof. Whitehouse himself writes in the temper and with the modest independence of a progressive scholar, though he has not thoroughly worked his way out of the older school of conservatism. Prof. Elmslie is, we take it, a sympathetic bystander, whose *forte* lies rather outside technical Hebrew studies; else why does he direct public attention to the hypercritical, if not hyper-historical, novelties of English origin in Prof. Harper's *Hebræica*? We have only space to mention papers by those well-known writers, Dr. Dods, Prof. Curtiss, and Prof. Warfield.

THE January *Livre* follows an innocent habit, and puts a good foot foremost for the new year. The original part contains two articles of unusual length and substantive value. The well-known pen of M. Eugène Asse has perhaps found worthier subjects than "Le Chevalier de Nerciat," a writer not commonly known (and for cause) to English readers. No such oblique remark is necessary as to the much longer and more important paper on "Madame de Pompadour," the books she collected, and the engravings she amused herself by producing. This, by M. Gustave Paulowski, is full and interesting, and has the advantage of two very handsome *hors texte* illustrations. The first reproduces in green ink La Tour's well-known pastel of the lady, where the dress and accessories, unusually elaborate for the style, perhaps a little conceal the fact that the painter has not been able to communicate to the somewhat angular features and cold hard expression of his subject the charm which is to be found in such much slighter sketches as, for instance, his "Mademoiselle Fel." The other plate is the title-page for a collection of the engravings. The number is very well worth buying.

A NEW LIBRARY OF PHILOSOPHY.

MESSRS. SWAN SONNENSCHN & Co. have in preparation—for issue simultaneously in London and New York—a series of philosophical works, under the general editorship of Mr. J. H. Muirhead, to be called the "Library of Philosophy." It will be arranged under three heads, comprising respectively works dealing with (1) schools of philosophers, (2) the history of thought in particular departments, and (3) the

subject matter of philosophy treated from an original point of view.

The first series will, it is hoped, ultimately cover the entire history of thought in the fields of metaphysics and ethics. At present it is proposed to deal more particularly with modern philosophy, and the following volumes have already been promised:—*Sensationalists*: Locke to Mill, by Dr. W. S. Hough, of Michigan; *Modern Realists*: Leibnitz to Lotze, by Prof. Andrew Seth, of St. Andrews; *Early Idealists*: Descartes to Leibnitz, by W. L. Courtney, of New College, Oxford; *Later Idealists*: Kant to Hegel, by Prof. W. Wallace, of Oxford; *Scientific Evolutionists*: Comte to Spencer, by Prof. John Watson, of Kingston, Canada; *Utilitarians*: Bentham to Contemporary Writers, by W. R. Sorley, of Trinity College, Cambridge; *Moral Sense Writers*: Shaftesbury to Martineau, by Prof. W. Knight, of St. Andrews; *Idealistic Moralists*: Kant to Green, by Prof. Henry Jones, of University College, Bangor.

The second series will include:—*The History of Logic as a Formal Science*, and of the Use and Influence of Logical Categories in Philosophy and the Sciences, by Prof. George S. Morris, of Michigan; *The History of Psychology*: Empirical and Rational, by Prof. Adamson, of Owens College, Manchester; *The History of Political Philosophy*: I. Plato to Rousseau, by D. G. Ritchie, of Jesus College, Oxford; II. Burke to the Present Day, by J. H. Muirhead; *The History of Economics*: Adam Smith to the Present Day, by Dr. J. Bonar; *The History of Aesthetics*, by B. Bosanquet; *The Evolution of Theology since Kant*, by Prof. Otto Pfeiderer, of Berlin.

By way of introduction, a translation of Erdmann's smaller *History of Philosophy*, in three volumes, by Dr. W. S. Hough, will be issued in October, 1888; and it is hoped that some of the other volumes will follow in the spring of 1889.

"ALADDIN" IN THE ORIGINAL ARABIC.

Abbazia: Jan. 22, 1888.

Histoire d' 'Alâ Al-Dîn | ou | La Lampe Merveilleuse. | Texte Arabe | publié | avec une Notice sur quelques Manuscrits des Mille et une Nuits | par | H. Zotenberg. (Paris, Imprimerie Nationale, MDCCCLXXVIII.)

In this booklet the modesty of the title is equalled only by the merit of the work. M. Hermann Zotenberg, the well-known translator of the *Chronique de Tabari*, has, after his fashion, taken in hand an interesting and much-disputed subject, and has treated it definitively in a style at once pleasant and learned—bristling with facts and figures, and readable withal.

Students of the "Arabian Nights" now know that ten of the Gallandian Tales (or eleven including the "Princess of Deryabar") are, or rather were, of unknown origin; and the list contained the two most widely read items—"Aladdin" and the "Forty Thieves." As I have said in the Terminal Essay to *The Thousand Nights and a Night* (vol. x., p. 105), conjectures about the provenance were manifold, but mostly ran upon four lines. Baron de Sacy held that they were found by Galland in the public libraries of Paris; Mr. Chenery suggested that they had been borrowed from the *Râwîs* or professional tale-tellers of Smyrna and the Levant, an opinion supported by the late Mr. H. C. Coote (*Folk-Lore Record*); and Mr. Payne (ix. 268) advocated the probability "of their having been composed, at a com-

* Large 4to. Notice, etc., pp. 1-52: Appendice, pp. 53-70. Text of Aladdin and Commencement du texte de Othavie (i.e., Shâwish the Maronite). Total pp. 156.

paratively recent period, by an inhabitant of Baghdad"; adding, however, that an examination of the various MSS. might yet cast some light on the origin of the "interpolated" Tales. On the other hand, I felt convinced (*loc. cit.* p. 105) that all would be recovered, because Prof. Galland was not the man to commit a literary *supercherie*.

While preparing for print the Gallandian tales early in 1887, I visited the Bibliothèque Nationale, where M. Zotenberg, keeper of the Eastern MSS., showed me a late purchase, containing the Arabic originals of Zayn al-Asmâ and "Aladdin"; and he kindly lent me his own transcription of the latter. I need not repeat the proofs which establish the genuineness of the MS.; they are fully detailed in the Foreword (pp. ix.-x.) to my "Supplemental Nights" (vol. iii.). The learned and genial author also favoured me with advance-sheets of his labours, especially his observations upon the MS. journals in the Bibliothèque Nationale (Nos. 15277 to 15280), which Prof. Galland kept till the end of his life. It appeared to me hardly fair to disclose at that time his main discovery, which was simply this: he had cleared up the real origin and provenance of the eight other Gallandian *Histoires* by quoting detailed and transcribed conversations with "M. Hanna (or Anna), Maronite d'Halep," alias Jean Dipi or Dippy, a French corruption of Diab. Now, however, M. Zotenberg has given ample extracts in his Notice, §iii., and has placed the colophon upon the disputed question. The following is Galland's manner of treating the matter:

"Samedi, 25 de May (1709). Le Maronite Hanna ma raconta le conte Arabe qui (suit): Un Sultan de Perse nommé Khosrou-Sohah n'estoit encore que Prince, qu'il se plaisoit fort aux aventures nocturnes, et c'est pour cela qu'il se déguisoit souvent pour mieux réussir à satisfaire son inclination. Il n'eust pas plus tôt succédé au Sultan son père, etc. C'est l'histoire des Deux Sœurs jalouses de leur cadette."

I may here again mention that M. Zotenberg empowered me to offer his 'Alâ al-Dîn to an "Oriental" publishing firm, well-known in London, and that the only result was the "no-public" reply. The mortifying truth is that Oriental studies are now at their nadir in Great Britain, which has long shown so small in the Eastern world. Let me still hope, however, that the *tirage à part*, which is confined, I am told, to 150 copies, will, with the author's permission, appear either in separate form, or, at any rate, among the pages of the Royal Asiatic Society, or of what seems now to be taking its place, "The Kāmashāstra."

CORRESPONDENCE.

"THE OLD SCHOOL OF CLASSICS AND THE NEW."

London: Jan. 30, 1888.

May I make a few remarks in reference to certain criticisms in the last number of the ACADEMY on my paper in the *Fortnightly* for January, entitled "The Old School of Classics and the New"?

It is in substance an attack on Prof. Sayce and others who seem to hold the same views as he does concerning the way in which the study of classics ought to be pursued. It also endeavours to illustrate Prof. Sayce's canons of enquiry and methods of arguing. To do this, it was necessary that I should touch lightly on some points which I treated more fully and more trenchantly four years ago in *Hermathena*. When I said then, "I do not intend to write again on this subject," I meant (and surely was understood to mean) that I would not take any further part in the discussion which was then proceeding in the pages of *Hermathena*. I kept my promise, and did not make any reply to Prof. Sayce's sur-rejoinder, the defiant tone of which showed very clearly how well he appreciated the advantage of having no answer to fear.

Now let me deal with the specific remarks of the ACADEMY. (1) In the *Fortnightly* I wished to avoid as much as possible discussion of grammatical points, and to dismiss as soon as possible a topic which I had already handled. In *Hermathena*, x. 122, I did not omit *δρα*, but

translated the whole passage, which runs, "He sent presents to Delphi not a few, on the contrary, to count (*δρα*) the silver offerings only, a very large number at Delphi are his, but over and above these he presented a vast deal of gold." Plainly *δρα* is not connected with *πλείστα*. The eminent scholars to whom we owe our Greek Dictionary would not have thought of deliberately connecting the words in this passage; but erroneous classifications will creep into a work on so large a scale. Plainly the words could not mean "the most possible" here; and if they did, surely "the most possible" is not a synonymous phrase with "the most part of," so that Prof. Sayce does not err in company with the eminent lexicographers. (2) It seems to me that it is probably quite true that Gyges contributed "a very large number" of silver offerings, and that it is absolutely incredible that he contributed "most" of them; and that Herodotus is not, at any rate, responsible for the latter statement. (3) The passage, "It is with H. as a historian," &c., does occur in Prof. Sayce's original preface, but he repeats it (*Hermathena*, x. 107) in his reply to my strictures, and, therefore, it may fairly be taken by me as applying to them all. Finally, I maintain that if one meets a volume containing the text of three books of Herodotus with footnotes, one may accurately describe it as an edition of three books of Herodotus. But, even though it were not an edition, is that any reason why its author should escape censure for erroneous comments?

R. Y. TYRRELL.

It was never suggested in the ACADEMY that Prof. Sayce should escape censure for erroneous comments. The object of the note was to show, from one example, that his offence is not quite so rank as it has been represented. And, despite Prof. Tyrrell's rejoinder, we are of the same opinion still. For, as to (1), surely Liddell and Scott's connecting *δρα* with *πλείστα* = the most possible, is no less culpable than Prof. Sayce's rendering of *πλείστα* as "the most." (2) Prof. Tyrrell has not met our argument that Prof. Sayce's note remains substantially unaffected when *πλείστα* is translated correctly. (3) Is it altogether fair to maintain that a general statement made in answer to an article containing several charges necessarily applies to each charge, when a special reply is also made to the charge in question? And, finally, may it not be other than accurate to describe a volume containing a text with notes—and also with elaborate excursions—as an edition *simpliciter*, when the author, both impliedly by his title-page and expressly in his preface, has protested that he is dealing "with the history rather than with the language of Herodotus, and with that history only in so far as it bears upon the East"?

THE WRITER OF THE NOTE IN THE ACADEMY.

THE ETYMOLOGY OF "FORS."

Oxford: Jan. 28, 1888.

Prof. Max Müller, in a postscript to a letter published in the ACADEMY on January 28, attempts to show why *Fors* cannot be derived from *ferre*. Appealing to the authority of Brugmann, he says that *√bhar* is an *ē* root, and in Latin this original *ē* remains unchanged before *r*.

May I be allowed to point out that this argument of the learned professor is irrelevant, for no one has ever maintained that the *o* in *fors* was the precise phonetic equivalent of the *ē* in *fero*. It would really seem as if Prof. Max Müller had never heard of the *e*-grades and of the *o*-grades of the "Ablaut" series of the European vowel-system. For a full and clear account of this system I would refer the pro-

fessor to Brugmann's *Vergleichende Grammatik*, pp. 246-261. The fact is there is no difficulty whatever in connecting *fors* and *fero*, the *o* of *fors* being the deep-tone of the high-tone *e* in *fero*. Any number of analogies could be given. Here are a few: *sora*, *sēro*; *mora*, *√mer*; *uorsus*, *uerto*; *mora*, *√mer*; *toga*, *tēgo*; *socius*, *sējuor*; *pondus*, *pendo*; *extorris*, *terra*. For many instances of the occurrence of this deep-tone *o*, see Max Müller's *Lectures on the Science of Language*, ii., p. 352.

The connexion of *fors* with *fero* is held by the following philologists—Brugmann (*op. cit.*, § 285), Curtius, Vanicek, Corssen, Bréal.

A. L. MAYHEW.

THE ISIS, OSENEY, WINDSOR, AND WANDSWORTH.
Nottingham: Jan. 30, 1888.

The only argument in Mr. Birch's letter that affects my proposition is that the word *wāse* is only mentioned four times in "the whole range of Anglo-Saxon horography," those four instances being between the Ock and the Thames-Isis. This may be so, but I do not see that it compels us to admit that *wāse* is an early form of the name Isis. Mr. Birch would apparently argue that if a *ἑκὰς λεγόμενον* in one of these early charters should bear some trifling likeness to a neighbouring river-name, it is proof conclusive that the word in question is an early form of the said river-name, however contrary to phonological laws the equation of the two words might be. Most philologists would prefer to leave the *ἑκὰς λεγόμενον* unexplained rather than adopt such a violent solution. But in the case of *wāse* we have no difficulty as to the meaning of the word; and its identification with the Isis is, as I have said, absolutely forbidden by the evidence of the charters themselves. If Mr. Birch will look over the boundaries, he will see that the *wāse* therein mentioned was in each case at some distance from the Thames-Isis, which river is independently mentioned under its proper name of Thames. If, as Mr. Birch suggests, "those who wrote down the boundaries for the Abingdon charters, being better acquainted with the Thames than with the tributary Wasa, incorrectly used the former word where they should have employed the latter," it is hardly likely that they would have gone on to refer to the Wasa as a feature in the boundaries entirely distinct from the Thames-Isis. This suggestion not only assumes that they wrongly described in a legal document so important a river as the Thames-Isis, but that they also transferred the proper name of this great river to some other object in the perambulation. Such a hypothesis is manifestly untenable.

Mr. Birch's *naïf* reference to Clarke's *British Gazetteer* (1832) for the etymology of Oxford is of interest as showing that the erroneous derivation of Oxford from a non-existent Ouse is much older than some of the correspondents of the ACADEMY who have been struggling for the dubious honour of originating this idea seem to be aware of.

As to the derivation of Oseney, it is clearly enough from the personal name O'sa, gen. O'san. It occurs as O'san-ig in 1006 in the Abingdon History (i. 417, 1); and the same name is recorded, as I believe Mr. Boase has already pointed out, in O'san-léah, A.D. 984, in the same work (i. 392, 22; 393, 3). This derivation is supported by the fact that most of the other islands in the vicinity derived their names from personal names. Thus we have Hinxey from Hengest, Ydeles-ieg from Y'del (= *yδ* + *ila*), Bottan-ig from Botta, Cuddes-ig from Cūð, Cytan-ig from Cyda, Huddes-ig from Hud, Snitan-ig from Snita, and Utan-ig from Uta. Of the *ey*'s cited by Mr. Birch, two, Botley and Iffley ("Gifteleia," A.D. 941-946; *Hist. Mon. de Abingd.* i. 89, 28; "Givetelei"; Domesday Book),

are not derived from *isg*, an island, but from *leah*, a lea, &c. Ox-ey is, no doubt, like Oxford, derived from *oxa*, an ox.

Mr. Birch refers to Prof. Rhys's derivation of *Oseney* from *Ouse*, and of *Ouse* from **ansa*, a deity (= Gothic *ans*, A.S. *ōs*). But Prof. Rhys has withdrawn the latter etymology; and he will, I have no doubt, also surrender the former, since both depend upon an assumption that this learned scholar now admits to be wrong.

I will not follow Mr. Birch into the "Ock" theory, for there is no necessity to reopen this discussion, Mr. Birch's philology being no sounder than that of the other advocates of this theory, and his examples being pretty much the same as theirs. But I am struck with the beautiful simplicity of the system of local etymology sketched by Mr. Birch. It is a very convenient one, requiring no great amount of research, and being as generally applicable as a patent medicine. The plan is to take a part of a local name that one does not understand, and to hold that it is "a generic equivalent of river or water in one of the remotest languages of England," and then to say, if the name of the nearest river cannot be explained as a "dialectical" representative of this "generic equivalent," that the river has changed its name, its original name being so and so. This is delightfully easy; but, since we have necessarily no records of these "remotest languages," it is open to the reproach of transferring local etymology from the domain of fact to that of fiction.

One of Mr. Birch's "generic equivalents" is *wandl*, which he detects at Wenlock, Cheshire(?), on the river Wenlock, which name is, he says, "a reduplicated word comparable with *Wendover* (*dour*, water)"—that is, "Wenlock" is *wandl* + *ock*, both of which are supposed by him to mean "water," and "Wendover" is *wandl* + Celtic *dwr*, "water." Wenlock appears to be a Celtic name (see Rhys, *Lectures*, p.), and as such I dare not attempt to explain it; but the *over* of "Wendover" is merely the Old-English *ofer*, "bank," &c. This name occurs as "Wendovre" and "Waudoure" in Domesday. It is not likely that *dwr* would have assumed the form of *over*. As to the "wend" of this name, Mr. Birch is probably correct in connecting it with the Wandle at Wandsworth; but that stream, so far from deriving its name from this imaginary "generic equivalent" for water, has, I believe, simply derived its name by a back-formation from the settlement of Wandsworth, just as the river Penk at Penkridge (*Panno-crucion*) has been evolved from the name of that village, as Prof. Rhys has shown. As these back-formations are of great interest, and are often very difficult to prove, I will state the grounds for the conclusion that Wandsworth is an instance of this process, even though this leads me somewhat away from Mr. Birch's letter.

The name of Wandsworth occurs in 1376 as "Wandles-worthe" (Riley, *Memorials of London*, p. 401), in 1382 as "Wandales-worth" (*id.*, p. 464), and in 1200 as "Wandles-wurth" (*Rotuli Chartistarum*, p. 178, 28). Our next witness is the Domesday Survey, where the name occurs as "Wendales-orde," "Wandales-orde," and "Wandes-orde." These three forms are of great importance. They establish the facts that in the Survey *wand* and *wend* are identical, and that the liquid *l* was sometimes omitted by the scribes, although there is clear proof that it existed in the name. There is a very early mention of Wandsworth in a contemporary charter of A.D. 693 in *Cart. Saxon.* i. 116, 26. It is there spelt "tō Wendles-wurðe," which is the correct Old-English form. "Wendles"

embodies the gen. sing. *es*, and the nom. must have been "Wendel." This is merely the English form of the name of the Vandals, the nom. sing. "Wendel" being attested by the compound "Wendel-saē," in Alfred's translation of Orosius, i. 1, and in the *Chronicles*, anno 885. But the gen. sing. forbids the explanation of "æt Wendles-wurðe" as "village of Vandals," and it is equally opposed to the explanation "village on the Wandle." The name can, I think, be only derived from the personal name *Wendel, a pet-name regularly formed by taking the first stem of a full-name beginning with "Wendel," such as the "Uendil-bercht" of the *Durham Liber Vitae*, 10, col. 1, Sweet, *O. E. T.*, No. 97.

It may be objected that this evidence is not strong enough to upset the derivation from the river Wandle. But a consideration of other local names embodying the name "Wendel" will, I think, overcome this objection. It must be remembered that there is no river Wandle at any of these places, and a derivation from such a river-name is therefore inadmissible. Windsor is another of Mr. Birch's examples. The early forms of this name are "Windles-ora," A.D. 1061 (*Chron. E.*), and "Wendles-ore," "Windles-ora," A.D. 1065 and 1066 (*Cod. Dipl.* iv. 165, 9; 178, 19). In Domesday it is "Windles-ores," so that we have here another example of the omission of the liquid after *d*. The change from "Wendel" to "Windel" may be illustrated by the twelfth-century name "Windil-gerus" in the *Durham Liber Vitae*, 6, col. 1. The *ger-us* here does not represent the Old-English *gār*, but the corresponding High-German *ger*.^{*} Probably the Surrey "Windlesham," the Durham "Windle-stone," and the Dorset "Windle-ham" are of the same origin as Windsor, but I am unable to cite any early forms of these names. In the charters we have, A.D. 985, "Wandles-cumb" (*Cod. Dipl.* vi. 120, 5), and A.D. 769-85, "Uendles-clif" (*Cart. Sax.* i. 341, 11, 34).[†] In Domesday we find "Wendles-berie," "Wendle-berie," and "Wending-berie,"[‡] Wellingborough, Northants; "Wandes-berie" (*æt Wendles byrig*), Wendlebury, Oxfordshire; "Wanddes-lei" (*æt Wendles léage*), Wandsley, Notts; "Wandes-treu" (*æt Wendles trowe*), Wandstrow, Somerset;§ "Wandres-laga"|| (*æt Wendles léage*), Wensley, Yorkshire; and "Wandes-lage" in the same county, which I

^{*} That is, the name is of Norman introduction. It was probably originally "Wandel-gér" (*cf.* the Lotharingian "Wandelmus" in Ordericus Vitalis, ii. 139, 8, and the forms of the name of S. Wandrille. Hence the changes here are *wandel*, *Wendel*, *Windil*).

[†] In this case the name of the river running at the foot of the cliff is recorded. It was the Tyne, so that it is plain that "Wendles-clif" did not derive its name from the river-name.

[‡] This may be explained either as embodying the possessive or adjectival suffix *ing*, or as standing for "æt Wendlinges-byrig," where Wendling would be, like Wendel, a pet-form of a full name. In either case Wendling-berie and Wendles-berie are derived from a man whose full name began with Wendel. Wendling has, however, overridden the shorter form.

[§] *Cf.* "Wandes-traw," A.D. 1065; *Cod. Dipl.* iv. 164 14 (dubious charter).

^{||} "Wandres" for "Wandles" is caused by the French preference for the lingual *r*, as in the familiar instance of *rossignol* = Latin *lusciniola*. Similarly, S. Wandrille is called "Guandre-gisilus" (i. 138-11; ii. 347, 7) and "Wandre-gisilus" (ii. 5, 2; 10, 5; iii. 84, 19; 104, 13) by Ordericus Vitalis, the name being originally "Wandle-gisil." An even more pertinent example is Ordric's spelling of Windsor or rather "Windles-ora." He Latinises this as "Windres-oria," acc. pl. (iii. 381, 12), and as "Windres-oria," dat. pl. (ii. 199, 21). *Cf.* also Wandrei and Wande, Cambridgeshire, in Domesday, which probably represent *æt Wendles-isge*.

am unable to identify. Geoffrey of Monmouth connected Wandlebury Hill, Cambridgeshire, with the Vandals, but it more probably represents "Wendles beorh," and thus has the same origin as the above names.

The evidence of these forms seems to me to prove that Wandsworth is derived from the personal name *Wendel, and therefore the river Wandle must be a back-formation from the name of that township.

W. H. STEVENSON.

THE MYTH OF CUPID AND PSYCHE.

London: Jan. 11, 1888.

A correspondent in New Zealand sends me the following note on Canon Taylor's theory that the story of Cupid and Psyche is in origin a Babylonian lunar myth. My correspondent argues that the incidents in the tale do not fit the phenomena. But I understand that the learned think this defect makes no difference. However this may be, Mr. Atkinson's remarks on lunar aspects in New Zealand are interesting.

A. LANG.

Nelson, New Zealand.

In the ACADEMY for June 18, Canon Taylor summarises the main points of this tale regarded as a lunar myth. The sun-lighted part of the moon, at first appearing as a slender crescent, is Psyche; the earth-lighted part is her lover Cupid, who, after the first few nights, vanishes altogether; Psyche, having accidentally dropped burning oil on his shoulder, made a scar which is visible "as the great spot on the right shoulder of the full moon," while on its lower limb may be seen the mark she made on his thigh in trying vainly, though a little roughly as it seems, to detain him; and, lastly (omitting other particulars), she goes down to Hades in search of her lost lover, and the lunation ends.

May an outsider suggest that this explanation seems in part not self-consistent, and seems, moreover, to succeed, so far as it does succeed, by ignoring half the material facts?

I do not know what are the canons of "the method of orthodoxy"—a method Mr. Lang is accused of not pursuing, but there must be among them some equivalent of the old legal saw "Allegans contraria non est audiendus"; and the interpreters of the myth, I submit, ought not to say that Cupid, having "disappeared altogether," is still present in, or as, the full moon to show his scars. Moreover, whatever the features on the moon may be which are taken to represent his two wounds, it is clear that they must be visible either before or after, probably both before and after, full moon—that is *ex hypothesi* on Psyche herself.

But the greater difficulty is that the theory ignores the obvious and material fact that the phenomena of the waxing moon recur in the waning moon, only in an inverse order. There is indeed authority for saying that the earth-light is even stronger on the waning than on the crescent moon. Cupid's visits, therefore, are all repeated; the scars, whosoever they are, vanish; and Psyche, having resumed "her slim girlish figure," disappears, as she first appeared, with her lover in her arms; and so the visit to Hades, in search of one not lost, becomes at least unnecessary, and, if still insisted on, should be presented as an incident in the wedding journey.

I may add that where the sky is translucent, as it is here (and I presume in Babylon), it seems rather a misuse of the word to speak of the earth-lighted part of the moon as *dark* during the first and last two or three nights of the lunation, or rather of the moon's visibility. It is then, not, of course, comparable to the other part in brightness, yet strongly golden.

A. S. ATKINSON.

* I think that this is Wandsworth, although there is no evidence on the Roll to prove this.

STRONG PRETERITES.

Cambridge: Jan. 28, 1888.

Many "strong preterites" similar to "rew" for "rowed" seem to occur about Cambridge. An old gardener here (an Essex man) uses "mew" (*myoo*) and "snew" (*snwoo*) for "mowed" and "snowed." A former cook of mine (a Norfolk woman) used to say that my cockatoo "shruck" and "scruch" at her. A middle-class tradeswoman in the town informed my wife that certain fish were better "frew" (*froo*) than boiled; and another gave it as her opinion that the character of servants in later life depended upon how they were "roor" ("reared") at home.

WM. WRIGHT.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Feb. 6, 5 p.m. Royal Institution: General Monthly Meeting.

5 p.m. London Institution: "The Asmonaeans," by the Rev. W. Benham.

8 p.m. Royal Academy: "The History of Architecture," V., by Mr. G. Aitchison.

8 p.m. Society of Arts: Cantor Lecture, "Yeast: its Morphology and Culture," II., by Mr. A. Gordon Salomon.

8 p.m. Victoria Institute: A Paper by Prof. Maspero.

8 p.m. Aristotelian: "Wundt's Theory of Apperception," by Mr. J. S. Mann.

TUESDAY, February 7, 8 p.m. Royal Institution: "Before and after Darwin," IV., by Prof. G. J. Romanes.

8 p.m. Society of Arts: "British Columbia," by Mr. H. C. Beeton.

8 p.m. Biblical Archaeology: "Pronominal Forms in Egyptian: their Relation to Semitic," by Mr. Le Page Renouf; "The Raising of the Two Colossal Statues of Ramesses II. at Memphis," by Major A. H. Bagnold.

8 p.m. Civil Engineers: "The Alexandra Dock, Hull," by Mr. A. O. Hurtzig.

8.30 p.m. Zoological: "The Herpetology of the Solomon Islands," III., by Mr. G. A. Boulenger; "Some New Lepidoptera from Kilima-njaro," by Mr. Arthur G. Butler; "Certain Points in the Visceral Anatomy of the Lacertilia," by Mr. Frank E. Beddard; "The Birds' Nests Caves of Northern Borneo," by Mr. D. D. Daly.

WEDNESDAY, Feb. 8, 8 p.m. Society of Arts: "The Continuation of Elementary Education," by Mr. W. Lant Carpenter.

8 p.m. Geological: "Some Remains of *Squatina Cranei*, sp. nov., and the Mandible of *Belonostomus cinctus*, from the Chalk of Sussex," by Mr. A. Smith Woodward; "The History and Characters of the Genus *Spiastrea*, D'Orbigny (1849), and the Identity of its Type Species with that of *Glyphastraea*, Duncan (1837)," by Dr. George Jennings Hinde; "The Examination of Insoluble Residues obtained from the Carboniferous Limestone at Olifton," by Mr. E. Wethered.

8 p.m. Microscopical: Annual Meeting, Presidential Address by the Rev. Dr. Dallinger.

8 p.m. Shelley Society: "Shelley's Women," by Mr. W. K. Parkes.

THURSDAY, Feb. 9, 2.30 p.m. British Museum: "The Languages and Races of the Babylonian Empire," II., by Mr. G. Berlin.

3 p.m. Royal Institution: "Early Secular Choral Music," I., by Prof. C. H. H. Parry.

8 p.m. London Institution: "Primitive Natural History," by Prof. G. J. Romanes.

8 p.m. Royal Academy: "The History of Architecture," VI., by Mr. G. Aitchison.

8 p.m. Society of Arts: "Etching and Mezzotint Engraving," by Prof. H. Barkoner.

8 p.m. Telegraph-Engineers: "Alternate Current Transformers, with Special Reference to the best Proportion between Iron and Copper," by Mr. Gilbert Kapp.

8 p.m. Mathematical: "The Volume generated by a Congruency of Lines," by Mr. R. A. Roberts; "The Free and Forced Vibrations of an Elastic Spherical Shell containing a given Mass of Liquid," by Mr. A. E. H. Love; "Isoscelians," by Mr. R. Tucker.

8.30 p.m. Antiquaries.

FRIDAY, Feb. 10, 7.30 p.m. Civil Engineers: Students' Meeting, "Arched Ribs and Voussoir Arches," by Mr. H. Medway Martin.

8 p.m. Society of Arts: "The Work of the Afghan Frontier Commission," by Capt. Mansfield.

8 p.m. New Shakespeare: "An Elizabethan Book-seller," by Mr. Sidney L. Lee.

9 p.m. Royal Institution: "Safety Lamps in Collieries," by Mr. W. H. Precoe.

SATURDAY, Feb. 11, 8 p.m. Royal Institution: "Experimental Optics," IV., by Lord Rayleigh.

SCIENCE.

Verner's Law in Italy: an Essay in the History of the Indo-European Sibilants. By R. Seymour Conway. (Trübner.)

MR. CONWAY'S essay is, if I am not mistaken, the first published result of the revised regulations for the Cambridge Classical Tripos. It was written early last year as a dissertation for the Language Section of that Tripos (part ii.), and is now issued in a somewhat expanded form. The regulations do not apparently require publication, as in the case of almost all prize essays; but Mr. Conway has been well advised to print his dissertation.

He was fortunate in selecting a subject which really needed working out on the lines of modern science; and it cannot be fairly questioned that he has made some valuable contributions of his own to the better understanding of it. As might be expected from a young scholar, trained in the best English school of philology, the whole investigation is based upon the principles of Brugmann and Osthoff. Indeed, Mr. Conway knows his *Grundriss* (as he familiarly calls the most recent treatise of the former scholar) almost too well for the comfort of his readers, who will find some stumbling-blocks in their way, if they are not quite so well acquainted with Brugmann's line of enquiry and method of expression. It sometimes happens, too, that Mr. Conway has, by the cumbrous structure of his sentences and the undue compression of his thought, made the way of his reader needlessly rough for him. Some of the time spent on revision might well have been devoted to securing somewhat more ease and clearness of form. But this is of little importance in comparison with the real value of the subject-matter. Mr. Conway has, in the first place, collected with great thoroughness the facts of the letter-changes which he has to discuss, grouping anew those familiar to every student of Latin, and adding to them, with a completeness not previously attempted, the answering phenomena in other Italic dialects, especially Umbrian and Oscan. Secondly, he has endeavoured to give a more thoroughly scientific explanation of these facts by determining the conditions under which the regulative laws operate, and the nature of the interfering causes which at first sight give an appearance of irregularity. The task evidently calls for a very rigorous procedure both in phonetics and in etymology, and a thorough knowledge of the history of the Italian dialects. It is only just to say that Mr. Conway is fully equipped for his task; and that, although on some points his case is not quite made out, it would not be easy to find indications of incompetent knowledge or unscientific method.

Verner's law, which incidentally explains the change from *s* into *r* in English, is, or ought to be, by this time not less familiar than Grimm's even to the schoolboy. But I do not know that any attempt has been made to apply it systematically to the similar phenomena in Latin. The objection may have been felt that there are no traces of its action here on the other fricatives, as in the Teutonic languages. But there seems to be no valid reason why its range should be the same in the two groups; and each may well be examined by itself.

The laws which Mr. Conway believes that he has discovered are the following:

"A. Medial *s* between vowels (1) following an unaccented syllable (*a*) become voiced (*p*) in pro-ethnic Italic, and in Latin after the first change of accent; and (*b*) further became *r* in Latin, Umbrian and other rhotacising dialects, while it was kept in Oscan and other non-rhotacising dialects; (2) following an accented syllable (*a*) was kept in all dialects, (*b*) except in Latin and Faliscan, where it became *r* even when following an accented syllable, if it was (*i*) followed by *i* or *u*, and (*ii*) preceded by *i* or *u* or a long vowel or diphthong. B. Medial *s* before nasals, (*a*) when following an unaccented syllable was lost without compensation; (*b*) when following an accented syllable (*i*) arising before and (*p*) after the period of rhotacism was lost with compensatory lengthening of the preceding vowel; (*ii*) arising during the period of rhotacism became *r*."

For the period of rhotacism Mr. Conway accepts, and supports by some fresh evidence, the generally received date 450-350 B.C.

The importance of the part which the accent plays in this theory is evident. It is very generally admitted that the primitive system of accentuation had been completely abandoned during the time of the Italic unity; and that a practice had sprung up, to which there are many analogies in English, of accenting all independent words on the first syllable. How and under what conditions this system gave way to that which we find in literary Latin, so that *existimo* became *existimo*, is a question on which very little light has as yet been thrown. Mr. Conway believes that the facts of rhotacism demonstrate an intermediate stage, when the accent had become bound by quantity in so far that it could not go back behind a long syllable in the penult, or, if the penult was short, behind a long syllable in the antepenult, but could go back to the fourth from the end or to the initial syllable, if all that intervened between it and the last were short. Thus *existimo* was no longer possible, but *caeruleus* was admitted. The evidence of this is found in the fact that there are no words which necessitate the assumption of the earliest accent, and none which need the supposition of the latest, while there are many which exclude in some instances the earliest, in others the latest, all, however, admitting the intermediate. Individual cases are open to discussion, and longer familiarity with the theory may show weak places in it; but the method of proof is rigidly scientific, and Mr. Conway is fully entitled to the credit of a good working hypothesis.

With regard to the exceptions which stand in the way of admitting Mr. Conway's general canons of rhotacism, it is impossible to feel that all doubt has been removed. To assume that *ara* has been affected by the analogy of *arere* is certainly somewhat strained, especially as we have no indication that Varro's derivation was due to a popular feeling rather than to a grammarian's device; to suppose that *aerum* was dragged after *aurora* because of the "picturesque connexion between the two, which was sure to be kept up," is hardly natural to anyone not defending a thesis; and the treatment of *virus* is far from convincing. But it would be premature to regard these and a few more exceptions as fatal; satisfactory explanations may yet be found, and

the attractiveness of the theory is such as to well repay the search for them.

It is impossible to discuss within the present limits the numerous incidental points of interest arising in the main discussion, or the careful and suggestive appendixes. The essay deserves a cordial welcome, not only for what it contains, but also as a promise of excellent work in the future. Once more a gentle protest must be raised by expressing the hope that a scholar who has induced his printers to give us "connexion" will prevail upon them for the future to spare us "disyllable."

A. S. WILKINS.

OBITUARY.

ANTON DE BARY.

ANTON DE BARY, whose death occurred on January 19, has been for the last twenty years the most prominent figure in the botanical world. He has laid the very foundations of accurate knowledge of more than one branch of botany, and has proved himself the true successor of Robert Brown and Hugo von Mohl.

He was born at Frankfort on January 26, 1831, and having entered the University of Berlin came under the influence of the celebrated Alexander Braun. He began at once the work of original research; and, in his *Untersuchungen über die Brandpilze*, published when twenty-two years of years, there is no trace of a prentice hand. The next memoir of note was his *Untersuchungen über die Familie der Conjugaten*—an investigation full of interest to the student of the development of sexuality in lower organisms. These researches established his reputation for brilliant work; but when, in the year following (1859) the publication of the last memoir, there appeared *Die Mycetozoen* (second edition, 1864), de Bary came at once into the front rank of biologists. In this remarkable paper there was told the life-history of these organisms, which have continued to fascinate everyone since. There is hardly a biologist of note of the present generation who has not at some time or other "taken up" the Mycetozoa. Are they animals or plants? Or is it profitable to put the question in that form at all? They had been considered fungi of high organisation, until at one stroke they sank so low in the scale of classification that the botanist likes to think of them as beyond the frontier line altogether. Next followed the *Recherches sur le développement de quelques Champignons parasites*, in which our knowledge of Peronosporae especially was much extended. Next *Die Fruchtentwicklung der Ascomyceten* gave rise to much discussion—limited, however, to botanists. In the meantime de Bary and Woronin had established the *Beiträge zur Morphologie und Physiologie der Pilze*, consisting of a series of memoirs coming out at uncertain times and continued down to a few years ago. In 1866 his handbook, *Die Morphologie und Physiologie der Pilze, Flechten und Myxomyceten*, represented the first serious attempt to establish order in the vast literature of mycology. It was a splendid performance; and the impetus it gave to research, and, better still, the direction, cannot be overvalued. Numerous memoirs followed. De Bary became editor of the *Botanische Zeitung*, a weekly journal, in addition to his other labours, and enriched it with much of his own work. Among the papers published during this time was the account of his investigation of the potato disease, which attracted much notice in this country. A great labour was carried on during these years and finally saw the light in 1877—his *Vergleichende Anatomie der Vegetationsorgane der Phanerogamen und Farne*—a book representing enormous

labour as well as insight of the highest order. In 1878 he published his charming primer of botany; and another period followed in which papers now and then appeared—for example, that on apogamy—and during which he was perfecting what was nominally a second edition of the great book on fungi, but turned out to be in point of fact a new work. In 1884 appeared the *Vergleichende Morphologie und Biologie der Pilze, Mycetozoen und Bacterien*, which, in many respects, stands not only above his own previous work but well in advance of anything in the contemporary literature of botany. In 1886 his *Vorlesungen über Bacterien* came as an especial pleasure to those who wished to see this group dealt with by an accomplished naturalist.

It would be interesting to point out in greater detail than these columns permit the direct influence of de Bary's work on agriculture and on medicine, as well as on the progress of botany. His method of cultivation of disease organisms has been the one by which all true progress has been made in that study.

During these years of productive labour de Bary held the post of professor of botany, first at Freiburg, then at Halle, and, since the war, at the new German University of Strassburg. Both in Germany and in this country numerous pupils are striving to carry on his work in the spirit of their master. His remarkable personal kindness and delightful humour inspired those who have had the privilege of working under his direction with feelings of devotion not only to botany but also to Anton de Bary.

GEORGE MURRAY.

DR. F. V. HAYDEN.

DR. HAYDEN, the well-known American geologist, whose death has been recently announced, was born in Westfield, Massachusetts, on September 7, 1829. His early training at Albany, N.Y., prepared him for a medical career, and during the war he acted as a surgeon and medical inspector. His own tastes, however, inclined towards geology; and he acquired considerable reputation by his exploration of the Yellowstone and Missouri rivers. As head of the Geological and Geographical Survey of the Territories he displayed remarkable enthusiasm, and published in rapid succession a series of noble volumes and maps, which were generously distributed to all scientific centres. For many years he held the Professorship of Geology and Mineralogy in the University of Pennsylvania, but was led to resign this position when the administration of the Survey demanded his entire attention. Dr. Hayden will be long remembered in the United States, if only for the action he took in securing for the people the Yellowstone National Park.

CORRESPONDENCE.

BISHOP WORDSWORTH'S EMENDATION OF "PHARS." IX. 567.

Woolleigh, Mayfield, Sussex: Jan. 24, 1888.

Tempting as is the late Bishop of Lincoln's most beautiful emendation of Lucan, *Phars.* ix. 567, on which Mr. Robinson Ellis has set his imprimatur (*ACADEMY*, January 21), there is one difficulty in the way of accepting it which my defective reading does not enable me to remove. Are there any Stoic parallels to the sentiment which it puts into the mouth of Cato? Pompey, when mortally wounded (viii. 629), assures the gods that he is happy, and that none of them can deprive him of this. Here is sound Stoical doctrine—the familiar paradox that virtue and blessedness can be no more than perfect. A wise man who dies in the moment of attaining them is the equal of Jove who possesses them eternally, because a perfect moment is equal to a perfect eternity. Cato,

in the ninth book, is asking Labienus—is the oracle of Ammon to be consulted as to the truth of a number of Stoical commonplaces, among others, according to the MSS.: Whether life, even long life, be nothing [apart from virtue]? Whether the age [to which one lives virtuously] can matter? And two lines later—Whether it be enough to will what is praiseworthy? The phrase, as the MSS. give it, is both pretentious and slovenly; but the sentiment suits Cato and the context. The addition of a single letter gives an exquisite phrase of the kind that Lucan aimed at; but if long life only puts off true happiness, praiseworthy desires and unsuccessful endeavours are not enough. No doubt a noble death itself is happiness according to Lucan, but the Stoics certainly held that happiness was possible at any and every moment in this life. To accept the emendation we want to know that Lucan Platonised, and that he could contradict himself in the course of three lines without calling upon us to admire the feat.

G. A. SIMCOX.

SCIENCE NOTES.

THE medals and funds to be given at the annual meeting of the Geographical Society, on February 17, have been awarded as follows: the Wollaston Medal to H. B. Medlicott; the Murchison Medal to Prof. J. S. Newberry, of New York; the Lyell Medal to Prof. H. Alleyne Nicholson; the Wollaston Fund to John Horne; the Murchison Fund to E. Wilson, of the British Museum; the Lyell Fund to Arthur H. Foord and T. Roberts.

In the February number of the *Journal of the Anthropological Institute* there are at least two papers of unusual interest. One of these is a thoughtful sociological study of the natives of the Lower Congo, by Mr. R. C. Phillips, who has lived among them for many years; the other is Canon Isaac Taylor's paper on "The Origin and Primitive Seat of the Aryans."

PHILOLOGY NOTES.

WE congratulate the editors of the *Classical Review* (David Nutt) on the bound volume which signalises the completion of their first year. They have succeeded in redeeming, in a fuller measure than might have been anticipated, the ambitious promise of their prospectus; and they have thrown in an index, compiled by Mr. W. F. R. Shilleto, which is in itself a marvel of intelligent labour. The double number for February has also just appeared. We observe that the distinction between original articles and reviews has practically disappeared—through no departure from the original plan, but by raising some of the reviews to the rank of original articles. Mr. Jevons, while noticing Gruppe's work on Greek mythology in its relation to Eastern religions, makes a valuable contribution of his own to a question that is now much to the front. We would also specially mention Mr. Tozer's account of a visit to the native land of Horace, Mr. Wheeler's letter on archaeological schools at Athens, and Prof. Jebb's rendering into Greek iambics of the two most famous stanzas of Shelley's "Adonais." We venture to quote the first lines:

Ἰσοῖς δ' ἔμπερος ἐμπεσὼν ἔφη μορος
δόξης ἀμολοῖς παθίκου κληρουχίας.

THE new number of the *Journal of Philology* (Macmillan) contains two papers on Aeschylus, by Mr. Macnaghten and Mr. Housman; notes on Propertius, by Mr. Paley; on Juvenal and Martial, by Prof. J. E. B. Mayor; on the *Aetna*, by Mr. R. Ellis, with an appendix of emendations on the *Opuscula Vergiliana*, contributed by Prof. Unger, of Halle; on the Numasios

Inscription, by Mr. H. D. Darbishire; on the date of Calpurnius Siculus (a very important article), by Mr. R. Garnett; on some passages of Nonius, by Mr. Onions; *Adversaria*, by Prof. Nettleship; and some lexicographical notes, by Mr. Haverfield.

MEETINGS OF SOCIETIES.

UNIVERSITY COLLEGE LITERARY SOCIETY.—(Monday, January 16).

T. G. FOSTER, Esq., president, in the chair.—Mr. P. Roscoe being unable to read his promised paper on "Prof. Wilson," Mr. Vodoz read one on "Rabelais." He began by pointing out the intimate relation that existed between the Renaissance and the Reformation, the Renaissance giving a new strength to the Reformation and preparing its triumph. He went on to show how greatly these two movements were favoured in France, both by the indifference with which they were met at court, and by the policy of a king who had no beliefs, and whose power was under no firm control. Among the first who saw that the old society had "outlived" itself, and whose life's work it was to bring about the formation of a new one, he would place François Rabelais, and Jean Calvin. Rabelais, the type of the Renaissance, played, as it were, into the hands of Calvin in dealing by his satirical wit the strongest blow that had ever been struck in France against the rule of ignorance and superstition. Having given a short account of his life, Mr. Vodoz showed how Rabelais was a true representative of the Renaissance, by his erudition, his freely cultivated mind, and his endeavours to further the study of classical literature. His enemies seemed to have agreed in giving him the character of a cynical mocker. Mr. Vodoz contended that he was most earnest at heart. The mask of folly he wears being but a shield, behind which he hides to throw his darts with impunity. Beautiful page, judicious thoughts, pleasant scenes even, abound in the strange book which was produced by his power of imagination, entirely bent on a sharp criticism of human nature and of society. A short account was then given of that book, "The Life of Gargantua and the Heroic Deeds of Pantagruel," with quotations tending to show the profound knowledge which Rabelais possessed of the heart of man, and that only a writer filled with the highest aspirations for truth and love could place in the mouth of his heroes such words as those of Pantagruel "in his prayer to God, before a fight with 300 giants." If Rabelais refused to stand by Calvin, it was not to fall into the other extreme, the Church of Rome; but he would be independent of either. He stands alone in his century, alone he represents the period of transition in literature.

SOCIETY OF ANTIQUARIES.—(Thursday, January 19.)

A. W. FRANKS, Esq., V.-P., in the chair.—Mr. R. S. Ferguson exhibited the seal of Sir Joseph Cradock, Commissary of the Archdeacon of Richmond, 1654. The seal bears a seated figure in a royal gown holding a pen. Mr. Scharf exhibited a large picture of four men playing cards, traditionally supposed to represent Lord Burleigh and his friends—an attribution which has nothing to support it. The picture at one time belonged to Lord Falkland, was known to Horace Walpole, and is now in the possession of Mr. Colnaghi. It is described in *Archæologia*, vol. viii. The painting, which is an oaken panel, was at one time ascribed to Zuccherò, but is more probably by Cornelius Ketel. It has been repainted to a considerable extent. Gold and silver coins lie on the table, many of which are of the time of Elizabeth, and none later.—Mr. Robert Day, junr., local secretary for Ireland, described four dug-out boats, discovered in Lough Erne and the Claddagh river, of which the smallest measured 22 ft. 6 in. by 2 ft., and the largest, 55 ft. by 2 ft. The workmanship showed no trace of metal tools.—Mr. Peacock contributed an account of a further portion of the list of Church goods destroyed as superstitious in Lincolnshire in 1566, which has recently been discovered in the Episcopal registry at Lincoln.

ROYAL ASIATIC SOCIETY.—(Monday, January 23.)

SIR THOMAS WADE, president, in the chair.—Sir Monier Williams laid before the society some letters from Jain Pandits. In doing so, he remarked that most oriental scholars were now of opinion that Vardhamana Mahāvira (Nāpātha) and Gautama Buddha were contemporaries. The Jains were an independent sceptical sect, probably a little antecedent to the Buddhists; at any rate, a sect of Niganthas or Digambaras (naked ascetics) existed before the Buddha's time. Gautama Buddha's main idea was that liberation from the cycle of rebirths (Samsāra) was to be by means of knowledge, evolved out of the inner consciousness through meditation and intuition; whereas Mahāvira's main idea was that liberation came through bodily mortification. The term Jina (conqueror) was used in both systems; but the Buddha was a Jina through meditation, while the Jain teacher was a Jina through austerity. The Jains had a notion that sin and shame went together, and that if they got rid of clothes they would get rid of sin; hence Mahāvira and his followers walked about with the air or sky (Dig) as their sole covering. On the other hand, one of the chief points on which the Buddha insisted was that of decent clothing. Nakedness (says the Dhamma-pada) cannot purify a mortal who has not overcome desires. It seemed possible that Devadatta, Gautama's cousin and great rival, belonged to a Digambara sect, opposed to the Buddha on this point; for in ancient sculptures he was represented nude or semi-nude, in close proximity to the robed Buddha. Even among the Digambaras Jaina, a protesting party arose, called Svetambaras, clothed in white robes. This separation of the two chief Jain sects must have taken place (according to Dr. Bühler) some time before the first century of our era; probably the Digambaras preceded the Svetambaras, though each claimed to be the oldest. Svetambaras objected to the Digambaras naked images of the twenty-four Jinas. They also admitted women into the order of ascetics, which the Digambaras never did. They also had distinct sacred books called Angas, Upāṅgas, &c., the composition of which is referred to the end of the fourth or the beginning of the fifth century B.C. The Digambara sacred books were of a later date (composed probably in the fifth or sixth century after Christ); but the Digambaras maintain that the Svetambara canon is spurious. The Jains called their twenty-four prophets Tirthankaras "ford-makers"—i.e., making a way across the ocean of transmigration. The Buddhists use this term for a heretical teacher. Jains had no stupas or dagabas for relics. They believed in the existence of souls, which the Buddhists denied. Jaina metempsychosis extended to inorganic matter. Their "three jewels" were right belief, right knowledge, right conduct. They laid even greater stress on the prohibition "kill not" than the Buddhists, and they made good and evil (or merit and demerit, Dharma and Adharma) two of their six fundamental eternal principles.—Mr. Ranj Lal, of Delhi, a member of the Jain community, read notes on some of the modern practices and tenets of the Jains.—Sir William G. Davis made a statement on the former differences between the Jains and the Vaishnavas at Delhi, and on the manner in which those differences had now been happily removed.—A discussion followed.

BROWNING SOCIETY.—(Friday, January 27.)

THE REV. MR. HARRISON in the chair.—Dr. Furnivall (president) announced that the Olympic Theatre had been engaged for the afternoon of Thursday, March 8, for a performance of Mr. Browning's "Blot in the Scutcheon," Miss Alma Murray and other well-known actors lending their assistance. He then proceeded to read a paper on "Abt Vogler," by Miss Ormerod. The paper dealt rather with the biography of the man than with the use he served in the poem by Browning, and was intended to supply members with fuller information as to his personality and surroundings than they already possessed. For this purpose Miss Ormerod had been requested to make an abstract of Dr. Carl Emil von Schachhäutl's *Life of Abt Vogler*, and this formed the substance of the paper. Dr. Schachhäutl, who was born in 1803, eleven years before Vogler died, collected the details of his life. He knew many of his friends, and had met only

one man hostile to him, and that was an organ-builder. Vogler was born in a suburb of Würzburg, lived a wandering, and to some extent, adventurous life, and died in 1814, at Darmstadt, loaded with honours. He had many brilliant qualities, among them an extraordinary gift for languages; and he himself relates, in a letter to his native town, that during five months of his travels in Spain, Africa, and Greece, he had confessed 1,500 persons in twelve different languages. Added to his more dazzling gifts, he had untiring industry, indomitable courage, and fervent piety. The paper then gave details of the many vicissitudes of his life, among the most interesting incidents of which were the enthusiastic admiration of his pupils, Weber and Meyerbeer, and his friendly rivalry with Beethoven at a musical *soirée*, when each extemporised alternately on a theme given by the other. His musical compositions have not stood the test of time, although his opera, "Castor and Pollux," was received with great appreciation during his life. But he founded three schools of music, in Mannheim, in Stockholm, and in Darmstadt, and there is a touch of the highest genius in his attempt to render in music the impression made upon his mind by pictures. His skill lay in extemporisation, in reforming the mechanism of organs, and in the construction of a portable concert-organ, which he called the orchestrion. As a reformer of organs he met with much jealousy and suspicion, and had to suffer from the ludicrous accusation of pilfering organ-pipes. He took extraordinary pains to render accurate the simplification of organ-mechanism; and his plan still survives among organ-builders, and is known as the Abt Vogler plan. He himself admitted his deficiency in the gift of melody, and his wandering life was hostile to greatness.—The chairman recorded the thanks of the society to the writer of the paper. The relation of Browning's poems to the life lies expressed in the title, where he is indicated as extemporising on an instrument of his own invention. It is as a reformer frustrated, but confident of after-recognition that he serves Browning's aim.—Some members expressed disappointment that the poem was not more directly handled in the paper.—Dr. Furnivall explained that it was just such a biographical paper that was asked for. Abt Vogler suited Browning's desire to give expression to the momentaneity of music.—Dr. Berdoe called attention to the strong similarity of thought in the fourth canto of the poem and some lines in "Paracelsus."—Mr. Slater considered the paper valuable as giving definite knowledge of the man.

FINE ART.

GREAT SALE OF PICTURES, at reduced prices (Engravings, Chromos, and Lithographs), handsomely framed. Everyone about to purchase pictures should try a visit. Very suitable for wedding and Christmas presents.—Geo. Reed, 115, Strand, near Waterloo Bridge.

THE ROYAL ACADEMY.

III.

THOUGH the exhibition contains a sufficiently complete series of works by the English masters of the last, and the first years of the present, century, the show is by no means a very representative or a very captivating one. It cannot be said to exemplify this year—as does so signally the rival show at the Grosvenor Gallery—the most sympathetic qualities of our school.

The Earl of Jersey's so-called "Portrait of a Sculptor" (119), by William Dobson, is a fine performance in the manner of the painter's master, Van Dyck, having, however, a certain individuality which agreeably distinguishes it from mere school work. The physiognomy of the anonymous artist (or, perhaps rather, *dilettante*) portrayed is stamped with that peculiar sensitiveness and melancholy which appear as the distinguishing characteristics of so many attractive personalities at that time of uncertainty and foreboding to which the picture belongs. Sir Joshua Reynolds is represented by that imposing family piece, "The

Marlborough Family" (120), which is one of the few remaining relics of the former pictorial splendours of Blenheim. It must have been, and, indeed, still is, in many parts, a splendid piece of colour. Some of the individual portraits, too, are excellent, and especially the group of three children in the foreground, which has all the delicious freshness and *espieglerie* of Sir Joshua's best manner, notwithstanding the characteristic affectation of the attitudes. Yet the master—evidently seeking to emulate Van Dyck's performances in the great Wilton family-group and other similar works—has not succeeded better than did his prototype in giving real dramatic cohesion to his picture, or in removing the uncomfortable impression that we have here a gathering of persons going through the awkward process of making believe that they are not posing, but have been caught by the painter in attitudes of unconscious dignity. An unusually splendid and well-preserved specimen of the system of colouring which distinguished the maturity of the same artist is the otherwise not very expressive or interesting full-length of "Dr. Ash" (39), contributed by the Governors of the General Hospital, Birmingham. This glowing, if a trifle hot, harmony of many reds and tawny hues, shows Sir Joshua rather in his Rembrandtesque than in his Venetian phase.

Nothing here adequately sustains the reputation of Gainsborough, or shows to the full his unequalled sprightliness and charm, save, it may be, the too hastily executed "Portrait of the Hon. Mrs. Henry Fane" (27), lent by Mr. Thwaites. This—if it cannot, from a technical point of view, take high rank among Gainsborough's achievements—is a characteristic presentment of the female dandy, distinguished rather by an air of supreme fashion than by a real refinement or an unaffected dignity of bearing. Romney is this year hardly seen to better advantage at the Academy than Gainsborough, though no less than eight works bear his name. The only portrait which reveals to the full his peculiar qualities of distinction and undemonstrative elegance is that of the Earl of Westmoreland (122) (lent by the Earl of Jersey). Were it not for a certain characteristic opaqueness and harshness of colour in the costume and accessories, this reposeful, yet vivacious, rendering of a handsome young nobleman, all too conscious of his high lineage and personal attractions, would be worthy to rank with Gainsborough's famous "St. Leger" at Hampton Court, and with Reynolds's portraits of the youthful Prince Regent. No English portrait here is more remarkable than Sir Henry Raeburn's "Lady Raeburn" (13), contributed by Lord Tweedmouth. We find in this undemonstrative delineation of a homely, yet sympathetic, matron of middle-age neither feats of the brush nor special charm of colour, though the technique—at any rate in the painting of the head—is firm and skilful. On the other hand the portrait shows a searching and unaffected truth of characterisation; it reveals a grasp of the personality represented, such as we do not find in an equal degree in any other English work in the exhibition. It is a living, and, more, a thinking being who looks down from this modest canvas, all unconscious, too, of the eye of the beholder. A fine portrait, too, is the "Paul Sandby, R.A." (22), by Sir William Beechey—broad both in characterisation and in execution. That of the "Countess of Cork" (43), by Henry Perronet Briggs, is also of considerable interest, as being a good specimen of a comparatively little known though evidently highly competent painter. Richard Wilson's two noble scenes from the "Vale of Llangollen" (152 and 158), lent by Sir W. W. Wynn, though they have not all the charm of his earlier

Italian subjects, fully vindicate his right to be considered one of the pioneers of English landscape.

It was a somewhat cruel proceeding to place between two fine and delicately atmospheric examples of Turner's second manner—the "Linlithgow" (37), and the beautiful "Ivy Bridge" (41), which so closely resembles, in composition and scheme of colour, a water-colour of the same time, which has been recently seen at Burlington House—Sir A. W. Callcott's learnedly-composed and solidly-painted "Classical Landscape" (40). The leaden hues and palpable artificiality of this, in its way, fine work, are thus made disagreeably prominent. Turner is further represented by the "Narcissus and Echo" (11), belonging to the year 1804—a work which now appears uncertain and blurred in execution, and can never have been among the fine productions of the master. Of about the same period must be Lord Leconfield's singularly beautiful and pathetic "Evening" (7). It is only the corner of a wooded park bathed in the waning light of a sun already below the horizon, but the deep orange reflections of which still show through the branches of the trees: in the foreground is a pool, half overshadowed already by the gathering shades of night, at which drink cattle and a horse. Here the poet-painter, preserving a measure of realistic truth, and resisting the temptation to manipulate unduly the elements of his picture, has infused into it a deeper pathos than marks some of the more tragic and conventionally idealised creations of his later time. The pathos—that of a tender regret for evanescent and fast-waning beauty—is here evolved without effort by a revelation of the natural affinities of the scene with a phase of human emotion; while, in the more disquieting production of his stormy maturity, Turner's primary object would appear to be—using nature as his instrument rather than seeking its representation as an ultimate aim—to express a personal mood, stormy, desponding, or fantastic.

Constable has rarely painted more magnificently than in the "Brighton: the Beach and Chain Pier" (48), lent by the Rev. T. Sheepshanks. Yet even this splendid exhibition of technical mastery does not suffice to redeem the irretrievably prosaic subject chosen. To accomplish this it would have been necessary to add the piquancy of a strong human interest, as it is understood in the most modern phase of French art; a suggestion of bustling movement, the clash of combined toil and energy, would, perhaps, have supplied what is wanting. However, it would be difficult to imagine finer painting than is shown in the cloud-laden sky; a greater skill than is brought to bear on the delineation of the vanishing row of houses which follows the line of coast; or a more remarkable realisation of never-ceasing movement than is supplied by the dark-green, ruffled sea. A fine specimen of the art of Collins is the landscape entitled "Bird-catchers" (10), in which the unusually important figures have an atmospheric envelopment peculiar to the painter. In the suggestion of such effects he was, indeed, without a superior among his contemporaries.

CLAUDE PHILLIPS.

JAPANESE ART AT THE FINE ART SOCIETY'S.

Down to the present time it may be said that the interest of the Japanese collector in England has been little influenced by accurate knowledge of the history of Japanese art. Large collections and fine collections have been formed with no other guide than the taste of the collector; and, though some of these, like M. Louis Goussier and Messrs. Audley and

Bowes, have studied the subject as much as they could, and have published beautiful and interesting works on the subject, and Mr. Franks has extracted all available information in the catalogues of his collection of pottery and porcelain, they have all had to collect and learn at the same time. Mr. Ernest Hart also has done his best in his lectures at the Society of Arts to summarise existing knowledge with regard to the different branches of Japanese art; and his republished catalogue is made specially valuable by the index of marks and signatures, given in Japanese as well as English characters. Yet, without disparagement to the knowledge of all these connoisseurs, Dr. William Anderson's work on the Pictorial Arts of Japan, and his catalogue to the collection of Japanese drawings at the British Museum, represent a standard of historical knowledge and scientific arrangement combined which no other writer has attained. What he has done for pictorial art is its division into accurate periods and schools, with accounts of the various artists, and distinction of various styles; and the opening of the new room at the British Museum, in which the most remarkable of the fine collection of Japanese drawings will be displayed, will, with the assistance of Dr. Anderson's catalogue, afford for the first time a permanent opportunity for the study of Japanese pictures.

It has been the aim of Mr. Huish, in this exhibition now being held at the galleries of the Fine Art Society, to afford an opportunity for something like a systematic study of other branches of Japanese art. With the assistance of Mr. Kataoka, he has arranged and classified some two thousand specimens of Japanese pottery, carving, lac, and bronzes, and other metal work, having first, by permission of the owners, chosen them from their collections. The exhibition, therefore, represents the pick of several fine collections (the contributors number more than fifty), and contains a large quantity of very choice things. So numerous and so choice are they, indeed, that it is impossible to describe, and very difficult to select, the choicest; and we must leave both tasks unattempted here. As a guide to the collection, Mr. Huish and Mr. Kataoka have compiled a catalogue which, when completed and corrected, will contain a clear description of each article, with notes as to its date and school, and the artist, when known.

The articles in the outer room are principally carvings and bronzes. Mr. Cyril Flower's bronze group of an eagle or falcon and a monkey is the first prominent object. On the same table will be found some specimens of armour in thin hammered iron, belonging to Mr. Ernest Hart, said to be of the fifteenth and sixteenth centuries, one of which, a helmet with a dragon coiled round it, weighs less than a pound. In the case (Y) in the same room are some fine carvings, most of them those large and elaborate modern groups in ivory, wonderful in workmanship, but unknown in the days of the Daimios, when the Samurai wore the costume shown in the doll lent by Mr. Alexander. But here are some old carvings also—notably Dr. Anderson's figures of Ni-O (23 and 24). In a case at the side are some very fine specimens of old sword-guards. In sword-mounts generally—those guards, caps, and rings on which the Japanese artists have bestowed such exquisite skill in chasing and inlaying with various metals—the exhibition is very rich, the chief contributors being Mr. E. Gilbertson, Mr. E. Hart, M. Bing (the well-known French collector), Mr. Spread, and Mr. Huish.

As may be supposed the netsukes are numerous and fine. In nothing does the Japanese art genius show itself more unmistakably than in sculpture in little; and these small

buttons, or toggles, sometimes full of impish humour, sometimes so perfect in imitation of nature and often such miracles of execution, have from their first appearance in this country aroused the collector's appetite. Nothing will satisfy the desire for netsukés when it once sets in. In one case at South Kensington Museum, there are now some four or five hundred lent by Mr. Thomas Gray, C.B.; and these are said to form considerably less than half of his collection. At the Fine Art Society there are more than can be properly seen in one visit, especially as they are difficult things to see, or at least to examine, unless you can take them in your hand and turn them round and round. Mr. H. Seymour Trower, Mr. Massey Mainwaring, Mr. E. Gilbertson, and Mr. F. G. Smith, are the principal lenders of netsukés. The names of the different artists are given in the catalogue. And it is possible that before long the names of these little masters of Japan (difficult though they be to remember) will be well known to collectors, and that a vast amount of time will be spent in learning their signatures in Japanese characters, while a veritable "Ikkan" or "Miwa," will fetch a great many times its weight in gold.

Perhaps the principal feature of the exhibition is the fine collection of works in lac; and Mr. Huish has rightly devoted a good deal of his interesting introduction to the catalogue in describing the process of constructing and decorating these beautiful things, which are the most purely national and unique of all Japanese productions. So Japanese are they that they require almost a separate education for their due appreciation by a Western. A process so slow, so elaborate, and, after all, so subdued in its ultimate effect, as that of lac-work was probably never imagined or executed by any other people except the Japanese, and by them could only have been brought to such perfection under the peculiar conditions of the feudal times of Japan. The employment of lac in Japan goes back, we believe, to the fourth century, if not further; but it was not till the eighteenth that the perfection of manufacture and decoration was reached. Nearly all the specimens here belong to the last or the present century. The art of lac-work differs from others in that not only the decoration but the substance on which the decoration is laid, or in which it is embedded, or out of which it is carved, is the result of the artist's labour, being a series of layers of the lac gum laid one over the other, each layer going through a separate process of hardening, polishing, and drying; sometimes morsels of gold leaf of different colours and different sized grains are embedded in the layers; sometimes the design is thus built up in the bulk with extraordinary patience and care, so that the whole lies beneath the polished surface; sometimes the layers are of different coloured lac and the design is carved in the substance; sometimes the lac is inlaid, sometimes incrustated, with different coloured lacs, and mother-of-pearl, and coral, and other coloured substances. Specimens of all kinds and of the finest quality—cabinets and caskets, medicine boxes and writing cases, and numberless other objects, including a saddle and a reading desk in gold and black lac, in aventurine and Nashiji, and a dozen other varieties, are lent by the Duke of Edinburgh, Mr. Salt- ing, Mr. Massey Mainwaring, Mr. E. Hart, Mr. Wm. Alexander, Mr. W. J. Stuart, M. Bing, and others too numerous to mention.

The many beautiful and curious specimens of bronze work and carving in the large room, the fine but small collections of Satsuma and Imari, and the cases in which choice examples of other kinds of Japanese pottery and porcelains are enshrined, we must leave our readers to discover for themselves.

COSMO MONKHOUSE.

OBITUARY.

J. W. INCHBOLD.

A PAINTER of considerable originality and achievement has just passed away. Born in Leeds on April 29, 1830, John W. Inchbold died at Headingley on January 23, 1888.

Mr. Inchbold's works in oil and water-colour are known to a good many lovers of landscape art. He was an ardent student of nature, and in his earlier days worked with painful fidelity according to the laws of the strictest sect of the pre-Raphaelites. We remember one of his first essays—a study in oil of grass and dandelions, exhibited at the British Institution, which was a marvel of microscopic accuracy. Gradually, as his artistic sense and power of expression developed, Mr. Inchbold adopted a larger and more sympathetic treatment. Not infrequently our enjoyment of his works is partially marred by the prevalence of a peculiar greenish blue tint for which the artist appeared to possess a strange predilection. But he has left behind him many fine works, both in oil and water-colour, which are free from this defect. Among his pictures painted in Venice, Switzerland, and Cornwall, are many choice examples of his feeling for atmosphere and for delicate nuances of colour in water and foliage. "Drifting"—a lake scene, which was shown at the Grosvenor Gallery a year or two ago—is one of his best oil pictures.

Mr. John Inchbold was a successful etcher, although very few of his plates have been published. A little volume of sonnets which he brought out in 1877 proved him to possess the power of poetic thought and expression in another medium besides that of the painter.

CORRESPONDENCE.

THE COLOSSI IN THE FAYUM.

Medinet el Fayum: Jan. 20, 1888.

Readers of Herodotus will remember the strange account which he gives of two pyramids in Lake Moeris, with statues on the tops of them. As such an arrangement would be most improbable architecturally, it is desirable to clear up this account. In hopes of finding something of the XIIth Dynasty, I accordingly began to work on the remains at Biahmu, which are usually supposed to be what Herodotus mentions.

In the few feet of dust and chips over the ruins I found innumerable fragments of the two great colossi, carved in very hard yellow quartzite sandstone, and polished with the utmost brilliancy. The only feature I recovered was a nose, which is $11\frac{1}{2}$ inches wide. The colossi were therefore about eight times life size, or 35 feet high seated. The thrones had the usual figures of the Niles holding plant-stems, and around the bases were nome figures. These colossi of 35 feet high had bases at least 3 feet high, and were placed on pedestals which remain about 22 feet high, making a total of 60 feet high.

These pedestals were each surrounded by an open court, with walls sloping up outside nearly as high as the pedestals; hence from a distance the colossi would appear as if seated on the tops of pyramids.

The age is fixed by a part of an inscription of Amenemhat III., the king who formed, or regulated, Lake Moeris. So Herodotus was correctly informed on this point. His mistake about the size of the structures was doubtless due to his seeing them from a distance during the inundation.

M. Grébaut has kindly allowed me to work on his own nomination, in the Fayum, this season, for the private exploration which I have now undertaken; so my next points of research will be the pyramids of Hawara and Illahun, and the Labyrinth, wherever that may be.

W. M. FLINDERS PETRIE.

NOTES ON ART AND ARCHAEOLOGY.

THE recent election of Mr. William Bell Scott as an honorary member of the Royal Scottish Academy is a graceful and well-merited recognition of this veteran worker's manifold and singularly varied services—as painter, etcher, teacher, poet and critic—in the cause of art and literature.

M. NAVILLE leaves for Egypt this week, to resume and complete his excavations at Tell Basta (Bubastis).

By the death of the Rev. J. J. Heywood, which occurred some months ago, another somewhat remarkable collection of prints comes into the market. Messrs. Sotheby will sell them, we understand, some time during the month of March. Those who know that Mr. Heywood, a few years before his death, had at least one good sale of prints in Wellington-street, and that he sold to Mr. Ellis, of Bond-street, not only his library, but likewise his unequalled collection of the etchings of Méryon—of which he issued privately a daintily printed catalogue in some sort complementary to that of Mr. Wedmore—will, possibly, be surprised to hear that other things remained to him. As a matter of fact, quite a large miscellaneous collection has still to be dispersed. It will be found richest, we understand, in Hollars—only the duplicates which Mr. Heywood possessed by this master having previously been offered. Then there are also said to be a certain number of good mezzo-tints, besides a considerable quantity of inferior works amassed in the process of giving extra "illustration," as it is called, to favourite books. The sale promises altogether to be one of the most interesting of the season.

EARLY in February will be opened, in Brook Street, a gallery of Shakspearean heroines. Sir Frederick Leighton has painted Desdemona; Mr. Alma-Tadema, Portia, wife of Brutus; Mr. Calderon, Juliet; Mr. Goodall, Miranda; Mr. Herbert Schmalz, Imogen; Mr. Val Prinsep, Mariana; Mr. Phil Morris, Audrey; Mr. F. W. Topham, Isabella; Mr. E. Blair Leighton, Olivia; Mr. G. D. Leslie, Anne Page; Mr. E. Long, Katherine; Mr. Macbeth, Rosalind; Mr. Dicksee, Beatrice; Mr. Perugini, Silvia; Mr. Poynter, Cressida; Mr. H. Woods, Portia; Mr. A. Waterhouse, Cleopatra; Mr. Yeames, Cordelia; Mr. Marcus Stone, Ophelia; Mr. Luke Fildes, Jessica; Mr. Richmond, Joan of Arc; and Mrs. Alma-Tadema, Queen Katherine. An illustrated catalogue, with an analysis of each play, has been written by Mr. W. E. Henley. These pictures will in course of time be engraved and published as supplements to the *Graphic*.

THE exhibitions that open next week include a collection of drawings and paintings of Venice, by M. A. N. Roussoff, at the Fine Art Society's, in New Bond Street; a collection of water-colour drawings by past and present students of the Institute, at the Goupil Gallery, also in New Bond Street; and a collection of water-colour drawings and sketches by Miss Clara Montalba, at Mr. McLean's in the Haymarket.

THE twenty-seventh annual exhibition of the Glasgow Institute of the Fine Arts will also be opened next week at Glasgow.

THE STAGE.

"FASCINATION" AT THE VAUDEVILLE.

MR. ROBERT BUCHANAN and Miss Harriett Jay took the right measure of their piece at the Vaudeville when they called it an "improbable comedy." It brings into the full nineteenth century a Rosalind masquerading in boy's clothes; but the new Rosalind is stirred somewhat by jealousy, and her investigations take her into haunts which are not very choice. It is true that the lady whose relations with her

own lover she suspects is described repeatedly as a fashionable beauty, if not a professional beauty, or a society beauty. Yet at the same time we are informed that nobody recognises her, and that at the very least she has a past which is discreditable. Perhaps Mr. Buchanan's and Miss Jay's notions of her were a little indefinite. Her conduct in the play does not seem to be very blameworthy. Nevertheless, it requires extraordinary tact on the part of an actress to reconcile us to the appearance of a young gentleman in a swallow-tail coat and trousers, among some rather fast people—among, at all events, a group of undesirable men, of whom a mischievous and ancient duke is about the worst, and a silly but good-natured and fairly innocent clergyman about the best. And Miss Jay—for it is the authoress herself who plays the part—does display extraordinary tact, unquestionably. In the mere matter of wearing boy's dress with naturalness and refined ease, she surpasses the most famous actress of the day. And other qualities she has besides the art *de savoir porter*—not *la robe*, but the swallow-tail. She acts, in every sense, with spirit and feeling—takes the piece safely through its emotional passages, and through, at least, her share of comic situations. She betrays feeling with discretion, and swaggers very prettily. There can hardly before have been afforded so large an opportunity for exhibiting Miss Jay's command of certain not unimportant phases of histrionic art.

All the while, the piece remains what it professes to be—"improbable." And, we must remember, to confess a fault is not always to atone for it; hence, the difficulty of taking even the serious scenes quite seriously. It is only when the pure comedy is being enacted that we can receive what passes with complete confidence. There are some well-imagined comic characters. The mischievous and somewhat wicked, but habitually genial old duke is at least a happy sketch, though Mr. Fred Thorne is not seen at his best in embodying him. Mr. Scot Buist and Mr. Royce Carlet help the play considerably. Mr. Conway is forcible and picturesque. Miss Vane—with whom London playgoers are not yet very familiar—performs with earnestness as the lady of doubtful position whose heart is touched by the lover of "Rosalind." But the part wants investing with a more obvious fascination, we think; and to that Miss Vane may direct her further efforts. As the gay and good-hearted clergyman, Mr. Thomas Thorne is very quaint and funny. You like him, you disapprove of him—then you discover that, though distinctly skittish, he is excellent at heart, and a firm and timely friend. Mr. Thorne's dry and absolutely unconscious humour, and his complete discretion, serve him admirably in this character. He is always entertaining, yet he never exaggerates—whatever others may do, he, at all events, never "forces the note."

We shall not prophecy long life for "Fascination," since our prophecy of a very long run for "Heart of Hearts"—following on the immediate and almost phenomenal success of its first representation—was not entirely realised. But it is, in its own way, a clever comedy, though an "improbable" one. And it is acted smoothly all round, and really well by several, and as well as it could possibly be by Miss Jay and Mr. Thorne. F. W.

STAGE NOTES.

MR. WILSON BARRETT is keeping his promise, in the spirit as well as in the letter, by the Wednesday matinees which he has already instituted. For two or three Wednesdays now he has been performing "Hamlet"; and the

performance, it is almost needless to say, is not less acceptable at the Globe than it was at the Princess's. On Wednesday next, Mr. Barrett changes the bill, and presents three short pieces, in two of which he is seen to very particular advantage. One of these is "A Clerical Error"; the other, "Chatterton"—a play in which his capacity for picturesqueness and pathos is evidenced in the most unmistakable of ways. "Chatterton" is a small piece, but it is a great performance.

MRS. BERNARD BEERE is changing the bill at the Opera Comique, after a very successful season with "As in a Looking Glass," and—a remarkable contrast to her presentation of this or that adventuress—is about to appear in a wholly sympathetic part.

WE have received from Messrs. Reeves & Turner the essay they have published on the Juliet of Miss Alma Murray, by Mr. Frank Wilson. Mr. Wilson, who proves himself to be a most thoughtful student of the drama, was the spectator of five out of the six performances of the character of Juliet which Miss Alma Murray gave in Edinburgh. He made careful notes of the proceedings; and by means of these notes he succeeds in showing us not only the general merit of Miss Alma Murray's performance—which no one who has seen her in the Constance of Mr. Browning or the Beatrice of Shelley could doubt—but, what is more to the point, the particular reading given by her to certain passages, and the effect she thereby obtains. Mr. Wilson—like every other critic—is really more interesting when his method is explanatory than when it is purely laudatory. He takes us through Miss Alma Murray's performance point by point, and makes us feel her careful reverence for the Shakspearean text. There may be reverence in a new reading when it is adopted with reasonableness and after due consideration. Thus, in the Second Act, Miss Murray adopts two of Mr. P. A. Daniel's emendations: "Bondage is hushed," instead of "Bondage is hoarse," and

"her airy tongue more hoarse than Fame
With repetition of my Romeo's name,"
instead of

"her airy tongue more hoarse than mine
With repetition of my Romeo's name."

In the second scene of the Third Act, to quote Mr. Wilson, "out of the 116 lines and part-lines allotted to Juliet, she speaks 102, while, on referring to the text-books of the two latest London revivals of the play, we find these lines reduced to 68 and 70, respectively." In the fifth scene of the Third Act—a scene with Lady Capulet—"throughout the dialogue with her mother immediately following Romeo's exit, Miss Murray's replies were given more as if dictated by some somnambulistic influence from within than as if she were entirely alive to the purport of Lady Capulet's words. It was only at the announcement of the projected marriage with Paris that she began to take full possession again of her protective mental faculties." We need not multiply instances of the actress's art, nor of the care with which Mr. Wilson now, like Mr. Moseley previously, has followed its display; but it is evident that Mr. Wilson's pamphlet must be full of interest to the student of the stage and of Shakspeare.

MUSIC.

RECENT CONCERTS.

WE have to notice three (and, should space permit, four) concerts during the past week at which Miss Fanny Davies appeared. Last Saturday she played some numbers from Schumann's Davidsbündler. That she should not play all was not

surprising, for M^{de}. Schumann herself, both in this work and in the Carnival, is in the habit of omitting certain numbers. But, having that inch, Miss Davies seems to have taken an all in returning to No. 9 after playing No. 14, and afterwards giving No. 13, and connecting one or two of the movements by an improvised prelude. If she has M^{de}. Schumann's authority for this, it might have been stated in the book. Her performance was by no means up to the usual standard, although the playing was correct. She did not seem to warm to her work. Signor Piatti gave for the first time a lesson for Viola d'Amore, by Attilio Ariosti, adapted by the performer for his instrument. Ariosti is generally mentioned as one of the three composers who each wrote an act of the opera "Muzio Scaevola," Buononcini and Handel being the other two. Yet, according to Dr. Ohryander, Ariosti had nothing to do with this opera. He published some lessons for the Viola d'Amore, in the playing of which instrument he was an expert. The music of this lesson has a very Handelian flavour. The adagio in F sharp minor is exceedingly graceful and melodious. All the pieces were given to perfection by Signor Piatti. At the same time one would have liked to have heard them on the original instrument, the peculiar soft and delicate tones of which would have added charm to the music. The concerted pieces were Mozart's Quintet in C for strings, and Beethoven's G major Trio (Op. 1, No. 2). Mrs. Hutchinson was the vocalist.

On the following Monday evening Miss Davies played a Fugue of Bach in A minor, one of his lightest and most genial fugues. The young lady fully made up for any shortcomings on the Saturday. Her rendering of the piece was mechanically correct; but, besides that, in her conception of it, she instinctively recalled M^{de}. Schumann. Brahms' Rhapsodie in G minor (Op. 79) was also given with much charm and beauty of tone. Signor Piatti repeated his "Ossian's song" Ballad for violoncello—a simple and picturesque little piece. Of course the composer was encored. Miss Liza Lehmann, the vocalist, was very successful. Mendelssohn's fine Quintet in B flat was admirably interpreted under the leadership of M^{de}. Norman-Néruda. The concert concluded with Beethoven's Sonata in A for piano and violoncello (Op. 69).

Miss Fanny Davies gave a pianoforte recital at Prince's Hall on Wednesday afternoon, and it was unusually well attended. Beethoven's Waldstein Sonata is not well placed at the beginning of a programme: late arrivals distract the performer. This means that Miss Davies did not do herself full justice. There was, however, some very good playing, especially in the latter half of the allegro and in the adagio. As a pupil of M^{de}. Schumann, Miss Davies was pretty sure to give an interesting reading of Schumann's "Etudes Symphoniques." It was, in fact, an excellent performance—plenty of tone, and yet not hard; clear phrasing, and proper feeling. Etude 4 (the canon variation) was, however, the least satisfactory. Later on came Brahms' Rhapsodie in G minor and a Mendelssohn Lied beautifully rendered; while for the last piece the young lady selected Rubinstein's difficult Staccato Etude in C, for her clever playing of which she was much applauded. Fräulein H. Sioca sang songs by various composers. Her voice is not sympathetic, but her method is good. Miss Davies accompanied all the vocal music most delightfully, but it was scarcely wise of her to do so. The plan of having a singer at a pianoforte recital is excellent; with an accompanist it would be a rest for the player, and anyhow a change for the audience.

J. S. SHEDLOCK.

CHAMBERS'S ENCYCLOPÆDIA.

A DICTIONARY OF UNIVERSAL KNOWLEDGE.

NEW EDITION.

ON MARCH 1, 1888, WILL BE PUBLISHED VOLUME I.

Price 10s., cloth; 15s., half-morocco.

TO BE COMPLETED IN TEN VOLUMES.

The Work will also be issued in Monthly Parts, price 1s., to be completed in 74 Parts (exclusive of Maps). Part I. will appear on March 1, 1888.

CHAMBERS'S ENCYCLOPÆDIA is convenient in size, moderate in price, and so arranged that every subject in the field of human knowledge can be referred to without difficulty. This New Edition, in preparing which the Editorial staff has had the assistance of eminent Specialists in all departments, has been re-written, and is printed from new clear type, with fresh illustrations and maps.

The Work may be ordered from any Bookseller, and Prospectus with Specimen Page may be had on application.

W. & R. CHAMBERS, London and Edinburgh.

WALTER SCOTT'S SERIALS.

ONE SHILLING MONTHLY.

Volumes for FEBRUARY Now Ready.

LITERATURE.

Australian Ballads and Rhymes: Poems inspired by Life and Scenery in Australia and New Zealand. Selected and edited by Douglas B. W. Sladen. (Walter Scott.)

THE beginnings of a literature must always be deeply interesting, and the beginnings of Australian literature are peculiarly so. Two reasons may be mentioned—first, that Australia is the only continent whose history dates back scarcely more than a hundred years (for of aboriginal history there is none); and secondly, that Australian literature, properly so called, came into being hardly more than forty years ago. Literature of an imaginative order cultivated under such conditions receives an advantage and encounters a difficulty at one and the same time—an advantage so far as modes of life and thought and aspects of external nature are all new and unworked; a difficulty so far as it lacks legend or historical foundation, which is often so great a stimulus to imagination. Whether the advantage or the difficulty preponderate must be a matter of individual opinion; but the present writer would be disposed to think that the sight of the "Pacific's sunny waves" keeping holiday along the "far-stretching shores" of "Summer's home" beyond the sea, and the profound stillness of evening under the azure sky of the Southern Cross, would make up for the want of many an old-world story.

Considering how short a time it has had an individual existence, it is not surprising that Australian literature should be so little familiar in England. For, although the poems of Lindsey Gordon, Kendall, Alfred Domett, and Mr. Brunton Stephens are known to a few, and Marcus Clarke's powerful novel, *For the Term of His Natural Life*, is appreciated probably by a wider circle of readers, and although Mr. Patchett Martin has introduced Lindsey Gordon to the public in *Temple Bar* and Mr. Stephen Thompson has written a thoughtful article on the subject generally in a recent number of the *Contemporary Review*—very little criticism has appeared. Hence Mr. Douglas Sladen's pretty little volume is doubly welcome, not only as the first poetical anthology of the "youngest born of Britain's great dominions," but for its pleasant introduction to the singers whose songs have made it up, and for a valuable study of Henry Kendall as a bush poet. It was not to be expected that these singers of a new hemisphere should always be strong in the mechanism of their art, for the genuine poetic impulse in such a case usually precedes a sense of the necessity for what has been aptly called the "mere scaffolding of poetry." Nevertheless it must be added that little can be urged on the score of technical imperfection against the writers quoted in this

book. But, should any reader feel a deficiency in respect of poetic form, let him turn to the prefatory essay and find a sufficient excuse. Mr. Sladen says:

"Those who have contributed to this volume are, for the most part, people who loved the free air of the mountain top, and the mysteriousness of the forest, the fierce excitement of race and chase, the honest thrill of manly sports, and the glory of nature—from the magnificent Australian sky down to the fringed violet or the azure wren. Not a few of them have, in what Gordon calls the "old colonial days," had their lives hanging on a thread in the perilous march of exploration or guerilla warfare with bushrangers and aborigines. This volume is essentially the work of people who have meditated in the open air, and not under the lamp; and, if its contents oftentimes want the polish that comes only with much midnight oil, they are mostly a transcript from earth and sea and sky, and not from books.

"Not that Australia has lacked poets, like her own child Kendall, as smooth as a pebble polished with the tireless patience of the waves. But these are the exceptions; and we confess that, for the most part, we hope to please the reader with what our poets have to say, rather than the way in which they say it."

If we may pass over Wentworth—born in Norfolk Island in 1791, and a competitor for the prize poem on "Australasia" won by Praed at Cambridge, but better known as the founder of responsible government at Sydney—we may term Charles Harpur the Homer of Australia, though his poems were first published in 1840. Of those here given, "The Aboriginal Mother's Lament" has distinct pathos, and a certain quiet dignity; while "The Creek of the Four Graves" (in blank verse—a form not much affected by contributors to this volume) describes vividly an old colonial experience, and a struggle with those "whose wild speech no word for mercy hath." Space will only permit me to quote one stanza of the poem which Kendall dedicated to his memory:

"And far and free, this man of men,
With wintry hair and wasted feature,
Had fellowship with gorge and glen,
And learned the loves and runes of Nature."

Kendall will always be remembered as the first writer, possessing genuine poetic gifts of a high order, who was a native-born Australian. He is pre-eminently the poet of nature. Here is a passage of true delicacy and beauty:

"October, the maiden of bright yellow tresses,
Loiters for love in these cool wildernesses;
Loiters, knee-deep in the grasses, to listen
Where dripping rocks gleam and the leafy pools
glisten:
Then is the time when the water-moons splendid
Break with their gold, and are scattered or
blended
Over the creeks, till the woodlands have warning
Of the songs of the bell-bird and wings of the
Morning."

And how delightful is his "September in Australia," which is original also, despite what its metre shows him to have learnt from Mr. Swinburne. But, indeed, all Kendall's poems are more or less charming, and it would be easy to write an article in their praise, dwelling on his power of word-painting. Lindsey Gordon is here represented by "The Sick Stock-Rider" and "The Exile's Farewell." The former poem is, in its own way, a masterpiece; once read it will never be forgotten. And it is remarkable as owing its

strength to a rare combination of many very different qualities. Mr. Sladen's critical remarks on Gordon are especially happy; but I should be disposed to differ from the opinion he expresses as to the superiority of others of his poems over "How we beat the Favourite"; and I think Mr. Stedman does it mere justice when he calls it "the best racing ballad in the language." The influence of the writer of such original and perfect work of its kind as this ballad or "The Roll of the Kettledrum" will spread, not only in Australia, but wherever horses are loved and martial ardour kindled; and men will think with the deeper regret of the wasted life and sad fate of the poet. Though represented here by some verses, not without a certain daintiness and imaginative fervour in the grim simile with which they close, Marcus Clarke will be best remembered by his novel, and by the appreciative, yet discriminating notice of Lindsey Gordon prefixed to the posthumous edition of Gordon's works. Alfred Domett, the hero of Mr. Browning's "Waring," is the most noteworthy of New Zealand poets. He is represented here solely by selections from "Ranolf and Amohia," a poem which, despite many faults, will live—not only because of its genuine poetic beauty, but because its descriptive passages depict scenes, such as the famed Pink Terraces, that have now passed away.

Mr. Sladen has not neglected the claims of Australian poetesses. Both the lyrics he gives from Mrs. J. G. Wilson are poetical in substance and tuneful in diction. The second is called "A Spring Afternoon in New Zealand":

"We rode in the shadowy place of pines,
The wind went whispering here and there
Like whispers in a house of prayer.
The sunshine stole in narrow lines,
And sweet was the resinous atmosphere.
The shrill cicada, far and near,
Piped on his high exultant third.
Summer! summer! he seems to say—
Summer! He knows no other word,
But trills on it the livelong day;
The little hawk of the green,
Who calls his wares through all the solemn
forest scene.

"A shadowy land of deep repose!
Here where the loud nor'-wester blows,
How sweet, to soothe a trivial care,
The pine trees ever-murmured prayer!
To shake the scented powder down
From stooping boughs that bar the way
And see the vistas, golden brown,
Stretch to the sky-line far away.
But on and upward still we ride
Whither the furze, an outlaw bold,
Scatters along the bare hillside,
Handfuls of free uncounted gold,
And breaths of nutty, wild perfume,
Salute us from the flowering broom.
I love this narrow sandy road
That idly gads o'er hill and vale,
Twisting where once a rivulet flowed
With as many turns as a gossip's tale.
I love this shaky, creaking bridge,
And the willow leaning from the ridge,
Shaped like some green fountain playing,
And the twinkling windows of the farm
Just where the woodland throws an arm
To hear what the merry stream is saying.

"Stop the horses for a moment, high upon the breezy stair,
Looking over plain and upland, and the depths
of summer air,
Watch the cloud and shadow sailing o'er the
forest's sombre breast.
Misty capes and snow-cliffs glimmer on the
ranges to the west.

Hear the distant thunder rolling, surely 'tis the
making tide
Swinging all the blue Pacific on the harbour's
iron side.
Now the day grows grey and chill, but see on
yonder wooded fold,
Between the clouds a ray of sunshine slips and
writes a word in gold."

Mrs. Hubert Heron's "Explorer's Message" tells tenderly a pathetic story of not unfrequent occurrence in "old colonial days." I regret that I have only space to give a brief extract from her poem "Braidwood," descriptive of upland scenery in New South Wales:

"No sound is heard
Save the deep soughing of the wind amid
The swaying leaves and harp-like stems, so like
A mighty breathing of great mother earth,
That half they seem to see her bosom heave
With each pulsation as she living sleeps.
And now and then to cadence of these throbs
There drops the bell-bird's knell, the coach
whip's crack,
The wonga-pigeon's coo, or echoing notes
Of lyre-tail'd pheasants in their own rich tones
Mocking the song of every forest bird.
Higher the travellers rise—at every turn
Gaining through avennued vista some new
glimpse
Of undulating hills, the Pigeon-house
Standing against the sky like eyrie nest
Of some great dove or eagle. On each side
Of rock-hewn road, the fern trees cluster
green,
Now and then lighted by a silver star
Of white immortelle flower, or overhung
By crimson peals of bright epacris bells."

Mr. Brunton Stephens, Mr. Patchett Martin, and Mr. Garnet Walch are writers of a widely different character, yet each possesses qualities of a high order; and it is especially to them that we must look for the future of poetry in their continent. Mr. Brunton Stephens's poem called "The Midnight Axe" is a vivid and weird story of crime, containing in a large measure the attributes which thrill us in Hood's "Dream of Eugene Aram"; while, as a proof of his versatility, he gives us "My other Chinese Cook" and "Drought and Doctrine," which are both genuinely humorous. Mr. Patchett Martin's "Bush Study à la Watteau" is clever, piquant, and witty; indeed, it is as a writer of light humorous verse that this poet especially excels. Mr. Garnet Walch has succeeded both in serious and humorous verse. His "Little Tin Plate" is a pretty tale forcibly told of the death of a little child at the diggings, and of a father's grief and fidelity to his memory. Again I must regret that space does not permit me to make extracts. Nowhere more than in his Nature poems descriptive of Australia does Mr. William Sharp show his genuine poetic gift. The first of the excerpts from him is entitled "Bell Birds," and contains the notable line

"And Silence woke and knew her dream was
day."

Had it been possible I would have wished to refer to Mr. George Gordon McCrae, who wrote the fine poem "Balladeadro," descriptive of native life and tradition, to Mr. Percy Russell, to Mr. John Bright (an early friend of Lindsey Gordon), and to Mr. Thomas Heney, author of "The Hut on the Flat." I must be permitted, however, to give a lyric by Mr. Philip J. Holdsworth—

vivid and passionate as such a lyric should be:

"MY QUEEN OF DREAMS.

In the warm-flushed heart of the rose-red West,
When the great sun quivered and died to-day
You pulsed, O star, by yon pine-clad crest,
And throbb'd till the bright eye ashened grey.

Then I saw you swim
By the shadowy rim
Where the grey gum dips to the western plain,
And you rayed delight
As you winged your flight
To the mystic spheres where your kinsmen reign!

O star, did you see her? My queen of dreams!
Was it you that glimmered the night we strayed
A month ago by these scented streams?
Half-checked by the litter the musk-buds made?
Did you sleep or wake?—
Ah, for love's sweet sake,
(Though the world should fall, and the soft stars
wane!)

I shall dream delight
Till our souls take flight
To the mystic spheres where your kinsmen reign!"

Surely it is well that poems such as these, dealing more or less spontaneously with life and nature under unconventional conditions, should be made readily accessible—when, as Mr. Stedman has just told us, our present-day verse is too artificial. We must, therefore, hope that this interesting little volume may have the undoubted success it deserves.

H. T. MACKENZIE BELL.

STUART RULE IN SCOTLAND.

The Lauderdale Papers. Edited by Osmund Airy. (Printed for the Camden Society.)

Robert Ferguson, the Plotter. By James Ferguson. (Edinburgh: David Douglas.)

"English Worthies."—*Claverhouse.* By Mowbray Morris. (Longmans.)

MR. AIRY, in this careful edition of the Lauderdale correspondence, has given valuable material for the history of a critical period. His papers in the *Quarterly Review* for April 1884, and in the *Historical Review* for July 1886, present a clear, if not an unbiassed, narrative of its main events. It is a pity that he did not feel himself at liberty to correct the vile and valueless spelling of the correspondence. Printer and reader should have been spared a useless repetition of this part of the editor's task. A list and *précis* of the letters would have been welcome—for the index is not of the fullest. The volumes can hardly be said to be interesting, though that is the fault of nobody but the writers. The spectacle afforded us of rascality triumphant (or, if militant, mainly with other rascality) is not exhilarating; and one had need be a strong partisan to sympathise much with the victory of either side.

Concerning this period, a fierce contest was waging some thirty years back among our countrymen north of the Tweed—Southrons held aloof, as became them. The heroes of that Iliad were (omitting lesser names) Prof. Aytoun, Mr. Mark Napier, and Principal Tulloch. Macaulay, the Ate of the conflict, died at the end of the year in which Mr. Napier's book on Claverhouse appeared; but had he lived he would probably have "gone on never-minding." His siege had been laid in due form, like that of the Abbé of the anecdote, and was too complete a work for reconsideration. He had re-awakened popular

interest in history; and a bold and free handling, with plenty of contrast and no hesitation, was essential to his method. Picturesque and "cook-sure" history has its cost. Fluency must tremble down to stammering, if every broad statement and telling antithesis be paused upon and subjected to strict examination.

Party spirit has had full sway over the writers on this period. There is not much to choose between the animus of Wodrow and that of Napier. Of its overt manifestations the reader has warning, but the unauthorised inference or the quiet *suppression veri* is a harder matter to fight. When Napier is silent on the case of Hislop, or makes perfectly sure of the pardon of an offender expressly left "to the mercy" of Claverhouse's lieutenant-general; when a Tory biographer of Sharpe equivocates about the promise of safety made to Mitchell, and scouts the possibility of any bishop detaining a letter of grace—such slurrings are as likely to pass unchallenged as the "common fame" allegations of Wodrow.

The value of the Lauderdale Papers is that they give us unimpeachable evidence as to the character and aims of the men who governed Scotland, and significant (if not so positive) indications of the temper of their opponents.

Lauderdale himself was a renegade, base as the "tyke" by whose "three skips" he so often expresses his contempt. His spring of action was ambition of the most vulgar sort. His strength lay in the personal favour of Charles, which he obtained and secured by slavish dependence on the king's pleasure. Therein he had the congenial support of Rodgers and Chiffinch, "very kind and civil at all times." To his abilities—mainly consisting in a dogged, unscrupulous persistence—Mr. Airy does full justice, "with advantages." Lauderdale used them of set purpose to bring his native country—"poor old Scotland"—into utter subjection to his royal master.

The maintenance of episcopacy by Lauderdale (whose religious bias, if he had any, was to presbytery) was a venial fault. The remembrance of his earlier days supplied a constant incentive to watchfulness. He could not forget how potent a factor in the Great Rebellion had been that very Covenant whose resurrection was now threatened and whose name was still a spell to conjure with. Nor were the victories of the Long Parliament wholly unavailing, even in Scotland. When the Court of High Commission was set up, it was an anachronism and fell within the year; and the proclamation, fining landlords on whose estates conventicles were held, was allowed to become a dead letter.

The imposition of episcopacy was, so far as we can gather, neither invited nor repudiated by any national feeling. When such a feeling has existed in Scotland, its manifestations have been unequivocal. The ministers, of course, resented their loss of power; but from their own admissions of the lukewarmness of that generation we may gather that the prospects of such a change did not perceptibly check the full-flowing tide of loyalty. In the absence of other irritations, those who disliked the bishops would probably have grumbled, yet submitted. But "the Whigs were dour

and the Cavaliers were fierce," and the repeated collisions between the Cameronian flint and the governmental steel at length kindled a conflagration. With the smouldering, kindling, blazing stages of that conflagration it was the business of Claverhouse to deal. The sectaries were embittered and rendered desperate by the sense of national defection from their principles. They knew that they were a minority, a "remnant"; but they claimed to be the real nation, and demanded not indulgence but supremacy. There was for a while hypocrisy on both sides—an affectation of tolerance, and an affectation of loyalty—but the feeling of irreconcilable hostility was there; and the instinct was just, whatever may be said as to the methods of the conflict.

The position of the episcopal clergy was wretched enough. They were blamed for not doing what they had no power to do. The bishops, seeing that the disorder in the Whig districts not only was an obstacle to the general welfare, but rendered the due performance of their own functions an impossibility, suggested practical measures for dealing with the growing anarchy, and are styled "bad men" for their pains by Mr. Airy. He thinks that they suggested the inbringing of the Highland host; but he adduces no evidence for that opinion, while he has recorded the fact that Athol, one of the "opposition" lords, had himself first proposed that measure in council. After all, the government had to be carried on, and from the baseness of the men in power we must not rashly infer that all resistance to them was founded on piety or patriotism. Two months before the coming of the Highland host, the Ayrshire covenanters had been working by a sort of moonlighter organisation, had broken into the house of the minister, and had threatened to kill him if he preached again.

Had Lauderdale been a better man, he would doubtless have been able to make better use of Leighton—that earnest but recluse spirit, an ecclesiastical Falkland vainly "ingeminating Peace." But Leighton's failure must not be laid wholly to the charge of Lauderdale. Leighton was amazed, and lost his way "among the thorns and dangers of this world," and had not Falconbridge's energy to break through the briars or cobwebs in his path. He lacked ability to rule, and so his virtue shone bright and calm, but lonely and useless. And it suited the court policy to have creature-bishops who might be played, and bullied, and deserted as might turn out expedient.

The opposition lords had no very lofty principles. Their resentment against Lauderdale was mainly personal; and their patron at court was Monmouth, whose frivolous, not to say treacherous, character is set in a new light by Mr. Ferguson's lately published study of his namesake the Plotter.

Charles, notwithstanding all his protestations that he intended to maintain his authority, was clearly that "sovereign lord, the king, whose word no man relied on." To the terror of Lauderdale's agents, he admitted the opposition lords to kiss his hand; and there is something comic in the reiterated, but evidently half-hearted, assurances that all was well, which those agents nervously sent to the anxious viceroy.

Moving among this base and motley crowd, the calm stern figure of Claverhouse acquires by contrast an added dignity; but his career is scarcely full enough for such a memorial as Mr. Morris has endeavoured to raise. He is the hero of one battle. His place among English worthies seems disputable. That he was not a type of the Scotch loyalists of his day, however much to his credit personally, does not add to his value as a subject of biography. And even the contrast he presents to his fellow officials is not fruitful of instruction; for his close reserved character did not fence in any marked originality. Even in his military capacity he was avowedly an imitator of Montrose.

Mr. Morris has made a very fair defence for his hero. Claverhouse was a man under authority, and was very careful not to exceed its measure. He held severity to be the truest mercy in dealing with rebellions.

"I am as sorry to see a man die, even a Whig, as any of themselves; but when one dies justly, for his own faults, and may save a hundred to fall in the like, I have no scruple."

To the straggling, struggling, but mainly victorious volumes of Napier Mr. Morris is deeply indebted; and he has brought discretion, judgment, and literary ability to his work. With the enormous Wigton episode he is happily unconcerned. The John Brown incident he has put in its right light, and he has not followed Napier in his rash assumption that the younger Brown was spared. In the case of Andrew Hislop (which Napier, with more prudence than candour, omitted to mention) Mr. Morris makes some little fight, but at last fairly throws up his brief with a comparison of Claverhouse to Pilate—"He preferred his own convenience, and the prisoner was put to death."

Dundee's brief military career is the subject of an interesting and animated narrative, and his private history is set forth as fully as the meagre materials allow. There is an involved and mysterious transaction about the transfer of land from the Lauderdale to Claverhouse, very circumspcctly condensed from Napier, but made, if possible, a trifle darker than before.

As to the upshot—the character of Claverhouse—it is (as usual) to little purpose that anybody gleans after Scott in his chosen fields. The Queensberry papers, disinterred by Napier, might, if discovered in time, have availed to temper the harshness of Macaulay's judgment; but it is difficult to see that Scott's estimate would have been essentially, if at all, altered. Even after reading Mr. Morris, much more after reading Napier, we turn for fuller light, for relief, refreshment, and repose, to the ever-living portraiture of Claverhouse in *Old Mortality*. And his ghost (like another apparition) vanishes with a melodious twang to the music of "Bonnie Dundee."

R. C. BROWNE.

TWO BOOKS OF TRAVEL IN THE LEVANT.

Letters from Crete. By Charles Edwardes. (Bentley.)

Pen and Pencil in Asia Minor; or, Notes from the Levant. By William Cochran. (Sampson Low.)

MR. EDWARDES'S book is one that ought not to be judged from its table of contents. A

glance at this makes it plain that he did not see much of Crete; in fact, his acquaintance with that island was confined to a residence of some duration in Canea, the capital—or, rather, in one of its suburbs—a visit to the town of Candia, and two or three excursions into the interior. But the real merit of his work lies outside the sphere of topography. It is to be found in a feature of his writing, for which in one place he apologises to the correspondents to whom his letters are addressed—his "trivial observations on human nature." These certainly need no apology, for Mr. Edwardes has the gift of seeing in ordinary men and women and ordinary occurrences more than other people would see in them. Besides this, his impressions of nature are those of a painter—only the suggestiveness of his imagination saves his descriptions from the fault of word-painting; and he possesses a considerable vein of humour. In his preface he tells us that one of the books which he took with him to Crete was Curzon's *Monasteries in the Levant*; and there is ample evidence in his narrative that he had imbibed the spirit of that delightful book. Until we had read these letters, we were unaware how much might be made of an Englishman's ignorance of foreign languages. The author informs us that, beyond his native tongue, he knows no language except a little French—"invertebrate French"; and, consequently, as he established himself in a native house, and carried out his furnishing, housekeeping, bargaining, and general intercourse with the natives without the help of an interpreter, he had numerous difficulties to encounter. To say the truth, we hear rather too much of these before the end of the volume is reached; but some of the incidents thus produced are very amusingly described. Here, for instance, is the story of the purchase of furniture:

"As my furnishing could not be postponed, we went from this quarter of the town to that, I seeking what I thought necessary, and Georgio and the ass carrying what I purchased. But I trust in mercy I may be spared such another series of wrestles of wits and tongues, handicapped as I was with no adequate knowledge of Greek. How, for instance, would you express that you wanted your bed to be of wool, not feathers; that you were not fond of green counterpanes as compared with purple; that you felt sure the price for such and such a thing was outrageous unless there was good reason for contrary argument, and so on—all by signs and frantic attempts at onomatopoeic illustration? I simulated lying on the counter when I wanted a mattress, put my cheek in my hand for a pillow, and tickled the shopman's coat up to my neck to symbolise counterpane, blankets, &c. And the way it amused everyone except myself made me the more impatient! Georgio grinned without ceasing; and there was so much general laughter that even the weak ass took heart of grace, and indulged in several discordant prolonged brays, which sounded derisive."

But these linguistic deficiencies were productive of corresponding benefits. The English fleet was lying at this time in Suda Bay, and there was a talk of the cession of Crete to England. The political world of Canea was consequently in a state of excitement; and under such circumstances a limited vocabulary might be mistaken for reserve. Accordingly Mr. Edwardes, when relating a

conversation which he held with the French consul, tells us: "The caution with which I moulded my French sentences has convinced him that I am a diplomatist." In describing his every-day life, he gives the following account of the capture of the inevitable fowl for dinner.

"I am obliged now and then to descend into the garden and prick down this or that bedraggled bird for instant death. If it is a hen, it proves to be one that has laid eggs until she can lay them no more; if a cock, an ancient bird, the rheumatism of whose stiffened joints makes him the last in the general scamper of escape from an inspection that might prove fatal to any one of them."

This last sentence is not unworthy of a place in the famous mock-heroic description in *Kothen* of the slaughter of the fowls by the British deputy-provisionary-sub-vice-prospecting-consul at Paphos. But this sort of drollery, though it ripples through Mr. Edwardes's book, is only an accompaniment to a sympathetic interest in the people among whom he was thrown. In particular, his description of the inhabitants of a leper village—for there are several of these in Crete—is highly pathetic. Through the medium of this record of every-day incidents a good deal of information is to be gathered about Cretan politics and their moving causes. In his account of these the author is very impartial. He believes that the people with their present constitution are well off under Ottoman rule, while at the same time he recognises that the memory of the treatment which they have themselves survived, and the traditions of former persecutions which have been handed down from their ancestors, render it impossible for them to be content with any form of Turkish government. The stories which he has to tell of outrages against Christian women by Moslems, even in times of peace, go far to justify this view.

We will add one more passage from this book, as a favourable specimen of Mr. Edwardes's power of describing scenery. It represents the Cretan Ida as it appeared in the spring-time, when it is covered with snow.

"There is one other presence that has to be acknowledged—that of Mount Ida, sixty miles away. I had looked at this holy hill again and again while we were going along; but had not recognised that it was at all concerned with the earth on which we were treading. Far away, over the nearer hills, there was a grey mist where earth and sky seemed to meet, and in one place this mist was white instead of grey. Gradually I caught myself tracing a shadowy form through this uncertain atmosphere, and at last I understood that this etherealised shape was not essentially ethereal."

Mr. Cochran's *Pen and Pencil in Asia Minor* is in many ways a contrast to this. Notwithstanding the dancing dervishes at full twirl that are represented on the cover, it is a businesslike volume, full of substantial matter. The primary object which the author had in view in making his journey was to enquire into certain points connected with the silk trade. Mr. Cochran had been for many years a student of silk-production, and had endeavoured to bring about the introduction of that branch of industry into parts of the British empire where it did not exist, though the climate was suited for the purpose,

especially New Zealand and Ceylon. But he felt that it was of the first importance to secure a remedy for the diseases that have decimated the silkworms of Europe, and are rapidly destroying those of China; and, as he was aware that such a remedy had been discovered by M. Pasteur, and that this was being practically applied in the neighbourhood of Smyrna by Mr. John Griffith, an experienced silk-farmer, he went to Asia Minor, in order to learn by personal observation how far the experiment was successful. The result was that he was perfectly satisfied; and as he found that sericulture was being carried on there on a large scale and according to the most approved methods, he has devoted nine chapters of his book to a detailed account of the whole subject, including the production, rearing, and educating of the silkworm; the maladies to which it is subject, and the remedies for them; the silk harvest and its preliminaries; and the varieties of the mulberry, and the best modes of growing them. This copious discussion, based as it is on the experience of a working system, ought to be of great value, both to students of the question and to persons engaged in the trade.

In order to avoid the tediousness of a continuous treatise, Mr. Cochran has introduced these technical chapters in various parts of the narrative of his journey after his arrival at Smyrna. Other chapters are devoted to similar subjects, connected with trade and manufactures, such as the making of Turkey carpets, and German competition. His remarks on the last point corroborate the reports which have reached our ears of late from various parts of the globe, to the effect that German traders are more enterprising and more successful at the present time than English; and the reasons which he assigns for this are the same that have been given elsewhere—viz., first, that they are better educated, especially in respect of the knowledge of languages, and by this means are better qualified to communicate directly with the natives; and, secondly, that they are more elastic in adapting themselves to their customers, and, instead of forcing upon them the articles which are produced with least trouble to the manufacturer at home, endeavour to provide them with articles which suit their taste. To these reasons we may add a third, which Mr. Edwardes notices when speaking of the commerce of Crete, that British merchants grant no credit to the native dealers, whereas Austrians and Germans allow from three to six months' credit and give facilities for exceeding those terms.

Mr. Cochran's narrative of his journey is not the least businesslike part of his volume. He gives it in full, from a description of seasickness in St. George's Channel, after starting from Liverpool, to an account of the Isle of Anglesea on his return to Holyhead. Much of this might have been omitted with advantage, but we are in some measure reconciled to it by the author's genial and sensible mode of writing. During his residence in the East he visited Constantinople, the sites of the Seven Churches of Asia, and other places near the west coast of Asia Minor; and, besides giving an account of these, he has described the Greek and Turkish institutions of Smyrna, and has discussed at length the question of

brigandage, which has long been a burning one in that neighbourhood. Perhaps the most graphic notice in the volume is that of the site of Hierapolis with its petrifying waters, which, having poured for centuries over cliffs three hundred feet in height, have produced incrustations that present the appearance of frozen cascades. It should be added that the book is profusely illustrated with woodcuts, which are taken partly from photographs and partly from the author's sketches. Many of the latter, especially the vignettes, are charmingly pretty. Among the most attractive are the views of the Dardanelles and the Bosphorus, of the snowy peak of Mount Cadmus in Phrygia with the windings of the Maeander, and of the channel between Euboea and the island of Andros. Those of Mr. Cochran's readers who get tired of his "pen" will find ample compensation in his "pencil."

H. F. TOZER.

RECENT WORKS ON THE HISTORY OF ISRAEL.

Histoire d'Israel. Par Ernest Renan. I. (Paris: Calmann Lévy.)

Storia degl' Israeliti dalle origini fino alla Monarchia, secondo le fonti bibliche criticamente esposte. I. By D. Castelli. (Milan: Hoepli.)

Our readers may be surprised to hear of two new books on the history of Israel after the startling and profound works of Nöldeke, Wellhausen, Robertson Smith, Kuenen, and Stade, the last of which appeared only a year ago. What new documents have been brought to light that would justify two works on such well-trodden ground? It is true that M. Naville has discovered the site of Pitom, and found there bricks made without straw—a fact related in Exodus; but this discovery does not help to elucidate the immigration of Israel into Egypt, nor their emigration from it. The Moabite stone has been known for fifteen years, and has even been declared lately a fabrication. Assyrian inscriptions have not of late added much to Biblical history. Moreover, the critical school being unanimous on the point that the Hexateuch (the Pentateuch and Joshua) has been compiled from three chief documents, viz., the Yahwistic, the Elohist, and the Editorial or Redactorial, their differences now relate solely to the question of still further subdivisions, such as the second Elohist and the late interpolator. But all this concerns the history of the Bible, and not of the people of Israel as a political body. On the other hand, the advanced historians of Israel agree that the patriarchal narratives are not historical; that Israel, as a whole, never went to Egypt, and, in consequence, never came out of it as a compact nation; and, finally, that the conquest of Palestine was never made as described in the Pentateuch and in Joshua.

What then is the object of M. Renan's and Prof. Castelli's histories of Israel, if all that they have to tell can be obtained from the translation of the German or the Dutch? And, after all, is it worth while to write a negative history? Prof. Castelli, for instance, sums up the whole historical part of Genesis with the following adaptation of Deuteronomy xxvi. 5, in a plural form: "I miei antenati erano Siri nomadi, emigrano in Egitto, dove dimo-

rarano." The rest is legendary! M. Renan, who forestalls our objection against writing a history of Israel without accepting the Hexateuchal documents as historical, makes the following statement in his classical preface:

"Cette histoire mécontenta les esprits étroits à la française, qui n'admettent pas qu'on fasse l'histoire de temps sur lesquels on n'a pas à raconter une série de faits matériels certains. Des faits de ce genre, il n'y en a pas dans l'histoire d'Israël avant David. Pour contenter les historiens de cette école le présent volume devrait être une page blanche. Une telle méthode est, selon moi, la négation même de la critique. Elle a un double inconvénient. Elle mène ou à une crédulité grossière ou à un scepticisme non moins aveugle: les uns admettant les fables les plus indigestes; les autres, pour ne pas admettre de fables, rejetant de précieuses vérités. Le fait est que, sur des époques antérieures à l'histoire proprement dite, on peut encore avoir beaucoup de choses. Les poèmes homériques ne sont pas des livres d'histoire; et pourtant, est-il une page plus éclatante de lumière que le tableau de la vie grecque mille ans avant Jésus Christ qui nous est offert par ces poèmes? Les récits arabes antéislamiques ne sont pas de l'histoire; et pourtant, il est permis de faire d'après ces récits des peintures d'une surprenante vérité. Les romans arthuriens du moyen âge ne renferme pas un mot de vrai, et sont des trésors de renseignements sur la vie sociale de l'époque où ils sont écrits. Les légendes des saints, pour la plupart, ne sont pas historiques, et néanmoins elles sont merveilleusement instructives pour ce qui tient à la couleur des temps et aux mœurs."

Following this poetical view, M. Renan is right in employing the Hexateuchal documents to write in his well-known brilliant style a poetical history of the nomadic life of Israel according to the story of the patriarchs, the conception of *Yhwh* according to Moses's narrative of what happened on the Horeb or Sinai, the history of the Beni Israel in Egypt, and their wanderings in the desert. But, since the documents bearing on these subjects are recorded as late as the ninth century B.C., and many yet later, how can they be made use of for real history? Better justified is Prof. Castelli when he calls this part of the description the legendary history of Israel. However, giving up the pedantry of words, we may say that M. Renan's book is admirable and attractive in general; but his comparison of the Biblical narratives with late Eastern and Western literary productions must be taken as purely poetical. From his great knowledge of Semitic inscriptions, he is master in the part where he treats the mythological past of Canaan. Of course, for the epoch of the Judges, and much more for that of Saul and the early career of David up to his entry in Jerusalem, with which his first volume finishes, he stands on firmer ground. Perhaps it would have been better to avoid expressions like "le brigand d'Adullam"; but I suppose we must admit poetical licenses. Anyhow, M. Renan will introduce the Old Testament by his splendid style to his compatriots, just as he did with his *Origines du Christianisme*; and that is something for a country where the Bible is scarcely known. Translations of Wellhausen and Kuenen would not have done the same service.

Prof. Castelli proposes to himself the same object for his fellow-countrymen in Italy, where the Bible is no better known, and where

Biblical criticism is quite a foreign study, even to the learned class. He does not pretend to brilliancy, but he makes clear to his readers what has been done by his predecessors in all countries in the field of Biblical criticism. In fact, we may safely say that he is more intelligible and accessible than the German works on this subject. In many points he follows his own way, and is therefore very often original. He employs, like Kuenen, the terms "prophetic" and "sacerdotal" documents instead of the usual Jehovistic and Elohistie. His putting side by side the different documents of the same narrative (as he has also done for the legislative part in one of his previous works)—such as the creation, the deluge, the genealogical tables, and other documents—will prove very convincing as to their duality. We hope that in his second volume, which will begin with Saul, he will give a comparative table concerning the various authors of the different documents. Perhaps M. Renan will do the same in his second or third volume.

We may mention, in conclusion, two remarkable essays recently published in German relating to the split between Judah and Israel in the time of Rehoboam. The one by Dr. Maybaum (in the *Zeitschrift für Völkerpsychologie u. Sprach.*, xvii., 3, p. 290), where the author tries to prove that Shiloh was destroyed by Rehoboam, and consequently translates the passage in Gen. xlix., "until he will destroy Shiloh and to him will then be the weakness of nations." The other, by Herr M. Friedmann (in the *Jubelschrift zum siebenzigsten Geburtstag des Prof. Dr. H. Grätz*), in which the author represents the split as the ancient feud between the houses of Judah and Joseph, as already hinted in the blessing of Jacob, Judah powerful and Joseph struggling for power. He also gives plausible explanations as to the two calves, instituted by Jeroboam, and his alteration of the feast of Tabernacles from the seventh month to the eighth. It is impossible for us to take notice of all essays relating to Biblical history which are published in special periodicals, and incidentally in commentaries on biblical books. It is worth while, however, to draw attention to Prof. Franz Delitzsch's preface to his fifth edition of his commentary on Genesis, in which he accepts (as already pointed out in the ACADEMY) the views of the modern school.

AD. NEUBAUER.

NEW NOVELS.

The Second Son. By Mrs. Oliphant. In 3 vols. (Macmillan.)

Countess Irene. By the author of "Caterina." In 3 vols. (Blackwood.)

More than He Bargained For. By J. Robert Hutchinson. (Fisher Unwin.)

The Jewels of Prince de Janville. By Almhain (Sonnenschein.)

Renée Mauperin. From the French of E. and J. de Goncourt. (Vizetelly.)

A Mystery Still. By F. du Boisgobey. (Vizetelly.)

The Meudon Mystery. By Jules Mary. (Vizetelly.)

One is naturally surprised, on taking up *The*

Second Son, to find on the title-page no other author's name besides that of Mrs. Oliphant; for the story has been appearing serially in the *Atlantic Monthly* as written jointly by Mrs. Oliphant and Mr. T. B. Aldrich, and is also thus announced by the American publishers. However this may be explained, the volume before us shows little sign of collaboration. Mrs. Oliphant's style and the subject-matter she chooses are alike well known. She has written a large number of pleasant stories of the kind that appeal to admirers of the late Anthony Trollope. But while these stories, in the judgment of the present reviewer, show less of romantic sentiment than the writings of any other eminent novelist of the day, they are occasionally remarkable for a certain note of distinction—not a rare or in any way an impressive note, but of sufficient potency to act as a mild leaven. Less frequent even is imagination, as distinct from fancy and invention; though in some of her short tales and sketches, notably *The Besieged City*, the higher quality is manifest. In *The Second Son*, however, there is no hint of imaginative faculty, while the note of distinction—even in the attenuated degree displayed in Mrs. Oliphant's later novels, and, it may be added, in her Literary History—seems to me wholly absent. It might be unfair to describe *The Second Son* as primarily a novel with a purpose; but if it be regarded in this light it must be as advocating the rigid upholding of the moral basis of the rule of primogeniture. Edmund Mitford is "the second son." In his refusal to accept the position of an heir over the head of his elder brother he is true to his principles, and, in the main, praiseworthy—so long as that brother lives; but, after Roger's death, his motives and decisions become incomprehensible. Stephen, a third brother, is the villain of the story—not a melodramatic villain, but a vulgar society scoundrel. The plot turns upon his abduction and attempted ruin of a girl called Lily Ford. The chief merit of the book is in the lifelikeness of the principal characters, with the exception of Edmund. The squire, the father of the three brothers, is an admirable portrait, for which, however, originality cannot be claimed. The reader gets too much of Stephen. His vulgarity pervades the story like the rank aroma of certain weeds. As for the love element, it is present in ample proportion, and is of the sturdy, mediocre quality to which Mrs. Oliphant has accustomed us.

The author of "Caterina" displayed in his first book an intimate and sympathetic acquaintance with Viennese life. In *Countess Irene* he—or, as I am inclined to think, she—has again placed the story amid Austrian scenes and people. The countess herself is a charming and impulsive girl, with a wonderful voice inherited from her mother, who was once a famous singer. Count Walter Nugent and an old Irish friend named Harding have informally arranged that the two daughters of the latter should marry the sons of the former. To this secret end Herbert Harding is sent to live in Austria, there to be thrown into constant companionship with Irene; while Natalie Nugent and Harry Harding are left to fall in love with one another in Ireland. The plot is a fairly good

one, and its evolution sufficiently skilful; but to many readers the chief interest will probably be in the Viennese portions of the story, and the glimpses into the life of the people, such as are afforded in the chapter recounting Herbert's skilful outmanoeuvring of the landlord-music-seller. Although the Countess Irene acts the part of the good simpleton, the chief female personage in the story is a young Polish singer, Olga Levinsky *alias* Esther Loewe. Her weakness and folly as well as her misfortunes are the cause of all the inopportune disasters as well as of some of the good fortune that results. In the end Irene marries Herbert; and, though the latter is a man of determination, the reader will probably not grudge him a little sympathy in advance for the troubles he is pretty sure to meet with from his impulsive wife.

More than He Bargained For is a story of the old Company days in India. The author seems to have a good eye for nature, and certainly possesses the faculty of picturesque, if somewhat too florid, description; but his characters are not very strongly sketched, with the exception of Tom Flinn—a wealthy indigo-planter, who is apparently meant as a type of the Anglo-Indian at a period when the loosest morals prevailed—and his Mussulman manager, Hoosein Khan. After a good deal of preliminary matter the plot turns upon Flinn's illicit love for Hoosein Khan's adopted daughter, who ultimately is found to be no Moslem maid but the child of a Captain de Winton. Two love episodes enliven the romance, and both come to happy conclusions, although not until the murder of Flinn by Hoosein, who, after a prolonged struggle between avarice and honour, thinks he will preserve his daughter from Flinn's harem and at the same time save his equally precious gold by stealthily murdering his *farangi* master. Flinn believes that he has a hold over his manager sufficient to force him to yield Zilla; but he never dreams of Hoosein's attempting violence, and thus gets more than he bargained for—as does Hoosein Khan as well. One of the bases of the story—that of the adoption of the little English girl by the Mussulman manager—seems highly improbable; but the narrative is brisk and interesting throughout, and may be recommended as a graphic and presumably trustworthy picture of a bygone period in the Madras presidency. Its sub-title—"A Tale of Passion"—is a misnomer. It is a story of unbridled licence on the one part and of warm but commonplace affections on the other. Of "passion"—that much misunderstood word—there is not a trace.

"Almhain" is a new writer who, scorning the conventionalities of the ordinary novel, makes his hero a Piccadilly jeweller. The plot turns upon the robbery from Mr. Bonham's safe of some valuable jewels belonging to the Prince de Janville, among which is an ancient Central American ring, whose uncanny specialty is the faculty of bringing evil to its possessor. At first the reader will be seduced by the hope that he is going to be entertained with a mysterious tale after the manner of *The Moonstone*, but the bogey part is ere long apparently forgotten by the author himself. Charlie Bonham is discharged after trial, but only to find himself a ruined man.

His marriage, which was to have occurred on the day succeeding the night of the robbery, is indefinitely postponed, and he retires into obscurity on a pittance. Heroes of this kind never behave like sensible mortals, so the reader will hardly be surprised to find Bonham acting in a manner that would qualify him for a home for imbeciles. Finally he falls in with a beneficent and aristocratic "commercial," and the two comrades are ultimately successful in tracing the diabolical ring. Of course all ends right. Joseph Eaglebank, the father of the young lady, is the best-drawn character in the book. This wealthy "self-made man" was at eighteen a violent Radical, when he was possessor of a Sunday suit of clothes, a shovel, and a pig. So long as this pig lived he remained a Radical; but when the cot in which it was kept was burnt down and Joseph's Radical brethren—like the gentry of Cathay of whom Elia wrote—gleefully devoured roast pork, and at the same time mockingly refused compensation, Joseph at once adopted Conservative principles, and held by them for the remainder of his days.

We have M. Zola's authority that *Renée Mauperin* is more of a novel than any of the other books written by the Brothers de Goncourt, and also that "never has the approach of death [from heart disease] been studied with more painful patience." Truly enough even the most fleeting tremors of the disease are here duly narrated; but if M. Zola knows of nothing in literature "more touching or more terrible" his familiarity with books must be confined to the productions of the Paris school of "naturalists." The book is interesting in the same way that a vulgar play, a street incident, a *bourgeois* family party, may hold our attention—as an indication of the habits or proclivities of people whose ways of life and thought are different from our own. The deadly commonplace, the sordid life, of the majority of the middle classes in France has been the theme of many novelists from Balzac to Zola, and now it is beginning to pall even upon the vitiated Parisian palate. Of its class *Renée Mauperin* is a good example, though it is not nearly so powerful a psychological study as that strange and morbid book *Germinie Lacerteux*.

A Mystery Still is in the best manner of its prolific author. It is interesting and even exciting, and the plot is neither bewilderingly intricate nor palpably absurd. The beautiful Claudine Marly is one night found murdered; but no one save a maid named Olga, whose silence is secured, ever suspects the real assassin. The lover and the husband of the latter kill each other in a duel decidedly *d l'Américaine*, and the comely and pleasant Marchioness de Benserade is even happier as a widow than of yore. Moral: those who commit crimes, which are never likely to be discovered, are the people who obtain the most enjoyment out of life.

The Meudon Mystery begins with the discovery of the leg of a murdered woman beneath a cartload of straw, and ends with the triumph of justice. Between the first and last chapters the pages reek with crime and bloodshed. One wonders if any of the Boulevard novelists could even conceive of a

story without revolting crime, commonplace adultery, or wearisome criminal details.

WILLIAM SHARP.

SOME CLASSICAL SCHOOL BOOKS.

Demosthenes: The First Philippic; Olynthiacs I.-III. By Evelyn Abbott and P. E. Matheson. (Clarendon Press.)

The Apology of Plato. By St. George Stock. (Clarendon Press.)

Lysias, Epitaphios. By F. J. Snell. (Clarendon Press.)

Plutarch's Life of Nicias. By H. A. Holden. (Pitt Press Series.)

Xenophon, Oxyropeia, Books III.-V. By H. A. Holden. (Pitt Press Series.)

QUITE a row of neatly bound little volumes comes before us from the Clarendon Press—the texts in green cloth, the notes in brown. They look as if they would wear well. They are of handy size and large clear type. If only schoolboys would apply to them half the care and energy which have been expended in preparing them, the schoolmaster's world would return to the golden age. *Incipe, parve puer!*

First on the list is Messrs. Abbott and Matheson's instalment of the Philippic and Olynthiac speeches of Demosthenes. This seems to us a model of what a schoolbook should be. There are no words wasted in it, and it is full of matter. The notes—clear and to the point—are helped out by a serviceable analysis of each speech; and the whole is prefaced by a bright introduction, which begins far enough back not only to interest the reader in what Demosthenes has to say, but to put into his hands all the threads of the business which is going on. We observe with pleasure that the notes, besides explaining the Greek and elucidating constructions, also point out the *technique* of the speech, showing the applicability of a simile and the appropriateness of a word or argument, so as to give boys some idea of how the oratorical effects are produced. The text is that of Bekker.

"The world," says Mr. Stock, "will always be the better for the Apology of Socrates;" and we heartily agree with him. But it is necessary to make it accessible to the modern world; and Mr. Stock has gone manfully to work with introduction, running analysis, and notes. The introduction wins for the hero the sympathy of the reader before he comes to Socrates' own words. It sets forth what little is known of the man, describes his surroundings, and does as much, perhaps, as can be done to explain the standing wonder of his judicial murder. About the notes we have no complaint, except that we should like a few more of them. Here and there a phrase over which a junior student may stumble is passed by. In 23B, ταῦτ' οὐκ ἐστὶ μὲν ἐνὶ καὶ οὐκ περιττὸν ζητῶν, it might have been pointed out that ταῦτα=διὰ ταῦτα, as often in Plato and Aristophanes. In 30A, ταῦτα καὶ νεώτερον καὶ πρεσβύτερον ποιῶσα, why is the dative case used instead of the accusative? Mr. Stock has nothing to say on the subject; but it would have been well first to warn schoolboys against translating "This I will do to young men and old," and then to suggest that it is an instance of ethical dative, or *dativus commodi*, "This I will do for their good."

The circle of classical authors adapted for school use is being perpetually widened, and now Lysias is brought well within the curriculum by Mr. Snell's commentary on the *Epitaphios*. The editor does not seem quite convinced of the genuineness of the speech,

though he sums up in favour of it; but he rightly thinks it worth reading for its own sake. The text which he follows is that of Cobet, but the readings of Scheibe are also noticed. No real difficulty is passed over in the commentary; but Mr. Snell will find by experience that a somewhat fuller system of notes is more useful, at least to young readers. They want more words made about a passage before they see either that there is a difficulty or what its explanation is. It would be a very useful lesson in history to take a class of boys through the *Epitaphios* and make them read at the same time Grote or Cox on the Persian Wars. The boys would be the better for seeing the nature and origin of Lysias's mis-statements and for being made to understand what means we have of correcting them.

We are glad to see that Dr. Holden has not allowed himself to be deterred by objections from editing the *Life of Nicias* upon the same plan as the *Lives of Sulla* and the *Gracchi*. The portion of Greek text being small, it is quite possible, without unduly swelling the volume, to satisfy the wants of students of different degrees of proficiency; and no other plan could make the book so useful at schools or for the General Examinations at Cambridge. Dr. Holden gives us a carefully written introduction upon Plutarch, his *Lives*, and his authorities for the *Life of Nicias*, discriminating in this last section what can be traced to Thucydides and what must be due to some other source, such as Philistus or Timaeus. Then comes the text, in which he has mainly followed Sintenis. We notice, however, that in c. 14, l. 33, while Sintenis has a colon at *εἰς*, Dr. Holden puts the colon at *κέρκος*. Now, while *αἶται* is rather awkward with either punctuation, it is, perhaps, more awkward to have it beginning a sentence without any particle, as Dr. Holden prints it. In c. 18, l. 49, instead of *καθάρει*, which is an old puzzle, he proposes, though he does not venture to adopt, *καθόλου* or *παράπαν*. In the commentary, which is as clear and helpful as Dr. Holden's notes are wont to be, we have marked one or two places where the meaning may possibly be other than what he assigns. At the end of c. 21, *τῶν περιγενομένων ὀλίγοι μετὰ τῶν δαλῶν ἀπεσώθησαν*, where he translates "only a few got back safe with their arms," *μετὰ τῶν δαλῶν* is, perhaps, more emphatic than schoolboys will understand from this version. "Few of those who got back brought their arms with them." In c. 26, l. 44, we should think that the talk is rather of the army expecting successes than of Nicias expecting them. Nicias was not hopeful about the expedition. At p. 119, it strikes us that "these sort of speculations" is queer English to issue from a University Press. We should have liked to see notes upon the making of the shield in c. 28, and on the reason why the Athenian prisoners at Syracuse were branded with the figure of a horse (c. 29); but it would be ungrateful to pick any more small holes in a very excellent piece of work.

Dr. Holden has also been carrying a stage further his edition of the *Cyropaedia* of Xenophon, of which the first part was noticed in the *ACADEMY* of July 2, 1887. Books iii., iv., v., are now treated on the same plan as books i., ii., and we can follow the young Cyrus down to his reconciliation with his jealous uncle. Cyrus is as tedious as usual in these books, and the reader finds none of that magic charm of manner in him which so struck Artabazus. But Dr. Holden accompanies him patiently through all his marches, battles, and speeches, and clears up with wonderful success the sometimes obscure expressions of Xenophon. Part of the obscurity is due to confused constructions—common enough in all Greek writers, and yet a thing which the study of those very writers teaches us to detect and to

avoid. Dr. Holden's notes on pp. 15, 39, 75, 87, 92 of his commentary are excellent examples of how to cut the knot of such entanglements. In book iii. 1.23, does not *ὁ δὲ παραυθουμένης*, which he translates "not even when they try to talk them over," rather mean "when they try to encourage them"? In v. 2.13, Gobryas surely wants to find a son rather than a son-in-law. He would like to adopt any honest Persian, as he talked of adopting Cyrus in iv. 6. 2. On v. 1. 26, *ἀρεθόμεθα κ.τ.λ.*, Fischer translates *facile et patienter feremus indignationem et iram Cyaxaris, dummodo a te ornemur*, and Dr. Holden follows him. But nothing has been said about Cyaxares, whereas allusion has been made in § 20 to *πυρκαϊκῶν καὶ κινδυνέων*, and these seem rather to be the hardships to which *ἀρεθόμεθα* applies—unless (as is just possible) the passage be playful, and speak of the hardship of seeing Cyrus's face and the burden of being favoured by him.

NOTES AND NEWS.

MESSRS. MACMILLAN & Co. will shortly issue a volume of poems by the late Principal Shairp, of St. Andrews and Oxford. They consist mainly of pieces published in magazines or left in MS., and represent Shairp's later work, although a few poems from the volume *Kilmahoe* are included. The book has been edited by Mr. F. T. Palgrave.

MR. FISHER UNWIN is about to publish the first issue of a *Government Year Book*. The object of this annual volume, which is edited by Mr. Lewis Sergeant, is to give a concise sketch of the forms and methods of Government in every country of the world, with an abstract of the written constitutions, and materials for the purpose of reference and comparison. A brief review is added of the chief occurrences of the past year bearing upon and illustrating the several constitutions.

MR. J. P. JOHNSON has nearly finished a work on the writings of Thackeray, which will be illustrated with several hitherto unpublished portraits of Thackeray, and of his father and mother, and will also contain a facsimile of an unused wood engraving from one of the novels. The volume will be published by Mr. Elliot Stock.

A NEW life of Shelley, by M. Felix Rabbe, the translator of his poems into French, will be published shortly by Messrs. Ward & Downey, in two volumes, under the title of "Shelley: the Man and the Poet."

MR. J. L. JOYNES has in the press a volume of translations of poems by German writers of '48, including Freiligrath and Heine, as well as others not so well known to English readers. The volume will be published by Messrs. Foulger & Co., under the title of *Songs of a Revolutionary Epoch*.

MESSRS. WARD & DOWNEY will send to the libraries at the end of next week two new novels in three volumes: *Marvel*, by the author of "Molly Bawn"; and *A Voice in the Wilderness*, by Miss Catherine Fothergill.

MESSRS. BALDOCK & Co. announce a novel, entitled *Satan outdone by a Lawyer*, by "Libra," the Anglo-Indian lady, whose *Darkness* and *Daylight* has lately been published by the same firm.

THE library edition of Mr. Hall Caine's last novel, *The Deemster*, having been exhausted some weeks ago, the publishers (Messrs. Chatto & Windus) have sent to press a one-volume edition. We understand that Messrs. Appleton are issuing the book in America at twenty-five cents.

MR. GARDNER, of Paisley, will issue immediately a limited edition of Dr. Bucke's *Life*

of Walt Whitman, which has been out of print for some months. He will also publish, at the same time, *English Critics on Walt Whitman*, edited by Prof. Dowden.

A NEW edition of Mr. Stuart Glennie's *Greek Folk-songs* will be issued almost immediately by Messrs. Ward & Downey. It will contain an essay, which did not appear in the first edition, on "The Science of Folklore."

THE Deutsche Verlags Anstalt, of Stuttgart, have acquired the right of translating Mr. William Westall's *Two Pinches of Snuff*, for publication in Germany, Austria, and Switzerland.

THE following cheap editions of novels are announced by Messrs. Ward & Downey:—*Gretchen*, by Rita; *The Old Factory*, by William Westall; *Double Cunning*, by J. Manville Fenn; *A Lucky Young Woman*, by F. C. Philips; *In Luck's Way*, by Byron Webber; *Passages from the Life of a Lady*, by Hamilton Aide. One-volume editions of the following are also announced by the same firm: Lady Wilde's *Ancient Legend of Ireland*, and John F. Keane's *Three Years' of a Wanderer's Life*.

ON Tuesday next, February 14, Messrs Sotheby will sell by auction a very choice collection of rare English books, drawn from several libraries, and mostly bound by Bedford. Among them are first editions of Milton, Chapman, Swift, Gay, Sterne, Gray, Bewick, Byron, Shelley, Dickens, Tennyson, &c. But perhaps the two greatest rarities are Sterne's sermon on "Elijah and the Widow of Zerephath," printed at York in 1747; and the only known copy with coloured plates of Charles Lamb's *Prince Dorus* (1811).

THE registers of St. George the Martyr, Queen Square, Bloomsbury, are being printed in its parish magazine, copies of which, price one penny each, can be obtained from Mr. W. Vernon, bookseller, of 40, Lambs Conduit Street. The church was not constructed until about the beginning of the last century, but for at least a hundred years after that date the neighbourhood was inhabited by a very fashionable class. Many illustrious persons have worshipped within its walls, and the entries in the registers should be of a valuable character. The first name in the section of the burial registers printed in the magazine for this month is as follows: "1714, January 28, Robert Nelson, Esq., of Gloucester Street. Vir insignis."

WITH reference to a note in the *ACADEMY* of last week, we are informed that the engraving of Lord Tennyson, as a young man, which appears in the first volume of the new edition of his poems published by Messrs. Macmillan, is from a portrait of him drawn by his sister-in-law, Mrs. Weld.

THE FORTHCOMING MAGAZINES.

MR. GEORGE W. CABLE has for some time past been making an extensive enquiry into "The Negro Question" in the Southern States of the Union. At the request of the editor of the *Contemporary Review*, he has written an article very fully setting forth his observations and conclusions. It will appear in the March number, and be published simultaneously in several leading American journals.

THE Duke of Argyll is now writing a series of popular articles for *Good Words* on "Darwinism as a Philosophy," with special reference to its bearing on fundamental questions in religion. The first will appear in the March number, together with the beginning of Miss Linakill's "Vignettes of a Northern Village," and an article by the Countess of Aberdeen on "Our Mothers and Girls."

MR. HARRY FURNISS's portrait of Mr. Spurgeon, drawn from life, will be the second of

the "Gallery of Pulpit Portraits" in the *British Weekly*. It will appear next week as a supplement, with a biographical sketch by the editor of the *Expositor*.

UNIVERSITY JOTTINGS.

On Thursday in the current week a grace was approved by the senate at Cambridge for founding a professorship of Chinese. The duties of the professor are defined to be "to teach the principles of the Chinese language, and generally to promote the study of the Chinese language and literature in the university"; and it is expressly stipulated that he shall receive no stipend unless and until the university shall otherwise determine. Sir Thomas Wade, late British minister at Peking, and now president of the Royal Asiatic Society, is at present living at Cambridge, and recently gave his invaluable Chinese collection of books, &c., to the university library.

On Tuesday next, February 14, a new statute relating to the lending of books from the Bodleian will be promulgated in congregation at Oxford to the following effect:

"That the curators of the Bodleian library have power, under certain conditions, to lend printed books to certain persons who are in charge of university institutions, and to lend printed books and MSS. to the delegates of the Clarendon Press."

At both Oxford and Cambridge, it will be proposed next week to present petitions to the Queen in Council, in opposition to the joint petition of the Colleges of Physicians and Surgeons asking power to confer degrees in medicine and surgery.

It will be proposed to confer the degree of Doctor of Music, *honoris causa*, upon Herr Joseph Joachim, on the occasion of his visit to Oxford next Tuesday to give a concert in the Sheldonian theatre. It will be remembered that a similar distinction was granted to Herr Richter a few years ago.

MR. GOSSE, the Clark lecturer at Trinity College, will deliver a course of four lectures at Cambridge this term on "The Literary Criticism of the Age of Queen Anne." The subjects of the individual lectures will be as follows:—"Rymer's Attacks on Shakspeare," "Jeremy Collier's Critiques on the Stage," "John Dennis," and "Criticism in Addison and Shaftesbury."

MR. SINKER's Life of the late Hon. Ion Keith-Falconer, Lord Almoner's Professor of Arabic at Cambridge, who died in May last while engaged in missionary work among the Arabs near Aden, will be published about the end of the present month by Messrs. Deighton, Bell & Co.

MR. F. W. BOURDILLON, the translator of "Aucassin & Nicolette," is now delivering a course of lectures at Oxford on "Poetry."

MR. J. W. CLARK has been elected president of the Cambridge Philosophical Society, in place of the late Count Trotter. At the next meeting of this society Mr. H. Gadow will read a paper on "The Character of the Geological Formation as a Factor in Geographical Distribution," illustrated by observations in Spain and Portugal.

FROM the *Cambridge University Reporter* we learn that, at the litany at Great St. Mary's, on Ash Wednesday, "doctors of divinity wear copes."

THE *Durham University Journal* is printing, in its fortnightly numbers, a bibliography of recent books, &c., relating to the university or written by Durham men.

ORIGINAL VERSE.

THE LIGHTHOUSE, BIARRITZ.

No home of pleasure or dear household days,
But a bleak tower whose single beauty lies
In the bright flame piercing the murky skies,
And lighting far-off seamen on their ways.
Shaken by rain or storm that madly plays
About the rough-hewn stones; where breakers
rise
And toss their foaming crests, as horse that
bles
To the far goal, or shaggy hound that bays
At castle gate and would an entrance win.
There are a few such brave beleaguered souls
Who bear a beacon light, and hear the din
Of a great strife below, and the winds off
Would ruthless beat them down, but the wave
rolls
And breaks—leaving their steadfast flame
aloft.

B. L. TOLLEMACHE.

OBITUARY.

SIR HENRY SUMNER MAINE.

THE death of Sir Henry Maine, in the maturity of his intellectual powers, is an irreparable loss alike to the world of letters, to his own university, and to the government of India. Among authors a teacher, at Cambridge a man of affairs, in the India Office a philosopher—he brought to each of his many duties the varied experience gathered elsewhere, and it would be hard to say in which he was the most distinguished. His published works will always attest his connexion with teaching—at Cambridge, at the Temple, and at Oxford. But it should never be forgotten that more than half of his active life was devoted—like all that of John Stuart Mill—to the service of India. The general public will never know how large a part he played in the councils of the viceroy and of successive secretaries of state, for Indian statesmen do their work behind a screen. It is certain, however, that his profound knowledge of India not only supplied him with some of his most effective illustrations in comparative jurisprudence, but also gave a tinge to the political philosophy of his latest volume of essays.

To Englishmen, Austin and Maine stand forth as the champions of two rival schools of jurisprudence. Austin, founding ultimately upon Hobbes and more immediately upon the utilitarianism of Bentham, deduced a system of analytic jurisprudence as logical in its parts and as far removed from practice as the political economy of Ricardo. Maine, coming later—his *Ancient Law* was published thirty years after the delivery of Austin's first lectures—drew his inspiration from the doctrines of evolution that were already everywhere in the air. He was sworn to no school and propounded no system. He was not even the originator of the historical method; but he applied it with a clearness of vision and a wealth of examples that mark the master mind. To the erudition of a German and the lucidity of a Frenchman he added that fertility of imagination which has been the boast of Englishmen since the time of Bacon. Austin is said to have regretted that he was not born in the days of the mediaeval Schoolmen. Maine is emphatically the product of the age and the country of Darwin and Herbert Spencer. In place of the arid definitions of Austin, which even lawyers can barely stomach, he has painted for us a series of brilliant pictures showing the growth of legal institutions from prehistoric times. Under his skilful treatment, the procedure of ancient Rome and the contemporary land system of India alike become not only intelligible but even attractive. Some of his phrases—such as that about the change from *status* to contract—stamp themselves upon the memory, and one feels that the general

impression can never be modified by subsequent research except in unimportant details.

But though Maine lectured on law, his real work lay in the wider field of history. In this connexion it is curious to remember that *Ancient Law* appeared in the same year (1861) as the second and last volume of Buckle's *History of Civilisation*. The latter work took the reading public by storm, but—it is sad to confess—is now dead and buried. The success of the former was by no means extraordinary at the time; a second edition was called for only in 1863, and the third not till 1866. But, if we consider the permanence of its influence, it is hardly going too far to call it by that much abused epithet "epoch-making." For it represents to this day the most successful application to the historical sciences of the comparative method borrowed from biology, which is not the least of the intellectual achievements of the latter half of the nineteenth century. Among its numerous progeny may be reckoned Fustel de Coulanges' *La Cité Antique*, Elton's *Origins of English History*, Sir A. O. Lyall's *Asiatic Studies*, and F. Seebohm's *English Village Community*.

Henry James Sumner Maine was born in 1822. His father was a doctor practising in England, but of Scotch descent. He was educated at Christ's Hospital, and afterwards at Pembroke College, Cambridge, where he graduated in 1844 as senior classic and also among the senior optimes in mathematics, besides gaining the Craven scholarship and several other university prizes. Having been elected fellow and tutor of Trinity Hall, he was appointed in 1847, at the early age of twenty-five, regius professor of civil law; but he vacated this chair in 1854 to accept the readership on jurisprudence at the Middle Temple. In 1862 he was nominated legal member of council in India—a post first filled by Macaulay, and subsequently by Sir Fitzjames Stephen. His term of office was almost coincident with the governor-generalship of Lord Lawrence. The principal statutes passed and chiefly framed by him are thus enumerated by Mr. Whitley Stokes, in the introduction to his *Anglo-Indian Codes*:—The Succession Act and the Marriage Act of 1865, the Companies Act of 1866, the General Clauses Act of 1868, and the Divorce Act of 1869. In 1871, shortly after his return home, he was appointed to the Council of the Secretary of State for India, which office he held until his death. In the previous year he had been invited to the newly founded chair of comparative jurisprudence at Oxford; but this he resigned in 1878, on being elected master of Trinity Hall at Cambridge. It was only last year that he accepted the Whewell professorship of international law at Cambridge, vacant by the resignation of Sir W. Vernon Harcourt; but we believe that he delivered only a single course of the lectures on this subject upon which he is known to have expended great pains in preparation. His health of late had not been good, and he suffered especially during the hot weather of last year. In the beginning of January he went to the south of France for change. He died at Cannes, from an attack of apoplexy, on Friday, February 3; and at Cannes he was buried on February 8, a special funeral service being held on the same day in the chapel of Trinity Hall.

Apart from periodical literature, Maine's first publication was a paper on "Roman Law and Legal Education" in the volume of *Cambridge Essays* (1856). *Ancient Law: its Connexion with the Early History of Society and its Relation to Modern Ideas*, appeared—as already mentioned—in 1861. His professorship at Oxford bore fruit in three volumes—*Village Communities in the East and West* (1871), *The Early History of Institutions*

(1875), and *Early Law and Custom* (1883). His last book was *Popular Government* (1885), consisting of essays reprinted from the *Quarterly Review*. We believe that none of the addresses have been published which he delivered as Vice-chancellor of the University of Calcutta.

Of the honours that Sir Henry Maine received it must suffice to mention that the Académie des Sciences Morales et Politiques chose him to succeed Emerson as foreign associate; and that he was himself specially gratified to hear last autumn of the public compliment paid to him in his class-room by Prof. Sohm, the eminent legist of Leipzig. J. S. C.

THOMAS H. DYER, LL.D., died at Bath on January 30. He was born at St. Dunstan's in the East, London, on May 4, 1804, and was educated privately. His early years were passed in a city house; but he soon retired from commercial life, and, after a lengthened stay on the continent, where he made a particular study of Rome, Athens, and Pompeii, entered upon a protracted course of authorship. His works were numerous, but they were all marked by labour and erudition. He compiled accounts of the history, topography, and remains of *Ancient Rome* (1864) and *Ancient Athens* (1873), and wrote histories of the *City of Rome* (1865) and of the *Kings of Rome* (1868). He explored the ruins of Pompeii; and his narrative of the remains went through several editions, and was supplemented in 1867 by *Pompeii photographed*. Several years were spent on the preparation of a *History of Modern Europe* (1861-4, 4 vols.), which chronicled the period from the fall of Constantinople to the end of the Crimean war; and its success justified a second edition in five volumes (1877) when the narrative was brought down to the year 1871. These elaborate works did not exhaust his literary labours. He engaged in the fascinating pursuit of emending the tragedies of Aeschylus—*Tentamina Aeschylia* (1841) was the title of the volume which he published. He also produced a life of Calvin (1850); and he put forward in 1873 a *Plea for Livy*, in answer to the criticisms of Prof. Seeley. Mr. Dyer was honoured in 1865 by the university of St. Andrew's with the degree of LL.D.

MR. WILLIAM DAVY WATSON died at 5, King's Bench Walk, Temple, on January 30. He was born at Kidderminster on May 12, 1811, and from 1821 to 1827 was educated at Hazelwood, near Birmingham, the school which the father of Sir Rowland Hill established and directed. For the next two years (1827-29) Watson was at University College, London, and then he matriculated at Trinity, Cambridge, where he took the degree of B.A. in 1835, and M.A. in 1837. In November of the last year he was called to the bar at the Inner Temple. Mr. Watson was at one time editor of the now defunct *Edinburgh Courant*, and he was for many years London correspondent of the *Manchester Guardian*, when his communications were frequently quoted in the London papers. He was the author of *Trevelthan*: a Cornish Story (1848), *Lily of St. Paul's* (1852), and *Cache-cache*: a Tale in Verse (1862). For more than twenty years he was a familiar figure at the Reform Club. His ready knowledge bore witness to his extensive reading.

WE have also to record the death, at San Remo, of Mr. Edward Lear, widely known as the author of several books of "Nonsense Verses," but also a hardworking and accomplished artist—and, yet more, the "E. L." to whom Tennyson addressed the exquisite little poem beginning:

"Illyrian woodlands, echoing falls
Of water, sheets of summer glass,
The long divine Peneian pass,
The vast Akroterian walls."

MAGAZINES AND REVIEWS.

IN the new number of *Mind*, which marks the entrance of the journal upon its thirteenth year, Mr. F. H. Bradley continues his psychological studies by a discussion of pleasure and pain, desire and volition. His treatment of these difficult subjects is fresh and suggestive, though he has now and again a rather provoking way of hinting at his meaning rather than fully declaring it, and though it may well be doubted whether, with all his anxiety to write pure psychology, he does not occasionally confuse the subject by introducing properly metaphysical conceptions. In a second article Dr. Cattell, who has been collaborating with Dr. James Ward in the Psychological Laboratory at Cambridge, manages to give, within narrow limits, a fairly intelligible *résumé* of the results of research in the first and typical psychological laboratory—that instituted by Prof. Wundt at Leipzig some eleven years since. The results are of quite sufficient value to make one welcome the multiplication of these workshops, and more especially the recent establishment of one at Cambridge. Mr. T. Whittaker ingeniously argues that state action is not necessarily opposed to individualism, in the sense of the doctrine that sets up as its ideal the unimpeded self-development of the individual. The remaining article, by Mr. D. G. Ritchie, discusses, in a comprehensive and interesting way, the connexion between the origin and validity of ideas. He contends with great force that they are perfectly distinct; but the relation is probably less simple than this. The common notion, gently ridiculed by the essayist, that the value of a person or an institution is affected when its origin is known, is hardly likely to be pure delusion. It might, one thinks, be shown that a study of origins is exceedingly helpful in testing values. If, for example, religious belief were invented by a class of persons called priests for the sake of terrifying and maintaining their hold over vulgar minds, surely this would tend to lessen the logical value of the belief. If, on the other hand, religious ideas are shown not to depend on any such external influences, but to spring up under every variety of circumstances, this would serve to some extent to support their claims on our minds. Thus the study of origins is by no means immaterial to the logical or ethical consideration of validity, though Mr. Ritchie does good service in bringing out the real distinction between the two.

THE veteran archaeologist, Mr. Charles Roach Smith, has contributed a paper to the *Antiquary* on the walls of Chester. Whatever opinion we may hold as to the date of their construction, the views of one who has devoted a long life to the study of everything relating to Roman Britain cannot but be of value. His reminiscences of investigations made forty years ago are very interesting. Mr. H. P. Maskell's paper on Emanuel Hospital is carefully compiled. We wonder how many of our readers have ever heard of this interesting old place; yet it stands within easy distance of Westminster Abbey. It was founded in 1594 by Anne, widow of Gregory Fiennes, Lord Dacre of the South, for the poor of Westminster. From Mr. Maskell's account we should fear that it is now in a decaying condition. We trust that an effort will be made to preserve not only the charity but the quaint old buildings. Mr. T. W. Shore's "Traces of Old Agricultural Communities in Hampshire" throws additional light on an obscure subject suggested by Mr. Seebohm's *English Village Community*. It seems that "the people of Ithorpe are lords of their own manor, and to this day exercise their manorial rights." Mr. Walter Haines communicates extracts from the churchwarden accounts of Stan-

ford-in-the-Vale, Berkshire. There is much in them concerning the holy-loaf or *eulogia*, about which a note of explanation should have been given. Many of his readers will not understand what the entries mean. The holy bread was given away in many, perhaps all, the churches in England in the unreformed days. The rite survives still in France; we are not aware that it has continued to be observed elsewhere.

YORKSHIRE possesses so many historic and biographical memories that it may be hoped its inhabitants, particularly those belonging to Hull and Holderness, will not allow Mr. W. G. B. Page's praiseworthy venture to perish for lack of support. Last year's numbers of *The Hull and East Riding Portfolio*, (Hull: Page), contain several papers of great interest to archaeologists, which are illustrated from old prints and maps of some rarity. Among these articles may specially be named "The Early History of Spurn Head," which covers a period of some 300 years. It is the work of Mr. L. L. Kropf. "The Monastic Institutions of Hull and its Vicinity" is another article, which ought to prove useful to the dwellers in that district, and "The Lake Dwelling in Holderness" is a record which should certainly not be forgotten. When local magazines and "Notes and Queries" are springing up all over the country, it will be lamentable if Hull and the neighbourhood should lose the benefit of *The Hull Portfolio*, and of Mr. Page's sympathetic editorship, for want of a few more subscribers.

CORRESPONDENCE.

FORS FORTUNA.

Oxford: Feb. 4, 1888.

I am afraid it might appear uncourteous if I did not answer the Rev. A. L. Mayhew's letter in to-day's ACADEMY; but I must confess that it seems hardly fair that learned journals should be encumbered by discussions which might quite well be settled by a post-card. The Rev. A. L. Mayhew not very long ago found fault with what I had said about the French *calin*. If he had written to me, instead of writing to the ACADEMY, I should have told him in private, what I did not quite like having to tell him in public, that he had never perceived the real difficulty of the etymology of that word, namely, the accent; and that a reference to an etymological dictionary, before writing to the ACADEMY, would have shown him that the etymology which he thought was his own had been proposed long ago by others.

The same applies to his strictures on my etymology of *Fors*. Mr. Mayhew is good enough to inform me that in Latin, too, there is such a thing as *Ablaut*, and he refers me to Brugmann's *Vergleichende Grammatik* that I may see how the *o* in *fors* is the deep tone of the *e* in *fero*; nay, he recommends me to study my own *Lectures on the Science of Language* in order to learn this new lesson. As Mr. Mayhew is an eminent divine, I do not resent this peculiar tone of argument. If I am not mistaken, I think I had the honour of counting Mr. Mayhew among my audience when, shortly after the appearance of Curtius's essay, *Die Spaltung des A-lautes im Griechischen und Lateinischen*, I lectured on the vowel-changes in Sanskrit, Greek, and Latin. During the last twenty years this subject has been running like a red thread through almost all philological controversies. Curtius, to put it as shortly as possible, held that the *e* variety existed before the European, the *o* variety before the classical separation. Scherer, in his *Geschichte der Deutschen Sprache* (1868), went a step further, and traced the Teutonic vowel triad *a, i, u*, back to an earlier vowel triad, *a, e, o*. Then followed Fick, *Die ehemalige Sprachenheit der Indogermanen Europas* (1873), and Bezenberger, *Die A-reihe der Gotischen Sprache* (1874). Ever since we have had no rest. The whole science of language seemed to turn round *a, e, o*. Next came Schmidt on *ē* in his *Vocalismus*, then Fick on European *ā* and *ē*. But it was Amelung who, after publishing his valuable essay, *Die Bildung der Tempusstämme durch Vocalsteigerung*, in 1871, was the first to claim *ē* (1873), as prior to the Aryan separation. All these observations, however, remained isolated and unaccounted for till scholars turned again to Sanskrit, and discovered in the Vedic accentuation the true key to all this vocal variety. How, after Benfey and other Vedic scholars—myself among the rest—had shown the working of that secret spring, extending its influence from the Vedic *vēda* and *vidmā* to the Modern German *ich weiss* and *wir wissen*, this solution of the riddle could again have been neglected or rejected,

seems strange indeed. "Back to Sanskrit!" ought to be the war-cry in the science of language, as "Back to Kant!" in the science of thought. Verner, after explaining the exception to Grimm's law by a reference to the Vedic *Svaras*, showed how the difference between *e* and *o* in German could likewise, under certain circumstances, be accounted for by the Vedic accent. After the existence of an Aryan *ē* had once been proved, that discovery reacted on the new theory of double gutturals, which was started by Ascoli, and confirmed by Schmidt and Fick. It was Collitz who clearly proved, what others may have divined, that the palatalisation of the gutturals was originally due to the primitive Aryan *ē*. With this discovery all the materials were ready which enabled De Saussure to give us his complete theory of the primitive system of the vowels in the Indo-European languages (1879)—a theory lately placed in the clearest light by Hübschmann, in his *Indogermanisches Vocalsystem* (1885). I may have omitted several books which supplied important contributions. In the elaboration of the Aryan vowel-system and its influence on the theory of the *Ablaut* Brugmann, Osthoff, Humperdinck, and last, but certainly not least, Merlo, have treated the same subject, each in his own masterly way, both in their larger works and in numerous contributions to the leading linguistic journals.

When one has thus watched from year to year this interesting period in the science of language, and followed the numerous discoveries, so far as it is possible for a man who no longer counts among the "youthful grammarians," it is somewhat strange to be advised by the Rev. A. L. Mayhew to study the *Ablaut* theory in the recent compendium of Brugmann.

Is Mr. Mayhew not aware that what have been called the *e*-grades, of which he fears that I never heard, are more fully realised in Sanskrit than anywhere else? Where can he find the four steps of the root *bhar* more completely represented than in *bhāra*, *bhāra*, *bhrīti*, and *bhra* (in *anavabhra*)?

That the *ā* of *bhāra*, the *Hochstufe*, was represented by *o* in the classical languages, was known as far back as Schleicher's Compendium. How *ā* and *ā* were actually pronounced in Sanskrit, at the time of the Prātishikhyas, is difficult to determine; but it is at all events curious that even in modern Sanskrit the sound of the English *o* is often represented by *ā* and *ā*. Thus Doctor is written *Dāktar*. But, however that may have been, who would have doubted that a root like *bhar* could in Latin, as it does in Greek, have developed the vowel *o*?

May I now ask the Rev. A. L. Mayhew a few questions? Does he really think that every root must develop or does develop every one of these four changes? Does he really think that it is mere chance that Sanskrit *bhar* should be *fero* in Latin, but Sanskrit *mar*, *morior*? Does he really think that the change of *verto* to *vortus* is due to *Ablaut*? Does he really think that *pondus* from *pendere* is quite regular, and has he never read in De Saussure, p. 79—

"Le latin, fort chiche de ses *a*, en met parfois où il n'en faut point. Il a les neutres *pondus* de *pond* et *foedus* de *fid*, alors que la règle constante des thèmes en *a* est de garder *a*, dans la racine?"

Does he really think that *extorris* comes from *terra*, and not from *torreo*, the causative of *ters*? Has he not, before writing to the ACADEMY, taken at least the trouble to find out whether I was right in saying "that *bhar* is an *e* root, and that in Latin this *e* remains unchanged before *r*?" It was surely not very difficult to look through a Latin dictionary, and to see whether *fero* under any circumstances changes its *e* into *o*. I am afraid Mr. Mayhew may adduce *fordus* as an instance; and to avoid another letter I say at once that *fordus* cannot

be derived from *fero*. My argument, therefore, remains entirely untouched by Mr. Mayhew's friendly observations. The root *bhar* never takes *o* in Latin. *Fors* would be the single instance when we should have to admit such a change; and, therefore, though I did not think it necessary to use that argument in support of the much stronger mythological arguments advanced in my *Biographies of Words*, I still hold that the absence of the transition of *e* into *o* in all derivatives of the root *bhar* is a strong inducement to the comparative philologist to look for another root, such as *har*, which in Latin shows a decided predilection for *o*.

The Rev. A. L. Mayhew finishes his letter by informing me that Curtius, Vanicek, Corssen, Bréal, and Brugmann derive *Fors* from *ferre*. He might have blown an even louder trumpet by saying that everybody derives *Fors* from *ferre*. Does he really think I should have written on *Fors*, and tried to discover for it a new etymology, if I had not known of these attempts at accounting for the original conception of *Fors*? Or does he think that the *Quod ubique, quod semper, quod ab omnibus* applies to philology as well as to theology?

I must apologise for this long letter, but I really had no time to be shorter, and no wish to be curter. May I, in conclusion, assure my friend and almost next-door neighbour, Mr. Mayhew, that I shall always be delighted to discuss these matters with him in private; but that they hardly seem to me to call for a *disputatio publica et solennis*. I hope, therefore, he will not consider me wanting in proper respect if in future I decline to take part in these friendly, but somewhat obsolete, jousts.

F. MAX MÜLLER.

Oxford: Feb. 4, 1888.

A friend has kindly pointed out to me that, in some of my examples of Latin *ō* related to Latin *ē*, I have mixed up words which properly belong to the *ō*-grade with some that really belong to the weak or zero-grade. It is true that Brugmann connects *mors* with *√mer*, but *mors* is not in the *ō* or deep-tone grade, but in the zero-grade, the Latin *-or-* representing Indo-European sonant *r*. Compare the connexion of Latin *cor* with Greek *καρδ-ιη*. See *Vergleichende Grammatik*, § 285. The relation between *fors* and *fero* is precisely analogous.

A. L. MAYHEW.

"AUCASSIN AND NICOLETTE."

Glasgow: Jan. 26, 1888.

Mr. Bradley, in his review of the two recently published translations of the charming *fabliau* of "Aucassin and Nicolette" (which is, I understand, singular in being written in prose, interspersed with snatches of verse), in the ACADEMY for January 21, remarks:

"It is curious that a work which is so widely known, and which offers such tempting opportunities for the display of the translator's skill, should until now never have been rendered into English. As it never rains but it pours, we have now two different versions, published within a few weeks of each other."

But the tale of "Aucassin and Nicolette" was rendered into English verse so far back as 1796-1800, by G. L. Way, in his *Fabliaux, &c.*, from Le Grand's collection, which first appeared in 1779; and it is "curious" that last year a friend of mine showed me a MS. translation which he had just finished, and was not a little surprised when I informed him that the tale was already well known in English. Whether he will print his version now that such scholars as Mr. Bourdillon and Mr. Lang have forestalled him, is perhaps more than doubtful—unless "for private circulation only."

It appears from Loundes that Way was not the first to render any of Le Grand's collection into English, since he mentions the following works, in one of which, at least, I should suppose the tale of "Aucassin and Nicolette" may be found :

"Tales of the 12th and 13th Centuries, from the French of M. Le Grand. London, 1786. 12mo, 2 vols.

"Norman Tales, from the French of M. Le Grand. London, 1790. 12mo.

"Tales of the Minstrels, translated from the French of Mons. Le Grand. London, 1796. 12mo."

The "aged captive" in the second line of the opening verses in the original text of the tale is certainly "a puzzler." This is how it opens in Mson's edition of Barbazan's *Fabliaux et Contes*, &c., Paris, 1808; tome i., p. 380:

"Qui vauroit bons vers oïr
Del deport du viel caitif
De deux blax enfans petis,
Nicolette et Aucassin
Des grans paines qu'il soufrit,
Et des prouesses qu'il fist
Por s'amie à le cïer vis."

And on the word "caitiff" in the second line is the following footnote:

"M. de Sainte-Palaye a copié *antif*, mais il n'existe pas dans le manuscrit, et il ne signifieroit rien ici, puisqu'il ne seroit que la répétition du mot précédent: il en convient lui-même dans sa copie qui est à la Bibliothèque de l'Arsenal."

Le Grand, in his version, or paraphrase, of the tale (ed. 1781, tome iii., p. 31), altogether ignores the "aged captive," probably because he could make no sense of it. This is how he begins:

"Qui de vous veut entendre de bons vers et les aventures antiques de deux amans jeunes et beaux? C'est Aucassin et Nicolette. Je vous dirai tout ce qu'Aucassin eut à endurer pour sa Mie au teint de lis, et toutes les prouesses qu'il fit pour elle."

Way's rendering of Le Grand thus opens (ed. 1815, p. 5):

"What wight is he that fain would now be told
Of rare adventures fallen in days of old?—
Sweet verse I sing, and goodly deeds I tell,
Of a young pair that loved each other well:
Young were they both, in love their hearts were met,
Their names were Aucassin and Nicolette.
All that the youth essay'd, by day or night,
For his sweet maid, with skin like lily white,
And all his prouesses, and all his pains,
The fruitful compass of my tale contains."

Le Grand has been charged by some captious critics with having travestied the compositions of the Trouvères; but this is not true, though it cannot be denied that in the case of most of the tales of a "free" nature which he has included in his collection his modesty (a not very common virtue of French writers in the last century) was such that the "point" is altogether missed. Yet his collection is not without its value to the many who cannot read twelfth-century French; and, on the whole, it is very useful to students of the history of popular fictions.

Way's English metrical versions after Le Grand are pleasant reading. There is a peculiar charm in the archaic, or now seldom used, words and phrases which he employs, as in the *fabliau* of "The Grey Palfrey," one of the most delightful of love-tales; "The Norman Bachelor"; "The Priest who ate Mulberries"; and "The Priest who had a Mother in spite of himself." And one can only regret that he did not live to give us more of them in the same dress.

In conclusion, I may state that there is a remarkable likeness between the story of Aucassin and Nicolette and that of Florence

and Clariet, in the Charlemagne romance of Duke Huon of Bordeaux.

W. A. CLOUSTON.

HUGUENOTS AND THE COLLEGE OF PHYSICIANS.

London: Feb. 6, 1888.

It may not be generally known that, in connexion with the refugees who came to England after the Revocation of the Edict of Nantes in 1685, there is preserved at the College of Physicians a document, dated 1792, containing a resolution of that college "to subscribe £50 towards the relief of the suffering clergy in France—refugees in the British Dominions." It is of great interest to know that this old and historic college came nobly to the help of the foreign pastors at a time when the Royal Bounty Fund was impoverished by the exigencies of the previous appeals which had been made to it.

The college had for its first president the celebrated Thomas Linacre; and medical science can number some eminent Huguenot names among its past ranks, of whom may be mentioned those of Baron, Blondel, Le Fevre (physician to Charles II.), De Moivre, Martineau, and Roget.

An abstract of the document above mentioned is to be found in the valuable Report of the Historical MSS. Commission (vol. viii., part i.), which also states that there are about 200 volumes of MSS. in the library of the college.

By the intolerant Edicts of France, in 1680, medical men were excluded from holding any public employment. Other hard measures were successively imposed on those of the Protestant faith, so that it is hardly surprising that many settled in England. Between the years 1681 and 1689, no less than nine French refugees were admitted to the ranks of the college.

S. W. KERSHAW.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Feb. 12, 5 p.m. London Institution: "The Roman Conquest of Judaea," by the Rev. W. Benham.

8 p.m. Royal Academy: "The Arts immediately dependent on the Plastic Art," I., by Mr. Alfred Gilbert.

8 p.m. Society of Arts: Cantor Lecture, "Yeast: its Morphology and Culture," III., by Mr. A. Gordon Salamon.

8.30 p.m. Geographical: "A Journey in the Interior of Labrador in 1887," by Mr. Randle F. Holme.

TUESDAY, February 14, 8 p.m. Royal Institution: "Before and after Darwin," V., by Prof. G. J. Romanes.

8 p.m. Society of Arts: "The Principles of Design, as applied to Bookbinding," by Mr. H. B. Wheatley.

8 p.m. Colonial Institute: "Recent Impressions in India and Australia," by Lord Brassey.

8 p.m. Civil Engineers: "The Economic Use of the Plane-table in Topographical Surveying," by Mr. Josiah Pierce.

8.30 p.m. Anthropological: "The Akkas, a Pigmy Race from Central Africa," by Prof. W. H. Flower, with Notes by Emin Pasha; "Skulls from the Hindu Kush District," by Dr. J. G. Garson.

WEDNESDAY, Feb. 15, 8 p.m. University College: Barlow Lecture, "The Tomb of Dante," by the Rev. Dr. E. Moore.

8 p.m. Society of Arts: "Type-writers and Type-writing," by Mr. J. Harrison.

THURSDAY, Feb. 16, 8.30 p.m. British Museum: "The Languages and Races of the Babylonian Empire," III., by Mr. G. Bortin.

3 p.m. Royal Institution: "Early Secular Choral Music" with Illustrations, II., by Prof. Hubert Parry.

8 p.m. University College: Barlow Lecture: "A Critical Discussion of Selected Passages from Dante," I., by the Rev. Dr. E. Moore.

6 p.m. London Institution: "Pictures of the Year," by Mr. H. Blackburn.

8 p.m. Royal Academy: "The Arts immediately dependent on the Plastic Art," II., by Mr. Alfred Gilbert.

8 p.m. Linnean: "Self-fertilisation and Cleistogamy in Orchids," by Mr. H. N. Ridley; "The Birds and Mammals of Hudson Bay Territory," by Dr. John Rae.

8 p.m. Society of Arts: "Etching and Mezzotint Engraving," II., by Prof. H. Herkomer.

8 p.m. Chemical: "The Analysis of Wackenroder's Solution and an Explanation of the Formation of its Proximate Constituents," by Prof. H. Debus; "Polarisation of Light by Mutual Displacement of Bromine and Chlorine," by Prof. Thorpe and Mr. G. W. Rodger; "The Action of Phosphorus Pentachloride on Salicylaldehyde," by Mr. O. M. Stuart; "Some Reactions of Nitrogen Chlorophosphure," by Mr. Ward Coleridge.

8.30 p.m. Antiquaries.

FRIDAY, Feb. 17, 1 p.m. Geological: Annual General Meeting.

8 p.m. Philological: "The Illusions of Monosyllabism," by Prof. Terrien de Lacouperie.

9 p.m. Royal Institution: "Some Developments of English Pottery during the last Fifty Years," by Sir Henry Doulton.

SATURDAY, Feb. 18, 8 p.m. Royal Institution: "Experimental Optics," V., by Lord Rayleigh.

SCIENCE.

A PICTURE BOOK OF COMPARATIVE COSMOLOGIES.

Ethnologisches Bilderbuch mit erklärendem Text. 25 Tafeln. Zugleich als Illustrationen beigegeben zu dem Werke "Die Welt in ihren Spiegelungen unter dem Wandel des Völkergedankens." Von Adolf Bastian. (Berlin: Mittler u. Sohn.)

AMONG the pursuits which for many years have occupied Prof. Bastian is the study of man's representations of the shape and nature of the universe. His works contain a mass of materials and dissertations on this interesting subject, and he has now had the happy thought to collect in a picture-atlas some of the most striking of these as imagined by nations not yet arrived at the scientific stage. The illustrations are accompanied by more or less of explanation, and are considered to stand in connexion with the volume on cosmologies.

As might be expected, the pictures have far more effect on our mind than the dissertation. Thus, mere description how the Egyptians fancied the firmament in the likeness of the heaven-goddess is weak in comparison with the actual pictures, especially that on plate vii., showing her standing with feet in the east and arching her body over the sky till she touches the west with her finger-tips, so that the sun in his divine bark sails up her legs, over her back, and down her arms. So quaint is this imagination that, notwithstanding its antiquity, it seems not to have spread into other mythologies. Another fancy of this kind belongs to Peru, where the heaven is typified by an overarching serpent, whose two heads touch the eastern and western horizon, while the rain-god above pours down the showers from his earthen pot. It seems from the note that in an old Chinese temple of the Wu family there is sculpture something like this—namely, "the arch of heaven formed by a double-headed dragon." In both cases, it seems as though the idea may have been developed from the rainbow, which in folklore is held to be a serpent. Among the Aztec picture-writings here reproduced from the Vatican Codex are seen two little mountains with a man between, in which, were it not for the explanation, would be hardly recognised a cosmic idea which has lasted on from antiquity and established itself in the most distant nations. They are the two clashing mountains, which in Mexican myth are located on the way of the dead, where, provided with the proper charms, the departed soul has to dodge between them before they can close again and crush him. It is in the Buddhist cosmology that the clashers

appear in what seems their original and purposeful meaning. They are two rocks or cliffs on the horizon which open and close like jaws or doors, and let the sun through at sunset and sunrise to and from the space beyond. We should expect, indeed, to find them depicted in Buddhist world-pictures; but Prof. Bastian, who has, perhaps, examined more of these than any other Orientalist, seems never to have met with them, or he would have reproduced them here. It would be interesting to see a birch-bark picture of them among the North American Indians, in whose folklore they have a not less established place, and to set over against such a rude sketch the conception formed of them by some Greek painter showing the Argo making her perilous passage through the Symplegades.

The pictures collected by Prof. Bastian fall into two classes, interesting in two different ways. Some are taken direct from nature, and depict the universe as it seems to the untrained observer. Such are the canopy of heaven with sun and moon as represented by the Delaware Indians, and the Peruvian map of earth and sea and sky. Though belonging to a very different stage of thought, the drawings of the world as conceived by Greek, Arab, and Indian philosophers come under the same class. Here the earth floats like a leaf on the waters, covered in by the bell-like sky, or it forms the flat top of a cylinder, or stands on a cube in the middle of a flat world-disc, or is borne like a table on many posts, or carried by the famous elephants who stand on the tortoise. It would be well, however, to know more particularly whence Prof. Bastian compiled this series of figures, of which some seem familiar, but others as if sketched by a modern artist to match the ancient descriptions. A different interest attaches to those which, based on abstruser conceptions, passed from one country to another, undergoing such changes that history is required to interpret them, while, on the other hand, they themselves furnish history by proving intercourse to have taken place between the nations which adopted them from one another. No doubt the great source of cosmic theory was Babylon, where the astronomical conception of the spheres or zones of the seven planets took shape in the planet-temples, like that of Borsippa, rising in successive stages. The idea is plainly discernible in the scheme of the Buddhist *sakwala*, where Mount Meru occupies the centre round which lie concentrically the seven great rocky circles with the seven seas between, and outside all the huge encircling mountain-ridge. Not less obviously Babylonian in conception are the Brahmanic and Buddhistic heavens in successive stages inhabited by beings of different grades of form and deity. The South Sea Islanders' schemes of upper and lower worlds, with regions of gods and souls, of waters and clouds, of emptiness and thought, of darkness and nothing, must seem to us too philosophical for barbarians to have invented. But if considered as the result of borrowed Asiatic ideas, they are what might be expected; and it is worth the reader's while to compare them here with the stages of Buddhist *devatokas*, or worlds of gods, and *arupalokas* or worlds of formless spirits. Thus in

Buddhist cosmology, as well as in the allied Moslem scheme of the seven heavens and earths encircled by the ocean and the mountain of Kaf, the rational Babylonian astronomy survives lowered into unintelligent dogma. Its development in the scientific direction by the Greek mathematicians is not illustrated here; but Christendom furnishes several related world-schemes. It was not for nothing that Kosmas made his voyage to India, for he brought back Mount Meru and put it up in the centre of his world for the sun to set behind, covering the whole with a firmament in the shape of the ark of the covenant. In a mediaeval picture reproduced from Didyon's *Iconographie Chrétienne* the seven heavens of the planets are marked with their signs, while above them a three-faced Trinity, much like a four-faced Brahma, leans pensively over his creation. It is an interesting consideration, raised in one's mind by this picture book, how physical and moral conceptions have worked in together. The firmament and the underworld required physically for the sun's journey by day and night became homes for departed souls undergoing a brighter or darker fate, while the astronomical paths of the planets became a series of graded regions to lodge the blessed and the damned according to their deserts. The resemblances between the heavens and hells of the Campo Santo at Pisa and those of a Buddhist temple are rooted in common history.

E. B. TYLOR.

OBITUARY.

ASA GRAY.

DEATH has been laying his hand heavily on the foremost rank of botanists. Only a very few months ago, reviewing the *Life of Darwin*, I wrote that, of the little band of apostles of evolution, all but one were still with us. Asa Gray has now joined his friend and master. In September last, a company of foreign botanists, probably the most illustrious ever seen in England, met at Manchester on the occasion of the meeting of the British Association. Of these, the two most distinguished were unquestionably Anton de Bary and Asa Gray. De Bary has just left us in the prime of manhood, Gray in the fulness of years.

The life of the greatest botanist—may we not say the greatest naturalist?—that America has yet produced was an uneventful one. Born in 1810, at Paris in the state of New York, he was intended, as a youth, for the medical profession; but soon, under the influence of Torrey of New York, the Nestor of American botany, he turned his thoughts to the pursuit of pure science. In 1842, he was appointed to the professorship of Natural History in Harvard College, Cambridge, Mass., a position which he held during the remainder of his life—residing in a house attached to the Botanic Garden there—though he has not lectured since 1873.

Dr. Gray's special work was in structural and systematic botany, especially the flora of his own country, of which he possessed a profound knowledge. Among his more important works are (in conjunction with Prof. Torrey, and never completed) *Torrey and Gray's Flora of North America*; *The Botanical Text-book*; *Structural Botany—How Plants behave and How Plants grow*; two charming popular introductions to the study of botany; the *Botany of the United States Expedition under Captain Wilkes*, and many others of less importance. In addition to these, his contributions to descrip-

tive botany were very numerous, in the form of communications to the *American Journal of Science*, the *American Naturalist*, the *Proceedings of several learned societies*, and other periodicals. Unfortunately, these have never been collected during the lifetime of the author.

But Dr. Gray did not work only in the arid field of descriptive botany. Such essays as that on "The Flora of the Rocky Mountains," written in conjunction with Sir J. D. Hooker, and the address on "The Characteristics of the North American Flora," presented to the meeting of the British Association in Montreal in 1884, show an insight into some of the most difficult problems of biology, a grasp and power of mind, which indicate the master intellect.

The leisure of his later years afforded Asa Gray the opportunity of frequent visits to this country, attracted largely by his fifty years' friendship with Sir J. D. Hooker. And here, mingling with the older and younger followers of his own science, he won the love of all by the child-like simplicity and purity of his nature, and the combined geniality and vivacity of his conversation. There was indeed in him much that reminded one of Darwin: the same gentleness and humbleness of nature, the same perfect fairness in controversy, the same generosity towards antagonists. In Asa Gray science has lost a true and faithful servant, his friends one whose memory will ever be held in affectionate esteem.

ALFRED W. BENNETT.

THE death is also announced at Balmuto, near Kirkcaldy, of Dr. J. T. Irvine Boswell, one of the highest authorities on British plants. Under his earlier name of Syme, he is best known as the editor of Sowerby's magnificent *English Botany* in eleven volumes, with coloured plates of every species. About twenty years ago he abandoned the teaching of botany in London for a Scotch lairdship in Fife, and took the name of Boswell, being lineally descended from the same family as the great biographer.

CORRESPONDENCE.

A NEW ASOKA INSCRIPTION.

Vienna: Feb. 1, 1888.

By the last Indian mail I have received from Dr. James Burgess facsimiles of the new inscriptions in Bactro-Pali, or northern Indian characters, lately discovered at Shāhbāzgarhī. I believe that I shall act in accordance with his intentions, if I make known at once that the new find contains in nine lines and a half Asoka's twelfth rock-edict, which is missing in the published version of Shāhbāzgarhī, or Kapurdigiri, as the older erroneous appellation used to be.

The facsimile is, like all the previous similar publications of Dr. Burgess, truly excellent and easy to read, except in a certain number of passages where the stone has been damaged. For these a comparison of the original paper-cast will be indispensable. The edict offers none of those monstrous words and forms which have hitherto made the Shāhbāzgarhī version the despair of the epigraphist and the philologist. It is even almost free from clerical mistakes. The only certain one is an erroneous repetition of the words "so cha puna tatha haratnam" in l. 6. Among the new readings which it shows, the form *prashada* or *prashanda*, which occurs fifteen times instead of the *pāsada* or *pāsanda* (found here twice) of the other versions, possesses a great interest. It fully confirms Prof. Kern's derivation of the word *pāshanda*, "a sectarian," from the Sanskrit *pārshada*, "a member of an assembly or school." The analogy of the northern Pali forms *Priyadarsi* and *dharma* for *Priyadarśi*

and *dharma* shows that *ra* is used, in my opinion only graphically, for *ar*. Hence, *prashada* may stand for *parshida*, which comes very close to the Sanskrit original.

Another *varia lectio* proves the correctness of my explanation of the words "*tehi vatayvam*," Gîrân, l. 8, and "*tehi vataviye*," Kâlsî, l. 34. The new version has (ll. 7-8):

"*ye che tatra tat-a prasana tesha(m?) vatava[:]*
devanam priyo na tatha danam va puga va mahati
gatha kiti[:] *salavadhi siya ti savraprashadanam.*"
And to those who adhere to this (or) that (faith) it must be said: The Beloved of the gods does not think as (highly) of liberality or ceremonial worship as (of) what—hat an increase of the essence may happen among all sectarians.

The genitive *tesha* (*m?*) leaves no doubt that the corresponding *tehi* of the other versions is, as I conjectured in the *Zeitschrift der Deutsch-Morgenländischen Gesellschaft*, vol. xxxvii. p. 386, the dative (not the instrumental) of the plural. G. BUHLER.

BISHOP WORDSWORTH'S EMENDATION OF LUCAN, IX. 568.

Trinity College, Oxford: Feb. 6, 1888.

Though I find it difficult to believe that the line of Lucan (ix. 568)—

"An sit ulta nihil et longa an differat aetas"—

can be right either metrically or grammatically, and though Mr. G. A. Simcox's interpretation, by which *et longa* is made to mean "even long," and *differat*, "can matter," appears to me to labour under every possible objection—of metre, pause, and meaning—yet it seems worth while to say a word in defense of Bishop Christopher Wordsworth's emendation—

"An sit ulta nihil? det longa an differat aetas?"—

from the point of view on which it is attacked, of inconsonancy with Stoic teaching. The bishop himself quotes Seneca, *Epist.* 73, a passage which I will copy at length:

"Quemadmodum ex duobus sapientibus qui senior decessit, non est beator eo cuius intra pauciores annos terminata virtus est: sic deus non unicit sapientem felicitate, etiamsi unicit aetate. Non est ultus maior quae longior."

The last words the bishop quotes wrongly, it would seem, "non est *ulta* maior quae longior"; but in itself this statement is not only in harmony with the rest of the words quoted, but with other passages of Seneca. So *Epist.* 101:

"Ubi stabilita mens soit nihil interesse inter diem et saeculum, quicquid deinceps dierum rerumque venturum est ex alto prospicit et cum multo risu seriem temporum cogitat. Ideo prope, Lucili, uluere et singulas dies singulas ultas puta."

And he goes on to commiserate the wish of Maecenas to live even in torment, provided only he *may* live. The real good may be that, whether late or soon, we must die—"Nega nunc magnum beneficium esse naturae, quod necesse est mori." In this last sentence he seems to suggest very nearly what Lucan puts more epigrammatically—"Does long life give increase of happiness, or only defer what may prove (not a misfortune, but) a blessing, death?" ROBINSON ELLIS.

SCIENCE NOTES.

MR. RUSKIN has presented to the Natural History Museum, at South Kensington, his large diamond and crystal of ruby, both remarkable for their excellence as mineral specimens, on condition that the following characteristic inscriptions shall always appear on the labels descriptive of the specimens:

"*The Colenso Diamond*, presented in 1887 by John Ruskin, in honour of his friend, the loyal and patiently adamantine first Bishop of Natal."

"*The Edwardes Ruby*, presented in 1887 by John Ruskin, in honour of the invincible soldiery and loving equity of Sir Herbert Edwardes' rule by the shores of Indus."

THE Palaeontographical Society has issued its volume for 1887, containing a large mass of technical matter full of interest to students of British fossils. Dr. G. J. Hinde continues his monograph of Fossil Sponges, while Prof. Rupert Jones and Dr. H. Woodward commence their monograph of the Palaeozoic Phyllopora. The fossils of the Inferior Oolite are especially well cared for, Mr. W. H. Hudleston taking the Gasteropods, and Mr. S. S. Buckman the Ammonites.

PHILOLOGY NOTES.

MR. GEORGE BERTIN has written for the series of "Abridged Grammars," published by Messrs. Trübner—under the general editorship, first of the late Prof. E. H. Palmer, and now of Dr. R. Rost, of the India Office—a volume dealing with the various languages of the cuneiform inscriptions. In the space of little more than one hundred pages, he gives very concise sketches of the grammar of the five following languages: (1) Sumerian-Akkadian, (2) Assyrian-Babylonian, (3) Vannian, (4) Median, and (5) Old Persian. The book will be dedicated to Prof. A. H. Sayce, to whom the author expresses his indebtedness, especially as regards Vannian and Median.

In the *Celtic Magazine* for February, Mr. T. Cockburn gives an account of Prof. Windisch's investigations into the Indo-European verbal forms with a characteristic *r*, more especially the Latin and Celtic *r* passive. The original paper appeared in the *Transactions* of the Royal Saxon Society of Sciences, under the title, "Ueber die Verbalformen mit dem Character R im Arischen, Italischen und Celtischen." Prof. Windisch points out that the Indo-Iranian languages had forms in *r*, which appeared more especially in the third plural perfect middle. He thus dispels the idea that the Latin and Celtic passive forms in *r* are unique, and shows how impossible it is that this *r* could arise from the rhotacising of intervocalic *s*, which would be necessary if the form arose from affixing *se* (oneself) to the stem, as the old theory had it. Mr. Cockburn thus sums up the results arrived at:

(1) "The *r* is in its origin identical with the nominal suffix *ra*. (2) It was used originally in the third person plural only, as was the case in Sanskrit and Zend. (3) It was transferred by analogy to the third person singular. This took place in Latin and Celtic. (4) It was further transferred in these languages to the other persons with certain limitations."

MEETINGS OF SOCIETIES.

ANTHROPOLOGICAL INSTITUTE.—(Anniversary Meeting, Tuesday, January 24.)

PROF. FLOWER, V.-P., in the chair.—The officers and council for the ensuing year were elected as follows:—*President*: Francis Galton; *Vice-Presidents*: Dr J. G. Garson, Prof. A. H. Keane, F. G. H. Price; *Secretary*: F. W. Rudler; *Treasurer*: A. L. Lewis; *Council*: G. M. Atkinson, E. W. Brabrook, C. H. E. Carmichael, Hyde Clarke, A. W. Franks, Col. H. H. Godwin-Austen, T. V. Holmes, H. H. Howorth, Prof. A. Macalister, R. Biddulph Martin, Prof. Meldola, the Earl of Northesk, O. Peek, Charles H. Read, Lord Arthur Russell, Prof. A. H. Sayce, H. Seebohn, Oldfield Thomas, M. J. Walhouse, Sir C. P. Beauchamp Walker.

SOCIETY OF ANTIQUARIES.—(Thursday, Jan. 26.)

C. D. FORTNUM, V.-P., in the chair.—Mr. W. J. C. Moens read a paper on the bibliography of the "*Chronyc historie der Nederlandtcher Vorlogen*, etc.," printed by Solen at Norwich,

1579, showing that genuine editions were falsely dated for purposes of concealment, and also specifying certain pirated editions, in which passages reflecting on the Papacy were omitted.—Captain Acland Troyte read a paper on the "*Harmonies*" of Nicholas Ferrar, which were scrapbooks containing woodcuts illustrative of the History of the Jews and of the Life of Christ, with the passages referring to them pasted underneath. Copies of these were presented to the family of Charles I. Two of the volumes were exhibited.—Mr. J. Gardner D. Engleheart exhibited a mediaeval bell, which belonged to the town clerk of Pickering, bearing the name of William Stokesley and figures of S. Michael or S. George and the Dragon, the Virgin and Child, S. John the Baptist, and a crucifix. It is of fourteenth-century work.—Rev. J. G. Lloyd exhibited a pewter coffin chalice from Rhoscrowther, Pembrokeshire.

CAMBRIDGE PHILOLOGICAL SOCIETY.—(Thursday, January 26.)

DR. JACKSON, president, in the chair.—Mr. W. Robertson Smith read a paper on the sacrifice of a sheep to the Cyprian Aphrodite (Lydus, *De Mensibus* iv. 45). Like the service paid to Venus Verticordia and Fortuna Virilis at Rome, of which Lydus speaks in the same chapter, the sacrifice in question fell on April 1. It was argued that this coincidence is not accidental, and that both ceremonies are Oriental in origin and connected with the feast of Venus among the Harranians on the first three days of Nisan, spoken of in the *Fihrist*, and with the spring feast at Hierapolis (*De Dea Syria* 49). The Roman rite was not ancient (Macrob. *Sat.* i. 12), and like other features in Italian Venus-worship must have come from the great Phoenician sanctuary of Venus-Astarte at Eryx. The words of Lydus ἐν μάρτυρι δὲ τῇ Ἀφροδίτῃ τοῖς ἀνδράσι οἱ καὶ ἡ Ἥρα must refer to the special ritual of the day at Rome; and the sacrifices of Juno compared with those of Venus are probably those offered in the Regia to Lucina by the regina sacrorum on the Calends of every month, viz. *agna vel porca*, answering to the sheep and wild boars of the Cyprian rite. The difference in the sex of the victim corresponds to the known preference of the Paphian goddess for male victims, which again may be connected with her androgynous character. A variety of arguments conspire to show that the Cyprian rite was an atoning sacrifice; and, according to many analogies, this points to the correction ἐκνευσμένοι for ἐκνευσμένοι in the description given by Lydus. The priests, clad in sheepskins, offered to Aphrodite the sacrifice of a sheep. But it also appears that one type of Astarte had a sheep for her sacred animal and was originally a sheep-goddess. The symbolism of the ram, so common on Cyprian coins, and sometimes directly connected with Aphrodite, leads to the conclusion that the Cyprian goddess was in fact the sheep-Aphrodite, and that the rite in question was one of those mystical *phania*, analogous to totem sacrifices, in which the sacred animal is sacrificed by men of its own totem kind. The most complete parallel is found in the lustration at the Lupercalia. Faunus-Lupercus, like his priests the Luperci, is clad in the goat-skin, and goats are sacrificed to him at the Lupercal. The subject was illustrated by reference to other rites of a similar kind, especially to the annual atoning sacrifice of Hera Acraea at Corinth, where the victim is a goat—that is, a victim ordinarily excluded from the altars of Hera—while its sacrosanct character appears in the fact that the thing was so arranged that the animal procured its own death without the intervention of the hirelings who managed the ceremony. Similarly at Eryx the victims were supposed to offer themselves freely at the suggestion of the goddesses. This implies that they were sacred animals, which again implies that atoning sacrifices had a place of unusual prominence in the worship of the Oriental Aphrodite, since sacred animals are not offered except in atoning and mystical rites. The key to all this was sought in primitive totemism (*Enyc. Brit.*, "Sacrifice").

FINE ART.

THE ROYAL ACADEMY.

IV.

WE have already spoken in general terms of the interesting, though unequal, collection of sculptures, ornamental bronzes, medals, and plaquettes, belonging to the periods of the early and the achieved Renaissance, which is contained in the water-colour room; and we may now proceed to examine a few of the prominent examples exhibited. The famous "St. Cecilia," by Donatello (28), one of the glories of Lord Wemyss's collection, is here, and somewhat surprises those who only know it through the reproduction made for the Arundel Society; for it is executed in that dark *pietra serena* peculiar to Florence. It has been almost everywhere accepted as a work of the master himself, and is included in that *catalogue raisonné* of his works issued last May in Florence, under the auspices of Sig. Gaetano Milanesi, in commemoration of the five-hundredth anniversary of his birth—an enumeration, however, which is by no means so exhaustive, or so critical, as might have been expected under the exceptional conditions of its publication. To breathe a doubt as to the correctness of the attribution might, therefore, appear the rankest heresy. Yet, exquisite as is the purity of the outline, daintily as the lightly-expressed draperies are disposed, extraordinarily fine as is the chiselling of the low relief, the work does not produce on us quite that impression of latent energy in repose, of individual characterisation, which marks all the finer productions of Donatello. To suggest a doubt, is not, however, to deny outright; and it would be hard to point to any other sculptor who could have achieved the work, unless it be the great Florentine's most successful follower, Desiderio da Settignano, by whom there is an unfinished bas-relief, also in *pietra serena* (34), in the gallery. The "Virgin and Child surrounded by Cherubs," attributed to Donatello (43), which is lent by Mrs. Cockerell, is a fine replica in marble of the relief at St. Petersburg. Remarkable as both works are for refinement of execution, the emptiness of the conception, and the somewhat meaningless type both of the Virgin and of the cherubs, prevent us from classing them among the productions due to the master himself. Several repetitions of the subject, in *gesso*, both painted and uncoloured, are to be found in the gallery. Much the same criticism may be applied to Mr. Drury Fortnum's charming marble relief, "The Virgin and Child" (35), more modestly ascribed by its owner, with a query, to Desiderio; although this reveals a higher degree of individuality than the last-mentioned example. A finer and more exquisitely finished original, with slight variations, is to be found in the Gallery at Turin. The bas-relief of the "Virgin and Child" (40)—which appears to be a copy with variations, and in lower relief, of that which at the Bargello is given, though not with general acceptance, to Donatello—is open to considerable suspicion. It is chiselled with much delicacy; but some of the detail, especially where it differs from the original, would appear to point to a modern origin. Over several other works here it has been sought to cast the glamour of the same great name. It is difficult to understand on what grounds Sir J. C. Robinson's curious alto-rilievo, showing Lucretia stabbing herself (Case C, 5), is attributed to Donatello; while the exquisite little head of the young St. John from the same collection (Case C, 4), though it bears a certain resemblance in its tenderness of conception and style to the beautiful S. Giovannino bust in the Casa Martelli at Florence, approaches, in our opinion, still more nearly to the manner of Mino da Fiesole. His, too, is a name which

has been strangely misused in this exhibition, which, however, contains at least one undoubted work from his hand—the exquisite bas-relief, "The Virgin and Child with Angels adoring," signed "Opus Mini" (37), and showing a great resemblance of style to the ciborium, similarly signed, at Sta. Maria in Trastevere, at Rome. Seeing that Mr. Gambier Parry is the happy owner of this treasure, it is somewhat surprising that he should attribute to the master himself his other bas-relief, "The Virgin and Child" (41), which is an agreeable performance of the same school, but far below the level of Mino himself.

There is nothing here from the hand of Antonio Rossellino, whose name appears twice in the catalogue. Of the works attributed to him, Mr. Parry's ugly and expressionless relief, "The Virgin and Child" (39), may possibly have issued from the Rossellino atelier; but Mr. Donaldson's large alto-rilievo of the same subject (30)—a somewhat vulgar and over-ornamented work of the end of the fifteenth century—has little or nothing in common with that school. The fine marble relief contributed by Mr. Henry Vaughan (36), showing in profile the bust of a beautiful woman, with locks lifted from the forehead and loosely knotted behind the head, cannot be said to belong to the school of Donatello, save in so far as all sculptured reliefs executed in Florence during the latter half of the fifteenth century do so belong. It is a work, fine in conception rather than subtle in execution, which in a vague way recalls the painted portraits of Giuliano de' Medici's beautiful mistress, Simonetta Vespucci, and especially the portrait attributed to Botticelli, in the possession of Colonel Sterling.

A comparison of Mr. Heseltine's bronze bust, called "Filippo Strozzi" (29), and ascribed to Benedetto da Majano, with the marble bust in the Louvre and the terra-cotta which from the Strozzi Palace has passed into the Berlin Museum—both well-authenticated portraits by that artist of his protector—must prove that the work at the Academy has been mis-named. Neither does it, in our opinion, bear the characteristics of the style of Benedetto. It must be remembered that bronze portrait-busts belonging to the fifteenth century are extremely rare, marble, stone, terra-cotta, and *gesso* being the materials usually employed. We should be inclined to place Mr. Heseltine's bust in the first twenty years of the sixteenth century.

The enamelled earthenware of the Della Robbias is represented by the beautiful tabernacle (12), by Andrea della Robbia, and the bas-relief, showing the last moments of Santa Maria Egyptiaca, by the same master (14), both of which Mr. Drury Fortnum recently lent to the Burlington Fine Arts Club. It is impossible to accept as genuine productions of the Della Robbia atelier either the bas-relief of the "Virgin and Child" (11), or its pendant, the relief in which the same subject is encircled with a border of flowers and fruit (16). We should be inclined to attribute to the earlier time of the great Luca della Robbia himself one of the most exquisite things here—the unglazed terra-cotta medallion, showing the "Virgin and Child surrounded by Angels" (Case C, 7), lent by Sir J. C. Robinson, and by him given to Lorenzo Ghiberti. This little work reveals a tenderness and a devotional fervour such as are hardly characteristic of the last-named great sculptor; while the artful simplicity shown in the modelling of the draperies—which, without exaggeration, duly emphasise the forms beneath—is quite worthy of Luca at his best. We cannot do more here than call attention to the finely-composed bas-relief roundel, "The Virgin and Child with Adoring Angels" (9), dated 1428, and bearing

the name Nicholo; this its owner, Mr. Fortnum, considers to be possibly either an early work by Luca, or by the bronze-caster, Niccolò Baroncelli, of Florence. The same collector lends the curious portrait-bust of Lorenzo il Magnifico, attributed to A. del Pollajuolo, and supposed to have been moulded from the face of that prince after death.

It is unnecessary to describe anew the magnificent "Virgin and Child, and Little St. John" (38)—an unquestioned work belonging to the first period of Michel Angelo's practice, and the great glory of the Royal Academy's private collection. It shows how absolute was already the master's departure from the types and forms of the fifteenth century, and how he had deliberately renounced the aims of the quattrocento masters, taking as his ideal imposing majesty of proportion, and a generalised grandeur, in lieu of a poetic realism, serving to heighten the expression of devotional fervour. It would be interesting to know on what evidence—whether that of drawings, documents, or mere analogy of style—Sir J. C. Robinson has based his somewhat audacious attribution to Michel Angelo of the painted terra-cotta statuette of the "Dead Christ" (Case C, 3). The pose of the carefully and finely modelled figure is an adaptation—mannered in its studied elegance—of the "Christ" in the famous "Pieta" at St. Peter's, and the form is, like that of Michel Angelo's statue of the Saviour at the Minerva, completely nude; but it is impossible to recognise, either in its conception or in its anxious finish, the supreme breadth and vigour which Buonarroti would have imparted to a model of this kind, designed, as it would have been, if he had indeed produced it, as a preparation for a larger work. An examination of the collection of original wax models at the South Kensington Museum, or of the contents of the Casa Buonarroti at Florence, would, we think, amply support our view, should it not be deemed that the work speaks for itself.

The early decadence of Italian sculpture in the first half of the sixteenth century is well illustrated by Mr. Heseltine's pretty alto-rilievo (46), correctly ascribed to Agostino Busti, as is proved by a comparison of its workmanship with that of the statuette, from this sculptor's famous tomb of Gaston de Foix (Case C, 2), lent by Sir J. C. Robinson.

Lack of space prevents us from discussing in detail the fine series of decorative bronzes, plaquettes, and medals which completes this section of the exhibition. The most remarkable bronzes are those of Mr. Drury Fortnum, including examples attributed to Lorenzo Ghiberti, Ricio of Padua, Peter Vischer of Nuremberg, and many others. Particularly enjoyable is Mr. Salting's exquisitely well-chosen collection of medals of the fifteenth and sixteenth centuries, which almost rivals in beauty, if not in completeness, the famous collection of M. Dreyfus, at Paris. Special attention should be directed, among these last, to the quattrocento series, including such rarities as the magnificent example of Pisano's great "Ludovico Gonzaga"; the well-nigh unique "Victor Pavonius," from the Bale collection, ascribed to A. Marescotti; and the very important "Andrea Barbazza" by Sperandio.

CLAUDE PHILLIPS.

LETTER FROM CYPRUS.

Larnaka: Jan. 10, 1888.

ON our way to Cyprus, my companion and myself spent a few days at Smyrna, and were there shown an interesting collection of Anatolian ware. It belongs at present to Mr. Lawson, of the Ottoman Imperial Bank, and comes from Kutaya, in Phrygia. It represents all that is now left of a very beautiful manufacture

of pottery, which never extended beyond a narrow local limit, and has been extinct for nearly three hundred years. Though evidently of Persian origin, it includes no plates, and consists entirely of vases and similar vessels. The colouring is rich and diversified, a soft blue found on three of the vases being simply exquisite. In some cases the figures represented on the ware are in relief. Unfortunately, there is no chance that any more examples of the ware are likely to be met with; otherwise it would doubtless attract as much attention as the coarser and rougher ware of Rhodes.

The weather favoured us in our travels through Cyprus, and we visited all the places we hoped to see. But I was disappointed by finding how few traces of their presence have been left by the English upon the island since my last visit to it, seven years ago. It is impossible not to contrast the external appearance of Cyprus under English rule with that of Algeria, as I saw it last winter, under French rule. There is no carriage road to connect even the capital of a district like Paphos with any other place in the island; the harbour of Famagusta is still silted up; steamers come rarely and irregularly; and except at Larnaka a hotel is unknown. And yet for those who want a soft, warm climate in the winter, Cyprus offers exceptional attractions. Kyrenia and the neighbouring northern coast are an improved Riviera as regards both scenery and climate; and Kyrenia itself is the centre of pleasant excursions to such mediæval ruins as the castle of St. Hilarion or the abbey of Bellepaix, while it is connected with the capital Nikosia by one of the few carriage roads that exist.

The malady that afflicts Cyprus is the common one of want of money. The surplus revenues of the country, instead of being spent on public improvements, go to assist the English and French governments in paying the holders of the guaranteed Turkish debt; and the necessary expenditure of the local government is kept at starvation point. At the same time, the scanty population of the island is taxed to the utmost—indeed, after a year of drought like the last, beyond the utmost; and the want of proper means of communication between Cyprus and the outer world, as well as between one part of the island and another, prevents capital from being invested in it. While, therefore, the country is being drained of its money, nothing comes into it in return, though its wine is excellent even now, and might be made equal to the best French claret if only French manufacturers could find it to their interest to bring their capital and their workmen into the island. But Cyprus must be provided with a good port—such as could be made at Famagusta for less than £300,000—before the trade and prosperity of the island can be expected to revive.

It is pleasanter to turn from the present of Cyprus to its past, when, as is testified by the numberless remains of cities and tombs, it must have supported a large and flourishing population. But the temples and shrines that once adorned it have long since been levelled to the ground. The traveller who expects to find stately columns or ancient walls will be grievously disappointed. The wars that have swept over Cyprus have left scarcely anything of early date standing above the ground. The ancient sites of the island are marked by subterranean tombs or mounds of broken pottery and stone. Hard by the monastery of Akhiropiti, on the northern coast, the docks of the old port of Lapithos may be seen cut in the rock, and here and there the squared stones that lined the quay, with holes drilled through them for holding the hawsers of the ships. At Kuhliss, the ancient Paphos, there still exist some relics of the famous temple of the Phœnician Aphro-

dité, as well as the two sacred stones of the smaller shrine on the sea-shore, where the goddess arose from the foam of the waves. We spent a night in the farm which has succeeded to the castle of the Lusignans, which was itself built on the foundations of the older temple. Behind the castle is a line of gigantic stones, cleanly cut and fitted together, which represents a portion of the western wall of the great Phœnician shrine. Some of them are pierced with those curious holes, like the hieroscopes of a Christian church, which are met with also in the Phœnician temples of Malta and Gozo.

Nothing is left of the smaller temple on the sea-shore except a few shapeless ruins and two menhirs, or upright stones, of great height, each with a large rectangular hole drilled through the centre. One of the stones is unheaven; the other is cut, and has probably replaced in Greek or Roman times an older and more sacred monolith, which had been destroyed. The two stones, like the stones Jachin and Boaz in front of Solomon's Temple, or the upright stones in the "Giants' Tower" in Gozo, are memorials of the worship of Bethels, or sacred stones, common throughout the Semitic world, which the Phœnicians brought with them to Cyprus. The famous Black Stone of Mekka is a standing witness to the tenacity with which the Semite has clung to this primeval form of worship, and another curious illustration of the same fact is to be found near Larnaka. Here, in the pretty Moslem sanctuary of the Tekké, above the Salt Lake, is the reported tomb of Mohammed's nurse, one of the most holy places in the Mohammedan world. The tomb is built under a megalithic structure, consisting of two upright stones, some fifteen feet in height, and a third stone of great size which rests upon them. The two uprights have been defaced by carving, stucco, and whitewash, but the third stone remains pretty much in its original condition. The legend runs that the stones were conveyed from Palestine by invisible agency, like the Holy House of Loreto. The archaeologist, however, will prefer to see in them a relic of the Phœnician, or pre-Phœnician age, whose sanctity was respected down to the time when a Mohammedan tomb was erected under it. The stones seem to have been cut, like the huge vaulted stones which form the roof of the pre-Hellenic tombs and shrines of St. Lazarus at Larnaka, and St. Catherine at Salamis. These have been transformed into chapels of the saints whose names they bear; but their pagan origin is still indicated by the votive rags tied to the twigs of a bush that grows before the entrance of St. Lazarus's shrine.

The Greek successor of the Phœnician Paphos, Neo-Paphos, has little to show the traveller except rock-cut tombs and the traces of the old harbour; but the modern town of Ktima, or Baffo, on the cliffs above, is a beautiful spot, with steep mountains behind and rich gardens in front sloping down to the blue sea. The road from here to Poli-tes-Khrysokhou, where Dr. Ohnefalsch-Richter has disinterred Hellenic vases and similar remains, is exceedingly bad, part of it indeed consisting of the dry bed of an almost perpendicular water-course. It may be inferred from this that a good deal remains to be done in the way of road-making in the district of Paphos.

The path from Poli to Karavostasi is wild and picturesque. Karavostasi adjoins the site of Soli. Here I sought in vain for any traces of an age earlier than that of the Romans; but in the Limniti Valley, about two miles to the west, Dr. Richter has found pottery of the Mykenæan type.

The museums and collections of Cyprus, however, have impressed me with the belief that, so far as tombs are concerned, the most interesting results are likely to be obtained by

excavations in the prehistoric necropolis of Paraskevi, close to Nikosia. This has been worked for many years, but many of the tombs contained in it are still unopened. Most of the "Kypriote" cylinders sold in Nikosia probably come from it. On one of them, now in the Cyprus Museum, I noticed the figure of a double-headed eagle, like that on the Hittite monuments of Asia Minor. A Babylonian cylinder, with two lines of cuneiform inscription, has recently been found in one of the tombs.

The pottery of Paraskevi is for the most part pre-Phœnician, some of it being incised and the lines filled with white; some of it again being ornamented with reliefs, which frequently assume the figure of a snake. In one instance, I observed the figures of deer delineated in precisely the same way as on cylinders of the "Kypriote" class. I may note here that Dr. Richter has some rude clay cylinders which seem to me to be imitations, not of Babylonian cylinders, but of Egyptian cylinders of the XIIth Dynasty; and that Col. Warren possesses five remarkable Babylonian cylinders with cuneiform inscriptions—which at present I am unable to read—which are said to come from Ammogeti, in the neighbourhood of Old Paphos. It may be hoped that Mr. Ernest Gardner, who is just now digging on the site of an old Phœnician fortress at Liodari, near Nikosia, on behalf of the Hellenic Society, may find it possible to undertake some excavations also at Paraskevi.

While at Nikosia, I made a copy of the Phœnician inscription found last year at Dali, of which Mr. D. Pierides has already given an account in the ACADEMY. Until the lime which has accumulated in many of the letters has been removed by hydrochloric acid, much of it must remain illegible; but enough can be read to show that it is an inscription dated in the third year of "Baal-melech, king of Kition and Idalion, son of the king 'Az-Baal, king of Kition and Idalion, son of the king Baal-melech, king of Kition." As Baal-melech I. is called king of Kition only, Mr. Pierides concludes that Idalion was a conquest of his son.

From the excavator's point of view, I must confess that my visit to Cyprus has been a disappointment to me. Excavations at Old Paphos (Kuklia), important as they would be for the history of Phœnician art and the worship of Aphrodite, would, I fear, be too costly to be undertaken except by a government; and at places like Neo-Paphos, Soli, and Salamis, the relics of antiquity seem too modern to be worth the trouble of disinterring. Even the tumuli in the vicinity of Salamis, so far as I was able to examine them, have all been opened, apparently in the Roman period. One of them, on the road from Famagusta to Larnaka, has been built round a core of cut stones. It is probable that the best sites for the excavator are to be found in the Karpas Promontory—at all events, these have hitherto escaped the spade of the treasure-hunter or antiquary, and the immense caves which exist in their neighbourhood are full of promise to a disciple of Prof. Boyd Dawkins. The excavations, however, undertaken at Kurion by the Vicomte de Castillon, the French consul at Larnaka, on behalf of the Louvre, in order to test Gen. di Cesnola's account of his discovery of a temple-treasure there, show what may be discovered even on sites which have been frequently worked. Among the objects found by him is a beautiful Hellenic vase of the best epoch, with the words *Μεγδαλης καλός* scratched upon it. Within it was placed a second vase, and in this a bronze helmet. Many articles of gold were found at the same time, as well as specimens of Phœnician glass. Among the jewellery is a gold ring, the *chaton* of which has been engraved by Phœnician artists with

the representation of a ship. The brow and stern of the ship terminate in the head of Anubis, and upon the deck are figures in a semi-Egyptian style, one of them being that of a seated deity.

I cannot conclude this letter without a word of thanks for the kindness and hospitality which we have met with everywhere among the English residents in Cyprus. The traveller appreciates this all the more in a country where there are no hotels, and where the houses of the natives, and even the monasteries, are comfortable and filthy in the extreme.

A. H. SAYCE.

CORRESPONDENCE.

THE BORNHOLM RUNIC FONT.

Copenhagen, Denmark: Feb. 6, 1888

At the recent university festival here in honour of the great Danish linguist, R. K. Rask, a little literature sprang up relating to him. I would especially point out a well-written life by Dr. F. Rönning, who has had access to his letters. It runs to over 150 pages in octavo, and is most interesting. But the chief work on this occasion was a small folio, by Prof. Dr. L. F. A. Wimmer,* on the famous sandstone font in the island of Bornholm (No. 1978 in Liljegren's *Run-urkunder*), the most precious in all Scandinavia. It bears a series of carefully sculptured figures, and a long Runic inscription descriptive of the pictures in the several panels. A generous money-grant by His Excellency the Chamberlain Scaevnius, the Danish Cultus-Minister, made this costly publication possible.

The book is excellently printed by Thiele on fine paper, and has three admirable copperplates by Prof. Magnus Petersen, two of them devoted to this piece; while the third shows the font at Bjersjö in Scania. This latter also is richly sculptured with Biblical events, arranged under seven round arches, and is well worthy of study and comparison, some of the subjects being the same on both. But it has only Latin letters (some words in Latin, others in old Scanian Danish), and is dated by Wimmer at about 1230. In addition hereto, Prof. Petersen has engraved four other old fonts used by the author in his investigations.

My readers, perhaps, know that there are many rune-rusted fonts in Scandinavia, only two in England. But what makes this Bornholm treasure—the only one in the island—so remarkable is the curious fact, independently pointed out some years ago by three Northern runologists—Profs. Carl Sæve, Leffler, and Wimmer—that the words are in the early dialect of Gotland, where indeed it was probably carved. The fine stone of that commercial centre was often exported in the middle ages, sometimes with the work upon it “ready-made.” We have even a runic grave-minne in the Swedish province of Upland, which expressly states that it was brought from Gotland and raised over the deceased. Wimmer fixes the age of this Bornholm relic at the last half of the thirteenth century. It is true that our Bornholm “dipstone” was published long ago, in 1827 (*Antiquariske Annaler*, Kjöbenhavn, vol. iv.), by C. Thomsen, with a comment on the inscription by Finn. Magnussen, and two copperplate engravings; but the drawings were poor, the runes often blundered, and with many lacunæ. Nobody could, therefore, handle it with any confidence. We owe the clever recovery of the staves and the faithful and beautiful pictorial treatment to Prof. Wimmer and his gifted artist. However, this first attempt was in the infancy of Northern archaeology, and was better than nothing. We

stand on the shoulders of our fore-goers, and have entered into their labours, and learn even from their errors.

Besides the usual strange nondescript decorative carving below, the upper bowl gives a life of Christ arranged in compartments, each spanned by a tri-lobed arch, cut off from its neighbour by a pillar. A charming effect is gained by each pillar having its own character. Every column, base, and capital shows variety of tasteful ornamentation. The scenes pictured are: (1) the annunciation; (2) the meeting of Mary and Elizabeth; (3) the birth of Christ; (4 and 5) the coming of the three Kings on foot, with their gifts; (6-8) their return on horseback, bearing branches; (9) the scourging of our Saviour; (10) He is led away, bound; (11) the crucifixion, Christ in profile, draped from head to foot, stands close to the cross, held by one executioner on the left, while another on the right holds a hammer and a large nail.

We have here precious materials for students of olden art, costume, and Christian symbolism. Space forbids entering into details, or discussing the language of the 431 later or Scandinavian runic characters, of which comparatively few have greatly suffered. I will only speak of one group, the first panel-scene and its explanatory text, partly as a specimen, and partly because we here meet something uncommon. The runes say:

“PITA IR SANTI GABREL OK SEHPÍ SANTA MARIA AT HAN SKULDIBARN FYPA.”

THIS IS SAINT GABRIEL, EKE [and, who] SAID TO-SAINT MARIA THAT HO [she] SHOULD a-BARN [child] FEDE [bear].

Gabriel, winged, has a rayed nimbus; his right hand holds a sceptre. (Mary and the attendants have the simple nimbus, Christ always the crucial glory. The three magi are crowned, without nimbus.)

Most curious, perhaps unique, is the conventional representation of the Divine dove. It descends on the head of the Virgin, not into her ear. But no one would suspect it to be a dove at all. It is, in fact, a round ball, from which issues a staff, both before and behind. Now this is only the wear and tear of the usual symbol. The body of the bird has become a round centre, the lower staff its neck and head, the hinder rod its tail. Also, in the next compartment, where she stands embraced by Elizabeth, exactly the same debased symbol enters the top of St. Mary's head.

Written last of all is the name of the excellent sculptor, Sihrafr Mesteri, Master Sihraf. This name is found on a dozen runic monuments in Gotland and other parts of Sweden. So far as I know, it does not occur in any other Scandogothic land.

Several other runic monuments are mentioned incidentally in the pages before us. Among these is an early Christian grave-memorial at Valleberga in Scania, of special interest to Englishmen. It tells us of the two men there commemorated that

“PER LIKIA I LUNTUNUM”

THEY LIE IN LONDON,

just as other Scandinavian rune-stones speak of Bath, Dundee, and other places in different lands. It was found in 1867; and, in 1868, I engraved and published it in my *Old N. Run. Mon.*, vol. ii., p. 820 (see also vol. iii., p. 350). I there showed that London was certainly the proper translation of this Luntunum; and at p. 9 of his work Prof. Wimmer accepts my attribution as quite correct.

I do not profess to agree with Prof. Wimmer in all he has said, for no book is faultless; and I differ from him as to several vital questions, both as to runes and linguistics. (Besides which, he has given no index.) But all this has nothing to do with the matter. His exhaustive

monograph does him honour as a learned runesmith, and shows the patience and talent he has devoted to the decipherment of the doubtful marks, as well as his skill in expounding their meaning in the light of modern speech-lore. I, therefore, have pleasure in heartily recommending this elegant volume to all interested in the traditions with which it is connected. Those who are fascinated by rune-craft will learn much; those who follow the attractive and daily spreading science of Christian picture-writing will find here a plentiful harvest. The latest British additions to this store are Allen's *Christian Symbolism in Great Britain and Ireland*, and the book by Miss Margaret Stokes, on *Early Christian Art in Ireland*.

GEORGE STEPHENS.

NOTES ON ART AND ARCHAEOLOGY.

THE fourteenth exhibition of the Nineteenth Century Art Society will open next Monday, February 13, in the Conduit Street Galleries.

MESSRS. CASSELL & COMPANY are about to publish, in serial form, a *Pictorial Scrap-Book*, which will contain about 3,000 pictures, including natural history, historical, biblical, and general subjects. The first monthly part will be published on February 24.

MESSRS. VIRTUE have sent us a proof impression of the plate which appears as a frontispiece in the February number of the *Art Journal*. It is an etching by Mr. Macbeth Raeburn, after one of Mr. J. Pettie's simplest and most effective pictures—“Ho! Ho! Old Noll!” which was to be seen in the jubilee exhibition at Manchester last year. The reproduction is a good piece of work, being particularly successful in its lights and shadows.

THE plate chosen by the Council of the Art Union for the current year is a line engraving by the veteran, Mr. Lumb Stocks, of Mr. J. B. Burgess's picture of “A Spanish Letter Writer.” The subject tells its own story and ought to be popular, though we fear that the Art Union will never again reach its highwater mark of prosperity, attained in 1875 and 1876 with its two prints after MacIise's “Meeting of Wellington and Blucher” and “Death of Nelson.” Of more recent years the most successful issue seems to have been Frith's “Road to Ruin.”

THE STAGE.

STAGE NOTES.

WHEN the “Woman Hater”—Mr. Lloyd's farcical comedy at Terry's Theatre—has run its course, its place will be taken by a piece of serious interest, in which, of course, Mr. Edward Terry will himself appear. We are glad to hear that Miss Rose Norreys and Miss Maude Millett are engaged for this production.

“CUPID'S MESSENGER,” by Mr. Calmour, is immediately to precede—if, indeed, it is not already preceding—“Partners” at the Haymarket. “Wet Paint” was probably put up hurriedly and never destined for a long run.

MR. EDWIN OLEARY's “Mirage”—a new piece in four acts—was appointed to be performed at a matinée at the Princess's on Thursday.

MISS MARY ANDERSON's season at the Lyceum will not extend quite to the time of Mr. Irving's return. It ends before the close of March, and, during its course, the lady will have presented nothing but the “Winter's Tale.” Miss Anderson contemplates another tour in America.

THE Olympic revival of “The Ticket of Leave Man” is immediately to suffer—so we understand—by the withdrawal of Mr. Henry Neville, an excellent Bob Brierley, but one

* *Döbefonten i Åkirkaby Kirke*. Fol. Köbenhavn, 1887, Gyldendalke Boghandel. Pp. 84.

whom certain critics rather rashly regard as the only Bob Brierley possible. There will, however, remain as very notable features of the performance—during the limited time still allotted to it—the garrulous landlady played by Mrs. Stephens and the Jem Dalton of Mr. Willard, which is allowed on all hands to be as strong a thing as any which this most capable and interesting actor has yet done. Apropos of Mr. Willard, it is worth mentioning that he is a possible tenant of the St. James's Theatre after Mr. Hare and Mr. Kendal vacate the place this summer.

UNDER the title of "Love and Half-pence," an ingenious comedietta, by Mr. William Poel, was brought out at St. George's Hall on Tuesday in last week. It is in some measure an adaptation from a French play, of which a version by the late Mr. John Oxenford was produced nearly thirty years ago. But the piece, as it now stands in Mr. Poel's name, contains a somewhat different list of *dramatis personae*; and, to judge from at least one or two jesting allusions which the last generation would never have understood, has been written "up to date." It was interpreted last week by Mr. Poel himself—who played very appropriately, with a good deal of dry humour; by Mr. Hinton Grove, the latter part of whose performance was decidedly entertaining; by Miss Hepworth, who is safe and sympathetic; and by Miss Mary Dickens, who played with extreme freshness, heartiness, and fun. The young lady has perhaps hardly been cast for a comedy part before; yet this was quite the best thing we have thus far seen Miss Dickens do. And it is a line in which she may most reasonably be encouraged to, in some measure, devote herself.

MUSIC.

RECENT CONCERTS.

MDME. DE PACHMANN (Miss Maggie Okey) gave a pianoforte recital at Prince's Hall on Monday afternoon. She commenced with Brahms's Sonata in F minor (Op. 5), a work which makes heavy demands on the performer. The lady's rendering was in many points satisfactory, but at times lacking in breadth and energy. The rest of the programme consisted of a number of short pieces, and these were given with finished technique, charm, and refinement. In Schubert's beautiful Impromptu (Op. 90, No. 3), in Henselt's "Si oiseau j'étais," in Liszt's "Au bord d'une source," and in her own pieces she fairly won the hearts of her hearers. It may be thought that Mdme. de Pachmann was treading on dangerous ground in attempting some Chopin pieces, and especially the Etude in thirds—the beauty and poetry of which was first revealed to us by her husband; but she achieved a brilliant and well-deserved success. Mdme. de Pachmann owes, no doubt, much to her husband, and his influence may easily be traced; yet she has character and merits of her own. There was a very large and appreciative audience.

At the Popular Concert on Monday evening a quartet of Haydn's was substituted for that of Brahms in C minor. Mdme. Norman-Néruda had slightly injured one of her fingers, and had been unable to rehearse the modern composer's work. Of Haydn's eighty-three quartets there are certainly many which are child's play to such accomplished artists as Mdme. Norman-Néruda and her associates; but there are others which stand quite as much in need of rehearsal as those of Brahms. We say this because there are musicians who look down with pity—not unmixed with contempt—on Haydn's art-work, and who from one work would have us learn all. Haydn, at his best, is by no means to be despised. Mdme. Frickenhaus was the pianist, and played Schumann's Sonata in G minor.

The lady really only touched the surface of the work. Excellent fingers she possesses, and in pieces of a lighter character they are of great service to her; but, in a rendering of Schumann's compositions, if once technique gets the upper hand, the music loses much of its charm and nearly all its meaning. The public seem, however, to have enjoyed the performance, for an encore was demanded. Mdme. Frickenhaus gave some modern piece with grace and finish. The concert concluded with Beethoven's ever-popular Septet.

Mr. Henschel, taking time by the forelock, gave an In Memoriam Wagner concert (No. 12 of his series) last Tuesday evening at St. James's Hall. The programme commenced with Beethoven's "Eroica." The performance, on the whole, was a very careful one. The March was taken slightly faster than usual, but we think it an improvement. The Scherzo lacked crispness, and the Trio was hurried and hazy. The Wagner selection included the usual "Tristan" pieces, the Siegfried Idyll, the "Parsifal" Prelude, and the Kaisermarsch, some of them given with considerable effect. But let us say one word about the scheme itself. Every true Wagnerite knows that the performance on a concert platform of excerpts from the music-dramas is contrary to the preaching—if not to the practice—of the master. They are heard there at a great disadvantage. One must not, however, be too ideal. It was by giving detached movements from Beethoven's symphonies, even at the Paris Conservatoire, that the French public first learned to understand the mighty genius. But in giving excerpts some care should be had in the arrangement. On Tuesday there was a want of contrast in the first three; and, though there was plenty of it in the Kaisermarsch, that piece always appears to us quite out of place in the concert-room. And once more Wagner, with these disadvantages of place and position, was put before the audience just after they had heard one of Beethoven's finest symphonies. Richter's plan of putting a Beethoven symphony at the end is, we think, a wise one. No one can touch the Bonn master in his own department; and Wagner's music without his drama has an unequal chance after the older master.

Miss Esther Barnett, a young and talented pupil of Mr. T. Wingham at the Guildhall School of Music, gave a pianoforte recital at St. James's Hall on Wednesday afternoon. She played Bach's Italian Concerto and his Fugue in A minor with great nimbleness of finger. Her reading of the C minor Variations of Beethoven, if neat as to technique, was somewhat affected, and there was not good contrast of tone. In a number of short pieces by Mendelssohn, Bennett, Chopin, &c., she was heard to much advantage. Her strong points are her elastic touch, and her delicate and refined style of playing. She ought to develop into a first-class pianist. An unusually large audience were liberal in their applause, and her effective rendering of a Barcarolle by her master resulted in an encore.

J. S. SHEDLOCK.

MUSIC NOTE.

THE prospectus of the seventy-sixth season of the Philharmonic Society is an interesting one. Mdme. Schumann is announced to play Chopin's F minor Concerto at the first concert, March 15. During the season Herr Edvard Gieg will play his Concerto in A minor, and conduct a new orchestral work; M. Charles H. Wider will conduct his "Music to a Walpurgis Night"; and M. Tchaikowsky will make his first appearance in England, and conduct a new work of his own. The season, consisting of seven concerts, will end on June 16. Mr. F. H. Cowen will be the conductor.

WARD & DOWNEY'S NEW BOOKS.

NEW BIOGRAPHICAL WORKS.

SHELLEY: the Man and the Poet.
By FELIX RABBE. 2 vols., 21s. [Shortly.]

THE LIFE and TIMES of JOHN WILKES, M.P., Lord Mayor of London, and Chamberlain. By PERCY FITZGERALD. 2 vols., 21s.

FRANÇOIS LISZT: Recollections of a Compatriot. By MAJAME JANKA WOHL. 6s.

WARD & DOWNEY,
12, York-street, Covent-garden, London.

CHAMBERS'S ENCYCLOPÆDIA.

A DICTIONARY OF UNIVERSAL KNOWLEDGE.

NEW EDITION.

ON MARCH 1, 1888, WILL BE PUBLISHED VOLUME I.

Price 10s. cloth; 15s. half-morocco. TO BE COMPLETED IN TEN VOLUMES.

The Work will also be issued in Monthly Parts, price 1s., to be completed in 74 Parts (exclusive of Maps). Part I. will appear on March 1, 1888.

CHAMBERS'S ENCYCLOPÆDIA is convenient in size, moderate in price, and so arranged that every subject in the field of human knowledge can be referred to without difficulty. This New Edition, in preparing which the Editorial staff has had the assistance of eminent Specialists in all departments, has been re-written, and is printed from new clear type, with fresh illustrations and maps.

The Work may be ordered from any Bookseller, and Prospectus with Specimen Page may be had on application.

W. & R. CHAMBERS, London and Edinburgh.

NOTICE.

ON WEDNESDAY NEXT will be published the Second Volume of the *HENRY IRVING SHAKESPEARE*, Edited by Henry Irving and Frank A. Marshall, and Illustrated by Gordon Browne. The Work will be completed in eight quarterly volumes, small 4to, cloth, gilt top, price 10s. 6d. each.

*** Prospectus, with Specimen Page, sent Post-free on application.

LONDON: BLACKIE & SON, 49 AND 50, OLD BAILEY.

WILL BE PUBLISHED, FEBRUARY 17TH,

THE GOVERNMENT YEAR BOOK.

A Record of the Forms and Methods of Government in Great Britain, her Colonies and Foreign Countries.

1888.

With an Introduction on the Diffusion of Popular Government over the surface of the Globe, and on the Nature and Extent of International Jurisdictions. To which is added a Review of the Chief Occurrences affecting National and International Government. Edited by LEWIS SERGEANT, Author of "New Greece," "England's Policy: its Traditions and Problems," &c. Large crown 8vo, cloth, 6s.

NEW VOLUME of "THE STORY OF THE NATIONS."

CHALDEA. By Zenaide A. Ragozin. Maps and Illustrations. Large crown 8vo, cloth, 5s.

"Written in a vivid and interesting style."—*Scotsman*.

INSPIRATION and the BIBLE: an Inquiry. By Robert Horton, [M.A., formerly Fellow of New College, Oxford. Crown 8vo, cloth, 6s. [Shortly.

MORE than HE BARGAINED FOR: an Anglo-Indian Novel. By J. R. HUTCHINSON. Crown 8vo, cloth, 6s.

CHARLES WHITEHEAD: a Monograph. With Extracts from his Works by H. T. MACKENZIE BELL. Cloth, 5s.

"It is strange how men with a true touch of genius in them can sink out of recognition.....Several works by this writer ought not to be allowed to drop out of English literature."—*Times*.

OLD YEAR LEAVES: Being Old Verses. Revised by H. T. Mackenzie Bell. Cheap Edition, cloth, 5s.

"The author, in an original and happy preface, shows that he can write good nervous prose, and can at once be finely ironical and humorous, and include himself in the subject of his laughter."—*British Quarterly Review*.
"An author confers a favour on the public by issuing pieces of the quality of those which Mr. Mackenzie Bell has given us."—*Sunday Talk*.

LONDON: T. FISHER UNWIN, 26, PATERNOSTER SQUARE, E.C.

PROPOSED ENGLISH EDITION OF

KALEVALA,

The Finnish Epic Poem upon which Longfellow modelled his "SONG OF HIAWATHA."

Prospectus on application to W. F. KEST, 4, Basington-gardens, Chiswick, London, W.

Now ready, price 1s.

THE JOURNAL of the ANTHROPO-

LOGICAL INSTITUTE of GREAT BRITAIN and IRELAND. Vol. XVII., Part 3, FEBRUARY, 1888.

Contains Communications from Lieut.-General PITT-RIVERS, F.R.S.; Dr. JOHN BEDDOE, F.R.S.; E. C. PHILLIPS; and Canon ISAAC TAYLOR, LL.D.; and Anthropological Miscellanies.

London: TRUBNER & CO., Ludgate Hill.

NEW EDITION IN ONE VOLUME.

This day, small crown 8vo, 600 pp., cloth bevelled, gilt top, price 3s. 6d.

MEMOIRS of NAPOLEON BONAPARTE:

From the French of M. DE BOURBONNE, Private Secretary to Napoleon, and Minister of State under the Directory, the Consulate, the Empire, and the Restoration. With Two Steel Plates.

London: CROSBY LOCKWOOD & FOX, 7, Stationers' Hall Court, E.C.

1888.

NOW READY.

Twenty-eighth Annual Publication. Price 50s., elegantly bound. Dedicated by permission to H.R.H. the Prince of Wales.

THE COUNTY FAMILIES of the UNITED

KINGDOM: a Royal Manual of the Titled and Untitled Aristocracy of Great Britain and Ireland. By EDWARD WALFORD, M.A., late Scholar of Balliol College, Oxford. Containing Notices of the Descent, Birth, Marriage, Education, &c., of more than 12,000 distinguished Heads of Families in the United Kingdom, their Heirs-apparent or Presumptive, together with a Record of the Patronage at their disposal, the Offices which they hold or have held, their Town Addresses, Country Residences, Clubs, &c.

London: CHATTO & WINDUS, Piccadilly, W.

In crown 8vo, handsome cloth, price 5s.

TWO NORTH-COUNTRY MAIDS.

AN EVERY-DAY STORY.

BY

MABEL WETHERAL.

"This little story is prettily told, and shows a delicate appreciation on the author's part for some of the finer traits of female character."—*Athenæum*.

"Delightfully simplicity and charm."—*Literary World*.

"There is more than simplicity....there is power."—*Academy*.

"Drawn by one apparently to the manner born and with a easy natural touch."—*Morning Post*.

"The interest lies chiefly in the graphic pictures we get of Cumberland peasant life, evidently drawn by one to whom the border county is very familiar."—*Echo*.

"The plot of the story is well conceived....the work is thoroughly well done."—*Whitehaven Advertiser*.

"Decidedly above the average."—*Liverpool Daily Post*.

"Justifies its title better than almost any one out of every hundred stories."—*Publisher's Circular*.

"No girl who may be found absorbed in this should be disturbed or told she is wasting her time."—*Nottingham Guardian*.

"In the sense of real charm and simplicity is not 'an every-day story,' and we would gladly see many more of the same type."—*Warrington Guardian*.

London: ROBER & DOWLEY, 29, Ludgate Hill, E.C.

PEOPLE'S EDITION.—Price 6d., with PORTRAIT (Special terms for quantities.)

JOSEPH MAZZINI: a Memoir by E. A. V.

with two Essays by MAZZINI: "THOUGHTS on DEMOCRACY" and "THE DUTIES of MAN"

"Mazzini was one of the noblest patriots who ever wrought for the emancipation of peoples, and his life and work ought to be reverently studied by every young Englishman."—*Northampton Guardian*.

Crown 8vo, cloth boards, price 2s., post free.

THE CONFLICT of OLIGARCHY and DEMOCRACY.

By J. ALLANSON PICTON, M.A., M.P.

Third Edition, crown 8vo, cloth, price 1s. 6d., post free.

LESSONS from the RISE and FALL of the ENGLISH COMMONWEALTH.

By J. ALLANSON PICTON, M.A., M.P.

CONTENTS: The Origin and Growth of the English Oligarchy.—Causes and Hindrances of Reform.—The Relation of Political Reform to Social Progress.—The Land Monopoly.—The Distribution of Wealth.—Democratic Morals.

LONDON: ALEXANDER & SHEPHEARD, 21, FURNIVAL STREET, HOLBORN, E.C.

SATURDAY, FEBRUARY 18, 1888.

No. 824, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

English Newspapers: Chapters in the History of Journalism. By H. R. Fox Bourne. (Chatto & Windus.)

A COMPLETE history of English newspapers and a full account of English periodicals are among the dreams of compilation which have often dazzled the minds of literary students. The last antiquary who essayed to undertake a descriptive narrative of all the national periodicals was Mr. Cornelius Walford. The outlines of the work were carefully defined, much of the materials was collected together, and enthusiastic experts were engaged under his supervision in adding to the stores already amassed; but ere half the introductory work was completed the master-mind which planned and directed the operations was removed from our midst. Mr. Fox Bourne has wisely refrained from attempting an impossible task. He has not attempted to describe in detail the incidents relating to every newspaper which has issued from the press; he has forborne from chronicling the brief life of the weakly prints which have expired of inanition after the publication of a few numbers, and from following in every detail the career of those journals which influence, unconsciously it may often be, every morning and evening the views of the average Englishman. It has been his aim rather to give a selection from the ample materials which lie ready at his hand than to stupefy the reader with a mass of dry facts which he could not satisfactorily digest. He has endeavoured to show the bearing of journalism upon the politics and literature of our nation, and to illustrate the manner in which the conduct of English newspapers has influenced for good or for evil the course of English social life. Still, even when the task is undertaken in this discriminating spirit, there are some paragraphs in the volumes of Mr. Fox Bourne which may be likened unto a catalogue of dry names. These, however, can be easily omitted by the judicious reader; and he will readily acknowledge, if it has ever been his lot to peruse the previous compilations of Mr. Knight Hunt, Mr. Alexander Andrews, and Mr. James Grant on the same subject, that the latest historian of our English newspapers has far exceeded his predecessors. The contributions of the first two men of letters were marked by much research; and the volumes of Mr. Grant, obviously defective as they were in many respects, have been subjected to more derision than they merited. But whether fullness of description, accuracy of detail, or interest of narrative are regarded, his predecessors must all yield the palm to the narrative of the latest historian of our national press.

A work like this tempts a middle-aged Englishman into taking stock of the changes

which have taken place in the newspaper world during his own lifetime. The leading English daily paper still maintains its place; but, owing to the changes of legislation affecting newspapers, its predominance is not so marked as of yore. With the repeal of the tax on advertisements, and the paper duties, many of its rivals have been able to realise enormous profits even at the price of a penny, and there are at least four morning papers in London now whose daily sale averages about 200,000 copies. The *Morning Star*, founded as the organ of the Manchester School, and numbering among its contributors one of the three leaders of the English home-rulers, has long ceased to exist. The same fate long ago befell the *Morning Herald*, the high-priced expounder of the views of the Derbyite school of Conservatives; but its cheaper contemporary, the *Standard*, has grown and expanded until it has become the representative champion in the press of the views of the middle-class residents in and around London. Mr. Fox Bourne says of these journals that for some time they were maintained "by a subsidy from the Emperor Napoleon III.," but, unless my memory has deceived me, the paid defender of the Tuileries was the *Morning Chronicle* in its expiring days. In the evening papers of London there have been greater changes still. One ably conducted journal, the *Express*, which always failed to influence public opinion as much as its merits justified, perished nearly twenty years ago. The *Globe* has from about that date advocated different opinions in politics from those which it previously maintained. We have seen the foundation of the *Pall Mall Gazette*, and witnessed the chequered career which it has passed through in sentiment and in style. Its offshoot and rival is but the creation of a few years, and only a few days ago there appeared another evening paper to represent the opinions of a different class of politicians. The *Literary Gazette*, which Jerdan owned and edited for so many years (there are some curious letters from him in the two volumes of Canning's correspondence recently published) expired long ago of inanition; but its more pushing rival, which was founded some sixty years ago by Silk Buckingham, flourishes in undiminished vigour. Every profession and every class now maintains an organ in the press. The doctor, the lawyer, the architect, the artist, and the builder, each has one or more journals of his own. Those whose interests are confined to the promotion of gas, and the enterprising engineers, who have covered the earth with a network of telegraphic cables and who seek now to revolutionise the world of lighting, have both able advocates of their views in the public press. Those among us who have the good fortune to possess capital of their own were long content with papers published once a week, but during the last year or two a daily financial paper has obtained for itself by the independent character of its comments considerable influence and circulation. The *Economist* still maintains its place as the chief weekly organ of the investor, but it has now to compete with an energetic rival. The age is especially conspicuous for speculation on the Stock Exchange and for widespread interest in sport. *Beil's Life in London*,

which the athlete of twenty-five years ago was content to peruse for its descriptions of cricket-matches and regattas, is no longer among the living—even the perennial reproduction of its chronicles of the prize-fights of old at last failed to attract; and the sportsman of to-day can now revel in the *Field* or riot in the *Pink-un*. The *Record* still lives; and those who know it now as the champion of Evangelicalism will learn with surprise that Cardinal Newman once contributed to its columns. The influence of the *Guardian* survives undiminished; but both of them have now to contend with pushing rivals of a lower price. As the representative of every section of Dissent the *Nonconformist* maintains its high character for honesty and ability; but each school in the world of Non-conformity has now its separate exponent of opinion. The first number of the *Tablet* was published in 1840; and, in spite of the rivalry of another organ of Roman Catholicism, it still retains an influential circulation.

Mr. Fox Bourne supplies us with an abundance of information on the gradual growth of newspaper circulation. A tax on newspapers was surreptitiously carried through Parliament in June 1712; and when it came into law, "many eminent authors," to use the words of Addison, "published their last words." By the operation of this impost the circulation of the *Spectator* itself was reduced to less than half of the original numbers; and, from the figures given by Steele, it is inferred that the issue fell from 3,200 to 1,600. Under the first George newspapers made little progress. It was Walpole's design to "noble" the press by bribes rather than by repression, and he spent in this way about £5,000 a year. Bolingbroke's articles in the *Craftsman* gave an ephemeral value to that paper; but when they ceased the public journals once more lapsed into neglect. In newspaper enterprise the last twenty years of the second George (1740-60) are only remarkable for the publication by Cave in the *Gentleman's Magazine* of lengthened reports of proceedings in Parliament, and for the share which Dr. Johnson took in their expansion and revision—a subject which has recently exercised the talents of Boswell's erudite editors, Napier and Birkbeck Hill. With the articles of Wilkes in the *North Briton*, and with the letters of Junius, the influence of the London press grew by leaps and bounds. The blunders of the ministers under the young king did more in five years to promote newspaper power than the combined efforts of all the English journalists had accomplished in the previous century. In the two and twenty years, from 1753 to 1775, the daily average grew, in spite of the doubling of the stamp-duty and the advertisement-tax, from nearly 24,000 to close on 42,000; and although the circulation did not, probably owing to repeated increases in these imposts, increase in such rapid proportions in the next twenty years, the character of the newspaper press in London showed marked improvement. Great newspaper editors began to appear above the horizon; and the names of three of them—James Perry, John Walter, and Daniel Stuart—are permanently written in history. The pages in which Mr. Fox Bourne has chronicled the progress of their journals, and the contributions of the illus-

trious writers whose aid they enlisted, stand out as the freshest and brightest sections of his volumes. Never again were such distinguished names in English literature numbered among the writers in the daily press. Lord Campbell obtained employment on the *Morning Chronicle* as the theatrical critic, and some amusing adventures which he passed through in that capacity are narrated in his *Life*. Thomas Campbell published some of his most stirring poems in its pages, and Coleridge found Perry a generous paymaster for some contributions to his paper. John Walter raised the *Times* to a high place among the journals of the day, and the punishments which he suffered for libels on the royal dukes did not quench his ardour. Daniel Stuart's paper, the *Morning Post*, under his able editing increased its circulation twelve-fold in eight years, and he numbered among the writers on his staff five illustrious names. Sir James Mackintosh was his brother-in-law, and for many years his chief adviser; and the writers in his pay included, probably owing to Mackintosh's introduction, Coleridge, Lamb, Southey, and Wordsworth. Into the schemes of Stuart for extending the importance and the circulation of his journals much insight is afforded by his amusing reminiscences in the pages of the *Gentleman's Magazine*, and Mr. Fox Bourne has acted judiciously in embodying in his own pages considerable extracts from these entertaining glimpses of the past. Two other names are worthy of especial mention. *Cobbett's Register* made the public familiar with a style full of force and vigour, and placed before them opinions always fresh and original, if sometimes marred by eccentricity. The views of the Hunts in the *Examiner* were more worthy of adoption; and the pages of their paper were often brightened by essays written with a gracefulness of feeling and a lightness of fancy in which Leigh Hunt had no living equal.

The race of eminent editors and contributors continued to flourish after the dawn of this century. For many years John Black edited the *Morning Chronicle* with unflagging zeal; and, by the aid of many of the leading Whig politicians, and such critics as Hazlitt, continued to keep his paper in the front rank. Was not Hazlitt, I may ask *en parenthèse*, the author of the article in the *Edinburgh Review* for 1828 on the newspaper press, to which Mr. Fox Bourne often refers for a keen criticism of some London paper? Under the rule of Thomas Barnes the *Thunderer* began to distance all competitors. His power in political life was always deemed considerable; but the full extent of his influence with Lord Lyndhurst was not appreciated until after the publication of the journals of Charles Greville. The structure which Barnes partly raised was completed by Delane, whose name is still remembered, and will probably be transmitted through several generations, as the ablest newspaper editor in Queen Victoria's reign. Fonblanque's name is associated with the *Examiner*; Dickens and Harriet Martineau are two of the illustrious dead who were connected with the *Daily News*; and William Johnson Fox, the member for Oldham, long exercised an extraordinary power over the public through his articles, as "Publicola," in the *Weekly Dispatch*.

On the characteristics of such newspapers, past and present, the pages of Mr. Fox Bourne afford adequate information. Open his volumes where you will there is no lack of matter, both instructive and entertaining, written with complete freedom from prejudice. I have noted a few insignificant inaccuracies in his narrative, but they are of slight moment and can be easily corrected without detriment to its substance. "John Bee," quoted in i. p. 141, is usually considered a pseudonym for John Badcock; Roger North's *Examiner* (p. 49) is a misprint for *Examen*; the name of Canon Mozley is misspelt on ii. 186; and the wrong Christian name is given for the proprietor of the *Queen* on ii. 295. The merits of John Horne Tooke and John Taylor, "everybody's Taylor," as he was sometimes styled, are matters of opinion; but Mr. Fox Bourne inflicts somewhat summary punishment on both of them. Not the least of the good qualities shown by him is the good taste with which he refrains from unnecessary intrusion into the privacies of the newspaper life of the present day.

W. P. COURTNEY.

TWO VOYAGES TO THE WEST INDIES.

The English in the West Indies; or, the Bow of Ulysses. By James Anthony Froude. (Longmans.)

Down the Islands: a Voyage to the Caribbees. By William Agnew Paton. (Kegan Paul, Trench, & Co.)

TRAVELLING in these days has become "the contemplative man's recreation." He goes on board his screw steamer with the honest purpose of improving his own, and it may be others', knowledge of foreign parts. When he comes back and writes it all down it often as not appears that he has made no serious business of observation, but has amused himself with reflections on the badness of "the government" and what not. It is this recreative habit and the decay of the habit of observation that makes the run of modern books of travel such dreary reading. With a few very well-known exceptions—nearly all of them travellers into unknown regions—naturalists alone keep up the character of observant travellers.

Whatever may be said of Mr. Froude's book on our West Indian possessions no one can complain of its sharing the dulness I speak of. There is a delightful charm in being taken on one's travels with a man who, from the outset to the end, is unhesitatingly communicative as to his personal enjoyment of the journey. The reader sees with him the rough Atlantic, the gleaming tropical sea, the wooded headlands stretching into it, the negro and his dwelling-place, as only the West Indian Mail Company can enable him to see them. One is taken into his confidence in the matter of tobacco—one cannot expect much more. On his outward voyage Mr. Froude gains the personal regard of his readers, and especially of his reviewers, by an excellent story. Among his fellow-passengers was

"a missionary who, for the most part, kept his lips closed. He did open them once, and at my expense. *Apropos* of nothing he said to me, 'I wonder, sir, whether you ever read the remarks upon you in the newspapers. If all

the attacks upon your writings which I have seen were collected together they would make an interesting volume.' This was all. He had delivered his soul and relapsed into silence."

The author thus disarms criticism—at all events from pointed weapons.

Mr. Froude tells us that his purpose in writing this book is so fully explained in the book itself that there is no need of a deliberate statement of it in the preface. It may be fairly concluded that his purpose was rather mixed. The one thing which is stated over and over again above all else is his apprehension of what he thinks the consequences would be of giving the negroes a large measure of self-government. Since nobody wants to give them this, and very few negroes are to be found who claim it, one fails to see what it is all about. West Indian native newspapers sometimes claim it; but, since these newspapers circulate chiefly among the official class, which they live by worrying, little attention need be paid to them. Mr. Froude tells us himself that the negro is perfectly happy (no mortal is happier) under British rule. The danger is from the home government. "Oratory" (Mr. Gladstone) and Radicalism he foresees will in time extend the vote to the negro population, and then our colonies will become each another Hayti. Every one may judge for himself of the prospects of sufficient leisure for the home government to enable it to consider measures for granting to negroes what they do not demand. Every one, moreover, has heard of the gentleman who was frightened at the bogey of his own construction; but I think that it was some one else who wrote the account of it.

The island of which, next to Hayti itself, Mr. Froude gives us the most depressing picture is Grenada—"an island of [black] peasant proprietors." He visited this "scene of desolation and desertion" for a few hours, and spent them dining with a friend. It is a pity he was not more fortunate in the source of his information. The scene must have been to a considerable extent contemplated through other eyes. This place, which he would have us believe is ripening for another Hayti, is the one island of all our West Indian possessions the inhabitants of which have had the courage and enterprise to abandon sugar altogether and undertake the cultivation of other products. There is probably not an acre in it under the cane. Cacao has, perhaps to too great an extent, taken its place; but the planters are alive to this risk, and a botanic garden has been established for the experimental culture of other products. No other colony, except Ceylon after the coffee blight, has shown an equal amount of foresight and determination. No other island, if we can trust Mr. Froude, is so near the verge of social ruin and abandonment to negro rule, with attendant Obeah and cannibalism.

In Jamaica the economic outlook was depressing, but Mr. Froude's depression was surely carried too far when he felt some disappointment with the botanic garden. Here, at all events, one might have expected hopeful words. The significance of a botanic garden to the tropical agriculturist can hardly be over-estimated. Hope springs in it eternally. To it the planter looks for new products and

for information about them. The Jamaica Gardens are the one bright spot in that unhappy island. Mr. Froude visited them within a year of the end of Mr. Daniel Morris's vigorous administration. An American gentleman said to him :

" 'There are dollars in that island, sir, if they will look for them in the right way.' Nothing of this kind was going on at Castleton; so much the worse; but perhaps things will mend by-and-bye."

As for the English in the West Indies, what they have done and left undone, there is no useful account such as may be gathered from other sources. What Mr. Froude says of oratory may be in part very fittingly said of his own book. The delight of reading his travels is dangerously seductive and positively misleading (if I may distinguish between these words) to the reader who is in search of information as to our West Indian possessions.

The causes of West Indian depression are not far to seek, and the remedy is no affair of mystery. It is possible that we may see again a period of great prosperity founded on the cultivation of a single product, as was the case in the days of the sugar supremacy of the West Indies; but it is hardly likely—it is not very desirable. It would repeat the old history of the Irishman and his potatoes. It is more probable that the West Indian planter will gradually learn to stand on as many legs as possible, and through the agency of botanical economics and his own perseverance rescue himself from his present despondent state. Little good is to be done by longing after the fleshpots of the days of sugar planting and slavery. The competition of beet may be a much disguised blessing to the West Indies; but, at all events, it has taught a lesson to the planter which he is slowly learning. Mr. Froude is well aware of it; and it is much to be regretted that his book contains so little about it and so much about the imaginary horrors of future black republics.

It would be very ungracious to part with a grumble from a book which has given me so much pleasure in the reading of it. One cannot expect again the charm to be found, for example, in the account of Père Labat's travels in these islands. Mr. Froude did not leave the beaten track, and the mail steamer intervenes often in the narrative. There is a noble account of the naval victories by which these islands became ours. His estimate of Rodney is rivalled only by Sir Blennerhasset Portico's in Mr. Gilbert's ballad, if I may be so irreverent as to make the comparison. The most interesting and delightful part of the whole book is the account of Dominica.

Mr. Paton went "down the islands" from New York in the roomy and comfortable *Barracouta*, which calls at nearly all the ports. He thus saw a great deal of the Caribbean group and covered much of the same ground as Mr. Froude. He writes in the highest spirits from beginning to end. He did not carry letters of introduction to the governors, but contented himself with dutiful calls on the American consuls. He "made friends" with everyone he came across, including "the nigger" generally. One gets rather tired of the quantity of fruit

he and his fellow-passengers managed to consume; but much may be forgiven to so light-hearted a traveller. Mr. Paton by no means confines himself to the pleasures of life. He diligently studied statistical accounts of the islands, and steers most judiciously between their discrepancies. The result is an excellent, and on the whole trustworthy, sketch of the history and resources of the Caribbean islands. He went there "without prejudice," and looked persistently on the happier aspect of everything. He shows little insight into the future, and pretends to little. But, speaking of the future of the coloured races, he says (p. 211):

"It is not too much, however, to expect that in time the negroes will know how to govern themselves—they are capable of acquiring that knowledge, and, having acquired it, of using it wisely and man-fashion."

If left to themselves now, he agrees with Mr. Froude and with everybody else, they would sink to the level of Hayti. Mr. Froude carefully notes the presence of American ships in the West Indies; and at Hayti says, "The Yankee, whether we like it or not, is the acknowledged sovereign in these waters." Mr. Paton, himself an American, cannot behold shipping without asking "Where, oh, where, are the Yankee ships?" However, he cannot help noting the American fish smacks and timber drogers at Barbados; and, without going so far as Mr. Froude, it must be acknowledged that the American knows his market in these islands. This is a good book to read after Mr. Froude's. It dispels the gloom if it does not open our eyes very widely. It is refreshing to read Mr. Paton's opinion of the price of emancipation:

"As I studied the columns of figures of this grand book-account, the record of the noblest financial transaction ever negotiated by the men of any nation, I could not help indulging a feeling of pride that I was a kinsman of the nation of shopkeepers."

Mr. Froude, in spite of himself, interests us most in his own opinion of what he sees; Mr. Paton successfully tells us of the scenes of his journey, with which he connects himself only in a good-humoured casual way.

GEORGE MURRAY.

A Dictionary of Christian Biography, Literature, Sects, and Doctrines; during the First Eight Centuries. Edited by William Smith and Henry Wace. Vol. IV. N—Z. (John Murray.)

THIS welcome volume completes not only the particular work to which it properly belongs, but the whole series of cognate publications, beginning with the original issue of the *Dictionary of Greek and Roman Antiquities* in 1842. It has itself been long awaited, for the third volume appeared so far back as 1877, and the reasons for this delay are briefly explained in the preface. One claim made therein by the editors is substantiated by inspection of the volume—that there has been no crowding and scamping of the work towards its end, as is too often the case in biographical dictionaries, but that the important letters it contains have been given space commensurate with that devoted to the earlier part of the alphabet. In any future recasting of the whole series, should it ever

be feasible, there are some articles scattered throughout this dictionary which would be more conveniently transferred respectively to the *Dictionary of the Bible* and the *Dictionary of Christian Antiquities*, as, for example, Prof. Salmon's erudite paper on Simon Magus, one of the best in the new volume. And although the series, as just said, is now complete, yet it is so rather as regards the plan and the promises of the editors than as a *Ding-an-sich*. For it is not practicable to draw a hard and fast line at the year 800; and a further dictionary, which shall take us through the Middle Ages down to the close of the fifteenth century, is still needed by students of Christian antiquities and literature. In some respects it is even more needed than what we are here given; for we are living now under institutions which have been powerfully influenced by mediæval events and thinkers, and which are largely inexplicable without reference to them.

The first article of much importance is that on Neo-Platonism. It is good, but a little thin here and there, and relies too exclusively on Vacherot. The reader interested in the subject will want to know more of Proclus and Olympiodorus than is told him (Iamblichus gets space enough); and references might have been supplied to the writings of Keil, Simon, St. Hilaire, Bouterwek, and Biet, perhaps Matter also, in the list of authorities. Nestorius, by Prof. Stokes, and also the allied article on Nestorianism, are careful and accurate. Some note of the occasional recrudescence of Nestorianism in Western theology down to recent times might have been made with advantage. "Origenes" is a good example of Prof. Westcott's minutely careful scholarship, and is bibliographically a very useful article. The speculative portion, less adapted to the writer's special gifts, is scarcely so adequate. It is to be hoped that the suggestion thrown out as to the production of a really complete edition of Origen's works will be taken up and acted on. He is too stimulating an author by far to be neglected as he has long been. The companion paper, by another writer, on the Origenistic Controversy, has been very carefully executed; and commendation is specially due for the pains the author has taken to clear the tangle which has gathered round the acts of the Home Synod and the Fifth General Council in the matter of Origen's condemnation. My own examination of the question has led me to the conclusion that there was no condemnation by the Fifth Council, and that the raid against Origenism which undoubtedly followed the dissolution of that assembly was due to personal pressure brought to bear by Justinian on the Asiatic bishops. Dr. Salmon's Papias is almost exhaustive, and of his usual excellent quality. Under Philo of Carpasia, it would have been worth while to say that his Commentary on Canticles has been largely borrowed from by Gregory the Great. It is an interesting literary problem to ascertain the process, for though Gregory was long resident in Constantinople he never condescended to learn Greek, and this seems to point to an early Latin version. The hypothesis that Gregory is the original, and that the corresponding passages in Philo are later interpolations (which is adopted by Cornelius à Lapide) labours under two difficulties—that

evidence is lacking for Greek borrowings from Latin writers, whom Greeks were apt to despise; and the fact that *Poilo* is invariably superior to Gregory in the parallel places, which is not the wont of borrowers. I speak from direct comparison of every line of both the glosses in question. Mr. Ffoulkes, in his valuable essay on Predestination, usefully traverses and corrects the hyper-Augustinianism of Prof. Mozley's treatise, in which he followed the line of St. Prosper so closely, with kindred disregard of a great part of Augustine's mind as shown in many detached portions of his works. Prof. Ince's article on the heretic Pelagius is too brief in its notice of Semi-Pelagianism, which has no separate article devoted to it. And as Semi-Pelagianism so-called—that is, the teaching of the school of Cassian—has always prevailed widely in the West as a counterpoise to the Augustinianism of Aquinas, and helped partly to mould the seventeenth-century revolt against Calvin, it should have been accorded more space. The article on "Pelagius I., Pope," fails to bring out the invalidity of his pontificate, for he was intruded, apart from the irregularities in other respects attending his consecration. Dr. Lipsius sends a very careful analysis of the curious Gnostic work, *Pistis Sophia*, which makes all but a very few readers independent of any other source of information. "Polycarp" is another of Prof. Salmon's most helpful articles, and as full as his Papias. The separate article on Proclus makes some amends for the curt mention of him in the article on Neo-Platonism, but scarcely fixes his place in the movement, or puts his peculiar teaching plainly enough before the student; and the bibliography omits the Frankfurt edition by Creuzer, in 1820, of the *Institutio Theologica* and the Commentary on the Alcibiades. "Prudentius" is a good and full article; and Mr. Lock has read the hymns appreciatively. He might have referred to the position held in English hymnody by versions from them, notably Dr. Neale's fine rendering of "Corde natus ex Parentis," and more than one competing attempt at the well-nigh untranslatable "Jam moesta quiesce querela." Dr. Cazenove, in his article on the "Quicumque Vult" holds (in the present reviewer's mind, rightly) with Dr. Caspari, Dr. Brewer, and Mr. Ommanney, for the relatively early date of this creed or hymn, as against the critics who bring it down to the verge of the eighth century. Under "Romanus (IX.)," his distinguishing epithet, "the Melodist," by which he is known in Greek ecclesiastical literature, is omitted. There are some interesting historical facts left out in the notice of St. Rusticula; and they ought to be inserted in any fresh edition. My special reference is to her arrest by Chlotaire II. There are three or four omissions of persons named Rusticus, of no great prominence, it is true, but yet occurring in kalendars and martyrologies, and so needing some commemoration. Under "Sibylline Oracles" a protest must be entered against the acceptance of the Greek etymon proposed by Varro and accepted by Lactantius. The Sibyls first appear in Latin Italy, not even in Magna Graecia, and it is to Latin we should look for the source of their name. We get it in the obsolete *sibus*=wise, preserved for us by

Festus, and surviving in its compound *persibus*. "Sibulla" is thus a feminine noun formed thence, and meaning "wise woman." Synesius is given considerably more space than he is entitled to upon any ground, no fewer than forty-six columns being assigned him, or almost three times what is allowed to an epoch-making man like Augustine of Hippo. In Dr. Salmon's copious article on the "Teaching of the Twelve Apostles," he leans to the view that the so-called eucharistic section relates to the benediction of ordinary meals, but does not quite decide the point. The lack of contact, so to speak, with the earliest liturgical forms known to us seems to me a strong argument for this theory. Dr. Gwynn's scholarly discussion of the curious "Acts of Thecla" is a good example of the thoroughness with which all remaining documents of the earliest Christian centuries are now being sifted, to make them yield up the last grains of evidence which can throw any light on the many unsolved problems of Church life and organisation. Mr. Venables has very justly estimated the noteworthy common-sense and lucidity of Theodoret as an exegete. He would serve still as an excellent guide for simple expository sermons, a class of homiletics too little cultivated. Dr. Swete's "Theodore of Mopsuestia" is a commendable piece of work; but it hardly brings out his peculiar prominence as the leading Broad Churchman of his time, nor yet how his teaching prepared the way for that of Nestorius, and later of the Adoptionists. Canon Bright has dealt with a thorny subject in "Theophilus of Alexandria" with moderation and learning; and full proof of the high rank he held as a theologian is supplied. Dr. Lipsius is again well to the front with his "Valentinus," containing a minute account of the once powerful form of Gnosticism whose hierophant he was. The article on "Pope Vigilius," by Mr. Barnby, is a successful handling of a very intricate and repellent piece of Church history, which requires a special motive to induce any scholar to disentangle for himself. It may be worth while to note, under Dr. Cazenove's article on "Vincentius of Lerins," that the famous canon of orthodoxy he laid down, "Quod ubique, quod semper, quod ab omnibus creditum est," is merely a sonorous nullity in the view of not a few of its critics; but that their objection falls to the ground when this maxim is compared with the common law of England, based on almost identical principles, and open to precisely similar cavils, as thus being unreal and non-existent, whereas it has formed a considerable factor in our jurisprudence, and is as definite as the statute-law itself. Canon Raine has tried to hold the balance carefully between the advocates and the opponents of Wilfrid of York in the matter of his quarrel with the national authorities, lay and clerical, and his appeals to Rome. Under Zosimus, when the episode of Apianus is referred to, and the canon on appeals to Rome cited by that pope as Nicene is mentioned, the writer says that it "was, in fact, one of Sardica," and refers to the article on Pope Julius I., by the same author. I believe myself to have demonstrated that this so-called Sardican canon is a Roman forgery, the cumulative proofs against its genuineness

being overwhelming; and Bishop Hefele has pointed out a like forgery in the alleged Letter of the Council of Sardica to the pope, which is treated as genuine, as are the canons also, in the article cited.

It is necessarily impracticable to do more than thus touch on a few of the many hundred entries in this important volume, whose slight defects can be readily amended, and whose value to students can scarcely be over-estimated.

RICHARD F. LITTLEDALE.

TWO COLLECTIONS OF LITERARY ESSAYS.

Literary Sketches. By H. S. Salt. (Sonnenchein.)

Men and Letters, Essays in Characterisation and Criticism. By Horace E. Scudder. (Boston: Houghton, Mifflin, & Co.)

THE custom in these days is for authors to gather up their contributions to the magazines and make volumes of them; but, in dealing with such collections, it is necessary to distinguish carefully between the magazine article, pure and simple, which has accomplished all it ought ever to be required to accomplish when it has appeared in the periodical for which it was written, and that higher kind of literary work for which the magazine serves only as a temporary repository. There are, no doubt, many essays, belonging to the first rather than to the second class, which are quite worth gathering up.

Both the books named at the head of this review are collections of magazine articles—the former English, the latter American. But, on the whole, their merit is above rather than below the average of this class of literary work; and the authors, having seen fit to gather together and submit to the world these samples of their literary skill, I do not see that the world has any good reason to complain. Mr. Salt's work is, indeed, somewhat unequal; and, while some of his papers are excellent, two or three could very well have been dispensed with. The first, entitled "Two Kinds of Genius," is of little value; that on "The Tennysonian Philosophy" shows that the author has failed to appreciate properly anything but the graceful form of Tennyson's work. Mr. Salt fears it will be found that Tennyson's thoughts "when sifted, are light as chaff, and that his philosophical system is a mixture of opportunism and shallow optimist theories." The head and front of Tennyson's offending is that he has not been quite as respectful to certain aspects of scepticism and religious unbelief as Mr. Salt could wish. In his poem, "In the Children's Hospital," he has depicted a "terrible doctor, with red hair, big voice, big merciless hands," who, when the nurse timidly suggests prayer for a dying child,

"... muttered half to himself, but I know what I heard him say,
'All very well—but the good Lord Jesus has had his day.'"

Upon which Mr. Salt angrily remarks:

"In this passage Lord Tennyson has deliberately gone out of his way to couple disbelief with roughness and brutality; and I cannot imagine anything more disingenuous than to draw a picture which may conceivably be true in itself, but is calculated to suggest an absolutely erroneous inference to the mind. There

may be doctors like the one described, devoid of all gentleness and humanity; but it is not their belief or disbelief that made them so. Gentleness is not an invariable concomitant of Christianity any more than of scepticism."

But who said it was? Certainly not Lord Tennyson, here or elsewhere. Mr. Salt must not suppose that if the poem named suggests "an absolutely erroneous inference" to his mind, everyone else is in the like case. Few men, during the last half century, have done more to liberalise thought than Tennyson.

Where Mr. Salt is in sympathy with his subject, his work is much more satisfactory. This is the case in his essay on James Thomson ("B. V."). He displays here fine critical discernment. Almost as good is the study of "Shelley as a Teacher." Shelley's "great and cardinal belief," he affirms, "was undoubtedly in the perfectibility of man, the belief that the good is more potent than the evil, and that man's redemption must be worked out by no external revelation, but by the innate sense of virtue and love."

If we except a slight confusion in the philosophical phrases, that is entirely true. The papers on Thoreau, Edgar Poe, and Hawthorne are also good, though the first-named is, perhaps, spun out rather too much. I think Mr. Salt is quite right in describing Thoreau as "one of the most remarkable and original characters that America has yet produced." A quarter of a century after his death his fame is steadily rising; and my own experience, extending over a good many years, is that the more familiar I become with his thought the wiser it appears.

Mr. Scudder was joint editor with Mrs. Taylor of the *Life and Letters of Bayard Taylor*, published two or three years ago, and he is already favourably known to some English readers by his skilful handling of materials in that work. His present volume consists of eleven brief critical and biographical papers, the first of which has for its subject "Dr. Elisha Mulford" and the last "The Future of Shakspeare." From Mulford to Shakspeare is surely a far cry, and the fact that Mr. Scudder has treated both subjects with tolerable success is a point in his favour. At any rate, he is not as deficient in a sense of proportion as some of his fellow critics in America have shown themselves to be. He may discuss Mulford and Shakspeare in the same book, but he does not confound their merits or count them of equal importance. He does not, like Mr. Whipple, talk of "rapt communion with the spirits of such men as Bacon, Milton, Webster, and Channing!"

Two essays are devoted to Longfellow, concerning whom Mr. Scudder by no means shares Mr. Salt's opinion that he is "the demigod of popular mediocrity," or "B. V.'s" about "Excelsior," expressed in one of the most foolish passages he ever wrote, which Mr. Salt quotes with approval. One of Mr. Scudder's two essays is devoted to a description of "The Shaping of 'Excelsior.'" In the Harvard College library,

"spread open in one of the cases, are the first and second drafts of 'Excelsior'; and a rare chance is given of seeing how a poet, when he has seized upon the central thought of a poem, will sometimes work industriously at its final form. The first draft was written upon the blank spaces of a letter received by the poet

from Charles Sumner, so that the very paper of the poem had already an historic interest."

The essay on "Longfellow and his Art" is more solid, and, excepting a good contribution to Emerson literature, entitled "Emerson's Self," is, perhaps, the best in the book.

Most of Mr. Scudder's papers bear rather too strong an impress of their original use as articles written for such occasions as the publication of some notable book or the occurrence of some important literary event. The consequence is that, in some cases, a little disappointment is felt at what appears to be the inadequate treatment of a great subject. Thus the paper on "A Modern Prophet" (Frederick Denison Maurice) is not a study or a criticism of the great English teacher, but simply a well-written summary and review of Col. Maurice's biography of his father. But, if Mr. Scudder's book is not profound, at any rate it contains much intelligent and thoughtful criticism; and, above all, there is indication of force in reserve which entitles us to expect still better things hereafter from the same pen.

WALTER LEWIN.

NEW NOVELS.

His Cousin Betty. By Frances Mary Peard. In 3 vols. (Bentley.)

Every Inch a Soldier. By M. J. Colquhoun. In 3 vols. (Chatto & Windus.)

Little Miss Primrose. By the Author of "St. Olaves." (Spencer Blackett.)

Mine Own Familiar Friend. By the Author of "The Golden Milestone." (Digby & Long.)

Only an Advertisement. By C. L. Martin. (Elliot Stock.)

The Fortunes of Albert Travers. By B. S. Berrington. (W. H. Allen.)

Mary, the Queen of the House of David. By the Rev. A. Stewart Walsh. (Sampson Low.)

Among the Cape Kaffirs. By Ernest Glanville. (Sonnenschein.)

His Cousin Betty is an enjoyable and ingenious story of a trivial kind, and ought, to a certain extent, to satisfy Mr. Ruskin; for its main object is to show how people can be unhappy and torture each other, though married. John Leyburn and his brambly Devonshire cousin are rather uninteresting while they are each single, and even when—Leyburn being knocked down in place of another and a better man—they stand to each other in the relationship of patient and nurse. But marriage reveals, or perhaps forms, their characters. Betty, from being a love-sick child of nature, develops into a strong, self-respecting, and even self-assertive woman; and John only becomes tolerable when he returns to his wife in the last chapter, the ghost of himself, and dependent in almost every sense on her. But John is, from the first and very nearly to the last, anything but satisfactory. He ought not to have been misled by the representations of his unreal, match-making, and mischief-making sister into marrying a girl towards whom he is not quite certain as to his feelings. He tries to exonerate himself in the eyes of his wife by

laying the blame on this sister, with the help of a letter, which he allows to be discovered in a very clumsy fashion. But he knew Horatia's nature and he ought to have taken with more than one grain of salt any assertion of hers, and in particular any assertion to the effect that Betty wished and expected him to marry her. Mrs. Peard here makes a blunder, and of a kind to which she is not prone. Leyburn's gentilities and pruderies also become very tiresome. But the mistake involved in the portraiture of Leyburn, and minor ones which could be pointed out, are more than atoned for by the character of Betty, who has in her some of the qualities of Bathsheba Everdene, and a spice of Mr. Norris's favourite type of heroine. On the whole, she is probably Mrs. Peard's best character; certainly she is her most finished portrait. Lillias, Betty's anxious and eminently sisterly sister—with, however, a love affair of her own in the background—and even the provoking Horatia, are carefully sketched. Devonshire and Bohemia are both introduced into this novel, but are not made too much of. There is, indeed, very little that is inartistic, and nothing savouring of disproportion or excess in *His Cousin Betty*.

Who is it that gives *Every Inch a Soldier* its title? Is it Whitby, who fights gallantly enough for queen, country, and wife in the agony of the Indian Mutiny, but who is neither better nor worse than most English officers? Or is it Hodson, to rehabilitate whose reputation the last of "Mr. Colquhoun's" three volumes seems to have been chiefly written? It cannot surely be that half-ne'er-do-well, half-lunatic Wake *alias* Brown, with his weakness for getting into scrapes and finding treasures. "Mr. Colquhoun" should have styled his(?) book "Every Inch a Deceiver," for the one genuinely strong character in it is Louisa Page or Wake, a thoroughly unscrupulous Anglo-Indian "grass widow" (with, however, a jealous husband in attendance), who quite merits her nickname of "Unlimited Loo," and who, having been in training all through three volumes for the divorce court, would seem, not inappropriately, to find her way into a harem at the end. There is a good deal of military vigour in *Every Inch a Soldier*, and a trifle too much tipsiness and coarse fun. The scenes at the exciting period of the Mutiny are, to all appearance, drawn from the life; but the plot, into which they are worked, has been hastily constructed.

Little Miss Primrose is full of those prettinesses and pettinesses, which one has learned to expect from the Author of "St. Olave's," with an even slighter plot than usual. Nothing could be less adequate than the misrepresentation which separates Nelly Willoughby and Mark Heslington, except the explanation which brings about a reconciliation. The old maid who gives the book its name, with her little romance carefully preserved in the lavender of memory, keeps far too much in the background for a fairy godmother. But *Little Miss Primrose* gives us an abundance, though not a superabundance, of country scenery, society, and gossip. There is nothing specially notable about the inevitable squire, parson, and hard-up officer, although the last, Capt. Percy

Mannersby, reminds one, both in character and in fate, a little too much of Capt. Rawdon Crawley. The draperies and the flowers in *Little Miss Primrose* are all arranged very prettily; the sarcasms are not too pointed; and there are no more pronounced sensations than a dinner-party, a fancy dress ball, and a runaway marriage. The real life of the story is contributed by the two adventuresses—the sisters Celia and Petsie—the one of whom has married a parson before the story begins, while the other marries a captain, who, of course, develops into a brutal baronet before it ends. *Little Miss Primrose* would be but a stagnant pool but for Petsie Lavendale, with her mischievous fibs, and her artificial naïveté, and the pretty play of her plump white shoulder, and her innocent query—"Do you think my dress is cut too low for the country, Celia?" to which Celia returns the momentous reply—"One can go just as far in the country now as one can in town."

There is plenty of literary ability distributed over *Mine Own Familiar Friend*; and Lord Manorbier has a variety of chastening experiences in his life before the place once occupied by a coarse-minded music-hall singer is taken by the refined clergyman's daughter. Its author, indeed, commands an easy style, as *The Golden Milestone* proved clearly enough, and has rather a turn for sarcasm. But *Mine Own Familiar Friend* is too long; most of the characters in it are too self-conscious, and the two leading incidents—the violent death of the first Lady Manorbier, and the repentance by the wife of the hero's cousin of her treachery towards him—are rather hurriedly and inartistically introduced. The author is very much more at home among country girls—all modesty, simplicity, and delicacy—than among red-haired, loud-voiced *artistes*, who every second hour or so "feel deucedly hungry."

Only an *Advertisement* is a very readable, well-written, and improbable story of two mysterious children who are separated by an advertisement, and by the rather selfish lady who by means of it fills a want that had been left unsupplied by nature in her household. Kezia, the sister who has, during the early part of her life, the harder fate of the two, is naturally the stronger and morally the more attractive; and her adventures when in the hands of Nance Crinch and other less reputable persons, form the best part of this story. The author writes a careful, and even ambitious, style, but she (?) ought to beware of such a Madame d'Arblayesque sentence as:

"The daring independence of her girlhood had invested her with a self-command and assurance which were a counterpoise to her innate modesty and reserve; thus she escaped that subservieny which, mixed with an attempted self-assertion, is the ordinary manner of those risen from the ranks."

The Fortunes of Albert Travers is an eminently schoolboyish story of adventure among smugglers who have mostly Spanish names and Spanish instincts. Its author, Mr. Berrington, styles it "A Tale of the Eighteenth Century"; but he might almost as well have placed its action in the seventeenth, as in any other century in which it is possible for an English boy, the son of a clergyman with a large family, a small income, and a French

chateau, to blunder into an inn that is a haunt of smugglers, and into love with the innkeeper's daughter. Perhaps Albert Travers's pedagogic experiences on the Continent savour most of the eighteenth century, although his combat with German students, on the other hand, suggests rather the present. Essentially, however, this story would suit any period of history. It is told in an agreeable, though juvenile, fashion; and, indeed, the only serious fault to be found with it is that it contains no thorough-paced villain. Guevara, the captain of the smugglers, who tyrannises over Albert, and tries to take his sweetheart, Annette, from him, repents, is saved from drowning by the lad whom he has injured, and leaves him his money. Even Leonora, Guevara's pretty sister, who attempts to poison Annette is forgiven in the end. There ought to be vindictiveness, and nothing of the nature of repentance, in a melodramatic romance of the eighteenth century. Doubtless Mr. Berrington will remember this when next he writes, although he would probably find himself most at home in telling a domestic story of the present day.

Dr. Walsh, who writes *Mary, Queen of the House of David*, meant by its help to exalt the mission of women in the world. But he has none of the romancist's faculty. His book is simply a wild jumble of the Crusades, New Testament history, Christian ideas, Pagan rites, and the author's own mysticism, alike unintelligible and intolerable. Occasionally, Dr. Walsh gives us a bit of scenery in his hero's fantastic journeyings through Palestine; but, even for this, one would prefer to go to a work like *The Land and the Book*.

There is plenty of adventure, Kaffir superstition, and Hottentot English dashed with Dutch, in the two stories which Mr. Ernest Glanville publishes under the title of *Among the Cape Kaffirs*. The narrative in both seems to drag a little, and that in spite of the appearance in the one of a snake, and in the other of a devil-fish, the fascinating terrors of which are described with Hugoesque fulness, and not without a certain amount of Hugoesque power. Old Hendriks, the Hottentot, too, recalls one of Mayne Reid's heroes, the earless trapper Rube, both in his character and in his habit of coming to the rescue in the nick of time. But it is probable enough that this resemblance is accidental. Whether this be the case or not, Mr. Glanville's volume is one of the best and most carefully written books of adventure in South Africa that have recently been published.

WILLIAM WALLACE.

SOME TRANSLATIONS FROM THE GERMAN AND THE FRENCH.

Schiller's Wallenstein. Translated by C. G. N. Lockhart. (Blackwood.)

Songs and Lyrics. By Heinrich Heine and other German Poets. Done into English Verse by James Geikie. (Edinburgh: Thin.)

Dramatic Works of Victor Hugo. Translated by F. L. Slous, and Mrs. Newton Crosland. (Bell.)

MR. LOCKHART'S version of *Wallenstein* was produced under circumstances so exceptional that he has thought them worthy of record in a short but interesting preface. Full half a century ago, the translator served

some years in the Austrian army, until, as he grimly says, the anticipation of the millennium caused a considerable disbandment of the Austrian forces, and retarded promotion so seriously that he turned his thoughts to the Colonies, sailed for New South Wales, and remained there till 1880. During his military service in Austria, he "for years never spoke a word of English," nor had any access to English literature. He had actually to recover his native tongue by means of a German-English dictionary, during the short interval he spent in Scotland before sailing for the Antipodes. He had, however, a perfect knowledge of the German language and of Austrian military life—a double qualification for translating "Wallenstein," which can rarely, if ever, have been possessed by an Englishman before. Subsequently, during a wild and solitary life in the Australian bush, his companions were the Bible and Shakspeare, Goethe and Schiller, and an occasional newspaper. Much of *Wallenstein* was actually translated by the camp-fire, during long journeys, sometimes extending over months. Till 1870, he thinks he had never heard of Coleridge's version, on which he makes some interesting criticisms. Parenthetically it may be observed that one charge that he brings (p. xiii.) against Coleridge is scarcely credible. According to Mr. Lockhart, Coleridge rendered ("Piccolomini," act. i., sc. iv.)

"Das duftige Pfand der neuerjüngten Erde,

by
"Plucked in those quiet fields where I have wandered."

It is surely impossible. Either Coleridge had some other line in his text, or he was patching in, after his manner, a line of his own. In my own edition of Coleridge (Moxon: ed. Rossetti) the line certainly stands as Mr. Lockhart quotes it, except that, for "wandered," I find "journed"; but what did Coleridge find in his copy of the original? Perhaps some reader of the ACADEMY can answer a question which I can only ask. Anyhow, Mr. Lockhart has completed his version, confident (p. xvii.) that he can "represent Schiller more fully to my countrymen than he has ever been before," though by no means measuring himself against Coleridge as a versifier, and frankly admitting, against himself, that he has "never perfectly recovered the full mastery of the English language."

Readers of the ACADEMY will, I think, ignore his apology for writing "too much about myself and my petty doings." The story was well worth telling, and is well told. As a translator, Mr. Lockhart seems to fall into the common fault of making blank verse too stiff and monotonous. It is here that he is so inferior to Coleridge, who had Shakspeare's harmonies and vocabulary by heart, and constantly brings to our minds the affinities between the greatest of England's poets and the second of Germany's. There is, however, a fluent and soldierly directness about some of Mr. Lockhart's work which suits certain parts of "Wallenstein" very well. His imperfect recovery of the English tongue does not show itself so much in vocabulary as in order. Occasionally we find a real flaw, like

"It must be him—my special selection" (p. 209), and

"Him lawful to arraign
All witness fails" (p. 191);

but, far more often, an order so twisted and awry as to cause grave discomfort—such, for instance, as the following passages present:

"What was I,
Ere animate my soul by his dear love?" (p. 104)
"As Friedland's daughter
Could none a frantic fugitive discern" (p. 354).

"Dost think magnanimous I'll play the fool?"
(p. 290)

"Always the great Gustavus
Impressed was by the eminent display" (p. 176).

"Because you wish him guilty,
Right capable you are him so to make" (p. 158).

"That judged he should be capable of thinking"
(p. 140).

"I, his chief,
Had his orders given, of the very strictest,
From that position that he should not move!
Of my command is this the state?" (p. 67).

Any one of these may be defensible; but the frequent recurrence of such harsh turns gives a grittiness to the English and makes it less readable. But Thekla can always inspire Mr. Lockhart to his best efforts, as here (p. 357):

"When these rude hearts
Thus nobly act, shall I then fear to die?
No, surely not! For me that laurel wreath
Was plaited, too, that decked thy warrior's bier,
Without thy love life were a living death.
I cast its burthen off without a tear.
When I discovered thee, my loved one, here—
Yes, life had charms, for there before me lay
The golden hopes of that awakened day,
And twice we told our loves without a fear."

Viewed as literature, the translation is perhaps rather to be called readable than remarkable; but, when the circumstances of its composition are considered, it is of great interest and high merit.

Heine probably shares with Horace the reputation of the most translated poet; and, indeed, they have one common quality—the power of producing gems of poetry, at once perfectly natural and perfectly artistic; poems which, on however small a scale they may be, leave behind them a sense of power as well as of grace. There, I think, the resemblance stops. Very various opinions have been held about Horace's inner and more personal qualities; but no one, probably, has ever recognised in his poems the note of a broken heart. I do not understand how any one can fail to recognise it in Heine. Youth, no doubt, can readily be as "sad as night, only for wantonness." We need not, therefore, count the "Junge Leiden," in this connexion, though they are useful enough, in all conscience. But in the "Lyrisches Intermezzo," and in the "Heimkehr," the accent of real poignant sadness is unmistakable. It is easy enough to mock at love and at apostasy, though few have done so as brilliantly as Heine, in the *Reisebilder* and elsewhere; but the man's real self cries out in anguish of his soul throughout these poems. It is impossible, after reading them, to rest satisfied with Kingsley's summary judgment—"A wicked man, my dear." It is not altogether untrue, but altogether inadequate and misleading. We are all of us wicked; but this particular sinner could write "in starfire and immortal tears."

Mr. Geikie cannot touch our hearts as Heine can. What he can do is to write vigorous and forcible verse. His capacity for rhyme is good, and in straightforward descriptive passages he is often very successful. Such a poem, e.g., as "An eine Sängerin," in the *Romanzen* could hardly be better done than here (pp. 44-5). On the other hand, where a certain dreamy subtlety is required, as, e.g., in the familiar poem about Lorelei, he is simply nowhere. Contrast Heine's first stanza with his translator's:

"I know not what sad fate befalls me,
But heavy at heart am I;
An eerie legend enthalls me—
A tale of the days gone by."

is as though one should play the piano

in thimbles. What a loss, too, is the antithesis in

"Aus meinen grossen Schmerzen
Mach' ich die kleinen Lieder:"
when rendered

"The little songs I utter
Out of my griefs are fashioned."

Has Mr. Geikie forgotten that these "grossen Schmerzen" will by and by (p. 77) fill the mighty coffin that twelve giants bear to its grave in the waters?

But when the tone is lighter, Mr. Geikie can catch it—as, e.g., in "Die Welt ist so schön" (p. 61).

"The world is fair and the heavens are blue,
And gently the zephyrs flutter and woo,
And the flowers peep up in the grass anew,
And glitter and shine in the morning dew,
And men are shouting—a joyful crew!
Yet would I were in the grave at rest
With my dead love folded into my breast."

The fifth line is quite weak—yet the whole has a pleasant flavour of the original. Something more may be said of the beautiful version (pp. 109-10) of "Night Thoughts." The last three stanzas are excellent:

"Since from my native land I hid,
A many there I loved have died;
And while I reckon up the number
What grief is mine, what cark and cumber!

Yet must I count them all, and woe
Still wilder to my heart doth go.
I feel as though the dead lean'd o'er me!
Thank God, I wake—to see before me

My chamber-window gleam and glance
With thy bright sun, dear joyous France!
And, look! my sweet French wife comes to me,
And doth from all these yearnings woo me."

Nothing, I think, of Mr. Geikie's is better than this, unless it be the translations from Geibel, which are of great force and beauty, and quite take the lead among the miscellaneous poems with which the volume concludes. The last poem of all, "Lux Naturae," is original, as are its two predecessors—all three are good, the last the best. I am not sure that Mr. Geikie would not have deserved better of some other Muse than that of Heine, though he has wooed her well.

Mrs. Newton Crosland—who was, if I rightly remember, distinguished among translators of Victor Hugo, in the collection recently edited by Mr. Williams—has here translated "Hernani" and "Ruy Blas." The version of "Le Roi s'amuse" is by Mr. F. L. Slous, and seems (see p. 155, note) to have been first published many years ago. I have never seen any other translations of these dramas. Any one reading them in English for the first time would, I think, be driven to the conclusion that, as dramas, "Hernani" and "Ruy Blas" were greatly superior to "The King's Diversion." As a satire, no doubt, the latter play takes high rank; but those who subscribe to the opinion—I think it is Mr. Swinburne's—that even sinners in a drama must have some trace of human, or, at any rate, of devilish dignity, will hardly recognise a dramatic character in Francis I., as here depicted. We all know how supremely dramatic a figure is Iago, the man without a conscience or a scruple; but Francis is mere personified concupiscence, a mere statue for the court of Lubricity. There is deep pathos, undoubtedly, in Triboulet. It is with with aching hearts that we read of the fall and fate of Blanche; but, after all, Pandarus would still be Pandarus, though he drew the line at his own daughter. Mr. Slous has made what can be made of the worse parts, and, in satirical and indignant passages, rises to his best, as,

e.g., in St. Vallier's denunciation (act i., sc. iv., p. 189):

"O monstrous traffic! foully hast thou done!
My blood was thine, and justly, tho' it springs
Amongst the best and noblest names of France;
But to pretend to spare these poor grey locks,
And yet to trample on a weeping woman,
Was basely done; the father was thine own,
But not the daughter.
I come not now to ask her back from
thee;
Nay, let her love thee with insensate love;
I take back nought that bears the brand of
shame.
Keep her! Yet still amidst thy festivals,
Until some father's, brother's, husband's hand,
(Twill come to pass) shall rid us of thy yoke,
My pallid face shall ever haunt thee there,
To tell thee, Francis, it was foully done!"

But, on the whole, one wishes that Mr. Slous had tried another play, say, "Marion DeLorme." Didier, Marion herself, and Saverny are characters of more human interest than those in "The King's Diversion."

Mrs. Crosland is not, I think, so good a writer of blank verse as she is of rhyme. The influence of Byron's dramatic verse—which is surely the worst ever written by a poet of his level—seems to be often upon her—as, e.g., in such lines as:

"Oh, the old
Devil! Of all he takes the largest share
Of profits" (p. 351).

"Are you not 'shamed that with
Expanding fortunes, thus your heart should
shrink?" (p. 314).

"That old man who in
The darkness laughs" (p. 135).

The tendency, in other words, to weak endings, that break the sense and dull the metre, is very observable in the dialogue. There is, I think, little doubt that she has done "Ruy Blas" better than "Hernani." The interest of the latter play is in the exhibition of passion at white heat; but Mrs. Crosland rather sobers down the diction for her English readers. It is natural to do so, but it involves an appreciable loss. In the stately passages of "Ruy Blas" she is at her best, and a very good best it is—e.g., act iii., sc. 2:

"Oh, Charles the Fifth, in these dread times of
shame
And terror, oh, what dost thou in thy tomb,
Most mighty Emperor? Arise—come, see
The best supplanted by the very worst:
This kingdom, now in agony—that was
Constructed out of Empires—near its fall.
It wants thine arm! Come to the rescue,
Charles!
For Spain is dying, blotted out, self slain!
Thy globe, which brightly shone in thy right
hand,
A dazzling sun that made the world believe
That thenceforth at Madrid the day first
dawn'd,
Is now a dead star, that in the gloom grows less
And less—a moon three quarters gnaw'd away,
And still decreasing ne'er to rise again
But be effaced by other nations."

For romantic interest, no doubt, readers of these translations will turn first to "Hernani"—yet eventually, I believe, most of them will feel that "Ruy Blas" is not only better translated, but also the finer play. Such, at least, is the impression Mrs. Crosland's work leaves on the present writer. Yet there are noble passages in her version of "Hernani," too. Let us take leave of it with one that will dwell on the mind as a permanent verdict on the play and its hero:

"I know
That he existed formerly in dreams,
Hernani, he whose eyes flashed like a sword,
A man of night and of the hills, a man
Proscribed, on whom was seen writ everywhere
The one word *vengance*."

E. D. A. MORSEHEAD.

NOTES AND NEWS.

THE Hibbert lecturer this year will be the Rev. Dr. E. Hatch, of St. Mary's Hall, Oxford, who has taken for his subject "The Greek Influence on Christianity." The Hibbert lectures for 1886 by Prof. Rhys, the publication of which was delayed, are now nearly ready for issue.

Now that Scotch Conservatism is without a morning daily organ, either in Edinburgh or in Glasgow (the *Scottish News* having ceased on Saturday to appear as a morning paper), there is some talk of establishing a weekly political review in Edinburgh.

WE are informed that Messrs. George Bell & Sons are about to publish the poems of the late Mr. George Morine, whose sonnet in Mr. Waddington's *English Sonnets by Poets of the Past* attracted so much attention. Mr. Morine, who was born at York in 1809, died about sixteen years ago, and bequeathed his poems in MS. to the Rev. Richard Wilton, vicar of Londesborough, a brother-poet, who has now written the memoir which is to be printed with the poems.

UNDER the title of *Chants of Labour* Messrs. Swan Sonnenschein & Co. will shortly publish a book of songs for the people, set to popular tunes, and edited by Mr. Edward Carpenter. The frontispiece, cover and title-page have been specially drawn by Mr. Walter Crane; and among the poets, living and dead, who have been laid under contribution are Burns, Shelley, Charles Kingsley, Walt Whitman, William Morris, J. R. Lowell, and T. D. Sullivan.

MR. JOSEPH THOMSON'S novel is now ready for the press. It will be called *Ulu*, and the name of Harris Smith will appear on the title-page as joint author with Mr. Thomson. The publishers are Messrs. Sampson Low.

DR. EALES, the author of "Via Crucis," has in the press a companion volume, entitled *Via Lucis*, relating to Eastertide. It is illustrated by Mr. Wyndham Hughes, and will be published by Mr. Elliot Stock.

MESSRS. W. B. WHITTINGHAM & Co. announce a popular work by Mr. Edward P. Mathers, of Natal, entitled *Golden South Africa*; or, the Gold-fields Revisited. It will be illustrated with five original maps.

A SECOND edition of Miss Emily Lawless's *Ireland*, in the "Story of the Nations" Series, has been called for in three months.

MR. GEORGE MOORE'S new book, *Confessions of a Young Man* is being translated into French, and will shortly appear as a serial in the *Revue Indépendante*.

ON Friday next, February 24, Sir William W. Hunter, late director of statistics to the Government of India, will read a paper before the Society of Arts, entitled "Facts regarding the Religions of India, and their Influences on the Social Progress of the People." The Earl of Northbrook, at one time governor-general, will take the chair.

THE Shelley Society has issued to those members who have paid their subscriptions for this year its first set of four books, namely, the photo-lithographic facsimile of *The Mask of Anarchy* (1832); the other three are (1) the Shelley Society's *Papers*, part i., by Mr. Stopford Brooke, Mr. W. M. Rossetti, &c.; (2) the Shelley Society's *Note-Book*, part i.; (3) an Alphabetical Table of Contents to the three principal editions of Shelley's works. Four more books are in a forward state, and will be ready in June. Thus eight handsome books will be given for this year's subscription of a guinea. Some twenty new members have

recently joined the society, but more are still wanted. The hon. sec. is Mr. T. J. Wise, 127 Devonshire Road, Holloway, N.

THE action arising out of the preliminary arrangement for the Browning Society's production of "Strafford" in 1886 having been decided against Dr. Furnivall, some of his friends feel strongly that it would be unfair that the burden of the damages and costs should fall on him alone. A small committee, therefore, has been formed to collect subscriptions from members of the Browning Society and others. Contributions may be sent to either J. Dykes Campbell, 29 Albert-Hall Mansions, Kensington Gore, S.W.; or Walter B. Slater, 249 Camden Road, N.

WE have to acknowledge the receipt of two *Annals*, both of which have appeared this year a week or two earlier than previously. Of the *Statesman's Year-Book* (Macmillan), edited by Mr. Scott Keltie, it is enough to say that this invaluable volume is now in its twenty-fifth year, and that its bulk has grown to just over 1,000 pages. *Hazell's Annual Cyclopaedia* (Hodder & Stoughton), though only three years of age, is evidently thriving. If the number of pages has been reduced by 60, the total of articles has been raised to more than 3,000, partly by excluding information that has served its turn in former issues. We may here specially call attention to the articles on Assyriology, Biblical Archaeology, Egyptology, and Mythology, each of which conveys a large amount of information, up to the latest date, in a concise form. Altogether, the editor, Mr. E. D. Price, is to be congratulated on the success of his continuous efforts to make this book indispensable to the ordinary reader of the daily newspaper.

THE FORTHCOMING MAGAZINES.

DR. E. B. TYLOR, Mr. Charles Elton, Mr. A. N. Palmer, Mr. Sidney Hartland, and Mr. F. E. Sawyer, will contribute papers to the first issue of the new *Archaeological Review*. Mr. Elton writes on the Picts of Galloway, and Dr. Tylor introduces the anthropological section to the readers. A Blue-book account, lost amid official correspondence, of the tribes of Gambia will be published, and a glossary of Wilts agricultural words originally printed in 1813. This latter will be accompanied by some notes from Prof. Skeat. As an appendix to the *Review*, a portion of an index of papers contributed to the various archaeological societies of Great Britain up to 1886 will be from time to time printed and pagged separately. Other indexes will be given, and these will form a novel feature of the new review, which is resolved to render practical help to all interested in archaeology.

MR. GLADSTONE will contribute an article on Irish affairs to the next number of the *Contemporary Review*, and Sir Lyon Playfair will write in the same number on the condition of trade and technical education.

MR. MATTHEW ARNOLD will contribute a paper to the March number of the *National Review*, which will also contain articles by the Warden of Merton on "Ireland"; on "The Reform of the House of Lords," by the Hon. G. N. Curzon; and on "Female Suffrage," by Mrs. Fawcett, in reply to Mr. Goldwin Smith.

THE March number of *Time* will contain "Work and Workers, No. III.—Private Secretaries," by One of Them; "Old Church Wine in New Bottles," by Prebendary Harry Jones; "The Thermometer of Political Reputations," by the Hon. Randolph Stewart; "India's Undeveloped Military Resources," by Edward Lawrence, of Bombay Civil Service; a short story by Annie Thomas, &c.

The *Bookworm* for March will open with an article, entitled "Shakspeare's Physiognomy," by the editor. Among other contents will be the conclusion of Mr. Charles P. Johnson's paper on first editions of Charles Dickens's works; an account of Dr. Williams's library, by Mr. A. C. Bickley; and the *jeu d'esprit*, "The Bookworm's Story," which appeared in the second number, is continued under the title "Our *Modus Vivendi*."

THE March number of *Art and Letters* will contain "Afloat," II., by Guy de Maupassant; "Lilith," by Chesneau; "Miremonde," by Lanjol; "Antonin Mercieu," by Philippe Gille; "The Red Gendarme," II., by T. Gautier fils.

"ILLUSTRATIONS" will henceforth be conducted by a limited company, with Mr. Francis George Heath as managing director.

UNIVERSITY JOTTINGS.

THE senate of Glasgow University have elected Prof. Max Müller to be the first Gifford lecturer on natural theology. The tenure is for two years, which may be renewed once only. The emoluments consist of the interest of the late Lord Gifford's bequest of £25,000. The lecturer is required to give at least twenty public lectures annually.

DR. A. A. MACDONELL, at present Taylorian teacher of German at Oxford, has been appointed deputy to the Boden professor of Sanskrit. Mr. Macdonell won the Taylorian scholarship in German in 1876, the Davis scholarship in Chinese in 1877, and the Boden scholarship in Sanskrit in 1878. A few years ago he obtained the degree of Ph.D. at Leipzig, with a thesis in philology. He was the only representative from Oxford at the Oriental Congress at Vienna, two years ago. In 1886 he edited an abridged edition of Prof. Max Müller's *Sanskrit Grammar*; and still more recently he has, we believe, been lecturing for Sir Monier Williams, whose deputy he has now become.

It is stated that Sir Monier Williams has been appointed Duff lecturer at Edinburgh, where he will deliver a course of lectures on "Buddhism."

IN congregation at Oxford, next Tuesday, it will be proposed to grant £300 for two years out of the Boden Fund to Prof. Max Müller, for giving instruction in Vedic literature; and also £150 towards the excavations now being carried on in Cyprus by Mr. Ernest Gardner and others.

GEN. RICHARD STRACHEY, president of the Royal Geographical Society, is delivering a course of lectures at Cambridge, in the museum of archaeology, on "The Principles of Geography."

DR. CHARLES WALDSTEIN, curator of the Fitzwilliam Museum at Cambridge, announces a course of six evening lectures, to be delivered this term and next, on "Ruskin's Work as Critic and Philosopher."

THE collection of eggs of British birds formed by the late J. P. Wilmot has been presented to the University of Cambridge by Lady Caroline and Mr. C. H. Russell. This collection is historical, as having furnished many of the specimens figured or described in Hewitson's *British Oology*, notably a very fine egg of the extinct great auk, which now fetches more than £100 at auction sales.

LORD RANDOLPH CHURCHILL has accepted an invitation to speak on "Home Rule" at the Oxford Union on Wednesday next, February 22; and Mr. John Morley on the following Wednesday. We believe that neither of these now distinguished orators took part in the Union debates in their undergraduate days.

THE last number (26) of *Bibliographical Contributions*, issued by the Library of Harvard University, consists of a catalogue of Carlyle's books relating to Oliver Cromwell and Frederick the Great, which were bequeathed by him to Harvard. The total number of volumes seems not to exceed 250, of which only about fifty relate to Cromwell. Most bear Carlyle's autograph, and many are enriched with characteristic MS jottings from his pen. Here is a specimen, in an anonymous *Life of Charles, Prince of Lorraine* (London: 1746):

"What stupidest son of Adam can have written this?—a dunghill; and in it not 'pearls' but half a handful of old nails. Oho! 4 Feb., 1859."

The catalogue, which has been compiled by Mr. William Coolidge Lane, further contains a heliotype of the cast from the original death-mask of Cromwell, which was given to Carlyle by Mr. Thomas Woolner (the present owner of the mask), and which has been presented to the Harvard library by Prof. Charles Eliot Norton.

THE first number of a series to be called "Beihefte zum Centralblatt für Bibliothekswesen," consists of a print of the names in the register of the University of Paris for the year 1464, edited by Dr. Max Spürgatis, of Strasbourg, with a facsimile. The publisher is Harrassowitz, of Leipzig; but it may be obtained in this country from Mr. David Nutt.

ORIGINAL VERSE.

TO HIS LOVE
(WHO IS YOUNGER THAN HE).

WHAT shall I call thee—Song-bird? Sweetheart mine?

How shall I woo thee? . . . if, in truth, I dare
To cast my shadow on that path of thine;
To braid my silver with thy golden hair!

How shall I woo thee? Stretching forth my hands,
As elms in spring stretch forth their boughs to greet

Wing'd wanderers from sunny far-off lands?
Ah, seek some younger, fresher shade, my sweet!

Thy nest should be a bow'r of blossoms rare;
Thy shade should be all perfume, and thy lay
Pour'd forth upon the summer-spiced air
Of some soft clime, where it is always May.

Alas, my boughs are tempest-toss'd and shorn!
My roots have struck the rock—my leaves are shed.

Shall winter mate with spring, or eve with morn?
Despair with hope? The living with the dead?

Yet come, if come thou wilt! For well-nigh due
Is God's great miracle, when earth and sky,
Mountain, and moor, and copse their youth
renew—
And if the daisies, dearest, why not I?

I wak'd last night from dreams of spring, and, lo!
The first dear crocus shows its head to-day;
And yonder limes are crimson'd with the glow
Of the imprison'd summer! Come away!

Away, dear love, to meet and greet the spring!
Unfold, ye buds! Laugh out in leaf, ye trees!
Come, perfum'd winds, your laden sweetness
bring
From Tropic isles beyond the Western seas!

Sing, sing, ye thrushes! To our Northern shore,
Dear swallows, from the purple East fly fast!
Darkness and doubt and winter are no more—
The eternal youth of Hope is mine at last!

AMELIA B. EDWARDS.

MAGAZINES AND REVIEWS.

PROF. DANA, the famous American geologist, has, it appears, re-affirmed a doctrine which, if true, must cover with confusion the too forward champions both of science and of

Biblical criticism. His article, in the *Bibliotheca Sacra* (April, 1885, pp. 201-224), has drawn forth a reply from Canon Driver in the *Andover Review* (December, 1887). We refer to it here because there may be some who are inclined to accept Prof. Dana's conclusions upon trust, in ignorance of the methods by which they are obtained, and which, as the Regius Professor of Hebrew at Oxford shows, set at defiance every principle of interpretation and language. The tone of Canon Driver's article leaves nothing to be desired. He admits the supremacy of Prof. Dana within his own sphere, and claims less for Biblical criticism than some of his colleagues might desire. He has also taken a great deal of trouble—as not only this but other articles evince—to master the details of scientific investigations into the "genesis" of things; and on this, as well as on other grounds, we anticipate that both men of science like Prof. Dana and Sir J. W. Dawson (whose statements are also here criticised), and literary men like Mr. Gladstone (see *Nineteenth Century*, vol. xix.) will accept Canon Driver's reply as within its own sphere final, and as an important contribution to the general question. Of course, it may still be asked, Does not the discussion, as thus conducted, presuppose that which historical critics are seldom willing to admit, viz., that the Hebrew Scriptures do sometimes contain statements on subjects entirely beyond the mental horizon of the writers? and, would it not be better first of all to settle this question of fact, with which, of course, literary critics are alone competent to deal? There are other schools of Christian apologetics than that with which Prof. Driver may be supposed, we think, in this article to identify himself. But at any rate, his position as a representative philologist renders it quite impossible for such misinterpretations as Prof. Dana's to be re-affirmed in future. We may, in passing, give a word of well-deserved praise to Canon Driver's *Critical Notes on the International Sunday-School Lessons from the Pentateuch* (New York: Charles Scribner's Sons). Fortunate are the Sunday-school teachers who require and can digest such thorough and lucid teaching on the Pentateuch from a point of view at once critical and positive. To students and clergymen, at any rate, the book may be earnestly commended. We only regret its fragmentary character, the cause of which is explained in the preface.

THE principal articles in the *Revista Contemporanea* for January are "The Budget of Education," by S. Fatigato, showing how much less than other nations Spain spends on education in proportion to her revenue—1 to 1½ per cent. against 6½ in Belgium, and 4 in England. Francisco Lastres treats of the dissolution of marriage, stating that ecclesiastical law is still supreme in Spain in questions relating to marriage. Rodriguez-Ferrer concludes his account of the African traveller, Manuel Iradier, and advocates greater attention to the colonies and the navy. There is an interesting sketch of the life of Ribera, by Emilio Chaulic. N. Acero finishes his archaeological account of Baza, and fixes the site of other Roman cities in Murcia. F. de Paula Villadar makes it probable that Alvaro de Bazan, the first Marquis de Santa Cruz, was born at Granada, and not at Guadix.

THE *Boletín* of the Real Academia de la Historia for January highly praises Dr. A. Neubauer's mediæval Jewish chronicles in the "Anecdota Oxoniensia," and proposes the translation of portions of them into Spanish. Manuel Danvila prints the acts and budget of the Cortés of 1655, which are full of interest. The proposals for increasing the revenue range between novelties like free entry of all imports

and worn-out expedients, as debasement of the coinage. The treasury received less than one-third of the sum raised on some taxes, and less than one-seventh on others. We notice a payment of 40,000 crowns to the Conde de Nafort for a levy of 1,500 Irishmen, and 3,050 other Irish troops in Spain are mentioned. The *Boletín* is rich in Hebrew inscriptions and in notices of the condition of the Jews, especially at Jerez. In 1459, Enrique IV. declares that their persecution is "against the tenor and form of the Apostolic Bulls and the laws of my kingdoms."

CORRESPONDENCE.

THE IMPORTANCE OF OLD BOOK-BINDINGS.

London: Feb. 14, 1888.

The importance of gathering together, calendaring, and carefully preserving all docu-

ments relating to the history of the past has been so often insisted on in the ACADEMY that I doubt not you will allow me to make use of your widely-circulated columns to call attention to a storehouse of such documents, by no means unimportant, which has hitherto escaped the attention of all but a very small number of persons. I allude to materials used in the binding of old books.

Our cathedral and collegiate church libraries contain a considerable number of old books and registers in their original bindings. The earliest of these are composed of wooden boards covered with leather and lined with parchment. But parchment being expensive, leaves of old MSS., then considered useless, were often employed for this purpose. Later on wooden boards were discarded, and the binders substituted for them a pad composed of a number of sheets of paper and one or two of vellum. In the earlier days of typography, when printers were their own binders, they used for this purpose their own waste, proof, or cancelled sheets; and, as my regretted friend, Mr. H. Bradshaw, the late learned librarian of Cambridge, has pointed out, these fragments often afford most valuable evidence towards the solution of difficulties still remaining unsettled in the history of printing. They also often furnish a clue to the identification of the binder of the volume.

In this country, owing to the change of religion, a vast number of liturgical MSS. and printed books fell into the hands of the binders, and were used not only to line books, but also to cover registers. In one library which I visited recently, I found MS. fragments dating from as early as the seventh century, including not only leaves of liturgical and theological MSS., but portions of household accounts of English sovereigns and bishops. In another, I found leaves of an unknown tract, printed with Caxton's types, an autograph musical composition of Dr. R. Fairfax, and leaves of a fifteenth-century register of the chapter of Salisbury Cathedral.

Of late years, more attention has been paid to the care of the books in these ancient libraries, and many volumes have been rebound, many more, perhaps, are being, or will be, rebound; and, alas! too often the old covers have disappeared, together with the unexamined fragments they contained. Such has also been the fate of many a register in the probate courts, and, doubtless, of very many more in private possession.

I would venture to suggest the urgent importance of a thorough examination of the book-covers in all our cathedral and collegiate church libraries, as also of all registers in the probate courts prior to 1600, and of the drawing up of a calendar of the fragments—these might be classed as MS. historical, liturgical, musical, and varia—and printed. In all cases any trade-marks or stamps on the bindings in which these fragments occur should be carefully noted, as these may often lead up to the discovery of other fragments of a valuable document or work. Years ago, I found in an old binding, stamped with the trade-mark of Paul van Verdebeke, a Bruges binder of the commencement of the sixteenth century, a fragment of a book printed by John Bortoen; and the subsequent examination of other bindings bearing the same mark led to the recovery of a notable portion of a volume of which no other copy is known. I am convinced that if this work is undertaken even at this, the eleventh, hour, there is a very good chance both of saving a considerable number of interesting historical, liturgical, palaeographical, and musical documents, and of clearing up the history of early typography.

I would further urge that single, loose leaves are of little value by themselves; but that, if all those now lying useless inside old book

covers could be brought together, say in the British Museum, not only is there a strong probability of uniting leaves of altogether unknown books, but also a positive certainty that many of the incomplete breviaries, missals, and early printed books of Caxton, Winkin de Worde, Pynson, and others, in our national collection might have their missing leaves supplied. The surplus stock of detached leaves should, in my opinion, be used to complete deficiencies in similar books in the University and other public libraries, precedence being given to the claims of those who had contributed most to the general stock.

Many such fragments are also to be found in private libraries; and I would take this opportunity of urging collectors to submit to the previous examination of some competent person any old books they may decide on having rebound. Not long ago £102 10s. was paid for a portion of the contents of one cover of a volume bound in the early years of the sixteenth century. I could mention many other instances of valuable documents being found in old book covers did I not fear to encroach too much on your valuable space.

W. H. JAMES WEALE.

THE FIRST AUSTRALIAN POET.

London: Feb. 14, 1883.

I am a little surprised to find that, in his *Australian Ballads and Rhymes*, Mr. Douglas Sladen makes no mention of Charles Lamb's and Wordsworth's friend, Barron Field, and that your reviewer does not pull him up for the omission. Field's *First Fruits of Australian Poetry* was privately printed by him at Sydney, New South Wales (where he was a judge of the Supreme Court), in 1819, and was reviewed by Lamb in Leigh Hunt's *Examiner* for January 16, 1820. The review is reprinted in the popular editions of Lamb's "Works," unfortunately without the quotation he made of the capital verses on the kangaroo. The privately printed volume would appear to have contained only two poems: "Botany Bay Flowers" and "The Kangaroo"; but with these Field printed several others in the appendix to his *Geographical Memoirs on New South Wales: by Several Hands*, published by John Murray in 1825. Mr. Field's verses are strictly "Australian," and deserved the place of honour in any collection such as Mr. Sladen's.

J. DYKES CAMPBELL.

AINU FAIRY TALES.

London: Feb. 13, 1888.

Prof. Chamberlain, of Tokyo, who has already earned the gratitude of many little people (and of some big folk too) by his renderings of Japanese fairy-tales, has begun a series of little stories gathered from Ainu lips, of which the two which have just appeared, *The Hunter in Fairyland* and *The Birds' Party*, will be found no less interesting, and even more novel, than those of more Southern origin. These little brochures are daintily printed and got up, and very quaintly illustrated in colours by a Japanese artist, the very covers being pictured all over with representations of Ainu men and women, weapons, houses, and utensils, and with scenes from the stories. The tales show how like are the workings of the fancy in primitive peoples all over the world, and how universal the yearning after some happier existence than that which we have to lead from day to day.

F. V. DICKINS.

"FORS MAXIMILIANI."

Oxford: Feb. 11, 1888.

As our (non-lecturing) Professor of Comparative Philology was not in a position to contravene

any one of the statements in my short note, his lengthy communication to you is mainly taken up by an interesting list of books he has read lately, and by arguments tending to show that my letter was so trivial that it ought never to have appeared in the ACADEMY at all. May I be allowed as briefly as possible to recite the circumstances under which my note was sent to the ACADEMY? This will be my best answer to the charge that it was a triviality and an impertinence.

A short time ago there appeared in the *Saturday Review* a notice of the *Biographies of Words* in which the reviewer, as a humble seeker after truth, asked whether there was any phonetic difficulty in the way of connecting *Fors* with *ferre*. To this question Prof. Max Müller vouchsafed a very decided reply in a postscript to a letter in answer to Mr. Andrew Lang, which appeared in the ACADEMY. He said that the answer that philology gave was that *Fors* could not be connected with *ferre*, because (quoting the authority of Brugmann) an Indo-European *er* remains *er* in Latin. Of course, it was quite obvious to any one who had read Brugmann that this argument of Prof. Max Müller's was irrelevant and misleading. But this statement was made publicly in the ACADEMY. What reason was there why the irrelevancy should not be exposed without delay in the same journal? Prof. Max Müller says that my note dealt with an "obsolete" controversy. This is hardly correct. It dealt with a mistake of his own which had that very day seen the light. The professor is contemptuous about the shortness of my note. Is not brevity a more pardonable fault than sending you a letter full of personalities and other irrelevant matter, and steadily ignoring the main question in dispute?

I think it would have been better if Prof. Max Müller had not called up the memory of the discussion between us about *cālin*. He must know as well as I do that his equation of *cālin* with the Latin *cālinum* is absolutely untenable. I am glad to hear, as I do for the first time from his letter, that my suggestion as to its etymology had been made before. It matters not one straw who may be the first to hit upon a derivation. The important question is, Is it in accordance with history, and with well-ascertained phonetic laws? That Prof. Max Müller's etymologies are not always so, I may perhaps be able to show on some other occasion.

A. L. MAYHEW.

P.S.—It has been suggested to me that Prof. Max Müller's letter was in form a commentary on the statement I impugned. It may be convenient to place together text and commentary.

Text: "The word *Fors* cannot be derived from *ferre*. . . . The root *bhar* is an *ē* root, and in Latin this original *ē* remains unchanged before *r*."

Commentary: "This means that the particular root *bhar* does not usually appear in Latin with Ablaut [though, as I have always known and taught, plenty of other *ēr* roots do]; therefore the single apparent instance of such a phenomenon is likely not to be genuine."

Could any "eminent divine" do better than this, though the text were from the Bible, and the comment were a desperate attempt to defend an incredible dogma?—A. L. M.

DANISH PLACE-NAMES AROUND LONDON.

London: Feb. 9, 1888.

As to Wandsworth, Mr. Stevenson may be right about this coming from the personal name Wendel, but he should not forget that there is a place-name Vandel in Denmark;* and I, for one, believe that hundreds of the names of our

* There is also a Brent the double of our Thames tributary.

English villages were simply reproductions by Danish settlers of their home-names. Very few know or care to recognise so simple a way of accounting why a place was named; but, taking the metropolis as a centre, we find that many place-names near it are absolutely identical with those of Danish villages. I do not think the absolute identities of so many* places near London with Danish place-names has ever been pointed out before, so some may not be uninteresting.

The names in brackets are villages to be found in Danish gazetteers. Among other identities are London† (Lunden—several), The Hope (Hope), Foreland (Forumland and Foreland Fjord), Tilbury (Tilsbjerg), Greenwich (Grønnevig), Woolwich (Ulvig), Wanstead (Vanstead), Rainham (Ranum), Limehouse (Lymose), Foulham ‡ (Foulum), Turnham (Tjørneholm), Walham Green (øholm), Sunbury (Sonnebjerg), Egham (Egholm), Balham (Ballum), Riverhead § (Roevehede), Guildford (Gylteford), Ealing (Eiling), Hampstead (Hammestad), Graveney (Gravenel), Hackney (Aakenoes), Bromley (Bromelle), and Westerham (Vesterholm).

Of places beginning the same as Danish place-names, there are Hammersmith (Hammer-shuus), Isleworth (Islegaard), Gunnersbury (Gunnarskjer), Gravesend (Gravensteen), Carshalton (Karsholt), Swanscombe (Svanevig), Brixton (Brixgaard), Camberwell (Kammer-gaarde), &c.

One is apt to forget what strong evidences of Danish settlements there are all round about London, e.g., Clapham, known in connexion with Osgod Clapa a Dane, and how many *bys*, *oes* and *fleets* there are, as Gunnersby, Harrow, Hounslow, Taplow, Northfleet, &c. But I fear the suggestions made above afford too simple a way of accounting how some of our villages got their names to find favour with antiquaries.

WALTER RYE.

PARIS AND TRISTAN IN THE "INFERNO."

London: Feb. 7, 1888.

In a letter to the ACADEMY some months back (October 1), on the above subject, I quoted a passage from Chaucer's *Legende of Goode Women* in support of the view that the Paris of *Inferno* v. 67, who is coupled by Dante with Tristan, was intended to be the Paris of classical fame, and not the Paris of mediæval romance. In the passage referred to Chaucer couples together "Ysoude and Eleyne"; and I find the two again coupled in one of the *Chansons Royaulx* of Eustache Deschamps, who belongs to the second half of the fourteenth century:

"Qu'est devenuz Denys, le roy felon,
Job le courtois, Thobie et leur lignée,
Aristote, Ypocras, et Platon,
Judich, Hester, bonne Penelopee,
Royne Dydo, Pallas, Juno, Medee,
Guenievre, Yseult et la treubelle Helaine,
Palamides, Tristan a tout s'espée?
Ilz sont tous mors, ce monde est chose vaine."

The above is from the ballad numbered CCCLXVIII. in Vol. III. of the edition of Deschamps published by the Société des Anciens Textes Français.

PAGET TOYNBER.

THE PUBLISHING PRICE OF LARGE PAPER EDITIONS.

Oxford: Feb. 10, 1888.

There has grown up within the last year or two a custom in publishing which falls very

* And the partial identities of others.

† It is suggestive that there is a London-thorpe in Lincolnshire.

‡ We know the Danes wintered there.

§ Which is not the head of any river.

hard on the book-buyer—viz., putting no fixed price upon a book. To give an instance. When Mr. Lang's translation of *Aucassin and Nicolette* was advertised, it was announced that a certain number of copies would be issued on large paper. Anxious to secure two copies, I ordered a copy from two booksellers. When the book came out I happened to see a copy in a shop window and bought it at 14s. 6d. On coming back to Oxford my copies, previously ordered, were sent in. On asking the booksellers how much I was to pay, the one charged 15s., the other £1 1s.

Unless some change is made, lovers of fine books will hesitate to order large paper copies when they have no guarantee that the price may not be exorbitant.

After the book has appeared it may often rise in price; but those who have ordered copies months before have surely a right to be protected from exorbitant overcharge.

E. GORDON DUFF.

THE CANARY ISLANDS.

London: Feb. 8, 1888.

Your review (ACADEMY, February 4) of my book, *Tenerife and its Six Satellites*, seems to require some answer from me.

It is suggested that I have insufficiently consulted original authorities, and your reviewer would like to have a list of the books which I have seen on the subject. That is impossible, for two reasons: (1) their number is ninety-one—a list of titles too long, I fear, for your columns; and (2) about eighty of these only treat of parts of the islands, or are not really original authorities. In the earlier chapters of my book I have mentioned the really valuable, i.e., original, authorities that exist on the subject.

Now, with regard to a few of your reviewer's corrections:—(1) A certain amount of misprints there may be. They will all be corrected in the second edition. (2) As to the spelling of some of the local names, many of them are, of course, mere approximations, formed according to native pronunciation. There is no literary authority for authentic spelling in these cases. It is rash to be dogmatic, as your reviewer is, as to the spelling of a Guanche name. (3) The accuracy of my maps is, no doubt, open to comment. In the absence of any topographical surveys, I had to rely upon private observations, made roughly in the course of travelling. Even so, I doubt whether any one lives who is competent to point out many serious inaccuracies in them. (4) Of my husband's and Mr. Bécher-vaise's original meteorological observations your reviewer says nothing.

Your reviewer errs in supposing that I ever intended to write a scientific, botanical, or historical work. I went to the islands with the avowed intention of writing a modern work of travel that would induce others to travel there, and would give a true account of the present inhabitants. This, I maintain, I have done.

In conclusion, I have only to repeat what I say in my book, that criticisms founded upon a partial knowledge of these islands is apt to be most misleading.

OLIVIA M. STONE.

SIR HENRY MAINE.

Oxford: Feb. 11, 1888.

In your notice of the late Sir Henry Maine in to-day's ACADEMY (p. 97), you say "We believe that none of the addresses have been published which he delivered as Vice-Chancellor of the University of Calcutta." This is a slight slip; for, in the third and following editions of *Village Communities* (1876), you will find three such addresses, namely,

those delivered in 1864, 1865, and 1866. The author states in the preface that these three addresses "have not before been printed in this country," though, doubtless, they appeared in India soon after their delivery.

May I also point out that the same third edition includes several other essays and lectures originally published independently, e.g., the *Cambridge Essays* (1856) article on "Roman Law and Legal Education," the *Fortnightly* review of "Sir James Stephen's Introduction to the Indian Evidence Act," and the Rede Lecture (1875) on the "Effects of Observation of India on Modern European Thought"—thus containing in a collected form his scattered juridical as distinguished from his journalistic writings?

W. A. B. COOLIDGE.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Feb. 20, 5 p.m. London Institution: "Contemporary Novelists," by the Rev. H. O. Shuttleworth.

8 p.m. Royal Academy: "Antiquities recently discovered in the Acropolis of Athens," by Mr. A. S. Murray.

8 p.m. Victoria Institute: "Babylonian Civilization," by Mr. Boscawen.

8 p.m. Society of Arts: Cantor Lecture, "Yeast: its Morphology and Culture," IV., by Mr. A. Gordon Salamon.

8 p.m. Aristotelian: "The Real Essence of Religion," by the Rev. E. P. Scrymgeour.

TUESDAY, February 21, 8 p.m. Royal Institution: "Before and after Darwin," VI., by Prof. G. J. Romanes.

4 p.m. Colonial Institute: Annual Meeting, Election of President and Council; Adoption of the Report and the Statement of Accounts.

7.45 p.m. Statistical: "Canadian Railway and Commercial Statistics," by Mr. J. G. Colmer.

8 p.m. Civil Engineers: Discussion, "The Economic Use of the Plane-Table in Topographical Surveying," by Mr. Josiah Pierce.

8.30 p.m. Zoological: "The Azgros Vein of the Anurous Amphibia," by Prof. G. B. Howes; "Paleontological Contributions to Selachian Morphology," by Mr. A. Smith-Woodward; "Mammals obtained by Mr. G. F. Gaumer on Cozumel and Ruan Islands, Gulf of Honduras," by Mr. Oldfield Thomas.

WEDNESDAY, Feb. 22, 8 p.m. University College: Barlow Lecture, "A Critical Discussion of Selected Passages from Dante," II., by the Rev. Dr. E. Moore.

8 p.m. Society of Arts: "The Technical Education Bill," by Mr. Swire Smith.

THURSDAY, Feb. 23, 2.30 p.m. British Museum: "The Languages and Races of the Babylonian Empire," IV., by Mr. G. Bertin.

3 p.m. Royal Institution: "Early Secular Choral Music," with Illustrations, III., by Prof. Hubert Parry.

8 p.m. University College: Barlow Lecture: "A Critical Discussion of Selected Passages from Dante," III., by the Rev. Dr. E. Moore.

5 p.m. Hellenic: "Greek Architectural Mouldings," by Mr. H. H. Statham; "A Visit to some Museums of Northern Europe," by Mr. L. R. Farnell.

7 p.m. London Institution: "Historical Development of Music from Bach to Liszt," by Mr. Carl Armbruster.

8 p.m. Royal Academy: "Ancient Engraved Gems," by Mr. A. S. Murray.

8 p.m. Telegraph Engineers: "The Present State of Fire Telegraphy," by Herr R. von Fischer Treuenfeld.

8.30 p.m. Antiquaries.

FRIDAY, Feb. 24, 7.20 p.m. Civil Engineers: Students' Meeting. "The Erection of the superstructure of the Forth Bridge," by Mr. A. J. Knowles.

8 p.m. Society of Arts: "Facts regarding the Religions of India, and their Influences on the Social Progress of the People," by Sir W. W. Hunter.

8 p.m. Quakers: Annual General Meeting—President's Address.

9 p.m. Royal Institution: "Westminster Abbey," by Dean Bradley.

SATURDAY, Feb. 25, 8 p.m. Royal Institution: "Experimental Optics," VI., by Lord Rayleigh.

8 p.m. Physical: "The Efficiency of Incandescent Lamps with Direct and Alternate Currents," by Prof. W. E. Ayrton and Prof. John Perry; "Observations on the Height and Length of Ocean Waves," by the Hon. Ralph Abercrombie; "Experiments on Electrolysis," by Mr. W. W. Haldane Gee; "The Temperature at which Nickel begins suddenly to lose its Magnetic Properties," by Mr. Herbert Tomlinson.

3.45 p.m. Botanic: General Meeting.

SCIENCE.

MATHEMATICAL BOOKS.

The American Journal of Mathematics. Vol. X., No. 1. (Baltimore.) Prof. Sylvester's course of "Lectures on the Theory of Reciprocants" (pp. 1-16) are here brought to a close. Both the author and reporter are to be congratulated on having successfully carried out the plan originally laid down by them, and we trust we shall have equally good work on the same or similar lines in future issues. We have the abstracts of thirty-three lectures, actually delivered, and some simpler matter is worked up into a quasi-thirty-fourth lecture on "probably the most difficult problem in elimination which has been effected up to the present time." The succeeding paper—"Algebraic Surfaces, of which every Plane-section is Unicursal in the Light of n Dimensional geometry" (pp. 17-28), by E. H. Moore, jun—gives another proof of a theorem recently established by Picard (*Kronecker's Journal of Mathematics*, 1886 (pp. 71-78), and develops several allied propositions in the geometry of dimensions. Mr. Morgan Jenkins (pp. 29-41) simplifies, in his remarks on "Prof. Cayley's extension of Arbogast's Methods of Derivations," a paper read before the Royal Society in December, 1880. It is a paper well suited for this journal, as it is accompanied by several tables which would be rather cramped in the ordinary journals. In the "Properties of a Complete Table of Symmetric Functions" (pp. 42-46), Capt. P. A. Macmahon establishes some remarkable features of a tabulation set forth by Mr. Durfee in vol. v. Oskar Bolza writes "On Binary Sextics, with Linear Transformations into Themselves" (p. 47-70)—an investigation undertaken at Prof. Klein's suggestion. Prof. Cayley gives the sequel to his former communication on "The Transformation of Elliptic Functions" (pp. 71-93), and Prof. Woolsey Johnson (pp. 94-98), closes the number with a "Symbolic Treatment of Exact Linear Differential Equations." A feature of very high interest in connexion with the present number is that it is accompanied by an excellent likeness of Prof. Sylvester, with autograph signature—an example that we trust may be followed in the case of one or two more of our veteran mathematicians.

A Text-Book of Algebra. By W. Steadman Aldis. (Oxford: Clarendon Press.) This work is the embodiment of lectures on algebra delivered to students in the College of Physical Science at Newcastle-upon-Tyne, when the author was Professor of Mathematics there. This fact accounts for the mode of treatment adopted. It is not so much a book for elementary students—i.e., for boys at school—as for students of a more advanced type who are going over the subjects again, and who wish to get some insight into the principles of algebra. In his preface, the author states that he "has endeavoured to place the subject on a foundation of strict reasoning," and a comparatively large amount of space is therefore devoted to the discussion of "first principles." In this, Prof. Aldis has succeeded very well; and, though it does not go so deep as Prof. Chrystal's recent treatise does, yet it is a valuable introduction, and a manifest departure from the old type of book. It is not, then, a work got out for candidates who require the latest "tips" in their preparation for scholarship and other examinations, but for "persons who have not the opportunity, enjoyed by students in the old universities, of access to large libraries, or intercourse with other mathematical scholars." There are four sections. In the first are contained nine chapters devoted to arithmetical notions, algebraical laws, the four elementary

rules (in three chapters), highest common divisor, fractional forms, indices, and surds. The second section consists of seven chapters, treating of simple and quadratic equations, square and cube roots (with application to cubic equations), and one on determinants—another instance of the prominence now given to this subject in elementary training. Section three, in eight chapters, takes up the general subject of series, beginning with permutations and combinations, the ordinary progressions, the binomial and polynomial theorems, indeterminate co-efficients and recurring series, some special series, and logarithms with the exponential series. The concluding section discusses arithmetical applications—as ratio and proportion, continued fractions, indeterminate equations, inequalities, theory of numbers, and probabilities. Out of the 774 articles 283 are devoted to the first section. It will be seen that the usual subjects are taken, though in a somewhat different order; but one fault is that the more advanced parts are not treated at any length—in fact, some properties strike us as being conspicuous by their absence; and there is no advance here upon the old books. From its size one would have expected more than we find; but we can strongly commend the early part of the work as containing a clearly reasoned account of first principles. The examples are both excellently chosen and very numerous; and at the end, in the "Answers," Prof. Aldis has given some very useful hints, which will be a boon to students reading the work without the aid of a tutor. This being a "Clarendon" we need not say that it is well printed.

A Treatise on the Integral Calculus. Part I., containing an Elementary Account of Elliptic Integrals and Applications to Plane Curves, with numerous Examples. By Ralph A. Roberts. (Dublin: Hodges.) Mr. Roberts launches his book on the waters without any word of explanation, hence we cannot divine with certainty what actuated him to write it. No doubt he intends it to meet a want which he believes to exist in the mathematical library. He has done his work well, and even if it be not indispensable to his future part (or parts), it well deserves a welcome for its own sake. There is much of novelty in it, though it goes, in this present instalment, over a good deal of familiar ground. The writer here puts into a form adapted for students much of what he has embodied elsewhere in memoirs, which have been accepted on the score of novelty of treatment, or of results. The chapters on definite integrals, areas, and rectification of plane curves, are very full and interesting, and are accompanied by a good selection of examples; but the special novelty of this "elementary account" is the chapter devoted to a discussion of elliptic integrals—a subject for which our author in his other books has shown great affection. In the space of forty pages we have a sufficiently full introduction to these integrals. We anticipate that hereafter there will be a higher development of their properties. The book is exceedingly well printed, and we have come across hardly any errata. There is an index at the end.

Easy Lessons in the Differential Calculus; indicating from the outset the Utility of the Processes called Differentiation and Integration. By R. A. Proctor. (Longmans.) We have been much interested in reading this reprint of papers which originally appeared in *Knowledge*. They are, in our opinion, well suited for the class the writer had in view. We have recommended the work to beginners in the study of the Calculus, and have found that they, too, have been interested in Mr. Proctor's unfolding of the first principles and his treatment of some well-selected examples. Though

the book is small, it covers a fair amount of ground, and will serve to introduce the reader to many of the important applications. There are some misprints, which are in most cases easy to be corrected; but near the close (as on p. 110) letters have got rather mixed.

First Steps in Geometry. By Richard A. Proctor. (Longmans.) This little work has for its object to remove for young students in geometry the difficulties which the author encountered when he was a beginner himself. It contains three sections—(1) geometrical problems, (2) notes on Euclid, (3), riders and problems on Euclid's first two books. The most valuable part of it consists of the hints given for solving deductions. The collection of resolved problems and theorems is a useful one, and there are 260 easy riders to resolve. With an improved arrangement of the materials the size of the book might have been somewhat reduced.

The Conic Sections, with Solutions of Questions in London University and other Examination Papers. By George Heppel. (Baillière, Tindall & Co.) This is a small book, but it does not therefore follow that there is little in it. There is much good work bestowed upon a patient investigation of the properties of these well-known curves. We especially commend the discussion of the general equation, both referred to rectangular and oblique co-ordinates. Though not intended for absolute beginners—the way having been prepared for this class in an introductory work by another writer in the publisher's "Aids to Analytical Geometry"—this work goes over all the ground candidates for the examinations referred to in the title-page have to cover, and so is sufficient by itself for their purpose; or it may well be read, for the full discussion and illustration of the general equation, with any of the ordinary text-books.

Solutions to Problems contained in a Treatise on Plane Co-ordinate Geometry. By I. Todhunter. Edited by C. W. Bourne. (Macmillan.) "Printed solutions of examples seem to be found uninteresting, judging from the difficulty in persuading at least the younger students to read them. But much benefit may be derived by a judicious use of such works, especially by those who have not the assistance of a tutor." So wrote Dr. Todhunter in his essay on the "Private Study of Mathematics" (*Essays*, p. 81). Mathematical masters in schools, whose time is taken up with almost ceaseless teaching of the most elementary kind, are obliged to make their own collections of MS. solutions in the scant leisure time they can devote to such work, or to betake themselves to such aids as the present. To such we can commend the book before us, i.e., when the text-book in use is Dr. Todhunter's. This, we fear, is less frequently the case than it was when Mr. Bourne commenced, some fifteen years ago, the task which he has admirably carried out. The problems in Dr. Todhunter's book are good; and, if a second edition of the present work should be called for, we would suggest that Mr. Bourne should print the questions also, and then his book would stand on better ground, and attract a larger public. The author is no niggard, for he does not restrict himself to single solutions of a question.

Solutions and Hints for the Solution of some of the Examples in the Algebraical Exercises of Jones and Cheyne. By the Rev. W. Failes. (Macmillan.) The "Algebraical Exercises" are in very general use, and the book before us will be very serviceable to teachers in correcting the "exercises" done by their pupils. It gives ample assistance to the master, and the two or three papers we have worked in Mr. Failes's book are neatly solved. We are bound, however, to say that the first question we read (Lxxv. 1) contains two typographical mistakes,

the omission of an exponent (2), and the misplacing of a 2. Such little slips are to be expected in such a mass of figures, but their occurrence sometimes gives trouble in the press of teaching.

An Introductory Course of Plane Trigonometry and Logarithms. By J. Walmsley. (F. Hodgson.) As this handy book has now reached a tenth edition, it is only necessary to say that the author, not content with the success he had already achieved, has in this edition made considerable alterations and improvements which have been suggested to him by a teacher of great experience in the subject.

CORRESPONDENCE.

SOME RECENT EMMENDATIONS OF ARISTOTLE AND PLATO.

Oxford: Jan. 26, 1888.

In the *Cambridge University Reporter* of November 29 appears an abstract of a paper of emendations of the *Ethics* read before the Cambridge Philological Society by the president. None of them are convincing, but they are not liable to such grave objections as those considered in the *ACADEMY* of December 3.

They may be discussed in the order which they have in the paper:

I.

"VII 1 § 3=1145 a 27, *ἐπεὶ δὲ σπάνιον καὶ τὸ θεῖον ἄνδρα εἶναι, καθάπερ οἱ Λάκωνες εἰδῶσι προσαγορεύειν, ὅταν ἀγασθῶσι σφόδρα τοῦ (σεῖος ἀνὴρ φασιν), οὕτως καὶ ὁ θρησκύων ἐν τοῖς ἀνθρώποις σπάνιος.*"

"The phrase *σεῖος ἀνὴρ φασιν* is plainly unsound, since it cannot mean either 'they talk of a god-like man,' or 'this, they say, is a god-like man.' Accordingly it has been proposed to substitute *οὕτως* for *οὕτω*, or before *οὕτω* to add *οὕτως*. For my own part, noting that the Scholiast, 118, writes *οὕτως δὲ ἀνὴρ θεός [read σεῖος] ἔστιν, ἥτοι σεῖος, I think that, thus far, nothing more is necessary than the substitution of *ἀνὴρ* for *ἀνὴρ*. Compare Plato, *Sophist*, 216 b καὶ μοι δοκεῖ θεὸς μὲν ἀνὴρ οὐδαμῶς εἶναι, θεῖος μὴν. (In *Meno* 99 d, καὶ οἱ Λάκωνες ὅταν τινὰ ἐγκωμιάζωσιν ἀγαθὸν ἄνδρα, θεῖος ἀνὴρ φασιν, οὕτως, though the phrase is grammatical, the context seems to point to the same alteration.)"*

The emendation of this passage is unfortunate. It substitutes a commonplace for a lively idiom. *σεῖος ἀνὴρ* has not the article because it is a part of the predicate. The sentence in full is *σεῖος ἀνὴρ ἔστιν οὕτως*, shortened to *σεῖος ἀνὴρ οὕτως* where *οὕτως* is subject and *σεῖος ἀνὴρ* predicate (cf. "a fine fellow that!"). If proof were needed of anything so simple it is given in the passage of Plato by which this is probably suggested (see Susem.). *Meno*, 99 d, θεῖος ἀνὴρ φασιν οὕτως oddly quoted as probably needing the same alteration. *σεῖος ἀνὴρ οὕτως*, with the predicate first, is a natural form of exclamation. As an exclamation (cf. *ὅταν ἀγασθῶσι σφόδρα τοῦ*) it gains in liveliness by a further shortening in which the subject is dropped altogether (cf. "a fine fellow!").

The only admissible emendation is the one rejected (*οὕτως* before or instead of *οὕτως*). But the shortest form would probably please the Lacedaemonians best; and perhaps their opinion of the present correction would be *τῇ δασεῖ περιεργασθῆναι*.

II.

In the same passage another correction is approved as follows:

"But I am further of opinion that Zwinger is right in rejecting the whole clause *καθάπερ οἱ Λάκωνες—σεῖος ἀνὴρ φασιν*. For, as the reference to the *θεῖος* is merely retrospective and transitional, the justification of the term should be introduced, not here, but at an earlier stage; and, in fact, we have already had such a justification in § 1, *ὅσπερ Ὀμηρος περὶ Ἑκτορος κ.τ.λ.* Thus,

having first written *ἀνὴρ* in place of *ἀνὴρ*, I would then, with Zwinger, bracket the whole clause *καθάπερ οἱ Λάκωνες—φασιν*."

It is unsafe to follow the critic here quoted. One must suspect it did not occur to him that the remark he rejects might be meant to illustrate the rarity of the *θεῖος*. "It's a word with the Lacedaemonian for a man of rare merit (*ὅταν ἀγασθῶσι σφόδρα τοῦ*)." Susemihl's note on the emendation is "*seculudt Zwinger (male)*."

III.

"VI 2 § 2=1145 b 30, *ὅτι γὰρ οὐκ οἰεῖται γὰρ δ ἀκρατεὺς πρὶν ἐν τῷ πάθει γενέσθαι, φανερόν.*"

"It is customary to assume with *οὐκ οἰεῖται γὰρ* the ellipse of the words *δεῖν πράττειν* & *πράττει*, and to quote in justification 3 § 2=1146 b 23. But, whereas in 3 § 2 the requisite supplement occurs in the immediate context, so that the ellipse is easy, in 2 § 2 this is not the case. Is it possible that *οὐκ οἰεῖται γὰρ* has taken the place of the phrase which would most simply and directly express the writer's meaning, namely, *οὐκ ἀγνοεῖ*?"

This deals with a real and familiar difficulty. It seems a just observation that *οὐκ ἀγνοεῖ* would express the writer's meaning, but the emendation does not commend itself. The corruption of *ἀγνοεῖ* into *οἰεῖται γὰρ* is quite improbable (especially without variant); and it is hard to see why a particle so appropriate here as *γὰρ* should be sacrificed, unless it is to contribute a *γ* towards *ἀγνοεῖ*. It would be simpler to understand *ἀγνοεῖν* after *οἰεῖται* from the preceding context—a remedy which once occurred to me. But the probability is that the text is right as well as the current explanation, derived from iii. 2 (quoted above), to which add ix. 7 *δὲ μὲν καὶ δίδμενος δεῖν δ' (=δ ἀκράτης) οὐκ οἰόμενος*. In the New College MS. the words supplied are in the text itself, *δεῖν πράττειν* & *πράττει*; also in the Aldine, and in the excerpt from the *Ethics* in the commentary of Aspasius; but they have the air of a correction, and it would be unsafe to admit them against the more important MSS.

The ellipse is no doubt harsh, but it is hasty to emend the text without some consideration of the general question of ellipse in the style of Aristotle and his imitators. In the first place, the difficulty need not be made to look more formidable than it is. It is enough to supply *δεῖν*, which implies the rest. In the second place, there are some remarkably harsh ellipses within the limits of this book. One of the most striking is in chap. xii. 7, *τὸ δὲ τὸν σάφρονα φέγειν καὶ τὸν φρόνιμον δικάζειν τὸν ἄλυτον βίον, καὶ τὸ τὰ παιδία καὶ τὰ θηρία δικάζειν, τῷ αὐτῷ λύεται πάντα*. Grammar would demand that *τὸν ἄλυτον βίον* should be object of *φέγειν* and of the second *δικάζειν*, but yet *τὰς ἡδονὰς* must be supplied in both cases, as is seen from the opinions to which the author is referring in chap. xi. 4. The ellipse would be bad enough if these had immediately preceded, but they are in another chapter and fifty lines back. The compression of xi. 5 is more suited to a note than to anything intended for publication: *τοῦ δὲ μὴ πάσας σπουδαίας, ὅτι εἰσὶ καὶ αἰσχροὶ καὶ δνειδίζόμενα*, where, besides *εἶναι*, something like *σημείον δοκεῖ* must be added to explain the genitive, though neither the word *σημείον* nor a similar construction has anywhere preceded. Compare also the ellipse in the next sentence: *ὅτι δ' οὐκ ἔριστον ἢ ἡδονή, ὅτι οὐ τέλος ἀλλὰ γένεσις*. The following is a sufficiently harsh ellipse:

ὥς γὰρ Σπευσίππος ἔλκεν οὐ συμβαίνει ἢ λύσις, ὥσπερ τὸ μείζον τῷ ἐλάττω καὶ τῷ ἴσῳ ἐναντίον· οὐ γὰρ ἔν, &c., where *οὕτω τὴν ἡδονὴν τῇ λύτῃ καὶ τῷ μηδετέρῳ ἐναντίον* or something equivalent is to be supplied (see Fritzsche). Compare, also, iv. 6, *ὥσπερ οὖν οὐδ' ἔρταυθα κ.τ.λ.* But there are instances more akin to the passage before us in the same chapter: § 1. *οὐδένα γὰρ ὑπολαμβάνοντα πράττειν παρὰ τὸ βέλτιστον, ἀλλὰ δὲ ἀγνοῖαν*. This seems exceptional, for *υπολαμβάνειν*, like *οἰεῖσθαι*, has generally an adverb, at least, or a

proun to complete it. (Compare at the beginning of the chapter *ἀπορήσει δ' ἂν τις πῶς ὑπολαμβάνων ὁρθῶς ἀκρατεὺς εἶναι*, and § 2, *τὰναντία γὰρ πράττει ἂν ὑπολαμβάνει διὰ τὴν ἀκράσιν*.) Here (§ 2) *υπολαμβάνοντα* must be interpreted on the analogy of iii. 4, *παρὰ τὴν ὑπόληψιν πράττειν* and ii. 4, *μηδ' ἰσχυρὰ ὑπόληψις ἢ ἀντιτείνουσα*. The others are in §§ 10 and 11, *ἐπὶ δὲ τῷ πεπεισθαι πρᾶττων τὰ ἡδέα*; where *δεῖν* or *δεῖν πράττειν* may be understood with *πεπεισθαι*. § 11, *εἰ μὲν γὰρ μὴ ἐπείπειτο ἂ πράττει*, where *μὴ δεῖν* is wanted. In the preceding *πεπεισθαι δεῖν* has not occurred, but *οὐκ ἐμμένον οἷς ἐπέστη ὑπὸ τοῦ ὀδυρσίου* is found in § 7 above, and in the preceding section *υπολαμβάνει* . . . οὐ δεῖν πράττειν. Compare viii. 4, *τοιούτος οἷος μὴ διὰ τὸ πεπεισθαι δικάζειν τὰς . . . ἡδονὰς*, where, however, nothing similar has preceded. It must be allowed that the ellipse is anyhow more natural with *πεπεισθαι* than with *υπολαμβάνειν* and *οἰεῖσθαι*.

What is to be supplied with *οὐκ οἰεῖται* can be got from the tenor of the preceding context. The *ἀγνοια* of the *ἀκράτης* there spoken of would mean that he *οἰεῖται δεῖν, οἰεῖται μὴ εἶναι φαῦλα* (cf. *εἰδὼς δὲ φαῦλα*, i. 6), and to say that he has not this is to say *οὐκ οἰεῖται δεῖν*. The preceding chapter contains a sentence sufficiently like the present (*οὐκ οἰεῖται γὰρ δ ἀκρατεὺς πρὶν ἐν τῷ πάθει γενέσθαι*) in form to suggest the ellipse, viz. (§ 6), *καὶ δὲ μὲν ἀκράτης εἰδὼς δὲ φαῦλα πράττει διὰ πάθος*. It is twenty lines off, but that is less than half the distance between the sentence in xi. 5 and that which it explains in xii. 7 (above quoted), and this sentence (i. 6) is sufficiently fresh in the writer's mind, for the present context (ii. 1-5) is a discussion of it.

There is, however, something else perhaps in the writer's mind which may have unconsciously determined the choice of the word *οἰεῖται*. He is thinking of the doctrine in the *Protagoras*, and refers directly to this dialogue, p. 352 in § 1 (*περίλκειν . . . ἀνδράποδον*, see Fritzsche). But it is probable that in § 2 he has more especially before him *Protag.* p. 358, where *οἰεῖται* occurs in a somewhat similar way.

358 b, *οὐδὲς οὕτε εἰδὼς οὕτε οἰόμενος ἄλλα βελτίον εἶναι ἢ ἂ ποιεῖ καὶ δυνατόν, ὥστε ποιεῖ ταῦτα*.

1b. c. *ἐπὶ γὰρ τὰ κακὰ οὐδὲς ἐκὼν ἔρχεται, οὐδὲ ἐπὶ ἂ οἷεταί· κακὰ εἶναι, οὐδ' ἔστι τοῦτο, ὥς δοκεῖν ἐν ἀνθρώποις φύσει ἐπὶ ἂ οἷεταί· κακὰ εἶναι ἐθέλειν ἵεναι*."

IV.

"VII 4 § 2=1147 b 31 *τοὺς μὲν οὖν πρὸς ταῦτα παρὰ τὸν ὀρθὸν λόγον ὑπερβάλλοντας τὸν ἐν αὐτοῖς ἀπλῶς μὲν οὐ λέγομεν ἀκρατεῖς, προστιθέμεν δὲ τὸ χρημάτων ἀκρατεῖς καὶ κέρδους καὶ τιμῆς καὶ θυμοῦ, ἀπλῶς δ' οὐ κτλ.*"

"Whereas we ought to have, either *προστιθέμεν δὲ τὸ χρημάτων καὶ κέρδους* without *ἀκρατεῖς*, or *προστιθέμεν δὲ* [i.e. *κατὰ πρόθεσιν δὲ*] *χρημάτων ἀκρατεῖς καὶ κέρδους* without *τό*, the text gives an awkward combination of both forms. Either *ἀκρατεῖς* (after *χρημάτων*), or *τό*, should, I think, be bracketed."

The grammatical analysis is satisfactory (cf. VII. iv. 4 fin.), but does not justify an emendation. The passage is rather an instance of the tendency so familiar in Greek to combine two constructions. There is, of course, a motive for these violations of strict grammar. Here, perhaps, *ἀκρατεῖς* came in through a wish to define the construction of *χρημάτων*, which otherwise might sound as if genitive after the article *τό*.

V.

"ix. 10, § 3, *οὕτε γὰρ ἐκ δέκα ἀνθρώπων γένοιτο ἂν πόλις, οὕτ' ἐκ δέκα μυριάτων ἔτι πόλις ἔστιν*."

With a reference to Hume (*Populoussness of Ancient Nations*), it is pointed out that there is here a difficulty felt by Hume which has "escaped the vigilance of the editors." It is said that, as the whole population of Athens, excluding metics and slaves, but including (apparently) women and children of unripe age, may be estimated at upwards of 123,500, "a Greek would have no

difficulty in imagining a city which contained δέκα μυριάδας ἀνθρώπων (100,000 persons). From the assumption that ἀνθρώποι must mean the whole population with the exceptions* named, and that the passage ought to refer to the full citizens only, it is inferred that ἀνδρῶν should be read for ἀνθρώπων. This is supported by the phrases: χιλιάνδρος πόλις, μυριάδρος πόλις (Plato, *Pol.*, 292 E; Isoc., *Pan.* 286 D; Arist., *Pol.* ii. 8), and the note ends:

"We should have expected then οὕτε γὰρ ἐκ δέκα ἀνδρῶν γένοιτο ἂν πόλις: and, as one of the best MSS., L^h Par., and the Scholiast 161*, give this reading, I feel complete confidence in recommending its adoption."

Here ἀνθρώπων is a colourless word, and only comes as a sort of masculine termination for δέκα. It seems hardly necessary to say that when Aristotle, speaking of a πόλις as a community of citizens, says that it must contain less than 100,000 persons, he can only mean such persons as can be citizens. We may say, "ten persons won't make a college, and ten thousand are too many," and we should not include college servants. But, as "persons" is a wide term, we might in a special context make use of it to include those who are not properly members of the college. We might say, "the size of a college is not measured by the number of persons in it, for some colleges keep a larger proportion of servants than others." Thus Aristotle, *Pol.* VII. iv. says: ἐξ ἧς (πόλεως) δὲ βάνασοι μὲν ἐξέρχονται πολλοὶ τὸν ἀριθμὸν ὀλίγοι δὲ ὀλίγοι, ταύτην ἀδύνατον εἶναι μεγάλην· οὐ γὰρ ταύτην μεγάλην τε πόλιν καὶ πολυάνθρωπον. But, in the same chapter (1326^b 20), he uses πολυανθρωπία when speaking of citizens proper; and, when he introduces the subject of size, speaking of the χορηγία of the πολιτεία, he first says λέγω δ' ὅλον περὶ τὴν πλῆθος πολιτῶν καὶ χώρας, and then afterwards ἔστι δὲ πολιτικῆς χορηγίας πρῶτον τὸ τε πλῆθος τῶν ἀνθρώπων κ.τ.λ. . . . καὶ κατὰ τὴν χώραν ὡσαύτως. In VI v. 1320^a 17 and 1321^a 1, πολυάνθρωποι and πολυανθρωπία refer to the number of the citizens. This puts aside any argument which might be founded on μυριάδρος πόλις. But, even without such evidence, this last phrase could not give much support to the emendation. In the above passage, where Aristotle distinguishes μεγάλην and πολυάνθρωπος πόλις, he is opposing rather the citizens *de jure* (οἰκεία μόρια πόλεως) than the citizens *de facto* to the remainder of the population; and, therefore, if (what is not to be supposed) any rule for compounds with -άνδρος could be hence derived, it would be that they related to what Aristotle considered citizens in the proper sense. Now it so happens that the μυριάδρος πόλις quoted is the ideal state of Hippodamus (κατεσκεύασε δὲ τὴν πόλιν τῇ πλῆθει μὲν μυριάδρον), and two of the three classes into which it is divided are τεχνῖται and γεωργοί, who of course are not fitted to be citizens according to Aristotle.

As to the reading of L^b, it may easily have arisen from a misreading of ἀνών. It is well known that such abbreviations of ἀνθρώπος and its cases are very common.

In spite of the strong recommendation which accompanies it, the emendation is not likely to be accepted. Would ἀνθρωποφάγοι be recommended on the same principle for ἀνδροφάγοι in Herod. iv. 106, especially as most MSS. are said to read ἀνθρωποφάγουσι a few lines below? The scholiast will be considered hereafter.

"The second clause in this extract has for its

VI.

"x 7 § 1 = 1177 a 12, εἰ δ' ἐστὶν ἡ εὐδαιμονία κατ' ἀρετὴν ἐνέργεια, εὐλογον κατὰ τὴν κρατίστην· αὕτη δ' ἂν εἴη τοῦ ἀρίστου. εἴτε δὲ τοῦτο εἴτε ἕλλο τι κ.τ.λ.

* The emender seems to make these exceptions, but does not explain why. Hume's words are "ἀνθρώπος not πολίτης; inhabitant not citizen."

purpose, not to connect a κρατίστη ἐνέργεια already defined with the best part in man, but to define the κρατίστη ἐνέργεια as the ἐνέργεια of man's best part. Hence we should, I think, read αὕτη δ' ἂν εἴη <ἡ> τοῦ ἀρίστου."

The emendation seems at first sight neat, because the text might so easily have been corrupted, but it illustrates the danger of allowing too much influence to such a consideration. The reason given for inserting the article before τοῦ ἀρίστου is a reason for also inserting it before κατὰ τὴν κρατίστην (<εἶναι τὴν> κατὰ τὴν κρατίστην), where, of course, corruption of the text is extremely unlikely. On other grounds, also, the emendation is improbable.

The thought of the text, in fact, may be expressed either with or without the article. We might say—

"It is reasonable that the 'actuality' should be that which is in accordance with the best excellence or virtue of the soul (τὴν κατὰ τὴν κρατίστην), and that this virtue again should be that of the highest part of the soul, &c. (ἡ τοῦ ἀρίστου)."

But we might also say (as in the text)—

"It is reasonable that this actuality should be in accordance with the highest virtue; now it is the highest part of the soul which has the highest virtue; therefore, whether this part is reason or something else . . . it is the actuality of this, in accordance with its proper virtue, which is complete happiness."

This is a form of expression which would be natural if the intention was to lay stress upon the introduction of the "highest part" into the definition, and this is exactly the intention of this portion of the *Ethics*.

VII.

"x 9 § 5 = 1179 b 16, οὐ γὰρ οἶόν τε ἡ οὐ βέβαιον τὰ ἐκ τοῦ παλαιοῦ τοῖς ἡθεσι κατεληγμένα λόγῳ μεταστῆσαι.

"It seems clear that, in the absence of a preposition, τοῖς ἡθεσι κατεληγμένα cannot mean τοῖς ἡθεσιν ἐμπαγμένα καὶ βεβαιωμένα (Paraphrast). Now, in the *Politics*, IV (VII) 2. 1324 b 21, we have καὶ ἕτερα δὴ παρὰ ἑτέροις ἔστι τοιαῦτα πολλά, τὰ μὲν νόμοις κατεληγμένα τὰ δὲ ἡθεσιν—i.e., 'and in the other nations there are many other such practices, established, some of them by law, some by custom'—where ἡθεσιν could not possibly stand. I infer that in the present passage we should read, not ἡθεσιν, but ἡθεσιν, taking it as an instrumental dative in antithesis to λόγῳ. Apparently the Scholiast, 185*, had this reading."

This seems to assume that τοῖς ἡθεσι κατεληγμένα could only be construed "established in the character" (or "in men's characters"), that the dative, however, must be instrumental, and therefore that ἡθεσιν is not right.

1. There is a little confusion in the reasoning. The *Politics* passage has not the prerogative, which seems to be given it, over the *Ethics* passage. ἡθεσιν could certainly stand in the former if it could stand in the latter; and unless it is otherwise decided that the dative must be instrumental, the *Politics* passage proves nothing, for the meaning "established in" would obviously suit it as well as the *Ethics* passage. Indeed, if the text of the *Ethics* admits only one meaning—"established in"—it is this passage which would decide (if either could), for the passage from the *Politics* would be ambiguous, as admitting also of another meaning—"established by."

2. The kind of passage which is of real use has been already given in Liddell and Scott: "καταλαμβάνειν πίστι, ὀρκίους, Lat. jure jurando astringere, to bind by oath, Hdt. 9.10.6. Thuc., &c.: Pass. . . ἡμίλει Plato, *Legg.* 823 A." In these places, with which the lexicon associates the above citation from the *Politics*, the dative can only be instrumental. They further show that κατεληγμένα has not the merely general sense of "established." It is rather

"sanctioned" (in the more technical sense), "ratified," Plat. *L.c.*, τὰ ταῖς ζημίαις ὑπὸ νόμων κατεληγμένα.

3. The inference drawn from the words of the Paraphrast as to his way of construing the passage is probably correct; and it is at any rate important to criticise such a rendering, because it appears in Grant and some modern translations. But the instrumental dative suits the text of the *Ethics*, and there is no need of any emendation.

It seems to be assumed that ἡθη can only have one meaning—"character" (or "characters"); but it has another, found not unfrequently (Herod., Thuc., Plato), which brings it very near to ἥθη, that of "habits of behaviour." Thus it is used of the "manners" of a people, of the "ways" or "practices" of an individual. Cf., e.g., Pl. *Legg.*, 625 A, ἐπειδὴ δὲ ἐν τοῖς αὐτοῖς ἡθεσι τέτραφε νομικοὶ οὐ τε καὶ ἔδε. *Rep.* 558 D, οὐδὲ ὑπὸ τῇ πατρὶ τετραμμένος ἐν τοῖς ἐκείνου ἡθεσιν. It is something like ἐπιτηδεύματα, with which it is associated in Ps. Plat. *Epist.* 7.325 D.

Evidently, then, so far from its being true that ἡθεσιν could not possibly stand in *Pol.* IV. ii., it could very well be thus associated with νόμοις (τὰ μὲν νόμοις κατεληγμένα τὰ δὲ ἡθεσιν "some sanctioned by laws, some by manners.") Compare also the following from the *Politics* itself (1263^a 23):

τὸ μὲν οὖν κοινὰ εἶναι τὰς κτήσεις τούτας τε καὶ ἄλλας τοιαύτας ἔχει δυσχερείας, ὃν δὲ νῦν τρώων ἔχει καὶ ἐπικουρηθὲν ἡθεσιν καὶ τάξει νόμων ὁρῶν οὐ μακρὸν ἂν διενέγκαι· ἔξει γὰρ τὸ ἐξ ἀμφοτέρων ἀγαθόν.

In the part of the *Ethics* before us perhaps ἡθη may not refer to society in general ("manners"), but to the individual's "ways" and "practices," then τὰ ἐκ παλαιῶν τοῖς ἡθεσιν κατεληγμένα would be "that which has long had the sanction (i.e., the binding force) of men's practices." τὰ τοῖς ἡθεσιν κατεληγμένα, by itself, could be translated "sanctioned by men's dispositions," "deriving a binding force from men's dispositions," but the addition of ἐκ παλαιῶν favours the rendering preferred.

VIII.

It remains to say something on the use made of "the Scholiast," i.e., the commentaries ascribed to Eustratius and Aspasius. In every case where they are quoted for an emendation, the extract from the *Ethics* text in the commentary has the same reading as the received text. This circumstance, to say the least, should not have been unnoticed. Variations in the commentary itself are just what should be expected. It is the manner of such paraphrastic explanations, in the same language as the text explained, to put the thought in another form of words or construction, if possible, which often results in such a wooden sentence as that cited in support of the emendation of σείας ἀνθρ. The chances are that, if the text has φαίλος, the commentator will have κακός, and, if the text κακός, the commentator φαίλος; and it is in general* about as useful to correct the text by the commentary as it would be to correct the reading of a classic by aid of the Delphin paraphrase. A single instance will serve—the paraphrase of *Ethics*, x. ix. 5 quoted in favour of the emendation proposed there: ἀδύνατον γὰρ ἢ χαλεπὸν τοῖς ἐκ μακροῦ χρόνου φαίλοις ἔθεσι κατεληγμένους μεταστῆσαι. This substitutes ἀδύνατον for οὐχ οἶόν τε, χαλεπὸν for οὐ βέβαιον, ἐκ μακροῦ χρόνου for ἐκ παλαιῶν. If, therefore, the commentator understood the sense of the passage it is not surprising that he should write ἔθεσι for ἡθεσιν. The variation here of τοῖς φαίλοις ἔθεσι κατεληγμένους for τὰ ἡθεσιν κατεληγμένα is interesting, for it possibly illustrates the general principle of substitution, and certainly shows

* The exception is in favour of those cases where the commentary does not seem a natural variation of the received text.

that the meaning and construction of *καταλαμβάνεσθαι τινι* were understood. The passive seems to apply in the first place to the person restrained by the sanction (e.g., *δρεφ κατελιμμένος*), and is then transferred to the thing in respect of which he is bound (*ζηλῶν κατελιμμένος*). The commentator takes the first mode of expression where the text has the last. It is possible, indeed, that his choice of this particular form came from a mistake occasioned by the preceding masculine *τοὺς τοιοῦτους*; but, at any rate, he understood the general sense of *κατελιμμένος*, and knew that the dative with it was instrumental. The emender is silent on these two points, and one cannot gather that he recognises them. The translation "established" would, of course, not suit the commentator's *κατελιμμένος*.

After the paper just discussed is printed an abstract of another paper by a different writer, directed to an emendation of Plato, *Rep.* 438 E:

"Baiter following Madvig reads τὸ δὲ δὴ δίψος, ἢ δ' ἐγὼ, οὐ τούτων θῆσεις τῶν οἷων τινὲς εἶναι τούτο δρεφ ἐστίν; ἐστὶ δὲ δὴ τοῦ (Morgenstern for δὴ τοῦ) δίψος; 'Eγὼγε, ἢ δ' οὐ πῶματός γε and in the *adnotation critica* of his fifth edition (1881) he renders: *nonne in eorum genere numerabis, quae ita comparata sint, ut alicuius sint id, quod sint?* I do not believe that τούτο δρεφ ἐστίν in this sense can grammatically stand as a further predicate of *οἷων*, nor is it needed, for τινὲς εἶναι is quite sufficient, cf. 438 D, *ὅσα ἐστὶν ὅλα εἶναι τοῦ*. I, therefore, propose to omit the words τούτο δρεφ ἐστίν, or, if retained, to refer them to δίψος, thus making a double construction after θῆσεις, i.e., οὐ θῆσεις δίψος τούτων εἶναι κ.τ.λ., and οὐ θῆσεις δίψος τούτο δρεφ ἐστίν;

"Further, Morgenstern's emendation of *δῆπου* into *δὴ τοῦ* seems to me to be at least as unnecessary after the previous clause, as Ast considers the reading *δὴ τοῦ* to be.

"I, therefore, retain *δῆπου*, and consider that Prof. Jowett has precisely caught the spirit of the last words in his rendering—'Would you not say that thirst is one of those relative terms, thirst being obviously—Yes, thirst is relative to drink.'

The passage is accurately explained in the *adn. crit.* quoted. τούτο δρεφ ἐστίν is not a further predicate, but a part of the predicate. The translation is simply "things such as to be what they are in relation to" (literally "of") "something (else)," e.g., a father is what he is, viz., a father (= *ἐστὶ δὲ δῆπου πατήρ*) in relation to (or of) a son—a father is father of a son. Thirst is what it is, viz., thirst (= *ἐστὶ δὲ δῆπου δίψος*), in relation to something or of something—thirst is thirst of drink. The logical point intended is clear. As to *δῆπου*—I have long ventured to think that it might be right, not construing it as the emender does, but because of the correspondence of the clause containing it to the very clause which it is proposed to reject. The nature of this correspondence will be seen from the above examples.

J. COOK WILSON.

BISHOP WORDSWORTH'S EMENDATION OF LUCAN, IX. 568.

Woodleigh, Mayfield, Sussex: Feb. 11, 1888.

It is not for me to defend W. E. Weber's punctuation of the MS. reading of *Phars.* ix. 568, against Mr. Robinson Ellis's strictures. No one need do so who does not think it incredible (*a priori* it is hardly improbable) that we should find a faulty line—faulty not merely in taste but in metre and language—here and there is a very long poem in a very artificial style, by a very young man, who, doubtless, would have revised it, if he had lived to finish it.

I do not quite understand the tone of hesitation which Mr. Ellis imports into his paraphrase of the emended text. Oato is absolutely certain beforehand of the true answer to every

question he suggests: he is certain, therefore, if the late Bishop of Lincoln and Mr. Ellis be right, that long life does not give and does delay the enjoyment of the chief good. Two out of three of Mr. Ellis's quotations add to my difficulty in accepting this. They prove, if it needs proving, that long life is not necessary to give what may be enjoyed in absolute fullness at every moment. In proving this, they prove that it cannot delay the enjoyment of the true good—that we need not wait for death to usher in eternity. The third quotation does nothing to remove the difficulty. Seneca says that the necessity of death is a great benefit, not because happiness in the highest sense is impossible on earth, but because there are men like Maecenas, who would live for ever if they could—upon the most wretched and most shameful terms.

G. A. SIMCOX.

SCIENCE NOTES.

THE new volume in the "International Scientific Series" (Kegan Paul, Trench & Co.) will be Sir J. William Dawson's *Geological History of Plants*.

A NEW edition of the Geological Survey memoir on North Derbyshire has just been issued. The work originally appeared in 1869, and was written by Prof. Green, Dr. C. Le Neve Foster, and Mr. Dakyns. The preparation of the new edition has been entrusted to Prof. Green and Mr. A. Strahan, and the most notable feature in their revision has been the introduction of much new matter respecting the mines of Derbyshire. Mr. Strahan has contributed an interesting historical notice of Derbyshire mining, and has given a detailed account of the several lead and copper mines of the county, extending even beyond the rigid limits of Derbyshire, as in the case of the famous Ecton mine in Staffordshire.

MEETINGS OF SOCIETIES.

ROYAL SOCIETY OF LITERATURE.—(Wednesday, January 25.)

DR. W. KNIGHTON, V.-P., in the chair.—A paper was read by Mr. R. B. Holt, entitled "Reliability of the Ancient British Records." The reader produced evidence in support of his views, and maintained that the Welsh records and traditions, though greatly corrupted by Christian transcribers, modern law makers, and Welsh romancers, contain much original matter; that they give the most reasonable account of the derivation of our own social order; and that, as by them alone could be explained much that was otherwise unintelligible to us, considerable reliance must be placed upon them if we would not trust entirely to conjecture.—After some remarks by Mr. Offord and Mr. C. H. E. Carmichael, Mr. E. Gilbert Highton questioned some of the historical deductions in the paper, and drew a comparison between Roman influence in Britain and English influence in India.

UNIVERSITY COLLEGE LITERARY SOCIETY.—(Monday, January 30.)

T. G. FOSTER, Esq., president, in the chair.—Miss Jane Hay read a paper on "The Works of Bret Harte." Roughly speaking, the characteristics of Bret Harte's works are (1) the painting of nature, (2) the humour, (3) the love of humanity. As nature's painter, Bret Harte's success depends rather on a faithful reproduction of commonplace details than on a unique power of expression. But when he wishes to use nature as a harmonious setting to his men and women a more poetical colouring is given. The essential element of wit (incongruity) is, in the case of Bret Harte, attained either by the use of slang (when it is customary to employ elegant diction), or by an elaborate paraphrasing of slang phrases. The key-note of Bret Harte's humanitarian writing is charity; the theme is the dormant good which exists in weak people, and the improvisation is a rich and worthy development of the theme.

PHILOLOGICAL SOCIETY.—(Friday, February 3.)

A. J. ELLIS, Esq., in the chair.—Dr. Richard Morris read a paper, entitled "Pāli Miscellanies." He first discussed the Buddhist origin of a passage in "Hitopadeśa," i. 57:

"Yo 'dhikāḍ yojanaṇatāt paṇyati bāmiṣam khagāḥ
Sa eva prāptakālas tu paṇyabandham na paṇyati."

This verse is found in "Pañca Tantra," ii. 18:

"Ardhārdhād yojanaṇatāt āmiṣam valkṣhati
khagāḥ
So 'pi pāṇyasthitam daivād bandhanam na ca paṇyati."

The stanza as it occurs in the *Jātaka*-book, ii. p. 51, is applied to a *culture*, and not to a *pigeon*:

"Yan nu gijjho yojanaṇatam kunapānti avekkhati
Kasmā jāḥa ca pāṇa ca ā'sjāpi na bujjhasīti."

Childers registers *usada* (= *usada*) only in *usada-niraya*. Passages were quoted showing the use of the word in the sense of "bump," "abundance," "perfume," "desire." *Haithakacchapaka*, "a mode of obelance," was compared with Sanskrit *kapotahastaka*, "a mode of joining the hands together." There was a mode of salutation called "the crocodile prostration" (*sumsumdra-patita*). *Kataggaha* was explained as "a winning throw," in contradistinction to *kattigaha*, "a losing throw"

(in a game of dice). *Dhūta*, in the sense of "acetic," was compared with Sanskrit *avadhūta*; *dhona* (in "Sutta Nipāta") was connected with *dhona* in "ati-dhona-cāri" (in "Dhammapada"), and referred to the root *dhāv* (Pāli *dho*), "to wash," cf. *dhota*, "washed." This is the view taken of *dhona* in the "Mahānidāna." Prof. Fausbøll connects it with *dhā*, "to shake." *Khāri-bhāra* is wrongly translated "provisions" in the "Vineyya" texts; *khāri* = *tāpa*-*parikkhāra*. *Sāḍitta-sippa*, "the art of slinging stones," was illustrated from the "Jātakas," i. p. 418. *Odagga*, "elation," represents an older *audagga* from *udagga* (Pāli *udagga*). *Jāpeti*, the causal of *jānti* (from root *jd* or *ji*), was illustrated, together with the use of *rupati* = *lumpati*. *Unnangalam karoti*, a frequent expression in the "Jātakas," is equivalent to *khobheti* or *sankhobheti*. Childers's explanation of *dūteyya* was criticised. In the "Jātakas," a *kuntant* is said to have been employed as a messenger (*dūteyya* - *hārikā*). *Nisabhandāna*, in "Anāgata-vamsa," was shown to be a mistake for *nisabhandāna*, representing the older *śābhandāna* = "uttamāthāna," Sanskrit *śābhandāna* (Mahāvīyutpatti). *Oramati*, which has usually the meaning of "to cease," "to stop," is employed in the sense of *vikkamati*, "to strive," "to use exertion" (see "Jāt." i. p. 498, and iii. p. 185). The phrase, *vikkamāmi na pāremi*, was compared with a passage in "Cakuntala"—"*vavasiddhi na pāremi*." In the explanation of *oramati*, the Com. employs *osāreti*. This may stand for *osāreti* or *osāpeti* for *osāpeti* from *vy-ava-sā*, "to strive." *Osāpeti* occurs in the "Samyutta," in the sense of "to betake oneself to." In the "Jātakas," book, i. p. 25, it means "to place," "to put." The difficult form *oseti*, sometimes written *opeti*, may perhaps be a contraction of *ava-sāyati* = "to put," "place." Dr. Trenckner would make two forms, and would refer them to *āvap* and *avas*. In Sanskrit literature frequent mention is made of the faculty the *hamsa* has to separate the milk from a mixture of milk and water. In Pāli literature this power is ascribed to the *koṇṇa*; and in "Sumangala," p. 305, Buddhaghosa compares an *ariyaśvaka* to a *koṇṇa*, because if a mixture of spirit and water were put to his mouth, the water only would enter it.

ARISTOTELIAN SOCIETY.—(Monday, February 6.)

S. H. HOBSON, Esq., president, in the chair.—Mr. J. G. Willis was elected a member.—Mr. J. S. Mann read a paper on "Wundt's Theory of Apperception."—After stating the theory at some length, and mentioning phenomena which it served to explain, the writer noticed that it appropriated for empiricism doctrines hitherto the special property of metaphysical schools. Attention was then called to its application by Wundt in explaining the formation of concepts. The name of a concept is frequently (as Wundt points out) an epithet applying only to a small part of the total, and selected, to all appearance

quite arbitrarily. The earth is the "ploughed," the moon the "measurer"; a "Pferd" was originally only a stronger kind of post-horse. Other instances were given from among Greek animal names—σκῆλος, κερδῆ (fox), σῆμας, καλλίας (ape), αἰλουρος. Recent philology, too, seemed to support Wundt's view of the progress of mind. This, in one respect, might briefly be described as the gradual focusing of the apperceptive activity on smaller and smaller portions successively of the field of mental vision, with a consequent gain in clearness of definition and analysis. The difficulty of the theory—its insistence that attention is always voluntary—was partly obviated by Wundt's account of the formation of concepts. But the theory was less an induction from experiment than a deduction from Wundt's theory of the Composition of Mind. In conjunction with this it would account for (e.g.) hallucination in delirium, unexpected outbreaks of vicious propensities (especially in insanity), &c. But if reaction in such cases is voluntary, it was maintained, the term "voluntary," in extending its range downwards, must lose something in the other direction. Among the more complicated apperceptive reactions, we have acts to which moral predicates should apply; but they do not because of the state of the agent. With Wundt's use of the term, "voluntary," as applied to the agent, becomes unmeaning; for all action is voluntary which is not purely reflex. And the "voluntariness" of an act becomes an unimportant element in determining whether moral predicates can be applied to it or not. "Voluntariness," in short, in this extended sense, loses its prominence in our conception of morality, if Wundt's terminology be adopted.—The paper was followed by a discussion.

ENGLISH DIALECT SOCIETY.—(Wednesday,
February 8.)

ALDERMAN JOSEPH THOMPSON in the chair.—Mr. John H. Nodal read the annual report, which stated that there had been a delay recently in the issue of publications; but at the present moment there is more manuscript in the hands of the society's printers than at any previous period, most of it approaching completion, and comprising not only the belated publications for 1886, and the still unissued works for 1887, but the volumes which will form the quota for 1888.—The four works for 1886 and 1887, which are just about to be sent out to the members, are the third and concluding part of Mr. Robert Holland's *Cheshire Glossary*; a *Dictionary of the Kentish Dialect*, by the Rev. W. D. Pariah and the Rev. W. Frank Shaw; *The Folk-Speech of South Cheshire*, by Mr. Thomas Darlington, of St. John's College, Cambridge; and Mr. F. T. Elworthy's *Glossary of West Somerset Words*. The last named is the largest volume of the society's series, and will reach nearly nine hundred pages. It completes Mr. Elworthy's series of works on this important dialect, two others having been previously published.—The publications for 1888, all of which are in the printer's hands, and are expected to be ready not later than June next, are *Berkshire Words*, by Major B. Lowale; *Words used in Sheffield and Surrounding Villages*, by Sidney O. Addy; and *Words in Use in the Wapentakes of Manley and Corringham, Lincolnshire*, by Edward Peacock, second, revised, and enlarged edition.—Miss Ellen Shadwell has undertaken to compile the new list of English bird-names on the plan followed by Messrs. Britten and Holland in their *Dictionary of English Plant-names*. The compilation of a collection of *Public School Words* has had to be relinquished by the Hon. Percy Alleopp, on account of his parliamentary and other duties, and it has been kindly undertaken by the Rev. W. D. Bodkin, vicar of Ringwood, Hampshire.—The number of members at the end of 1887 was 245, and of libraries 56, making a total of 301—an increase of one library and a decrease of ten members, or a net decline on the year, as compared with 1886, of ten. Among the deaths, seven in number, are Dr. Bath O. Smart, of Manchester, joint author with Mr. H. T. Crofton of the *Dialect of the English Gipsies*; and Mr. Thomas Satchell, who presented to the members in 1883 copies of his privately-printed edition of Juliana Berner's *Treatyse of Fysshynge with an Angle*, and who was to have contributed to the society's publications a

Glossary of Durham words, and a Dictionary of English Fish Names and Fishing Terms.—The Treasurer's accounts show a balance in hand of £466, most of which will be required for the 1888 and 1887 publications. Reports are added concerning the progress of the English Dialect Dictionary from the Rev. A. Smythe Palmer, the editor, and Prof. Skeat, who has kindly undertaken to act as treasurer to the fund. From these it appears that £292 4s. 6d. has been promised—some of the amounts payable by instalments extending over five years—and £155 14s. 6d. has been received. Mr. Palmer has succeeded in enrolling the names of nearly one hundred workers, who are either reading books for quotations, or will contribute word-lists or oral specimens. At least one-fourth of these are ladies; and it is important to notice that a very large proportion of the whole are not members of the English Dialect Society—a fact which illustrates the widespread interest taken in dialects and dialectal work outside the limits of the society's subscribers.

EDINBURGH MATHEMATICAL SOCIETY.—(Friday,
February 10.)

W. J. MACDONALD, Esq., president, in the chair.—Prof. Chrystal read a paper on an algebraical inequality and its consequences.—Mr. W. Peddie exhibited a model of the thermodynamic surface of water-substance near the triple point.—Mr. A. Y. Fraser gave a preliminary report of the committee on the teaching of arithmetic.

FINE ART.

GREAT SALE OF PICTURES, at reduced prices (Engravings, Chromes, and Olographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—GEO. REES, 115, Strand, near Waterloo-bridge.

THE EXHIBITION OF THE GLASGOW
INSTITUTE.

MORE exclusively than has usually been the case, the present exhibition of the Glasgow Institute is a display of local talent. The contributions by members of the Royal Scottish Academy, and by Edinburgh painters, are less numerous and less important than they have been in most former years; and the strength of the exhibition lies in its gathering of the work of Glasgow artists, supplemented, as has always been the custom in these galleries, by a few examples of living and deceased masters, both British and foreign, lent from the rich cabinets of the collectors of the West. Among these latter is Millais's powerful portrait of Mr. Gladstone, lent by Sir Charles Tennant, the president of the Institute; and good examples of Reynolds and Gainsborough—"The Dead Bird" by the former, a portrait of Mrs. Billington by his great rival—both exhibited by the same owner. Among the examples of the continental art of the past is an especially admirable and representative work by Corot—"Morning by the Sea"—remarkable for the quiet truth and thoroughness of its lighting, for its tender gradation and delicacy of faint lovely colouring, and for its harmonious and satisfying unity of sentiment. A small and highly finished little work of Baron Leys—"Paul Potter in his Studio"—represents very completely one side of the art of this great master of Antwerp. In its well-calculated completeness, in the unobtrusive perfection of its handling, and in its fine, but subdued, colour-scheme, the picture recalls the great days of genre art in Holland. "The Guitarelli," by Roybet, is a thing more dexterous than pleasing; and by Van Haanen we have a charming little head of a black-haired Venetian woman.

Among the important works by English artists is Mr. Calderon's graceful "Oenone," so delicate in its portrayal of the figure of

the nymph, so purely decorative in the colouring of its background—in the rich blue haze of its distance, and the potent greens of its leafage. By Mr. Albert Moore we have two examples of his little known portraiture—the small head of "William Connal, Junr., Esq." which figured in last year's Grosvenor Gallery; and the very delicate female head—"Pale Margaret"—shown in the Royal Academy of 1886.

Most students of Scottish art will be glad to have the opportunity of again examining "The Bloody Tryst"—an early work by Sir Noel Paton, which elicited the praise of Mr. Ruskin in the Royal Academy of 1858; and which, in its sensitive expression of minute and exquisite detail, is unsurpassed by any of the works of that accomplished painter. The late Mr. Robert Herdman is represented by a delicate flower-piece, a landscape effect of ruddy sunset, and a masterly portrait-study of the fine and picturesque head of the late Rev. Dr. William Robertson, of Irvine.

It is in the department of landscape that the Glasgow artists are strongest, and their landscape-art seems every year to be approximating—in the case, at least, of almost all the younger men—to French methods. Of work in this direction we have an admirable example by Mr. James Paterson, "Glencairn in Autumn"—a picture free, and even loose, in its handling, very faithful in its rendering of tones and values, and especially remarkable for the definite, yet most delicate, portrayal of the elaborate reflections, in still foreground water, of heaped masses of clouds. Mr. Alexander Mann is another able Glasgow artist, whose art has been strongly influenced by his training in Paris. His "Nearing the Sea—Findhorn" is admirable in the expression of his planes, in its sense of space and recession, and in the excellent keeping of its cool, high-pitched colouring. Mr. Wellwood Battray is seen to advantage in the brilliant, mellow sky, and the shingled beach of his "Arran from the Kyles of Bute"; Mr. R. C. Crawford treats the onset of storm-driven waves with an effective vigour in his "Portincross Point, Ayrshire"; and Mr. A. K. Brown attains excellent truth of relation between dim, dawning sky and embrowned trees and landscape in his "Tween Light and Dark." "Ben Venue" is an exceptionally important landscape by the late James Docharty, A.R.S.A.—a typical example of the Scottish landscape of twenty years ago—patient and painstaking in its elaborate fidelity of form, but tending to a deadness and hardness of general effect, and certainly without the truth of tone, and the suggestion of motion and change, which have been chief aims with the best of later Scottish landscape-painters.

Among the figure-pictures by Glasgow painters may be named Mr. John Carlow's "Gathering for the Fair in Winter"—a work free and spirited in draughtsmanship, and true to nature in its rendering of an effect of frosty haze; and among the examples of current figure-painting that come from the South is Mr. Frank Bramley's interior with a couple of Paris milliner girls playing dominoes—a brilliant and accomplished study in varied tones of white.

The water-colours include a powerful subject of still-life by Miss A. M. Swan—"Yellow Daffodils"; two graceful figure-pieces by Mr. T. M. Rooke, symbolic of "Night" and "Morning"; and a clever sunset view of "Straithees, Yorkshire," by Mr. Nelson Dawson.

One of the most fascinating of the works of sculpture is Mr. H. Montford's delicate little bronze bust, entitled "Psyche weeps"; and Mr. Stuart Burnett shows several effective portrait subjects.

LETTER FROM EGYPT.

Cairo: Feb. 3, 1888.

In company with Mr. Percival, I have spent twelve days in travelling overland from Jerusalem to Kantara on the Suez Canal. The journey could have been easily accomplished in nine days; but we turned aside from the direct route in order to visit the ruins of Pelusium, where we spent a couple of nights. At El-'Arish, the first town on the Egyptian side of the frontier, we had to leave the horses and mules we had brought from Palestine and take to camels, as a quarantine of six days is imposed upon all animals coming from Asia. Travellers who follow in our footsteps would do well to take note of this fact, which was unknown to the dragomen and muleteers of Syria.

On the way from Bêt Jibrin to Gaza I visited the site which, since the time of Robinson, has been known as 'Umm Lakis and identified with the ancient city of Lachish. Seven years ago, when travelling in the south of Judaea, I was assured by the natives that the name was not 'Umm Lakis, but 'Umm Latis, or rather 'Umlatis; but I was then obliged to content myself with a distant view of the spot. On this occasion I rode over it, and found it to be not a *tel* or mound at all, but the corner of a low limestone ridge, of small extent, and covered to the depth of only half a foot with the fragments of pottery, none of which are older than the Roman age. The site of Lachish must be looked for elsewhere.

On the other hand, I have little doubt that the proposal to identify Khan Yûnas with the Iénysos of classical geography is based on fact. The modern village of Khan Yûnas occupies the summit of a large *tel*; and the beautiful mosque built by the Sultan Barkuk at the end of the fourteenth century and now in ruins contains fragments of Roman marble and columns, like the stonework of a fountain close by. The name Khan Yûnas, or "the Khan of Jonah," must be due to popular etymology, since the prophet had nothing to do with this part of the Palestinian coast either in history or in legend. Moreover, the oasis in the midst of which the village stands is the only one of any size between Gaza and El-'Arish, while it still possesses a little harbour among the sand-dunes of the shore into which boats can put in bad weather. The question of identification, however, seems to be set at rest by my discovery of the site of Mount Kasios, which is three days' journey from Khan Yûnas, as Iénysos also is stated to have been.

The Egyptian frontier is at a place still called Rapha', though a telegraph station is now the only existing habitation there. Rapha' is the Raphia of ancient geography, where the Assyrian king Sargon defeated the Egyptian forces. The situation is just such as would fit it for a battle, as the sand-hills here enclose a plain of considerable extent. To the north-west of the telegraph station I found a mound strewn with pottery, marking the site of the ancient town, and in the neighbourhood four Roman columns besides a Corinthian capital of white marble. Close by is the spring of water to which the town owed its existence.

El-'Arish, the Rhinokoloura of antiquity, is built on a lofty *tel* which overlooks the southern extremity of a waterless Wâdi, the "River of Egypt" of the Old Testament. The modern castle, with its four square walls, encloses a well of sweet and abundant water. Close to the well is a monolithic *naos* of black marble, in a very perfect condition, though now turned on its back and used as a cistern. The forms of the hieroglyphs engraved upon it seem to show that it belongs to the Ptolemaic period. The sculptures with which the interior is adorned are in an excellent state of preservation; so also is the inscription, in thirty-seven

long lines of hieroglyphs, on the left hand outer side of the shrine; that on the right hand side, however, has been much defaced. I took a squeeze of the inscription on the left hand side, but it was unfortunately destroyed by a storm of rain. The old Egyptian name of Rhinokoloura appears to occur in it under the form of "the city of waters," the temple to which the *naos* belonged being called Bes-am-t. I hope that means will be found for transporting the monument to the Bulaq Museum.

At the eastern foot of the *tel* on which El-'Arish stands, the remains of a house have just been found buried deep in the sand. It is built of well-cut blocks of stone. Six chambers have, as yet, been excavated, besides an arched vault, the walls of which were once covered with plaster. At the north-west corner of the portion at present excavated is a niche large enough to contain the life-size statue of a man, and protected by a roof in the shape of a shell. Niches, sometimes square, sometimes rectangular in form, and made to represent an Egyptian pylon, occur in all the chambers; and, in the room at the north-east end of the building, two Maltese crosses are sculptured in relief on the two extremities of the lintel of one of them. No objects have hitherto been discovered in the building, except a terra-cotta bowl of the early Coptic period, a Roman lamp, and two fragments of Roman glass. It is evident that the house must have belonged to a Roman functionary, but the crosses show that the functionary was a Christian. They have caused the building to be known as the *keniseh*, or church, among the natives. It is not likely, however, to remain much longer in existence, for it is situated on private property, and the owner has carried on his excavations in the hope of finding treasure. As this hope has been disappointed, he is likely to sell the stones of which the walls are constructed for building material.

I was told that similar ruins exist at Berdowil, three hours distant from El-'Arish, to which large stones have been brought from them. Berdowil must be the Bardowal of the map attached to Murray's *Handbook for Egypt*, where the Sirbonian Lake is called "Sabakat Bardowil," by which, I suppose, Sebkhât Berdowil, "the Salt-lake of Berdowil," is meant.

Want of time prevented us from following in Mr. Greville Chester's footsteps, and travelling to Pelusium by "the way of the Philistines," along the ancient high-road which ran between the sea and the Sirbonian Lake. This was unfortunate, as I learned from the Beduin that ruins similar to those at Pelusium exist at two places on the sea coast, one called Felissiyah and the other Qes. The ruins at Qes were stated to be on a hill, and to include "large stones." Qes was further stated to be 1½ days' journey (about thirty-five miles) east of Farama or Pelusium and two days' west of El-'Arish, lying at a distance of one day's journey (or nine hours on camel-back) to the north of the Bir el-'Abd, where we passed a night. In situation, as well as in name, it thus corresponds exactly with the Mount Kasios of antiquity, and I have little hesitation in identifying the ruins of which I heard with those of the famous temple of the Phœnician Zeus which once stood upon it. Felissiyah was described as lying between Qes and El-'Arish, at a distance of twenty-five hours from Pelusium, and therefore nearer to El-'Arish than to Qes. The name must be an Arabic adaptation of Pelusium, which has been transferred from its proper locality to the ruins of a neighbouring city.

Pelusium itself is now known as Farama, the Pe-Romi, or "Roman" city of the Copts. It lies five hours (or thirteen miles) to the north-west of Qatiyah, the nearest point from which drinking water can be obtained. Midway be-

tween Qatiyah and Farama is an oasis, whose palms are being slowly swallowed up by the encroaching sand, and which is known as Româneh—an indication that ancient remains are buried there. At Româneh the road to the sea-coast bifurcates, one path leading westward to Farama, and the other eastward to a desolate sand-hill, called Hemdiyah. Here I observed marble columns of the Roman age; and, when too late, I was told by a Beduin that "many written stones" also existed there. I hope, therefore, that M. Naville or Mr. Griffith will manage to pay the place a visit before they leave Egypt this spring.

Farama, or Pelusium, is the finest site for the excavator that I have ever seen. It is absolutely untouched; not a Beduin even lives within fifteen miles of it, and the Roman pottery and glass with which the mounds are covered have not been disturbed for centuries. The mounds are of very great size, and of oblong shape. Towards the western end is the rectangular enclosure of a temple, nearly as large as that of Luxor. The enclosure, which is composed of burnt brick, is complete on all sides; and the immense masses of *débris* which are heaped up within it must conceal the remains of a temple at once more extensive and more entire than those of the temple of Bubastis. Still further to the west are the granite columns of an old Egyptian shrine, which does not seem to have had any connexion with the great temple, while to the east are the prostrate columns of another temple of Roman age. The ancient harbour is very distinctly marked on the north-eastern side of the enclosure of the great temple, while to the south-east of Farama itself is another mound, the Tel el-Hirr, which is shown by the remains of which it is composed to have once been a Roman fortress. The Egypt Exploration Fund could not undertake any work more promising than the excavation of Farama. There is no difficulty in approaching the mounds at any time during the winter, as camel-tracks run across the mud-flats by which they are surrounded, and there is excellent camping-ground on their northern side. Workmen could be brought from Port Said, and drinking water from Qatiyah.

Northward of Farama lies the Qala' el-Tineh or "Mud-Castle," built on a small island formed by driving stakes of palm-wood into the mud. We had a tedious tramp of two hours across the mud from Farama in order to reach it, but I found nothing there except comparatively modern Arab work. It is obvious, therefore, that the name has nothing to do, as has been usually supposed, either with Pelusium or with Sin, the Old Testament title of Pelusium, but owes its existence to the "fortress built in the mud" beyond Farama about three centuries ago. The Arabic name of the ruins of Pelusium has always been Farama.

Since my arrival in Cairo I have learned that about 200 cuneiform tablets have been offered for sale here, which are said to have come from Tel el-Amarna. Some have been bought by the Bulaq Museum, but the larger number have been purchased by Danninos Pasha. I have not seen a specimen of them, and cannot, therefore, say to what age or class of cuneiform writing they belong. If they really have been discovered in Upper Egypt, their interest will be great.

The only new inscription I came across in Jerusalem was one recently disinterred within the Haram, on the northern side of the well at the north-west angle of the mosque of El-Aksa. This is on a rectangular block of marble, and consists of the Greek name or word Γερουσία.

I may notice, however, that Mr. Schick has just published a valuable monograph on the "Beit el Makdas oder Der alte Tempelplatz zu Jerusalem." His position has given him un-

rivalled opportunities of studying the topography and architectural details of the Haram; and for the first time we have a minute description of the ground once occupied by the Jewish temple as well as of the buildings that now stand upon it. His description of the water-supply will be found particularly interesting.

A. H. SAYCE.

NOTES ON ART AND ARCHAEOLOGY.

THE Royal Scottish Academy has made an excellent choice in the election of Mr. Robert Alexander—undoubtedly the foremost of Scottish animal painters—as a full member, in room of the late Mr. J. M. Barclay. Mr. Alexander is a native of Ayrshire, and he studied at Kilmarnock and in Glasgow under Dudgeon—a well-known scene-painter. Since 1868 he has contributed liberally to the exhibitions of the Scottish Academy, of which he was elected an associate in 1878.

THE Japanese "craze," or Japanese "rage," is to be ministered to yet further. In addition to the Japanese things at the Fine Art Society's, to the Japanese things at the Museum, and the exhibition illustrative of the history of engraving in Japan, which the Burlington Club opens this week, the Messrs. Dowdeswells are now making ready for a show of Mr. Menpes's personal record of the Japan of our day as he saw it only last year. The paintings, water-colour drawings, and etchings which are the result of his experience, and, perhaps, we may say, of his native sympathy with Japanese work, will be displayed at the Dowdeswells' with costly and fitting surroundings of his choice. Hence these preparations for what must be a somewhat unique show.

THE *Magazine of Art* for March will open with the first of a series of articles on "The Language of Line," by Mr. Walter Crane, dealing with the full power and significance "of Outline," and accompanied with illustrations by the author. Sir James Linton makes an appeal for the adequate representation of water-colour in the national collection in Trafalgar Square. The number will contain Mr. G. F. Watts's red chalk study after his "Love and Death," which he has just presented to the Whitworth Committee at Manchester. An article on the "City Art Gallery of Manchester" is illustrated with a photogravure of Mr. Luke Fildes' "Venetians," and with wood engravings after Mr. Burne-Jones's "Sibylla Delphica," Mr. Ford Madox Brown's "Work," &c. In the "Art Notes" the method of the Royal Academy elections is elucidated by the publication of the secret figures as voted at the recent elections.

WE have received the prospectus, with specimen plates, of a valuable contribution to the study of ancient art, which is to be published by the Verlagsanstalt für Kunst und Wissenschaft, at Munich, under the general editorship of Prof. Heinrich Brunn. The work is entitled *Denkmäler Griechischer und Römischer Sculptur in historischer Anordnung*; and it will consist of about eighty parts, each containing five permanent phototypes, with accompanying text (in German only), by Prof. Brunn. The size is large folio, and the plates measure sixteen inches by twelve. It is intended that the parts shall appear at intervals of not more than four weeks. The price of each part is £1. but they cannot be obtained separately. The English publishers are Messrs. Asher & Co., of Bedford Street, Covent Garden. The subjects chosen for illustration in the first part are: (1) archaic Apollo from Tenea, at Munich; (2) archaic bronze head—both in profile and in full face—found on the Acropolis, and now at Athens; (3) relief of Aesculapius, found at

Epidaurus, and now at Athens; (4) sleeping satyr, or Barberini Faun, at Munich; (5) two heads of a satyr, in marble and bronze, both at Munich. A scale in centimeters is marked on each photograph.

A GENERAL meeting of the Hellenic Society will be held at 22 Albemarle Street, on Thursday, February 23, at 5 p.m. Mr. H. H. Statham will read a paper on "Greek Architectural Mouldings," and Mr. L. R. Farnell one on "A Visit to some Museums of Northern Europe."

THE exhibitions to open next week include the collection of prints and books illustrating the history of engraving in Japan, at the Burlington Fine Arts Club, in Savile Row—to be seen only on the introduction of a member; and a collection of water-colour drawings at Messrs. Thomas Agnew & Sons', in Old Bond Street.

THE next examination for certificates and diplomas of the London Institute for the Advancement of Plain Needlework will be held at St. Michael's Schools, Ebury Square, Pimlico, at 11 a.m. on Saturday, March 24. Those who desire to obtain further information are requested to apply to the Secretary, 36, Balcombe Street, Dorset Square, N.W., and to enclose a stamped addressed envelope.

THE memorial to the late Duke of Buccleuch, which has been erected, at a cost of over £6,000, at the west front of St. Giles's Cathedral, Edinburgh, was last week unveiled, and handed over to the city by the Earl of Stair. The general design of the monument is due to Dr. Rowland Anderson, the architect of the new university buildings; the bronze figure of the duke, standing draped in the robes of the Garter, is by Mr. J. B. Boehm; and the bas-reliefs of scenes from the life of the nobleman and the history of his house have been entrusted to local sculptors—Messrs. Clark Stanton, D. W. Stevenson, Stuart Burnett, W. G. Stevenson, and W. B. Rhind. The extreme elaboration and delicacy of the decorations of the pedestal seem hardly in keeping with the breadth and comparative simplicity of the fine statue which surmounts it.

MUSIC.

RECENT CONCERTS.

THE musical season is beginning in earnest. The Crystal Palace Concerts recommenced last Saturday, when that excellent violinist, Pan Franz Ondricek performed the Concerto in A (Op. 53) of Dvorák, which he produced at a Philharmonic Concert in 1886. The programme also included Mozart's E-flat Symphony, Berlioz's orchestral arrangement of Weber's "Invitation," and Wagner's "Faust" Overture.

Herr Joachim made his first appearance at the Popular Concerts on Monday evening. To see and hear the great violinist is one thing; to write about him quite another. One can find nothing new to say—"He was received as usual with enthusiasm, and his playing was as fine as ever," is the tale which we have had to tell for many seasons; and we hope to be able to say the same for many seasons to come. Herr Joachim was leader in Mendelssohn's Octet in E-flat, and he was admirably supported by Messrs. Ries, Burnett, Wiener, Hollander, Gibson, Howell, and Piatti. As solo, he gave an Adagio and Allegro from Bach's Sonatas in C major, and he played by way of encore the "Siciliano" from the same master's first Suite. Mr. Max Pauer, the pianist of the evening, was heard to great advantage in Schumann's "Toccata" (Op. 7). The technical difficulties of this piece are great, but Mr. Pauer is master of

the key-board. There was, however, something more than good technique: his reading of the music showed taste and judgment. He pleased us less in his encore, No. 4 of Schumann's "Novelletten." Mrs. Henschel was the vocalist and Mr. Henschel the accompanist, and with two songs of Schubert and Mr. Henschel's characteristic "Adieux de l'Hotesse Arabe" they obtained much success. The programme concluded with Haydn's Quartet in E-flat (Op. 64, No. 2).

Mr. Henschel gave a most interesting concert (No. 13) on Wednesday afternoon. The programme commenced with the overture to "St. Paul," after which came the new Concerto in A minor for violin and violoncello by Brahms (MS.). This work was produced at Cologne on October 18 last, under the direction of the composer. The Concerto has the usual three movements, and only takes half an hour in performance. After a short introduction, consisting principally of cadenza-like passages for the two solo instruments, the orchestra gives out the bold principal theme of the Allegro. It is impossible for us, after a first hearing, to give a detailed account of this elaborate movement. Though clear in form, it is so full of important subject-matter and ingenious developments that at first one can only speak of the general effect. It seems to show the composer at his best. The parts for the solo instruments are exceedingly difficult; but one does not at all feel that Brahms made technical difficulty an aim. The Andante in D major, in simple aria form, is a gem, from first note to last. It possesses both dignity and tenderness; and what makes the music so satisfactory is the complete absence of any straining after effect, and the mastery which the composer has gained over his mood. The Finale is an animated movement, the themes are interesting and in excellent contrast; but we feel disposed to rank it in merit—as it is in order—last. The Concerto was splendidly interpreted by Herren Joachim and Hausmann, and well received. Herr Joachim played as solos three pieces from Schumann's Pianoforte Duets (Op. 85), which should have been announced as transcriptions. They are most effective. Mr. Henschel accompanied them to perfection on the pianoforte, and no doubt the applause was almost as much for him as for Herr Joachim. Herr Hausmann gave a most artistic rendering of Max Bruch's "Kol Nidrei," a solo often played by Signor Piatti at the Popular Concerts. It was, of course, given on this occasion with orchestral accompaniment, and was all the more effective. Space compels us to notice very briefly a Symphony in C of Haydn's, which we do not remember to have heard before. It is full of tuneful melody, clever workmanship, and delightful orchestration. It is among the master's late works, and in more than one place reminds one of Beethoven. The hall was well filled, but with so attractive a programme one would have expected to find every seat occupied.

LITERATURE.

Henry VIII. and the English Monasteries: an Attempt to Illustrate the History of their Suppression. By Francis Aidan Gasquet, Monk of the Order of St. Benedict, sometime Prior of St Gregory's Monastery, Downside, Bath. Vol. I. (John Hodges.)

THE old monastic life of England is a thing the memory of which passed away so long ago that it is extremely hard in these days to realise the place it held in the social life of the community. Many suppose that it was all idleness, many that it was all devotion, many that it was a mixture of the two with a considerable spice of licentiousness super-added to the compound. That it was very stagnant and not very profitable to the world has been taken so much for granted that it seems almost hopeless to suggest the contrary. Mr. Froude, in one of his picturesque passages quoted by Father Gasquet in the present volume (and apparently even Father Gasquet is not disposed to question its truth), suggests that if St. Bede or St. Cuthbert had visited the London Charter House in the days of Henry VIII., he would have found "the prayers, the daily life, almost the very faces with which he was surrounded," much the same as they had been in "these lonely islands of prayer" for a thousand years before. And possibly, in the form and spirit of their devotions, there may have been little change. On the other hand, as to the "daily life," the Chronicle of Jocelin of Brakeland shows that a monastery was not necessarily a sleepy place, even in the latter part of the twelfth century; and that when an abbot who was a man of business succeeded one who was none, he could effect, even in a monastic establishment, a very considerable revolution—aye, and animate his monks to resist encroachments on their rights, whether by the merchants of London at the local fair or by a rival monastery setting up a rival market some miles off.

But if little is known about the old monastic life, very much has been presumed, or taken for granted upon testimony the true character of which has hardly ever been questioned till within the last few years. A mysterious "Black Book" is supposed to have been compiled when the monasteries were visited in the reign of Henry VIII.; and such extraordinary revelations were then made of the dissolute lives of monks and nuns that an indignant Parliament insisted on the suppression of these dens of vice. That the "Black Book" had disappeared with all its damning evidences was a fact which occasioned no difficulty to a writer like Burnet, who found that in the reign of Queen Mary a commission was granted to Bonner and others to examine the records of "divers

infamous scrutinies" in religious houses. The commission itself indeed said nothing about the destruction of these records when found, but rather that they should be "brought to knowledge." Still it was clear to the Protestant mind (at least in the days of Bishop Burnet) that the only object of inquiring after such things could be to destroy the evidences of things casting such deep discredit on the papal system. Well, whatever may have become of the "Black Book" itself, it is clear that the destruction of evidences could not have gone very far; for at least three or four documents still exist (and were referred to by Burton in his *Anatomy of Melancholy* long before Burnet wrote) giving a black enough account of the state of the monasteries in Henry VIII.'s time just before their suppression. These three or four separate documents were possibly intended to form parts of a comprehensive book, reporting on monasteries throughout the whole of England; but, altogether, they embrace only certain districts, and it is clear only a minority of the houses are reported on even in them. These reports contain accusations of the foulest character—often of unmentionable crimes—against several of the inmates in a considerable number of the houses. But they are accusations merely, unaccompanied by a particle of evidence to support them; and we know quite well nowadays by whom and under what circumstances they were drawn up. They are in the handwriting of John ap Rice, a notary who accompanied Cromwell's visitor, Dr. Legh, in the work of inspecting the monasteries; and we can distinctly trace in the correspondence of Dr. Legh himself and his fellow visitor, Dr. Layton, the dates at which each of these separate reports was transmitted to their master. Now, dates are rather an important element by which to form some estimate of the results of this visitation; for it appears that the whole work was done with such amazing rapidity that it is simply out of the question to suppose that the enormities reported were proved by anything like a judicial inquiry. Between August and November 1535 Dr. Legh had traversed the South of England from Wiltshire to London and the Eastern counties to Norwich, including on the route the University of Cambridge, for which he drew up injunctions. Dr. Layton during the same period had taken another route from Gloucestershire by Oxford into Kent, as far as Folkestone. The two worthies then met at Lichfield about the end of the year, and made a joint visitation of the North of England, including the counties of Derby and Nottingham, Yorkshire, Durham, and Northumberland, and had completed their reports on the houses in this circuit as early as February, in good time to be made use of in the parliamentary session which began on the fourth of that month and extended into April.

They had visited in this rapid scamper through England a hundred and fifty-five monasteries in all, and professed to have found in more than a hundred of them cases of grave immorality. Even in the counties they had traversed by far the greater number of monasteries were not reported on at all. But the instances they had found were quite enough for the real object in view. Parliament was informed that a great deal of vice had been

discovered, and consented—though only, if we may trust a later tradition, under severe pressure—to grant to the king the property of all monasteries having an income of less than £200 a year; for it was stated in the preamble to the Act—not at all in accordance with the reports of the visitors—that religion was much better observed in the larger monasteries than in the smaller.

That the case against the monasteries was prejudged appears clearly from some of the letters of the visitors themselves. When Layton, in a fit of comparative honesty, had spoken well of the monastery of Glastonbury he was admonished that his report did not give satisfaction; so he wrote immediately to apologise for his "indiscreet praise," acknowledging that the abbot appeared "neither to have known God nor his prince, nor any part of a good Christian man's religion"! And to avoid a similar mistake at St. Mary's, York, he writes that he "supposes to find evil disposition both in the abbot and convent, whereof, God willing, I shall certify you in my next letters." It is needless to say that the testimony of such an accuser is absolutely worthless. And as for his fellow, Dr. Legh, even his associate Ap Rice felt compelled to write to Cromwell of his tyranny and extortions, begging him at the same time not to disclose that he had done so, else his life would hardly be safe from the bullies and serving men in Legh's employment.

Finally, the accusations, when they had served their purpose, were discredited even by a royal commission issued immediately afterwards to report upon the condition of the monasteries with a view to their suppression. As the monks were to be turned out, it was necessary to ascertain their number in each house and what sort of character each of them bore, as well as to take stock of their property. And, strange to say, the returns of this commission, so far as they have been collected hitherto, give the monks in almost all the houses a high character for probity, zeal, hospitality, and sometimes (we may add) for particular kinds of industry, such as writing, embroidery, and painting. Nor is this all; for it stands no less clearly recorded that several of those monasteries which look worst in the reports of the visitors stood highest in the esteem of their neighbours—the country gentlemen who had the duty imposed upon them of making these returns. The huge mass of scandal compiled by Drs. Legh and Layton was clearly believed by no one, not even by the king or Cromwell, or, we may add, by the visitors themselves.

Such is the real story of the famous visitation of the monasteries just before their suppression, as it appears in Father Gasquet's book. It is a new story, which it was impossible to tell even a few years ago with anything like accuracy, simply because the original evidences had not been made sufficiently accessible, or comprehensively catalogued in true chronological order. But, although the author is avowedly himself a monk, and dedicates his work to Pope Leo XIII., by whom, it appears, he was induced to undertake it, he need fear no contradiction hereafter on the main point here revealed. The old scandals, universally discredited at the time, and believed in by a later generation only through prejudice and ignorance,

are now dispelled for ever, and no candid Protestant will ever think of reviving them. Still further revelations doubtless await us in Father Gasquet's second volume, which will treat of the actual work of the suppression, to which the visitation of the monasteries was merely a commencement.

JAMES GAIRDNER.

The Principles of the Art of Conversation.
By J. P. Mahaffy. (Macmillan.)

In the present age good speakers, though rare enough, are perhaps more numerous than good alkers, for the opportunities for continuous conversation as distinct from the interchange of mere commonplaces are certainly rarer than in olden times. When life ran more slowly, and an early dinner hour insured a long evening, there was some chance for a man to practise himself in conversation, and to achieve distinction in a combat of words.

"What things have we seen
Done at the Mermaid! heard words that have
been
So nimble and so full of subtle flame,
As if that everyone from whence they came
Had meant to put his whole wit in a jest,
And resolved to live a fool the rest
Of his dull life."

But there are humbler triumphs still open to the man or woman who will take the trouble to win them; and, if conversation has become in some measure a lost art, Mr. Mahaffy's wise and witty counsels may make its recovery possible even to some ordinary units of society. Of course they must have some natural gifts to begin with, and they must not suppose that any rules, however precisely framed or exactly followed, can compensate for the absence of such; but there may be acquired a certain amount of skill which will render the natural gifts more available for their purpose, and which will save their possessor from egregious blunders, if it does nothing else. Before all things it is necessary to remember—what even good talkers sometimes forget—that the object of conversation is recreation, not instruction or moral improvement or controversy or display. Hence Mr. Mahaffy sounds a note of warning about the dangers of smartness—"an advantage which, if not deepened by solid acquirements or chastened by moral restraints, may make a man rather the scourge than the delight of his company." But there is, of course, an evil of an opposite kind, which is quite as much to be avoided, namely, "modesty without simplicity, which, though it may still be a moral virtue, is always a social vice, and, therefore, highly detrimental to good conversation."

It is beyond our purpose to give a thorough analysis of Mr. Mahaffy's treatise; but the Aristotelian vein in which he writes shows itself on every page, and is conspicuous enough in the following passage:

"What distinction are we to make between Shyness and Reserve—two qualities whose effects are generally similar, and each of which is a great hindrance to good conversation? We may start from the distinctions in ordinary use. No man or woman will openly claim to be reserved, but many will plead that they are shy. The reason of this is that shyness is assumed to be a physical or at least a constitutional thing, whereas reserve implies deli-

berate choice to stand aloof, and repel any intimacy of conversation as unwarranted either by the circumstances or by the relative position of the speakers. Thus, though reserve may arise from modesty, it is generally a form of pride, which for that reason no one will attribute to himself. On the other hand, shyness is either assumed to be a form, or an excess, of modesty, which is a virtue, or it is assumed to be congenital, and therefore a defect to be excused rather than a fault to be censured."

With these conclusions we are not altogether disposed to agree; for we think that, as reserve is supposed to be the mark of a strong character, and shyness of a weak, there are a good many men who would prefer to be called reserved rather than shy, and who deliberately act upon their preference. Be this as it may, Mr. Mahaffy is entitled to hold and to assert his own views; and, to judge from his book, he will always do so without offensive dogmatism or foolish diffidence. If he has not succeeded in giving the world a complete key to polite conversation, he has established his claim to be considered an original thinker, with powers of analysis and expression which few modern writers possess.

CHARLES J. ROBINSON.

Autobiography and Reminiscences of Sir Douglas Forsyth. Edited by his Daughter.
(Bentley.)

THIS book is a good specimen of the performance of a difficult task. The impediments which attend the writing of a man's life by a near relation have passed into a commonplace; and Miss Forsyth is entitled to respectful commendation for the way in which she has encountered them. The story before us is told, so far as possible, in the words of the hero; and the few remarks which the editor has considered indispensable are marked by good taste and self-control.

Forsyth was one of those men, not uncommon in the old Indian services, who, without any exceptional ability or high previous training, were developed by the conditions of the career. At Rugby, where he was contemporary with many men who have since risen to high distinction, he did not come prominently forward; being noted—so far as he was noted at all—for an amiable, honourable boy, rather lazy, and very good-looking. At Haileybury he did much better, coming out, ultimately, at the top of his term. With this prestige he landed in India, personally recommended besides to the ardent and ambitious Dalhousie. Failing to satisfy the great pro-consul, Forsyth fell into the shade for a while. But chance brought him a speciality—that opportunity for want of which many a clever man, in these days of divided labour, is doomed to live and die unknown. Being Deputy Commissioner of the Kangra Valley, he was much struck with the appearance of a number of Muslim Tartars who came down into that district from Central Asia for purposes of trade. Then came the Mutiny. But the memory of these people seems to have been fermenting in his mind. Years after, when he went to Jalandhar as commissioner, the Kangra Valley was one of the districts subject to his control. He now re-opened the question; and he found that the strange visitors came from Yarkand and Kashgar, where a Mohammedan conquest had

taken place some years before, the Chinese authorities having been expelled by followers of the Prophet from Kokand. This revolution had given a stimulus to the trade; and Forsyth endeavoured, though vainly, to interest Lord Lawrence in the matter. Nothing daunted, he went to Leh in 1867; and he was so satisfied with the result of his inquiries there, that he resolved to establish an annual fair at Palampur, where he invited the Yarkandis to come down and exchange their carpets and other produce for Indian tea. Led thus to study Central Asia and its affairs, he obtained sanction from Lord Mayo, and in 1868 repaired to London for the purpose of submitting his views to the government of Great Britain. The Duke of Argyll, then Secretary of State for India, received him coldly; but Lord Clarendon took a different view. Under instructions from the Foreign Office, Forsyth proceeded to St. Petersburg, via Constantinople, and successfully conducted a negotiation which was the original basis of the demarcation of the Afghan frontier recently concluded.

This intelligent and happy idea was also the foundation of Forsyth's own fortunes. He returned to India, at the close of 1869, highly recommended to the government by Lord Clarendon. Shortly afterwards he was sent by Lord Mayo to make further examination into the Central Asia trade question, and to visit Yarkand for that purpose. In this he was highly successful. To quote the words of a paper of the day: "The double journey of two thousand miles between Lahore and Yarkand and back was successfully accomplished in six months, over the highest tract of country in the world."

Then followed another difficulty with the government of India, more serious than that which has been noticed as occurring at the outset, in Lord Dalhousie's time. A band of excited peasants having caused anxiety in the Southern Punjab, a Mr. Cowan, Deputy-Commissioner of Ludhiana, proceeded against and captured a body of them encamped in the small independent state of Maler Kotla, on the borders of his district. Forsyth, who was then Commissioner of Ambála and Mr. Cowan's official superior, wrote to him, directing him to try his prisoners, but not to put any sentence in execution till he (the commissioner) should arrive. Mr. Cowan put the letter into his pocket and blew from guns some fifty of these unhappy bumpkins. Forsyth then wrote him a second letter, in which, instead of a reprimand or a call for explanation, he conveyed approval of the insubordinate and sanguinary act. The government of India, on learning these facts, dismissed Mr. Cowan from the service and censured Forsyth, who was removed from his commissionership and pronounced unfit for further employment that might involve political action.

The assassination of the lamented Mayo was followed by the viceroyship of Lord Northbrook, and Forsyth was sent back to Yarkand—this time not merely for commercial enquiry but on a special mission. This was, to a certain extent, a reversal of the previous order; but it is obvious that the word "political" has two senses. A Punjab commissioner has political powers which essentially differ from those of an envoy sent to conclude a treaty of commerce with a

foreign government. For the latter Forsyth had already proved his fitness, for the former—as it was thought—he had not.

The second mission to Yarkand was interesting, and might have been important. But, as we now know (though the book before us gives no hint of it), the whole thing came to grief through circumstances quite beyond British control. The tenacious Chinese were even then growing the crops that were to furnish the commissariat of an avenging force. When the crops were all ripe along the line of march the Chinese troops advanced, occupied the country, slew the Muslim usurpers, and resumed the government of Yarkand and Eastern Turkistan. The trade route is now closed; and the fair of Palampur is at an end.

In 1875 Forsyth went upon another mission, which, in spite of his temporary success, has proved equally ineffectual. With his usual combination of tact, suavity, and real shrewdness, he concluded a treaty with the King of Burma, whose son is now a dethroned prisoner in British India. In the following year he quitted India, and in 1876 retired from the service. The short remainder of his life was chiefly passed in railway business, in pursuance of which he visited Lisbon and went back to India for a few months. He died, somewhat unexpectedly, at Eastbourne, in the last days of 1886, leaving behind him—in the language of the *Times* obituary—"the ideal of an English gentleman."

Formerly, the administrative work of India was either in bad hands—when it was not done at all; or it was in exceptional hands—for which nothing was impossible. In this latter case the very difficulty of the work created the power of doing it. We can hardly miss the lesson of such a life as Forsyth's. Rebuked by Dalhousie, coldly treated by Lawrence and Argyll, censured and punished by a later local government—his buoyancy, self-reliance, intelligent views, and sympathetic manners, enabled him to surmount every obstacle and carry all his responsibilities to a happy conclusion. At the outset of his public life he laid down for himself three rules, extracted from his diary by the pious care of Miss Forsyth (p. 282), and when we read the words we cease to wonder at his success. Those who enjoyed the privilege of his friendship will recognise the sincerity with which they were recorded. Young men entering the India Civil Service can hardly do better than study the life of Douglas Forsyth in the light thus thrown upon it by himself.

H. G. KENNEDY.

Victorian Poets. By E. C. Stedman. Thirteenth Edition. With Supplementary Chapter. (Chatto & Windus.)

So persistent has been the parrot-cry that the reign of poetry and of romance is at an end that vast numbers of people repeat the foolish assertion in the conviction that they are giving utterance to a profound truth. Yet, save the Elizabethan period, there has been no epoch so fertile as our own, wherein so much beautiful and admirable work has been accomplished; which has endured so long and so gloriously, and in its decadence has given such promise of greatness to follow. That we are on the eve, not of a return to

empty formalism and dexterous dalliance with commonplace, but of a third great literary era, is the shy hope of many and the assured expectancy of not a few of those who have some warrant for their beliefs. To the Victorian epoch it is not yet time to write "Finis," although it is evident that its present autumnal beauty and abundance is of the St. Martin's Summer kind. One night, now or a few seasons hence, a chill wind will arise, and the wealth in which we exult will be a thing of the past; with one dawn will come a frost which will tyrannously remove these present riches to the vast garner where, as Sir Thomas Browne might say, Time doth vainly strive to satiate the avarice of Oblivion. I am well aware that there are many whose opinions are of weight who believe that we have run our course; that in the last fifty years we have exhausted our national genius; that the period which of necessity must soon dawn for us will be one of poverty if not of positive sterility. But these individuals, for the most part, belong, as it were, to the backwaters of the stream; and they have caught no glimpse of the widening estuary and the sea beyond. The keener-sighted, as well as the more hopeful, are aware of Oceanus; and I am glad to find that so acute and so capable a critic as Mr. Stedman is of their number.

In his supplementary chapter—a review of fourteen years of "British song" since the first publication of *Victorian Poets*—Mr. Stedman is able to adopt an attitude of anticipation as well as of retrospection. I note also with pleasure that, although he does not write very definitely on this point, he seems to be alive to the fact that, in poetic literature, the romantic impulse must lead to a great dramatic revival. He also shows that he has true insight into the great bulk of contemporary verse.

"Never were there so many capable of polishing measures quite unexceptionable as to form and structure, never fewer whose efforts have lifted them above what is, to be sure, an unprecedented level—but still a level. The cult of beauty and art, delightfully revived so long ago by Hunt and Keats, has brought us at last to this. Concerning inspiration and the creative impulse, we have seen first: that recent verse-makers who are most ambitious and prolific have not given much proof of exceptional genius. Their productions have the form of masterpieces, and little more. . . . Looking back, years from now, it will be seen that one noble song on a compulsive theme has survived whole volumes of elaborate, soulless artizanship by even the natural poets. . . . Breadth, passion, and imagination seem to be the elements least conspicuous in much of the recent song. The new men withdraw themselves from the movement of their time and country, forgetting it all in dreamland—in no-man's-land. They compose sonnets and ballads as inexpressive of the resolution of an imperial and stalwart people as are the figures upon certain modern canvases. . . ."

Mr. Stedman is not always the most subtle or discriminating of critics, but there is none among ourselves who equals him in breadth of sympathy, or in ability to resist allurements by the will-o'-the-wisp of mere form. The reason why contemporary criticism has so little public weight in this country is because most of its exemplars persist in castle-building in front of an advancing tide—imagina-

tion, originality, fervour, these have now become with them secondary to elaborately refined expression. And it is because Mr. Stedman strenuously endeavours to maintain his position on a truer foundation that his history of poetry in the Victorian epoch is so valuable. Nevertheless, many of its estimates are so out of proportion, there are such curious misapprehensions of the relative importance of "the younger men," that the last section of this book, at any rate, can only be regarded as a makeshift until a more critical record shall take its place. It would neither be courteous nor just to specify the somewhat startling overestimates which Mr. Stedman occasionally makes of certain writers among us. That this was almost inevitable must, in justice to Mr. Stedman, be recognised. He has great advantages in his distance from the field of battle; but if he can regard the varying aspects of the strife with calmness, he is also apt to exaggerate the clamour of those nearest to him, and even to overlook the centres where the real issues are at stake. But again it should be said that, with all its errors in judgment, many of them immaterial, and most of them readily perceptible to the well-read English public, *Victorian Poets* is not only the best book of its kind, but is worth (say) fifty reams of ordinary anonymous criticism of home-production.

WILLIAM SHARP.

Twenty-five Years in a Waggon in the Gold Regions of Africa. By Andrew A. Anderson. In 2 vols. (Chapman & Hall.)

HERE is a *bona fide* traveller who has a good right to appear in print. Two modest volumes contain the record of twenty-five years of toil and adventure. As long ago as 1860 Mr. Anderson resolved to explore the then almost unknown territories to the north of Cape Colony and Natal; and, after several preparatory trips, he started north in 1863. Since then he has been travelling continuously through South Central Africa up to the watersheds of the Congo and Zambesi—a vast expanse of country, 1,100 miles from north to south, 1,800 from east to west, and extending over an area of 2,000,000 square miles. He has put off publishing his travels till he has been overtaken by civilisation; and many districts are now well explored and settled which, when first visited by him, were almost entirely unknown. But, for all this, his narrative is full of interest. He is a close observer of nature, and of the habits of the natives, and of the wild animals which he saw in vast quantities roaming unmolested through regions where they are now extinct, or nearly so. There is not much method in Mr. Anderson's writing, and it is not always easy to discover the year, or even the decade, in which he is travelling. One really serious fault in the book, for which we suppose the publisher is more to blame than the author, is the want of a map. We cannot understand any publisher allowing a work of the importance of the present one to appear without one. The inconvenience is the more felt from the wide range of Mr. Anderson's travels, which obliges the reader, in following him, to refer to more than one sheet in the atlas.

Mr. Anderson's account of the large game

in South Central Africa will interest many besides sportsmen; and he deserves credit for abstaining from slaughter for slaughter's sake. He had many adventures with lions. In the Kalahara desert he counted at one time, in a troop, great and small, twenty-two; and he frequently saw six and seven in the middle of the day, and within a short distance of his waggons. So near did one come to his camp, that a bushman threw a piece of burning wood at it and singed its mane. This was in the Transvaal, where he also witnessed a conjugal dispute between a lion and a lioness. Many a one might envy the author such a sight as the following:

"As we advanced along the bank we became aware that large game occupied the other side of the river. The dense forest prevented our seeing them, but there was no mistaking the sounds. Elephants were near, by the breaking of branches and the constant rumbling sound of their bowels. The river was too deep and dangerous to cross, therefore I had no choice left but to remain quiet and concealed in the shadow of the beautiful trees, the branches of which overhung the river. We knew they were approaching the river to drink. After waiting some twenty minutes, one by one they pushed themselves through the undergrowth that lined the steep bank, and made for the water, standing in a row close together, sucking up with their trunks the water into their immense throats, an operation that looks ridiculous—a sight seldom to be seen in daylight. To have fired upon them would have been cruel, as there was no possibility of getting their tusks even if we had killed them; we, therefore, watched with intense interest this interesting sight. After satisfying their thirst, they walked into the river until they were half submerged, throwing water over their backs, and flapping their immense ears against their sides, making a peculiar noise, evidently enjoying the bath immensely, pawing the water with their huge legs; and then returned to the forest to browse on the young and tender branches of their favourite trees. There were thirty-seven full grown and eleven young ones of various sizes. It was with difficulty I could restrain my boys from giving them a shot. At the present time these splendid animals are never seen in these parts, where formerly they were so plentiful."

This was also in the Transvaal.

Mr. Anderson's observations lead him to conclude that vultures discover their food more by scent than by sight. They are constantly on the wing, flying in circles, and making long sweeps in their course. They thus get the scent from any carcass below.

"In watching them closely," he says, "it is easy to see when they have got the scent and when they lose it, as is often the case if they make too great a circle. There may be sometimes from 100 to 200 performing these graceful circular flights, some one way and some another. Being at a great altitude—1000 yards—when they smell the carrion, they are, if the wind is strong, more than a mile away from the animal; and as they fly round they gradually work up to windward until the object is visible. Then they do not come down at once, but appear to make a survey of the surroundings before coming down to feast on the carcass. I have many times seen them come down wind, pass directly over a dead beast unnoticed, until they have got into the current of air on the down side, when they have worked back until they could see the animal on the ground. Their splendid sight will lead them to the spot after a time, but their quick sense of smell is the

first indication that there is a grand feast for them."

It is known that birds will warn animals of the approach of danger. The most annoying to the African hunter is a species of plover, which persistently follows him, giving the note of alarm. Mr. Anderson endeavoured to rid himself many times from these birds; but they were not to be baffled, but would come flying round the bushes, prying everywhere, until they discovered him, and then set up their alarm-notes—making the game fly in every direction. If these birds once fix their attention on a hunter, he must either shoot them or give up hope of a good day's sport.

The author's passion for a wild life, and his admiration for the noble quadrupeds which must disappear as white men advance, do not blind him to the value of civilisation. He is keenly alive to the importance of a central railway through Africa to the Congo basin. The distance from Kimberley to the Zambesi is 770 miles. A single line of railway could, he asserts, be made at a trifling cost, the country through which it would pass being comparatively a dead level, and beyond the Vaal river only a few streams would have to be bridged. He has explored the whole line of country from the Zambesi to Kimberley; and he does not hesitate to state that a better country could not be selected for a railway, or one in which the cost would be less. He proposes that fifty miles at a time should be laid down and completed; and thinks that it would not take many years to accomplish this great object, provided the people of Cape Colony were more alive to their own interests, instead of living in their present dormant state, and devoting their attention to subjects of no real importance to their prosperity. This railway would open up all the country situated on the north side of the Zambesi to what is included in the Congo State, a region of untold wealth, teeming with elephants, ostriches, and every kind of large game, and thickly peopled by intelligent races alive to the advantages of civilisation. The trade of this region now naturally tends towards the west coast. He considers that the line he proposes would be far more profitable than extending the railway from Kimberley to what he calls "that wretched Republic, the Transvaal," where commerce cannot be increased under the present Boer rule. It would, moreover, reach a district intersected by large rivers, tributaries of the Zambesi, at an elevation of nearly 3,000 feet above sea level, with splendid open and extensive pastures, which is also a fine corn-growing country.

Mr. Anderson has little good to say of the Boers. He entirely denies that they are good pioneers, and asserts that from the time they crossed the Vaal river they have been a greater curse to the country, wherever they have set foot, than Moselekatse ever was when he marched north from Zululand:

"They advance," he says, "into native territories, killing the people by thousands, enslaving women and children, robbing them of all their lands and cattle, and occupying their country, with no ulterior benefit to themselves or others, but merely as a field for further spoliation of native races, so that the country may be cleared of them; but not for civilisation or improving the country, because they leave

a dark spot wherever they settle from the ruthless cruelties they perpetrate upon unoffending and innocent people."

He himself, however, was not unacceptable to the Boer ladies, one of whom used every endeavour to persuade him to marry her daughter, her words at parting being, "You can take my daughter as soon as you come for her." He was not to be caught by this or many other like offers he had made to him.

The book contains curious accounts of various structures erected by earlier and more civilised races; but we must think the author jumps without sufficient evidence to the conclusion that that race was white, and is too anxious to find traces of the Queen of Sheba and the Ophir of Solomon.

WM. WICKHAM.

"Handbuch der römischen Alterthümer."—*Römisches Staatsrecht.* Von Theodor Mommsen. Dritter Band, erste Abtheilung: Bürgerschaft und Senat. (Leipzig: Hirzel.)

It would have been hard for an admirer of Dr. Mommsen, if he had been allowed to choose, to decide which of the two great works he would like to see finished first—the *Römische Geschichte* or the *Römisches Staatsrecht*. One longs to see the many-coloured life and bustle of the early empire depicted by the same hand which has given us the Rome of Cicero in such happy touches; to have the central government of the Roman world described in its entirety and in its relations to those single provinces, each of which has been separately painted in vol. iv. of the *Römische Geschichte*. The men, the literature, and the crimes of the age call for Dr. Mommsen's handling, and we are impatient to see what he will make of them. But at other times, when the plot-interest weighs less with us, when we want constitutional usage settled and the loose expressions of Roman orators or historians corrected or explained, we think of the unfinished *Staatsrecht*, and realise how much we should gain if we had complete before us the picture of the people and the senate.

That great work, the "Handbuch der römischen Alterthümer," has probably grown under the hands of its designers. Seven volumes were from the first intended to contain it, but by a process too familiar with German writers the volumes have been multiplied by separate Abtheilungen; and the present Abtheilung (832 pages) cannot honestly be called anything but a volume, and a very stout volume too. It takes its place in the due order of the parts, and describes the "Bürgerschaft"; but the work is not finished yet. The senate has still to receive its treatment, and in that part of the work we shall look for the key to much that is still obscure in Dr. Mommsen's theories. The relation of the senate to the people is far from being settled for more than one republican epoch; but the relation of senate and emperor is still more provocative of curiosity. The name Dyarchy, given by Dr. Mommsen to the constitution of Augustus, is not yet sufficiently justified; and it is curious that the senate should continue to be an object of suspicion and jealousy to the emperors even after Domitian had taken into

his own hands the greater part of the filling up of that body (vol. ii., ed. 1, pp. 875-7). If the senate was, for the most part, packed by the emperor, what sort of *esprit de corps* was there in it which assimilated his nominees and changed his friends into political foes?

The first volume (of the *Staatsrecht* and of the whole "Handbuch"), published in 1871, dealt with the magistracy in general, and, it will be remembered, provoked the wrath of Madvig by unfolding Roman usage from the starting-point of such abstract ideas as collegiality. The second (in two parts or Abtheilungen) contained a full account of each office, republican or imperial. But as the position of the magistrates of the republican period could not be properly estimated until the position and powers of the people, which gave them their authority, were understood, so the position of the later officials, from the emperor downward, will not be completely set forth until the second part of the volume now before us (the third) deals with the senate, which elected some officials and was the rival or victim of others. To the completion of this task Dr. Mommsen is apparently postponing what remains of his history.

Vols. iv.-vii. of the "Handbuch," originally by Marquardt, take up other aspects of Roman life. Vols. iv.-vi., the *Römische Staatsverwaltung*, deal successively with the organisation of the state and provinces, with finance and the army, and with religion. The seventh volume, *Das Privatleben der Römer*, in two parts, by Marquardt, has, like the *Staatsverwaltung*, been revised in a second edition by other scholars. It seems to us perhaps of all parts of the work best suited for translation into English. For the translation of so large a work as the whole we can hardly hope, although the task is being undertaken in French by F. Girard. Will any English author or publisher be so enterprising?

It will probably occur to anyone who looks over this brief distribution of the subjects that the authors would find it very hard to keep off each other's ground, and Dr. Mommsen does trespass very considerably upon the ground of Marquardt. His work overlaps that of his coadjutor upon the topics of Dress, Name, Latini, Municipia, and many more. Nor does the comparison thus suggested tell altogether in Dr. Mommsen's favour. His style is by no means seen at its best in this work, and the third volume is certainly inferior to the others in clearness of arrangement. To tell the truth, it is cumbersome and uncouth, and the vast stores of learning accumulated within its covers are somehow not easily accessible. Surely the "Bürgerschaft und Senat" might both have been handled within one real volume, as seems to have been designed at first, and that a volume of moderate compass.

Purchasers of the whole work may, we think, fairly complain of being ill-used when they find that all the references in this volume to earlier volumes are to the second edition, of which the paging is seriously different from that of the first edition. How are those readers who bought the volumes as they first came out, and therefore in the first edition, to use these references? Surely they deserve some consideration,

It is, of course, much easier to make such general comments upon the execution of Dr. Mommsen's work than to controvert any one part of it; and Dr. Mommsen is generally found to carry too many guns for his assailants. But still we must venture to point out that a disputable assertion does not become certain by being repeated, and that (to take one instance) the view that plebeians voted in the *comitia curiata* is no better substantiated now than it was when it was put forward in the *Römische Forschungen*. It is perhaps more carefully guarded, or qualified, by the admission that this was not originally the case. But is it certain that it was ever the case? We think not. Of the several arguments which the author advances, none are conclusive, and two seem specially open to criticism. The fall of the patricians, he says, would, if none but patricians voted in the *comitia curiata*, have entailed the disappearance of *leges curiatae*. But why? When the patricians lost their position, the importance of the *comitia curiata* had already passed away, and that assembly was reduced to a mere form. Why should any people, and especially a conservative people, have taken the trouble to destroy an old form, sentimentally and traditionally interesting, while it was too weak to be offensive? The ceremony, therefore, remained, and *leges curiatae* were still formally passed; but the thirty plebeian licitors voted, not because they had a right to do so as plebeians, but because they were specially appointed and authorised to represent the thirty patrician *curiae*. Again, the case of C. Mamilius Atellus is adduced from Livy 27.8; he was elected *curio maximus* against the wishes of the patricians; and as the election took place in the *comitia curiata*, the plebeians must, it is argued, have voted therein, or they could not have outvoted the patricians. But then this argument will not be good unless it be admitted that the election did take place in the *comitia curiata*, and this is not generally admitted. Though the point is uncertain, the *comitia tributa* are just as likely to have been the electing body. Thus this argumentation *litum lite resolvit*. A handbook is not the place for doubtful theories, or, at least, their doubtfulness should be made very plain to the reader.

FRANKLIN T. RICHARDS.

NEW NOVELS.

Only a Coral Girl. By Gertrude Forde. In 3 vols. (Hurst & Blackett.)

A Lion among the Ladies. By Philip Gaskell. In 3 vols. (White.)

An Adventuress. By Francis Addison. In 2 vols. (Ward & Downey.)

Whose Wife? By Mrs. Harcourt-Roe. (W. H. Allen.)

The Moloch of Fashion. By Félise Lovelace. (Remington.)

The Algerian Slave. By L. G. Séguin. (W. Bartholomew.)

Gabriel Allen, M.P. By G. A. Henty. (Spencer Blackett.)

An Impecunious Lady. By Mrs. Forrester. (Ward & Downey.)

ALL who remember Miss Forde's *Tour in Corsica*, and her story entitled *In the Old*

Palazzo, will not need to be told that the author excellently utilised her experiences in the south of Europe. From this point of view similar praise may be extended to her new novel, which delineates with much vigour and freshness the strange and chequered career of Margherita Rucci, the daughter of a Capri fisherman. Taking the story as a whole, however, it is not equal to its immediate predecessor from the same pen. The Italian touches are charming enough, but the canvas is too large for the subject; and we cannot say that the painful *dénouement* springs from an overwhelming necessity, or, indeed, from any necessity at all. Margherita attracts the attention of a young English traveller, Keith Ronaldson. They fall desperately in love with each other, elope, and are married. A brief course of Paris training and tuition at the hands of the lover-husband effect a marvellous change in the peasant bride; and when she appears among Keith's family in England, and is taken into society, she becomes a fashionable favourite. For some time all goes happily; but Ronaldson gets drawn away by evil companions, and compromises as well as ruins himself at cards. Margherita, with her intense Italian nature, clings to him through all, and effects his moral salvation, reconciling him also with his outraged family. She bears him away to Capri to recover his lost health; and, as they have now a beautiful boy, and Keith has found earnest occupation in life, their happiness seems to be assured. But when Margherita has achieved all her remedial work, without rhyme or reason she is hurried into eternity by an old lover, Geronimo Garroni, who out of jealousy had first attempted to kill her husband. We perceive no need for this terrible sacrifice. But, apart from this blemish and the fact that it is too long, Miss Forde's novel is charmingly written. It is at least a pleasure to meet with a capable writer who has something to say.

For those who care to wade through the petty intrigues of garrison society, *A Lion among the Ladies* will no doubt prove entertaining enough; but any man or woman who feels the real earnestness of life will rather look with contempt upon the trivialities which distinguish the fair-weather existence of our soldiers at home. The First Battalion of the Chalkshire Rifles numbers some curious specimens of humanity, from Guy Leycester of "Ours"—the "lion among the ladies"—down to Major Brereton, the contemptible villain of the piece. There is not much of the flesh and blood element in any of the characters, though the author on one occasion does make "the blood of a long line of stainless ancestry surge up hotly into Guy Leycester's brain" as he knocks Brereton to the ground; while, at another time, in making love to the heroine he presses "passionate kisses, not on her lips alone, but on her shining hair, and on the soft white pillar of her girlish throat." But all are poor creatures, including the lion himself. It is true that in the third volume he goes to the Soudan and gets killed; and we could cheerfully have said farewell to many of the Chalkshire Rifles if they had "exchanged" and done likewise. The author seems to have a grudge against a favoured London

suburb, which he must settle with the inhabitants themselves, for in one place he speaks disparagingly of "that comparatively cheap and populous district known in the directory as Maida Vale"; and in another he refers more openly to a "shabby Portdown Road house." But Mr. Gaskell's style is what we must chiefly find fault with. It is one of the worst we have ever seen. He does not seem to like the English language; and certainly he does not betray that familiarity with it which is desirable. Many of his pages look almost like exercises in "Easy Lessons" in Latin or French, only that the Latin or French is not always accurate. Mr. Gaskell is not "a lion among the" languages.

A novel which opens with the strangling of two Englishmen by an Indian, and closes with the hanging of a third Englishman and the shooting of the aforesaid Indian, will be admitted to be pretty warm. Col. Addison has achieved this new feat in fiction in *An Adventuress*; while in the intervening space between the opening and the closing horror he presents us with an exhibition of sordid and despicable villainy such as we have rarely, if ever, seen equalled. The whole work is a sickening revelation of the seamy side of human nature; and, notwithstanding the introduction of two or three excellent characters, they are not sufficient to lighten the book and make it agreeable. The story is unquestionably exciting, but we cannot think the multiplication of such books advantageous in the public interests. Col. Addison says one smart thing when he describes a certain section of society in Rockby as "chiefly remarkable for their profession of charity and their vindictive jealousy of any one who practised it." By the way, the gallant author would do well to be a little more careful with his dates. At the opening of the story, Miss Lester goes to Rockby in May 1885; but long afterwards, and when nearly all the action of the novel has passed, we find, in the middle of the second volume, a letter concerning her written by her lover from Rockby Hall, and dated January 10, 1885.

The heroine in *Whose Wife?* is called upon to bear more than her fair share of misfortunes. She is a proud and beautiful woman; but she lives to become aware that her mother had been divorced, that she herself has two husbands, and that her child has died nameless. Her load of suffering is, indeed, great, and she almost succumbs from pain and anguish when her first husband, a brutal and loathsome being, returns and threatens to murder her by inches. Some of the passages in this book might have been toned down with advantage by Mrs. Harcourt-Roe, and we cannot say much for the story from the literary point of view. But it has a painful interest running through it, and will no doubt be read.

We have not, for a very long period, met with such a disagreeable story of vice among the upper classes as that presented in *The Moloch of Fashion*. We are not concerned to deny that there may be some basis of truth for the author's sweeping assertions; but we cannot feel that her work is justified on other grounds. Merely to lift the veil on aristocratic turpitude, with the object of laying

bare its hideousness to the world, is not likely to be productive of good. We want a pen that is something more than merely descriptive—a scathing pen like Thackeray's, which wounded in order to shame, and then to heal.

A wholly different type of novel is *The Algerian Slave*. Miss Séguin is a very pleasant and agreeable writer, and her books are invariably marked by a high tone. This story shows her at her best. The scene is laid successively in Venice, London, and Algeria, the time being at the close of the last and the beginning of the present century. The characters are well drawn, and the vicissitudes of the hero excite interest and commiseration, while the touches of description and the local colouring are excellent.

Mr. Henty has constructed an ingenious and entertaining plot in *Gabriel Allen, M.P.* The hero lives under the pressure of a painful secret, which he fears may at any moment bring down the sword of Damocles upon his head. How the danger at length passes away the reader must discover for himself. He will enjoy the story for many other things besides the sketch of Allen, for the author writes with a practised hand.

A word of commendation must also be given to *An Impecunious Lady*. Mrs. Forrester has written this shilling novelette for the benefit of a house of shelter for the homeless poor. It is none the worse story for that, and we sincerely hope it will be successful for the sake of its object. Mrs. Forrester places in touching juxtaposition the splendour and luxury of the rich in the west of London with the fearful suffering and privation of the poor in the east. Dives will have a terrible awakening some day when Lazarus rises up in judgment against him.

G. BARNETT SMITH.

RECENT THEOLOGY.

Studies in Religious History. By Ernest Renan. Authorised English Edition. (Bentley.) Of contemporary writers on religious and philosophical subjects M. Renan stands high for the uniform excellence of his productions, as well as for their number and multiform character. Applying Sheridan's well-known pun, we may say of him that his luminousness suffers no impeachment from his voluminousness. This collection of essays seems to us the best as well as the most characteristic of his recent works. He regards it as a sequel to the *Studies of Religious History*, published twenty-seven years ago; and the two works taken together not only attest the extent and variety of his studies, but bear witness to his own mental development. Some of the papers in this volume share the additional merit of being permanently valuable contributions to ecclesiastical history. Among these the most important are "Joachim di Flor and the Eternal Gospel" and "Francis of Assisi." The essay entitled "A Monastic Idyl of the Thirteenth Century" affords a curious insight into the working of monasticism, and the abnormal susceptibilities to which it occasionally administered. It is only an extreme form of a considerable number of such idyls, some of which are found in the *Heptameron* of Margaret, Queen of Navarre (e.g., Day 2, Nov. XIX.) We need hardly add that M. Renan's distinguishing characteristics of thought and diction abound in this volume, though some of the graces of

his incomparable style have, as was indeed inevitable, evaporated in the process of translation.

The Light of the Ages (Asia, Africa, Europe). By the Rev. H. R. Haweis. (Charles Burnet & Co.) The forewords to this first volume (in chronological order) of Mr. Haweis's series on "Christ and Christianity" explain its object. The religious enquirer

"will surely find the answer to the fashionable craze which proclaims all religion an ephemeral fancy of the human brain, when he perceives throughout the religions of the world the unity and solidarity of the religious consciousness."

The Light of the Ages, therefore, gives short sketches of all the great religions of mankind. We begin with "The Light of India"—Brahmanism and Buddha; and proceed to "The Light of Persia"—of China, of Egypt, of Greece, of Rome, of Scandinavia, with a final chapter on Judaism and Christianity. Of course, only a slight sketch of each religion can be given; but Mr. Haweis understands the art of rapid and intelligent summary, and contrives in each sketch to convey a clear picture of the religion treated of, and bring out its value as a witness to God's presence with the race. The best chapters are, perhaps, those on India, and the most inadequate the chapter on Greece. Mr. Haweis has bestowed special attention on Brahmanism and Buddhism, and does them justice; but the immense subject of Greek religion baffles him, and we receive but a vague impression from his account. The style of the volume is throughout refreshing and clear.

The Self-Revelation of God. By S. Harris. (Edinburgh: T. and T. Clark.) This very elaborate and important treatise forms a continuation to the author's work on *The Philosophical Basis of Theism*, published a few years ago. It may be described briefly as an attempt to restate on an enlarged basis, and with the greater amplitude of illustration rendered possible by the present advance of knowledge, the old questions of evidential Christianity. To quote the author's own words:

"Butler's *Analogy*, Paley's *Natural Theology* and *Evidences of Christianity*, the Bridgewater Treatises, and similar defences of Christian Theism in the last and the earlier parts of the present century are not now sufficient. The evidence which they present is as valid as ever, but they fail to present the new evidence and to meet the new questions and objections now urged on our attention. Their method is open to criticism, and some of the principles which they assume are now the very points in question."

With a full recognition of Dr. Harris's superiority in many respects to his predecessors we fear, we must add "Mutato nomine, de te fabula," &c.; for both his method seems open to criticism, and not a few of the principles he assumes are decidedly questionable. As to the first point, the method and spirit of his work may be described as Hegelian. It is a systematic attempt, based largely on *a priori* grounds, to evolve the whole sum of Christian theology from successive stages of the self-revelation of God. These stages or parts of his subject are four, viz.: (1) God revealed in consciousness as the object of religious faith and service. (2) God revealed in the universe as the Absolute Being. (3) God revealed in the universe as Personal Spirit. (4) God revealed in Christ as the Redeemer of man from sin. Under these four heads Dr. Harris considers most of the systems and moot points of religious thought which have appeared in the world's history, and on all these subjects he is both learned and instructive. Unfortunately, however, his system, like other modifications of Hegel's Universal Thought-vortex, suffers from over-elaboration and excess of detail. In

particular it seems needlessly over-weighted by accepting Christianity rather in its traditional than in its original form. He gives his general conclusion in words which seem to merit quotation, as they describe in fairly concise terms the design of the book:

"The conclusion reached is not merely that Christian Theism may find a tolerated, but inferior and precarious standing in the presence of empirical and philosophical science and advancing civilisation; it is that the existence of God, the Absolute Reason, the ultimate ground of the universe and revealing Himself in it, is the necessary *presupposition* [the italics are ours] of all scientific knowledge, that it is the necessary basis of all ethical philosophy . . . of all aesthetical philosophy . . . and of all teleological philosophy . . . that the revelation of God in Christ redeeming man from sin and advancing His kingdom of righteousness and goodwill, gives the only complete and satisfactory philosophy of human history," &c. (p. 10).

Our readers will perceive from this extract both the scope of the author and the tone and spirit of his work. They may, however, accept our assurance that, in the discussion of points of detail, the book is an exceedingly thoughtful and learned production, presenting fresh aspects and arguments of evidential theology in a manner certain to command respect, if not to ensure partial or complete conviction.

Antiqua Mater. A Study of Christian Origins. (Trübner.) The anonymous author of this work describes its design as written in answer to the following inquiry: "What may we learn—apart from the books of the New Testament—from the old Christian and the Græco-Roman literature of the second century, in respect of the origin and the earliest development of Christianity?" This standpoint, though not exactly novel, is worthy of occasional adoption, if only for the enlarged vista it affords into the beginnings of Christianity; but the question should, in our opinion, be preceded by another, viz.: What might we have expected to learn from non-Christian sources as to the origin of Christianity? That the evidence from outsiders in such a case would be fragmentary, vague, and partial is only what we might expect. The author seems to think, however, that it is more reliable, partly because it is earlier than our common traditional testimony. However this may be, he has produced an exceedingly interesting, able, and well-written work; and even those who dissent from his conclusions will readily acknowledge the combined acumen and impartiality with which his arguments are set forth. It is refreshing in these days to find a theme, ordinarily treated with uncritical prepossession, handled with such independence and dexterity. Not the least valuable part of the book are the incidental remarks of the author on such questions as the current position of theology among ourselves. The following observation, e.g., is as true as it is generally unheeded:

"We share strongly the feelings of some Churchmen of our time—that the habit of cultivating critical acumen to the highest degree in reference to classical letters and history in our schools and universities, and of blunting its edge when brought to bear on Christian letters and history, is the source of great moral evil in the educated world."

The Doctrine of the Atonement. By the Rev. Lewis Edwards. Translated from the Welsh by the Rev. D. C. Edwards. (Hodder & Stoughton.) This treatise is written in the form of a dialogue between teacher and disciple, and divided into chapters, which deal with the doctrine of the atonement in its relation to God, its relation to the person of Christ, and its relation to man. A very interesting chapter on the history of the doctrine completes the book. The author's theological position is best illustrated by his classification in the

introductory dialogue of the books the disciple is to read. He divides them into four classes: to the first belong Owen, Howe, Leighton, and Jonathan Edwards, who "advocate the truths of the Gospel and teach nothing contrary . . . to wholesome doctrine"; in the second come Butler and Paley, who teach no error, but do not advocate the truth; in the third, Augustine, Luther, Baxter, and Coleridge, and the best modern Germans, who teach truth mixed with error, while the fourth class teach error mixed with occasional truth. But Dr. Edwards is not so narrow minded as this classification would lead us to suppose. He writes to support the thesis that "the justice of God's nature demands an atonement in order to pardon sin," but he denies that he is a supporter of a commercial atonement. He starts from the position that "immutable principles exist, and cannot have their source in God's will." This contention is supported in chapter iii., Plato's doctrine of ideas being appealed to in illustration of the argument. Justice, Dr. Edwards argues, insists on an atonement. He then goes on to find in the "merit" of Christ the essence of the atonement. But this reasoning, while it seems to destroy the free-will of God, does not in any way explain the moral difficulty of vicarious punishment. The merit of Christ makes it only more inexplicable on any principles of justice that He should suffer for those who have no merit. Dr. Edwards undertakes to prove that Christ has gained for us that if we live Christian lives we shall be saved, provided always that we believe that it is so—for justification, he holds, must precede sanctification; but his proof only establishes that God is not responsible for this, which does not help us much. The fundamental weakness of the argument is the absence of any definition of God's justice, and its connexion with His love. The disciple asks for such a definition, but he never gets it. "The tendency of our days," we read in the preface, "is to think of God as Father only." This is surely a somewhat astonishing remark: it asks us to neglect Christ's special message about God, and go back to the Old Testament conception of Him as a Judge, and it seems to think justice no essential attribute of a father. The reason why Dr. Edwards's theory of the atonement is questioned by so many Christians now-a-days is that it denies that God forgives sins in any ordinary sense of the words. A discussion of the atonement should start with the question, "How can we forgive one another," if it is to help us to understand what we mean by talking of God's forgiveness. The historical part of the book is excellent. Dr. Edwards is to be thanked for insisting on the importance of the writings of St. Anselm, particularly of the *Cur Deus Homo*? but they are important historically rather than absolutely.

A Manual of the Book of Common Prayer. Showing its History and Contents. For the Use of those studying for Holy Orders, and Others. By Charles Hole. (Hodder & Stoughton.) This book is one of a series entitled "The Theological Educator." If we were justified in judging from this specimen only, a more reasonable and expressive name would be "The Theological Crammer." It is the last book that a good teacher would put into the hand of a theological student, as it would inevitably excite the strongest repugnance towards a subject which, if wisely treated, is full of interest. Yet we are bound to say that for the purposes of *cram* it is really effective. It is full of matter, tersely put, and generally accurate; and we are certain that if Mr. Hole were to lay himself out as an "Exam. Coach" he would run many of his men through. For example, if the editor of the series were seeking Holy Orders, Mr. Hole might probably undertake to pass him in the Prayer Book after a week's reading. We

think it really unfair of Mr. Hole to refer to Procter's well-known manual (though with words of praise prefixed) in such terms as "The ninth edition in 1870 is a sign of its being still in constant request." He might have learned very easily that the book is now, in 1887, in its seventeenth edition. Mr. Hole tell us very justly (p. 29) that the English Prayer-Book was "never legally abolished" during the Commonwealth, "though the public use of it was forbidden." Is Mr. Hole not aware that the *private* use of it was equally forbidden under heavy penalties? It is curious that Mr. Hole, when discussing that part of the prefatory matter entitled "Concerning the Service of the Church," makes no mention of its being very largely a translation of Quignonez's Latin. It was, of course, from the Psalms in the Breviary, of Sarum or other English "Use," and not from the Greek of the LXX. (p. 62) that our reformers got the verse "O Lord save the king," and its response. We observe that Mr. Hole prints (p. 86) the opening words of the Litany with the unauthorised comma after "Father." It is curious that Mr. Hole (p. 106 sq.) does not notice the absolutely certain fact that our translation of the Athanasian Creed is from a Greek and not a Latin original. In the note on *oremus*, "Let us pray" (p. 115), the Western use of *oremus* as preceding an *oratio* should have been noticed. It will be misleading to those for whom this book is intended to learn (p. 177) that in the West a bishop, but in the East a presbyter, always administers Confirmation, without adding that the presbyter's *delegated* power is clearly indicated in the East by his having to procure from the bishop the chrism used.

Expositions. By the Rev. Dr. Cox. Third Series. (Fisher Unwin.) Our ample notice of the two former series of Dr. Cox's *Expositions* renders it needless to do more than call attention to the appearance of a third series, having the same undeniable impress of the author's "image and superscription." Dr. Cox continues to sustain in this volume his well-established rôle of a thoughtful, independent, and striking expositor. The titles of his discourses seem, however, to border so closely on sensationalism as to have a tincture of affectation; and the author, in common with many of his calling, is inclined to squeeze more exegetical comment from his textual sponge than it can fairly be said to hold.

NOTES AND NEWS.

THE Cambridge University Press will publish immediately a collation of the Athos Codex of the Shepherd of Hermas, with an introduction by Spyridios P. Lambros, Professor of History in the University of Athens, translated and edited by Mr. J. Armitage Robinson, Fellow of Christ's College, Cambridge. Many of our readers will remember the excitement caused in the literary world by the forgeries of Simonides in the years 1855-6, among which the one which awakened the liveliest interest was a codex containing the Shepherd of Hermas.

WE hear that a work on the recent native disturbances in New Zealand may shortly be expected from the pen of Sir George Whitmore, the officer who was mainly instrumental in their suppression.

MR. WALTER RYE has compiled from local records a list of the Freedom of Norwich from 1317 to 1603. This calendar will give the date at which each citizen took up his freedom, with the trade or occupation to which he belonged, and will be preceded by a short introduction. The work will be issued very shortly by Mr. Elliot Stock.

MR. ROBERT BUCHANAN has completed his Ode for the International Exhibition in

Glasgow; and Dr. A. C. Mackenzie, the new Principal of the Royal Academy of Music, is at work on the score, which will be entirely choral. "The New Covenant," as Mr. Buchanan calls his ode, will be sung early next May, in the presence of the Prince of Wales.

MESSRS. CASSELL & Co. will shortly publish a small work, entitled *The Irish Union—Before and After*, by Mr. A. K. Connell, author of "Discontent and Danger in India," &c. It is a popular treatise on the political history of Ireland for the last two centuries.

MR. JULIAN CORBETT is writing a novel entitled "Kophetua the Thirteenth," the first instalment of which will appear in the April number of *Time*.

Lotus: a Psychological Romance, by the Author of "A New Marguerite," will be published shortly by Mr. George Redway.

The Golden Halcombes is the title of a new novel, by Mr. John Shaw, to be published shortly by Mr. C. W. Olley, Belfast.

MESSRS. SOTHEYBY will sell, on the three last days of next week, the very choice library of the late John Leveson Douglas Stewart. Among the chief rarities are collections of W. Fraser's publications relating to Scottish families, and of Sir W. Stirling Maxwell's privately printed works; a presentation copy of the Edinburgh edition of Burns, with many additions and corrections in the poet's handwriting; first editions of Fielding, Smollett, Byron, Dickens, &c.; and a remarkable series of illustrations by Cruikshank.

FRIENDS of the late Archbishop Trench and those who value his literary work in Biblical exposition, in poetry, and in philology, will be interested in hearing that a movement has been set on foot to do honour to his memory, and to his energetic advocacy of higher female education, by endowing two scholarships in the Alexandra College at Dublin. This college, which has done very successful work, was mainly founded by the archbishop's exertions, and the proposed memorial will replace two exhibitions which he annually contributed to the institution. A strong committee has been formed in Ireland and England for this purpose, and particulars will be forwarded or contributions received by the Rev. W. Ogle, 73 Park Street, Grosvenor Square, W.

THE chronicle of the Wimbledon Free Public Library makes a good start. The building was opened in March last as a reading room, and the average daily attendance of visitors has reached 360. Ten daily papers, ninety-eight weekly papers and journals, and forty-five monthly and quarterly publications are supplied. On the opening day the shelves contained only 2,000 books, and the number of volumes has since grown to 6,000, a catalogue of which can be purchased for the moderate price of sixpence. Mr. L. W. Longstaff, who takes great interest in the growth of the library, has issued a small pamphlet of twenty-four pages consisting of notes on the catalogue. His observations, which are arranged under twenty-six heads, will afford the enquirer considerable help in the choice of the best books housed in the building. They are brief, but to the point; and the low price, one penny, puts them within the reach of all.

WE have received tomo vii. of the *Historia del Ampurdan*, by D. José Pella y Forgas. This last instalment is full of interesting details on architecture and on the social condition of various classes of Spanish society in the fifteenth century. Only a supplement with indexes and map remains to be published. The whole seven tomos form a small folio of about 700 pages, admirably illustrated with photographs and careful drawings from actual

objects. Beyond the mere local history, the work has great value as a careful study of mediæval society and mediæval art.

THE FORTHCOMING MAGAZINES.

GARIBALDI'S "Memorie Autobiografiche," kept for many years under lock and key, and only just published in Italy, will be the theme of a paper by Dr. Karl Blind in the forthcoming number of the *Contemporary Review*.

CONSIDERABLE space in the March *Antiquary* will be devoted to the Chester discoveries. There will be four representations of the Roman sculptures, from drawings by Mr. Edward W. Cox, including the figure of Hercules and the fragment of sculptured frieze. A report of Mr. Loftus Brock's paper on the "Age of the Walls of Chester," and the lively discussion which followed thereon, will also be given.

THE leading article in the March number of *Scribner's Magazine* will be the first of two papers by Mr. John C. Ropes on "The Campaign of Waterloo." There will also be an article by Mrs. James T. Fields, entitled "A Shelf of Old Books," containing portraits of Keats, Shelley, Leigh Hunt, "Barry Cornwall," and Joseph Severn, and facsimiles of marginal notes, &c.; while Mr. R. L. Stevenson will this month write on several eccentric beggars whom he has known.

THE March *Century* will contain the story of "Colonel Rose's Tunnel at Libby Prison," told by one of the hundred and nine Union officers who escaped on the night of February 9, 1864; also an account of Bismarck, and an illustrative paper on Salisbury Cathedral.

AMONG the contributors to the *Woman's World* for March will be Ouida, who furnishes a paper "Apropos of a Dinner"; the Countess Martinengo-Cesaresco, on "Swiss Goblins"; Mrs. Harriette Brooke Davies, on "Culture versus Cookery"; and Lady Lindsay, who contributes a complete story.

MR. GEORGE R. SIMS has been engaged on the preparation of a new series of descriptive papers, which will be commenced in an early number of *Cassell's Saturday Journal*, under the title of "Life Dramas of the London Poor."

UNIVERSITY JOTTINGS.

PROF. A. H. GREEN has been elected to the Chair of Geology at Oxford, vacant by the retirement of Prof. Prestwich. Mr. Green has held the professorship of geology in the Yorkshire College of Science, at Leeds, since its original foundation; and he had previously served for many years as an officer of the Geological Survey. He is a special authority on the Yorkshire coal-field; has reported officially on the coal resources of Cape Colony; and is the author of a valuable treatise on physical geology.

M. T. RIBOT, author of *La Psychologie anglaise contemporaine* and of many other works on psychology—several of which have been translated into English—has been appointed to the new professorship on evolution, founded at the Collège de France by the municipal council of Paris. M. Ribot may be described as a disciple of Mr. Herbert Spencer, rather than a Darwinian *pur sang*.

CANON DRIVER and Prof. Cheyne have arranged to make a tour together in the Holy Land. They propose to start about March 10, and will be away for six weeks or two months.

IN Convocation at Oxford on Tuesday, the proposal to make a special grant out of the Boden fund for the teaching of Vedic literature was rejected by 85 votes to 43.

WHILE Convocation at Oxford has approved the petition of St. John's College to postpone its obligation to augment the endowment of the Laudian chair of Arabic, the following representation to the Vice-Chancellor has been signed at Cambridge by sixty-seven influential names:

"That inasmuch as (1) the remedy provided by statute to meet depression, and (2) remedies which lie within the sphere of action of colleges, have not been tried and found inadequate, it is not justifiable to alter recent statutes regulating the contribution of the colleges to the university."

BOTH Convocation at Oxford and the Senate at Cambridge—the latter unanimously—have adopted petitions to the Queen in Council against the petition of the two London medical colleges to obtain authority to confer degrees in medicine and surgery. An important discussion on the subject is printed in the *Cambridge University Reporter* of February 14.

THE Rev. Dr. E. Moore, principal of St. Edmund Hall, and Barlow lecturer on Dante at University College, London, will deliver a lecture at the Taylorian Institution at Oxford on Tuesday next, February 28, on "The Tomb of Dante."

SIR JAMES PAGET has consented to give the annual address to the students of the London Society for the Extension of University Teaching at the Mansion House, under the presidency of the Lord Mayor. The address will be on "Scientific Study."

WE have received from so distant a quarter as the University of California a very scholarly production, forming No. 8 of its "Library Bulletins." It is modestly entitled *References for Students of Miracle Plays and Mysteries*, by Francis H. Stoddard, A.M.; and it consists of sixty-eight pages of letterpress, besides an elaborate table classifying the extant English mystery plays. The body of the work is thus arranged: (1) histories, essays, and works of reference; (2) editions of plays not English, by languages, with the French mysteries in chronological order; (3) mysteries and miracle plays in England, with special mention of the present homes of the MSS., of the recorded representations, and of the printed editions. In the preface indebtedness is acknowledged to Miss Toulmin Smith's recent edition of the cycle of York Plays; and two academical dissertations to which that book gave birth in Germany are duly entered in their proper place. It remains to add that the typography of this catalogue is as excellent as its substance.

ORIGINAL VERSE.

LINCOLN: MIDNIGHT.

SLOWLY and solemnly the great bell tolls
The hour of midnight; now the sound floats clear
Across the stillness, falling on the ear
Like the sad knell that peals for passing souls;
Now, like the boom of distant guns, it rolls
Far off into the night, and a vague fear
Comes o'er the listener, as when sailors hear
The roar of breakers upon hidden shoals.
Then, caught upon the breeze before they die,
Above the slumbering city from the hill,
The last strokes chime out, flinging to the sky
Their deep-toned music, whose vibrations fill
The whole wide air; then, fading to a sigh,
The trembling sound is lost, and all is still.

PAGET TOYNBEE.

MAGAZINES AND REVIEWS.

THE February *Livre* contains an article of the very best kind for such a periodical—a "Voyage autour de Félix Arvers," by M. Charles Glinel, who has made the "single-

sonnet" poet his special study, and has found out all that is to be learned about him. It is not much, as those interested in Romantic literature partly know already. Arvers was a literal example of the clerk who penned stanzas when he should engross. But he did not cross his father's soul thereby, inasmuch as the paternal Arvers considerably died early. He left his son a small property, of which the said son was not too careful; but, as nearly half of it remained when he died, he can never have inhabited the typical *Château de la Misère* like so many others. The most curious thing about him is that he spent or wasted his life, which was not extraordinarily short (he died at forty-four), not in writing verse, but in writing drama, and that not independently, but in collaboration. Now his poetic talent, if not great in volume, was certainly real, which does not appear to have been the case with his dramatic talent. It now seems certain that the immortal "*Mon Âme a son Secret*," which holds in French literary history the place of "*The Burial of Sir John Moore*" with us, was written to, as well as for, Mme. Menessier, Charles Nodier's daughter; and that the "*Imité de l'Italien*," which has puzzled critics in the printed version, was an afterthought and a blind. The article is illustrated by a portrait of Arvers in the 1830 style—a portrait with character enough, but deprived of beauty by the steeply receding forehead and by parted lips of almost negro conformation.

OXFORD CITY RECORDS.

Oxford City Records. Part I. Volumes. Part II. Separate Documents. By F. Madan. (Privately printed.)

THE Germans have been engaged for some time in printing their early city records—for instance, those of Cologne and Strassburg, and those of the Hanseatic towns. Without them we should have a very imperfect account of life in the Middle Ages, or even in much later times; for chronicles deal less with the inner than with the outer life of a nation, and are often more picturesque than instructive. England is beginning to follow the German example; and not only London, but other places, such as Nottingham, have made large contributions to our knowledge of town life, of the daily doings of the citizens, their guilds and all manner of associations, as well as of the numerous inhabitants who lived outside the action of the guilds. One volume of Oxford records has been already published in 1880 by Mr. W. H. Turner, whose untimely death deprived the city of one of its most devoted sons. Now Mr. Madan gives us not the documents themselves, but a complete list of them—an indispensable prerequisite to faithful research. The proceedings of the hustings court begin about 1530; and here transfers of houses were registered, and all business connected with the freemen transacted. It is so difficult when you enquire into the history of old and interesting houses in a town to obtain any accurate information about them. The enrolment of apprentices begins in 1514. The audit accounts from 1553 include the accounts of the S. Frideswide and the Austin fairs and the Castle Mills.

It will be observed that these volumes mostly begin with the sixteenth century. The separate documents naturally begin much earlier. Thus, besides the charters, there are hustings and other court records from 1290 onwards, and curious coroner's inquests of the time of Edward I., and many documents illustrating the relations between the city and the university. The English proclamation of Henry III. (the only one until Henry V.'s time) is preserved at Oxford—the only other copy is that sent to Huntingdonshire; and from the Oxford copy

Prof. Skeat was enabled to edit a careful text for the Philological Society in 1882. The last words, *adforen othre moqe*, had always been a difficulty; but Prof. Skeat found that the true form was *inoge*, i.e., enough (we may compare Robert of Gloucester's *other barons inowe*).

The city of Oxford would have large claims on our gratitude if it would publish the very valuable early documents in its possession; and hardly any expenditure of city funds would yield a return of more permanent value, not to mention that the sale of such a book would probably make the risk of loss very slight indeed. We need not say that Mr. Madan has done his work, not only carefully, but thoroughly, and in the way that is most serviceable to students. C. W. BOASE.

CORRESPONDENCE.

THE ROUTE FROM SYRIA TO EGYPT.

Christ's College, Cambridge: Feb. 21, 1883.

Prof. Sayce's interesting account of his journey from Jerusalem to El-Cantara by the short-desert route invites some remarks connecting his observations with what is known as to the topography of the district from Arabic and other sources.

The desert along the coast between Palestine and Egypt is known to Arab geographers as Al-Jifâr, "the water-pits." Yâcût, who describes the district from repeated personal observation as it was about the beginning of the thirteenth Christian century, says that, though the cities that formerly existed in the region were desolate in his time, there were still many palm groves and a series of inhabited points along the highway where travellers could find all needful supplies. These points were Rafah (Raphia; the form Rafah used by Prof. Sayce is incorrect), Al-Cass, Az-Zu'câ, Al-'Arish, Alwarrâda and Cafya (the Qatiyah of Prof. Sayce). He quotes also a description by Al-Hasan al-Mohallebl, dating from the latter part of the tenth century, who still speaks of Al-'Arish, Rafah, and Al-Warrâda as towns surrounded by gardens with palm trees, vines, and pomegranates, and having also some slender crops raised in the sand. The natives, moreover, at one season of the year, caught a vast number of quails which came to them over the sea (cf. Num. xi. 31 sqq.). From these statements it would appear that the gradual sanding up of the cultivated spots round the water-pits which Prof. Sayce observed at Româneh has been long in progress all over the district. Româneh, by the way, should be written with two m's, and means "pomegranate"; see the Archduke Ludwig Salvator's *Caravan Route*, E.T., p. 9, where there is a view of the place. This may be mere popular etymology, for Brugsch, *Dict. Géog.* (p. 1242), supposes that the name preserves the Egyptian name of Pelusium *Roman* or *Romen*; but "pomegranate" is so distinctive a name in a place where trees are few that it is very unsafe to look further for an explanation. It is certainly illegitimate to suppose that the name has anything to do with the Romans, as Prof. Sayce seems to think. Equally incorrect is the explanation of Faramâ, "the Pe-Romî of the Copts," as "Roman city." The Coptic name of Pelusium, from which Faramâ is derived, is Peremoun; and, according to Brugsch (*ut sup.*) is old Egyptian. Has the printer played a trick with Prof. Sayce's MS., and changed "the city Roman" to "the Roman city"? In speaking of Faramâ, Prof. Sayce very justly rejects the idea that the neighbouring Tina is to be connected with the Sin of Exek. xxx. The two names cannot be etymologically one, and that Sin means "mud" is very questionable. But Prof. Sayce is mistaken when he thinks that the name Tina "owes its existence to the fortress built in the mud about three centuries ago." The name is old. Yâcût has an article on the place, and it was at Tina that Nâsirî Khosrau took ship for Tinnis, having come by land from Ascalon in A.D. 1047 (*Sefer Nameh*, ed. Schefer, p. 109). Prof. Sayce's suggestion of Faramâ as a site for exploration is well worth attention. The remains of antiquity in the middle ages were still such as to excite the admiration of the Arabs, who had a considerable town here, the capital of the district of Al-Jifâr. The place was considered very unhealthy (Al-Mohallebl in Yâcût s.v.), and its water supply was partly from rain, partly brought by ship from Tinnis. Brackish water could be obtained from wells outside the town. Faramâ was burned by Baldwin I., King of Jerusalem, on his last expedition, and was finally destroyed by Shâwir half a century later (Macrizî, *Khitat* i. 212). Baldwin sickened and died on the way back before reaching Al-'Arish, and the Bardawil, which Prof. Sayce speaks of three hours from that place, is the Hijarat Bardawil, or "Baldwin's Cairn," spoken of by Ibn Khallikan, No. 753, Wüst. and by Abulfeda iii. 373. The king's body was embalmed; but his entrails were buried in the desert, and every Moslem who passed by cast a stone at his

tomb. The name of "Baldwin's salt-marsh" would seem to have been anciently attached to the whole Serbonian bog. According to the Archduke Ludwig Salvator, it now belongs to a great lagoon skirting the caravan road, less than half a day's journey west of Al-'Arish. On the shore is a ruined "castle of Bardawil" and a heap of stones where Bardawil is said to have been slain by Abū Zaid (p. 26). Close by are the remains of an ancient town. These must be the ruins of which Prof. Sayce was told, and as they lie on the road it is curious that he did not see them. An old German traveller, quoted by Reiske (Abulf. iii. 718), tells the story of "a great giant" who lies buried half a day's journey from Al-'Arish. It would almost seem as if Arab imagination had transferred to Baldwin the story of Typhon buried in the Serbonian bog (Herod. iii. 5).

One is a little surprised to find Prof. Sayce speaking of his "discovery of the site of Mount Casius." There is, as geographers have long known, only one spot on the coast that can possibly be the sandy mount famous for the temple of Jupiter Casius and for the tomb of Pompey, viz., the cape which the English chart and the *Mediterranean Pilot* (1885, vol. ii., p. 378) call Kas Bouroun, that is Kas promontory. This Kas, or, more correctly, Cass, is the Qes of Prof. Sayce's informant. In Yâcût's time it was ruined; but his authority, Mohallebi, describes it, and tells us that going along the coast from Faramâ to Gaza, one comes to Ras al-Cass—a sandy promontory with a castle, gardens, sweet water, and some scanty agriculture. The Arab philologists retained an interest in the place because the garments called *cassiya* or *cissiya* (of mixed linen and silk), which a tradition forbade Moslems to wear, were said to come from it; and the Tâj al-'Arûs gives an extract from an Arabic *History of Damietta*, describing Al-Cass as it was after its ruin, which is to be compared with a similar passage in Macrizi (*Khitat* i. 182). The printed Macrizi, and also the MS. used by Quatremère (*Mém. sur l'Ég.* i. 337), have Cais for Cass, by a blunder, which is the less excusable as Macrizi is at the trouble to spell the word. From these accounts, it appears that the promontory was a great sand-hill, six post-stages (thirty-six miles) from Faramâ, between Sawâda and Warrâda, with ruins and some production of salt, which the Bedouins carried to Gaza and Ramla. Here the Franks used to post themselves to plunder wayfarers.

Thus, in the Middle Ages there were still two routes from Pelusium or Faramâ to Palestine. The usual route was that still used, south of the lagoons, the first day's march being from Faramâ to Baccâra, the second to Warrâda, the third to Al-'Arish, and the fourth to Rafah. Modern travellers going towards Syria join this route at Cafya, which Prof. Sayce makes thirteen miles from Faramâ, and pass the night at Bir al-'Abd, which is an easy afternoon's journey from Cafya. This point probably corresponds to Baccâra, and the next halting place, Mazâr (Bir al-Mazâra, misprinted Magâra in the archduke's book), will correspond to Warrâda. Warrâda, like Mazâr, lay among sand-hills. It was once a town and military post, and even in Yâcût's time had inhabitants, a *masjid*, and a station for carrier pigeons to bear despatches to Cairo. It plainly was, as Mazâr is now, the most habitable point between Cafya and Al-'Arish.

We now come to the historically more interesting northern route. As Cass lay between Sawâda and Warrâda, the latter station must have lain on both the northern and the southern roads. The ancient stations on this route are known from the Antonine itinerary, which agrees with Josephus's account of the march of Titus (*B.J.* iv. 11), except that Titus took but one day from the Pelusian mouth to

Mount Casius; while, from the town of Pelusium, the itinerary allows two easy stages. From Mount Casius it was two days' march to Rhinocolura (Al-'Arish), the station Ostracine lying just half way. It is generally assumed from Strabo's account that this whole road lay between the lagoon and the sea; but his words do not absolutely require this, and he does not name Ostracine. It is, therefore, worth considering whether, as seems to have been the case in Arab times, the road eastward from Mount Casius did not keep south of the narrow lagoon, and whether Ostracine must not be sought near Warrâda. The name "Ostracine" may be explained from the observation of the archduke that in the fossiliferous limestone used for building at Warrâda cockle shells (*Cardium edule*) are particularly prominent. More precise topographical information is needed to settle this point.

The station after Al-'Arish was and still is Raphia, and somewhere hereabout the Ienysus of Herodotus (three days from Mount Casius) must be placed. I cannot see that the distances at all determine the identification of Ienysus with Khân Yûnus, though that place is not so far from Raphia that the identification is impossible. But the suggestion that the name of Yûnus represents Ienysus is very hazardous. Yûnus is so common a name among Moslems that a Caravanserai of Yûnus might arise at any time, and it does not appear to be known to the Arab geographers. The place probably sprang up after the fall of Rafah, which in the earlier middle ages was a considerable place, but was ruined when Yâcût wrote. And in olden times the desert, on the edge of which Ienysus lay, did not come so far north, but ended at Rafah, three miles north of which began the famous avenue of sycamores described by Yâcût.

W. ROBERTSON SMITH.

THE WORD "HERENUS" IN CHAUCER.

Cambridge: Feb. 14, 1888.

When I explained, in the ACADEMY for January 7 (p. 9), that the word "Herenus" is simply a mistake for "Herines," i.e., the furies (such being the Middle-English form of Erinnyes), I did not expect that I should so soon light upon another singular perversion of the same word.

In Chaucer's Works, ed. 1561, fol. 322, back, there is a miserable poem, of much later date than that of Chaucer's death, entitled "The Remedie of Love." The twelfth stanza begins thus:

"Come hither, thou Hermes, and ye furies all
Which far been under us, nigh the nether pole,
Where Pluto reigneth," &c.

It is clear that "Hermes" is a scribal error for "Herines," and that the scribe has added "thou," out of his own head, to keep "Hermes" company. The context bears this out; for the author utterly rejects the inspiration of the Muses in the preceding stanza, and proceeds to invoke furies, harpies, and, to use his own expression, "all this loathsome sort." Many of the lines almost defy scansion, so that no help is to be got from observing the run of the lines. Nevertheless, this fresh instance of the occurrence of "Herines" much assists my argument; all the more so, as it appears in a disguised shape. WALTER W. SKEAT.

BRITISH MAPMAKERS AND BRITISH POSSESSIONS.

Bothwell, Glasgow: Feb. 11, 1888.

Notwithstanding all the good advice that has of late years been tendered to British map-makers, there are, as yet very few gratifying results to show for it. Either they or the editors they employ do not seem to be suffi-

ciently interested in geography to take a pleasure in making their maps accurately representative of the state of geographical knowledge. As their shortcomings are really of very serious import to the general public, it is desirable that friendly and honest criticisms should be unremittingly continued with a view to bring about such an improvement as science and patriotism alike demand.

One of the outcomes of the Jubilee year was a crop of new atlases of the British Empire, or new editions of such. Three of these, all issued by well-known houses, I have recently most carefully compared; and repeatedly, during the labour of comparison, have I been forced to the disagreeable conclusion that some one of the three editors had blundered. The atlases are: Bartholomew's *British Colonial Pocket Atlas* (1887), W. & A. K. Johnston's *Colonial and Indian Atlas of the British Empire* (1887), and Philips's *Handy-Volume Atlas of the British Empire* (1887). As engraver's work they are all creditable productions; and, apart from the engraving, they have all many excellent features, each one showing some points of superiority over the others. What I wish to direct attention to is that they cannot be found to agree on many simple matters of fact. In proof of this, let me give five instances out of my collection; and, lest it should be thought that the discrepancies are points of minute detail, I shall choose them so that they may all hinge on the fundamental question, What is British territory and what is not? For shortness' sake I shall speak of the atlases as B., J., and P.

1. *Ellice Islands*.—B. marks these as British on map xxiv., and confirms his map in words on p. 16. According to J.'s map they are not British. P.'s maps do not contain them at all.

2. *British North Borneo*.—J. extends the west boundary as far as Brunei Bay. According to B. and P. it only comes as far west as Kimanis Bay—a difference of probably sixty miles of coast line.

3. *Pishcen Valley, &c.* According to P., an important district close on 200 miles long, is under British rule. Neither B. nor J. has anything to support this.

4. *Aden*.—In B.'s map xiv. there is a district of some considerable size, extending eastwards and northwards of Aden, coloured red and marked "under British protection." In P.'s map the same district is coloured red, but nothing is stated in words. J. gives no indication by colour or otherwise of such a protectorate.

5. *North Somali Coast*.—In P.'s map xxvi. a stretch of about 400 miles of this coast is marked British. Neither B. nor J. shows any belief in such an extension of the Queen's power.

You will observe that I do not in any of the cases hazard an opinion as to who is wrong, B., J., or P. I merely state, and deplore, the fact that they cannot all be right.

Is there no remedy for this? Will not one of the three firms concerned examine into such difficulties, and pointedly clear them up in a second edition, so that we may in time be able to obtain an authoritative atlas of the Empire.

THOMAS MUIR.

[In a notice in the ACADEMY of Mr. C. P. Lucas's *Introduction to a Historical Geography of the British Colonies* (Oxford: Clarendon Press), attention was drawn to the fact that the map, engraved by Messrs. W. & A. K. Johnston, represented Grinnell Land as a British possession.]

THE FIRST AUSTRALIAN POET.

London: Feb. 18, 1888.

In answer to your correspondent, Mr. Dykes Campbell, I shall be very glad to insert anything good by Barron Field in the new edition

of *Australian Ballads and Rhymes*, which is to go to press about March 1. Can anyone favour me with transcripts of his *chefs d'œuvre*? I have the very best authority—his own—for knowing that he was the first, and that anyone who listed might "be the second Austral harmonist"; but the only entire poem of his that I have by me is his rather moderate sonnet on the landing of Capt. Cook.

May I take this opportunity of pointing out a mistake in this little volume of mine. Charles Harpur's name, given correctly in the introduction and notes, is misspelled Harper in the text. This mistake I overlooked in correcting the proofs, in which task, as is often the case with serial publications, I had to work at rather high pressure. I should feel very much obliged if those who have noticed any other mistakes or shortcomings would write to me, care of Walter Scott & Co., 24 Warwick Lane, E.C.

DOUGLAS B. W. SLADEN.

London: Feb. 18, 1888.

I think Mr. Dykes Campbell has fairly substantiated Barron Field's claim to be called the first Australian poet, if date alone be considered; for Barron Field was born in 1786, and Wentworth not till 1791. Also, if we are to consider the date of publication, Field's *First Fruits of Australian Poetry* was printed (as Mr. Dykes Campbell has shown) in 1819, while the famous competition on "Australasia" for the Chancellor's medal at Cambridge did not take place until 1823. If, however, native birth is to be taken into account, Wentworth's claim may still stand, for he was probably a child of one of those early colonists whom Governor Phillips placed in Norfolk Island soon after the settlement of Port Jackson (1788). Personally, I still feel (as I stated in my article) that Harpur is the first Australian whom we can call pre-eminently a poet; for with Barron Field we associate his analysis of Blackstone's Commentaries, and we think of Wentworth as Australia's first great statesman. If I erred in implying Wentworth's priority in point of date, I erred in good company; for Mr. Henniker Heaton, in his interesting article on the Australian centenary in the current number of the *National Review*, says that he "heads our list of poets."

H. T. MACKENZIE BELL.

THE PUBLISHING PRICE OF LARGE PAPER COPIES.

London: Feb. 22, 1888.

The former use of a publishing price was to tell the public what it should pay, the present use is rather to tell it what it should not pay. In the case of a limited issue, exhausted before publication, the information seems superfluous.

But there is reason in Mr. Duff's complaint, and we shall in future guard against the evil he alludes to, in so far as we are able. We would only point out (1) that when the demand for a book exceeds, or is thought likely to exceed, the possible supply no action of the publisher can prevent copies from being bought and held for a rise; (2) that if Mr. Duff had written direct to us he would have saved himself annoyance and spared the readers of the *ACADEMY* this correspondence.

D. NUTT.

THE ETYMOLOGY OF "FORS."

Cambridge: Feb. 21, 1888.

As the etymology of the Latin *fors* is under discussion, and there is a question whether the Latin root *fer-* can ever appear as *for-*, I hope I am not out of order in stating that Vanicek derives *forda*, a pregnant cow, from this root. See Lewis and Short, s.v. *fordus*. Whether this is right, I do not pretend to say.

WALTER W. SKEAT.

AIPOINTMENTS FOR NEXT WEEK.

MONDAY, Feb. 27, 6 p.m. London Institution: "A Struggle for Life," by Prof. E. Ray Lankester.

8 p.m. Royal Academy: "The Christian and Pagan Elements in Mediaeval Sculpture," I., by Prof. J. H. Middleton.

8 p.m. Society of Arts: Cantor Lecture, "The Modern Microscope," I., by Mr. John Mayall, jun.

8.30 p.m. Geographical: "The District of the Ruby Mines of Burma," by Mr. Robert Gordon.

TUESDAY, February 28, 8 p.m. Royal Institution: "Before and after Darwin," VII., by Prof. G. J. Romanes.

8 p.m. Civil Engineers: "Manganese in its Application to Metallurgy," and "Some Novel Properties of Iron and Manganese," by Mr. R. A. Hadfield.

8.30 p.m. Anthropological: "The Japanese *go-hai* or Paper Offerings to the Shinto Gods" (with illustrative specimens), by Mr. Basil Hall Chamberlain; "Exhibition of decorated Arrows from the Solomon Islands," by Mr. Henry Balfour; "The Australian Class Systems," by Mr. A. W. Howitt.

WEDNESDAY, Feb. 29, 8 p.m. University College: Barlow Lecture, "A Critical Discussion of Selected Passages from Dante," IV., by the Rev. Dr. E. Moore.

8 p.m. Society of Arts: Discussion, "The Technical Education Bill," by Mr. Swire Smith.

8 p.m. Geological: "An Estimate of Post-Glacial Time," by Mr. T. Mellard Reade; "The Movement of Scree-Material," by Mr. C. Davison; "Some Additional Occurrences of Tachylite," by Mr. Grenville A. J. Cole; "Further Discoveries of Vertebrate Remains in the Triassic Strata between Budleigh Salterton and Sidmouth," by Mr. H. J. Carter.

THURSDAY, March 1, 3 p.m. Royal Institution: "Early Secular Choral Music," with Illustrations, IV., by Prof. Hubert Parry.

8 p.m. University College: Barlow Lecture: "A Critical Discussion of Selected Passages from Dante," V., by the Rev. Dr. E. Moore.

4 p.m. Archaeological Institute: "The English Mediaeval Church Organ," by Dr. E. J. Hopkins; "Churches in South Gothland," by the Rev. Sir Talbot H. B. Baker.

6 p.m. London Institution: "Glimpses into the Parochial History of the City, as gathered from the Records," I., by Mr. Edwin Freshfield.

8 p.m. Linnean: "A New Genus of *Cyrtopogon* from Madagascar," by Mr. E. G. Baker; "The Flora and Fauna of the Kermadec Islands," by Mr. J. F. Cheeseman.

8 p.m. Chemical: "The Origin of Colour and the Constitution of Colouring Matters generally," by Mr. H. E. Armstrong.

8 p.m. Society for the Encouragement of the Fine Arts: "The Influence of Japanese Art on English Design," by Mr. C. Holmes.

8.30 p.m. Antiquaries.

FRIDAY, March 2, 8 p.m. Royal Academy: "The Christian and Pagan Elements in Mediaeval Sculpture," II., by Prof. J. H. Middleton.

8 p.m. Philological: "Omissions, Redundancies, and Developments in Western English Dialects," by Mr. F. T. Elworthy.

8 p.m. Geologists' Association: "The Pleistocene Land and Freshwater Mollusca from the Barnwell Gravels," by Mr. B. Woodward; "The Evolution of the Cephalopoda," by Mr. F. A. Bather.

9 p.m. Royal Institution: "Poisons and Poisoning," by Dr. O. Meymott Tidy.

SATURDAY, March 3, 8 p.m. Royal Institution: "Experimental Optics," VII., by Lord Rayleigh.

4 p.m. National Indian Association: Annual Meeting, "Recent Movements in India," by Sir W. W. Hunter.

SCIENCE.

Biographies of Words, and the Home of the Aryas. By F. Max Müller. (Longmans.)

In comparing this volume with the brilliant lectures by which many years ago the author won a deserved renown as one of the most consummate masters of English style, there is one difference too striking to be overlooked by the most careless reader. The tone of undoubting confidence, not only in the truth of his conclusions but in the certainty of their meeting with general assent, which added not a little to the charm of Prof. Max Müller's earlier writings, seems in this, his latest work, to have given place to a somewhat uneasy consciousness that his statements have now to encounter not, as in times past, merely the cavils of the ignorant, but the opposition of scholars of high and just repute. In his own chief departments of study the world has listened to the voices of younger investigators, who dispute many of his conclusions

on grounds the validity of which he is unable to discuss, because he has not made himself thoroughly acquainted with the new methods of research from which they result. This, or something like it, is what must, in greater or less degree, happen to the veteran in every rapidly-advancing science. Prof. Max Müller, however, may take to himself one consolation which is denied to most others—his writings are likely to survive as literature even when they have yielded to the universal fate and become obsolete as authoritative guides in science.

With regard to the specific questions at issue between Prof. Max Müller and the newer school of philologists, it is quite unnecessary to say that I do not pretend to speak with authority. Speaking, however, as an apprentice, not as a master, I may venture to say that the principles of the modern school appear to me to be strongly recommended by their internal coherence and by their agreement with such of the facts as are known to me. This being the case, it is a matter of course that I find myself unable to assent to a great deal of what is contained in the present volume. It is true that in one of the papers here reprinted Prof. Max Müller disclaims anything like hostility to the alleged discoveries of recent philology. His position seems to be that on the whole these discoveries are probably true, but somewhat unimportant. He speaks of them as "filigree-work traced on the cyclopean walls" of the noble edifice erected by the founders of the science; and—varying the figure—he protests against the presumption of those who, "having built some useful attics, declare that the first and second floors of the building erected by such men as Bopp, Grimm, and Pott are no longer fit for respectable people to live in." This protest is quite valid against anybody who claims that any living philologists are equal in intrinsic greatness of achievement to the founders of the science. But if it means, or is interpreted to mean, that the results of recent philology may be safely ignored, that is quite another thing. To answer metaphor by metaphor, one might say that the top storey, though it is the least important part of a dwelling-house, may be the most important part of a watch-tower. Of course metaphors are no arguments, but it seems more fitting to compare a science to a watch-tower than to a house for "respectable people" to live in. If the results of the later philologists be true at all, it follows that a vast multitude of questions are on phonological grounds now closed which were formerly, so far as such grounds are concerned, open questions, and were decided by former philologists by criteria of some other kind, which may now be dismissed as irrelevant. Either the later developments of the science are unsound, or else it is perilous to discuss any question of ultimate etymology without taking them into account. However, it is always possible that, in the enthusiasm of the possession of new instruments, the younger school may some be led to overlook sound results which their predecessors obtained by less elaborate means. For this reason it will be worth while to listen to what Prof. Max Müller has to say in arrest of judgment on questions that are beginning to be regarded as settled; and,

apart from what is controversial, the present volume contains a good deal that is of unquestionable interest and value. It is well to remember that opinions and arguments are not necessarily obsolete because they are not expressed in the very newest notation.

The first paper in this collection will not, I think, generally be regarded as one of the most successful. The author there deals with the etymology of "Fors Fortuna," and maintains that the appellative sense of the Latin *fors* is not the primary one, but is derived from the name of the goddess. He further argues that the root of the word "Fors" is not, as is commonly supposed, identical with that of *fero*, but with the root *gher* which appears in *θερμός*, *formus*. The result of this is that the goddess Fors is one of the multitudinous forms of the Aryan goddess of the dawn. In the *ACADEMY* of January 28, Prof. Max Müller tried to show that the derivation of the word from the root of *fero* is phonologically impossible; but the goddess Fors refused to smile on the professor's appeal to the *Sortes Bruggmannianae*. The derivation from *gher* is, doubtless, linguistically possible; but before it can, as Prof. Max Müller demands, "be accepted and treated like any other historical fact," it ought to be proved that the generally received etymology is inadmissible with regard to meaning. This Prof. Max Müller attempts to do; but his proof is far from convincing. His argument is that it is unlikely that a goddess who is known to have been the object of such genuine worship as Fors Fortuna can have been in origin a mere personified abstraction like Fides, Spes, Victoria, and so forth. But it is generally believed that one characteristic of Italian religion as distinguished from that of other Aryan nations was the habit—not, indeed, of personifying abstractions and then worshipping them, but—of ascribing seemingly supernatural phenomena to the agency of unknown divine beings, and bestowing on these beings names indicative of the mode of their operation. In all probability, *Rediculus Tutanius* was believed to be a very real person even by those who invented his name. A similar name in Greece, as denoting a deity really believed in, can scarcely be imagined as possible. Prof. Max Müller himself connects the name Ceres with the Sanskrit *Sarad*, harvest; and even the name of Venus has surely an abstract signification. Now, in all countries the result of "the lot cast into the lap" has been referred to divine agency. Is it so very unlikely that the unseen being whose operation was manifested in "chance" or "luck" should in Italy have received her name from the character of her influence on mankind? Or is it so very contrary to what one knows of human nature that the deity of luck should have been worshipped with enthusiastic devotion? Altogether, I fail to see that even a plausible case has been made out against the accepted view of the etymology of Fors.

The four following papers, "Words in their Infancy," "Persona," "Schoolday Recollections," and "Weighing, Buying, and Selling," are more satisfactory, as they chiefly deal either with admitted facts or with conjectures which, if incapable of being demonstrated, are at any rate more or less plausible

and interesting from their ingenuity. The notion, however, that *ghost* is etymologically related to *yeast* is not in accordance with the accepted doctrines of phonology. With regard to the most obvious objection, Prof. Max Müller says that "the representation of a Sanskrit [Aryan?] *y* by a [common] Teutonic *g* has been needlessly called in question"; but where is there any evidence in its favour? To appeal to the existence of instances of "analogous change" in Middle High-German does not seem to be much to the purpose.

The chief interest of the volume, however, lies in the chapters relating to the question of the original home of the Aryas. Prof. Max Müller argues that the older theory of an Asiatic origin is still unshaken by recent investigations. I do not think that he has succeeded in proving that the advocates of the European theory have no case; but he presses very effectively a good many points in opposition to the precipitate dogmatism of those among them who regard the question as conclusively settled. Although my own impression is that much of the evidence adduced in favour of the European theory has great cumulative weight, I cannot but regret the disposition shown, not only by Dr. Penka but by some more sober-minded upholders of the same position, to think that any sort of argument is good enough to use in what they consider a winning cause. The famous argument founded on the names of the beech and the birch, for instance, seems to me altogether destitute of force. The name of the beech is not common Aryan at all, but only European. The birch, as Prof. Max Müller has here shown, is indigenous in Central Asia, as well as in Northern Europe. I must confess, also, that I am largely in accord with Prof. Max Müller as to the incorrectness of the assertion that Sanskrit is less primitive than Greek or Lithuanian, not to say Gothic or Scandinavian. That it is so "in many respects" may be admitted; that it is so on the whole is a contention which seems violently opposed to fact. At the same time, I cannot quite understand all Prof. Max Müller's arguments on this point. He says, for example:

"And when from the vowels we turn to the consonants, where do we find the most perfect system? Five modifications of each check, guttural, dental, labial; a whole palatal series and a lingual series, which is not by any means restricted to non-Sanskritic words; five modifications of the nasal, and five modifications of the Visarga: Is not this a set-off against the loss of *ō* and *ē*, supposing that these sounds were really unknown in Sanskrit?"

As the question is one of "primitiveness," and nobody contends that the Sanskrit palatals and linguals existed in primitive Aryan, this argument rather reminds one of Charles Lamb's apology for coming to the office very late in the morning: "But, then, you know, I go away very early in the afternoon." Prof. Max Müller, however, while asserting the relative primitiveness of Sanskrit, rightly abstains from laying any great stress on this as an argument. He fully recognises—what can be shown by abundant examples—that the formal antiquity of a language is not necessarily in direct proportion to the nearness of those speaking it to their original home, nor even to their comparative freedom from

foreign admixture; and he also makes allowance for the fact that we have no means of knowing what the European languages were like at the time when Sanskrit was a living tongue.

Another point in which the author shows commendable caution is his refusal to avail himself of the argument which some have drawn from the supposed presence of Semitic loan-words in the common Aryan speech. His remarks as to the precarious nature of the evidence on which this borrowing has been assumed appear to me perfectly sound. Prof. Max Müller's observation that the Aryans had no common name for fish (or for any species of fish), while they had two common names for serpent, appears to have considerable force against that form of the European hypothesis which places the Aryan home in Scandinavia or on the shores of the Baltic.

In the chapter on "The Earliest Aryan Civilisation" I find a great deal with which I am in cordial agreement. Prof. Max Müller may or may not be prejudiced against the theory which regards "metocracy and communal marriage" as a stage through which the human race in general has passed. My own prejudice, if I have any, is in the opposite direction; but it seems to me absurd to deny that before the time of their separation the Aryan people had attained to the possession of an organised social system distinctly of the patriarchal type. As to the degree of perfection in the arts of life ascribed to the primitive Aryans, the view expressed in this volume is somewhat more moderate than that which the author is generally understood to have advocated in his earlier writings. The chapter is accompanied by a classified vocabulary of common Aryan words, throwing light on the condition of the people before their separation.

The appendices to the volume consist of a letter from Sir George Birdwood on "The Aryan Fauna and Flora"; a correspondence reprinted from the *Times* on "The Original Home of Jade," and another from the *ACADEMY* on the Soma-plant; a letter from the author to Mr. Rieley on "Philology versus Ethnology"; and an article on "The Third Metal, Copper or Iron"—the last being a discussion of one of the points raised in Prof. Sayce's address to the British Association at Manchester.

HENRY BRADLEY.

CORRESPONDENCE.

SOME CONTRIBUTIONS TO PÂLI LEXICOGRAPHY.

Wood Green.

Kutukuncaka occurs in the following passage from the *Divyâvadâna*, p. 8, l. 3:

"Âkroçakâ roshakâ vayam matsarinâh ku-
tukuñcakâ vayam
dânam ca na dattam anv api yena vayam pîtr-
lokam âgatah."

On p. 302, l. 3, of the same work the word recurs:

"Ete pi matsarinâ âsan kutukuncakâ âgri-
hitaparishkârâs."

The editors, not understanding this unusual

* The editors suggest "ostentatious" as the meaning of *âgrihitaparishkâra*; but the context shows that it signifies "having beggarly belongings," hence "mean," "shabby."

term, have admitted into their text (p. 302) the variant reading *kuṭkuṇcaka*, which they connect with Pāli *kukkuccaka*, "remorseful." Childers, however, refers the well-known *kukkucca* to the Sanskrit *kaukritya*. It sometimes appears under the form *kukucca*, as if from *ku-kritya*; and, in the *Anguttara Nikāya*, iv. 198, we find *akukkuccakajāta*, in the sense of "well-formed," applied to a tree. It is possible that *kukkucca*, "remorse," has a different origin, and may be derived from *kūt + kritya* (cf. Sk. *kūt*, "to sorrow"). But, be this as it may, *kukkucca* is never used in Pāli texts along with *macchari*, *macchara*, or *kadāriya*, but with *uddhacca*, &c. In the passages quoted above, *kuṭkuṇcaka* has not the sense of "remorseful."

The metre of the verse quoted from p. 8 of the *Divyāvadāna* would seem to show that the reading *kuṭkuṇcaka* is to be preferred to that of *kuṭkuṇcaka*. If, then, this term does not bear the meaning "remorseful," what is its true signification? Sanskrit gives us, apparently, no direct clue to the meaning, so recourse must be had to Pāli for its signification. Childers's dictionary here fails us entirely, and we are compelled to look elsewhere for help in solving the difficulty. It may be noted that *ākroçakā* and *roṣakā* correspond to Pāli *akkosakā* and *rosakā*, which are usually found together (see *Samyutta-Nikāya*, iii. 31, p. 96; *Sutta-Nipāta*, p. 24) in connexion with *maccharā*; *matsarinā* is the Pāli *maccharino*; and it may be assumed that in meaning it is synonymous with *kuṭkuṇcaka*.

On pp. 219, 298, of the *Divyāvadāna*, this term is associated with *āgrihita*, in Pāli *aggahita* (not in Childers; but compare *aggahitatta* in *Puggala Paññatti*, ii. § 3, 13; *Dhammasaṅgani*, § 1122, p. 199), which literally means "drawn tight or close"; hence closefisted, mean, greedy. But, in the *Puggala*, among the synonyms of *macchariya* we find not only *aggahitatta* and *kadāriya*, but also *kaṭukaṇcukātā* (written *kaṭa-kaṇcukātā* in the *Dhammasaṅgani*), an abstract noun formed from an adjective *kaṭukaṇcuka* or *kaṭa-kaṇcuka*, corresponding to an original *kṛta-kaṇcuka* or *kṛta-kuṇcaka*, "close," "near," "greedy" (cf. Sk. *kṛta-kapata*, "fraudulent"). *Kaṇcuka* or *kuṇcaka* must be referred to the root *kañc* or *kañc*, "to draw together, contract" (cf. Sk. *kañcuka* and *kañcukita*).

The compiler or compilers of the *Divyāvadāna*, not recognising the origin of *kaṭukaṇcuka*, tried to Sanskritise it into *kuṭkuṇcaka*, connecting it, perhaps, with *kuṭkuṇcaka* or *kuṭkuṇcaka*. But, whatever may be the etymology of the word, there is no doubt as to its meaning, which cannot be settled offhand by an appeal to the Sanskrit dictionary. As with *ekodibhāva*, no amount of ingenuity exercised by Sanskrit scholars can determine its meaning apart from the Southern Buddhist texts, where it is employed in its true and legitimate sense. That Pāli terms have been altered in the process of Sanskritisation needs no proof. We have several specimens in the *Divyāvadāna*.

The editors furnish us with a good example in *sambhinna-pralāpa* (p. 302) = Pāli *samphappalāpa*, "nonsense." *Sampha* was a word evidently unknown to the Sanskrit compiler, but it is not uncommon in Pāli. We have also a verb *samphappalapati* (*Sum.*, p. 74). To this we may add *vardhanīya* = Pāli *bhājana*; *nishparusha* = Pāli

nippurisa. The term is applied to music, and does not mean "not harsh," "soft," but "not human," "not produced by human beings," but by *gandharvas* or heavenly musicians. In the translation of the *Jātaka* book (p. 75), "nippurisehi turiyehi paricāriyamāno (v.l. *parivāriyamāno*)," the same expression as occurs in *Culla* VII, i. p. 180, is rendered "attended by musical instruments which played of themselves." In the *Vinaya Texts*, iii. p. 225, it is translated "waited upon by women performing music." This expression, I venture to think, may be rendered thus—"entertained by heavenly music." The Sanskrit parallel passage (*Div.*, p. 6) is *nishparushena* (v.l. *nishpurushena*) *tūryena kridati ramate paricārayati*" (see *Jāt.* i. p. 58). *Utkuṭukaprahāna* = Pāli *utkuṭikaprahāna*; *lūha* (pp. 13, 81) = Pāli *lūha*; *phuttaka* (p. 29), a kind of *barf* cloth = Pāli *potthaka* (see *Jāt.* ii. p. 432, where the form *pottha* also occurs); *phelā* = Pāli *pelā* (see *peḍā*, pp. 251, 365); *abhiprāya* = *adhiprāya*, Pāli *adhippāya*; *abhyavagāhya* = *adhyavagāhya* of Pāli *ajjhaghāhetvā*; *abhinirnameyāmi* = *abhinirnamayāmi* of Pāli *abhininnāmeti*.

A reference to Pāli explains many difficult expressions, as *asammosa-dharman*, which does not mean "ever alert," but "whose dharma or doctrine is without confusion"; *tadbahulavihārin* = Pāli *tabbahulavihāri*, "living intent on that"; *sthavika*, p. 475, answers to Pāli *thavika*, "a bag"; *kaṭaccha* or *kaṭacchu*, "a vessel" (?), p. 398, corresponds to Pāli *kaṭacchu*, "a ladle or spoon" (not found in our Sanskrit dictionaries), the etymology of which is, perhaps, to be sought in some of the modern Prakrits.

On p. 286, l. 2, we have the puzzling expression, "*sarvam santah-svāpateyam*"; on p. 439, "*sarva-santam svāpateyam*"; and, on p. 291, "*prabhūta-satta-svāpateyam*." If we take the word as it occurs on p. 291, we find it a part of a stock phrase, which we get in a simpler form in the *Dīgha Nikāya*, v. 10 (*Sumāṅgala*, p. 295); *Sutta-vibhaṅga*, i. p. 18; *Samyutta*, pp. 94, 95.

In the Pāli parallel passages there is no *prabhūta-satta-svāpateya*; but Buddha-ghosa, in commenting on the passage referred to in the *Kūṭadanta-sutta*, has the following note: "*Tāta idam evam bahum dhanam kensamgharitanti? Tumhākam pitamahādihi yāva sattamā kula-parivattāti*." The word *sattama*, Sk. *saptama* (as well as *satta*) may, perhaps, have been used in the sense of "going back to the seventh generation," hence "long accumulated," "of long standing" (see *Jāt.* ii. p. 47).

In the phrase on *Div.*, p. 439, I think we ought to read "*sarvam satta-svāpateyam aputram*," which would correspond to a Pāli phrase, "*sabbam sattamam svāpateyyam aputtakam*." Of the following passage in the *Samyutta Nikāya*, where *sattama* means the seventh (in succession):

"*idam sattamaṃ aputtakam svāpateyyam rājākosam paveseṭi*" (*ibid.*, 2.10, p. 92).

The phrase, *pahusanto*, "being rich," occurs in the *Sutta Nipāta* (i. 6.7, p. 18), but it throws no light on the passages under discussion.

R. MORRIS.

A RECENT EMENDATION OF SOPHOCLES.

Oxford: Feb. 13, 1888.

In the present number of *Mnemosyne* appears

* If *santa* were the true reading, it might stand for *kula-santaka*, "belonging to the family."

† Or (f) *sarvam sattaṃ svāpateyam*.

an emendation by J. Van Leeuwen of Soph. *Ajax*, 646-9:

θανθ' ὁ μακρὸς κτανάρθμης χρόνος
φύει τ' ἔδῃλα καὶ φανέντα κρύπτεται
κοῦκ ἔστ' ἑλεπτον οὐδέν, ἀλλ' ἀλίσκεται
χῶ δεινὸς ὄρκος καὶ περισκελεῖς φρένες.

Two emendations made by others are approved as certain:

"Correcta sunt a viris doctis duo vitia, ut equidem arbitror, manifesta. Nam pro φύει legendum esse φαίνει non multi opinor non concedent Herwerdeno; et pro ὄρκος, quod vocabulum sensu vacat, Bothius restituit ὄγκος. Satis usitata sunt ὄγκος-θαί, ὄγκον αἰρεσθαί . . . similia, sensu superbiendi."

Excuse, however, is taken to *ὄγκος ἀλίσκεται*, and it is proposed to read:

κοῦκ ἔστ' ἑλεπτον οὐδέν, εἰ μάλ' ἀσσεταί
χῶ δεινὸς ὄγκος καὶ περισκελεῖς φρένες.

Emendations of a passage which is a common possession are of interest outside the circle of the special students of Sophocles; and one may be permitted to offer reasons in favour of the familiar text.

Many will probably feel that the second verse loses in dignity by the substitution of *φαίνει* for *φύει*. Matters of taste are proverbially disputable; but is not the text sufficiently vindicated by the combination of *φύειν* and *φαίνειν* in another famous passage of Sophocles?

Oed. Col. 1225:

μή φύγει τὸν ἄπαντα νικᾷ λόγον τὸ δ', ἐπεὶ φανῇ,
βῆναι κείθεν ὅθεν περ ἦκει πολὺ δεύτερον ὡς τάχιστα.

It is instructive to observe that, as one critic alters *φύει* to *φαίνει* in the passage from the *Ajax*, so another (quoted in Mr. Jebb's *apparatus criticus*) alters *φανῇ* to *φύγῃ* in this passage.

As to the other emendations—*μαλ' ἀσσεταί* seems not to be the right kind of word to combine with the metaphor of *ὄγκος*. Something more properly opposed to *ὄγκον αἰρεσθαί*, for instance, is wanted; and the emendation certainly requires the support of some parallel expression. But the passages quoted are none of them to the purpose, and could at most justify only the expression *μαλ' ἀσσεταί τὰς περισκελεῖς φρένας*. From Epicharmus is quoted: *μή τὰ μαλακὰ μῦθος, μή τὰ σκληρὰ ἔχρη*; from Athenaeus: *τὸν σίδηρον μαλ' ἀσσεταί*; from Euripides: *χρόνος μαλ' ἀσσεταί*, and similar expressions from other writers.

But there seems to be a more serious difficulty. Does not the emendation cause a bathos in the sense? *κοῦκ ἔστ' ἑλεπτον οὐδέν, εἰ—*, ought obviously to be followed by a clause describing something which never would be expected to happen. Yet *μαλ' ἀσσεταί τὸν δεινὸν ὄγκον*, if a possible expression, would seem most naturally to mean something which a Greek would count upon.

J. COOK WILSON.

SCIENCE NOTES.

THE "Progreso Editorial" of Madrid has published a handsome Spanish translation of Tylor's *Anthropology*, by Dr. Antonio Machado. A preface by Dr. Tylor reminds the modern Spanish student of the great part taken by his ancestors in the foundation of anthropology, and the field for study still open in Spanish America.

WE have received the first number of a new periodical devoted to anthropology—entitled, *Internationales Archiv für Ethnographie*—edited by Dr. J. D. E. Schmeltz, keeper of the Royal Ethnological Museum at Leiden, with the co-operation of Dr. Bahnsen, of Copenhagen; Prof. Guido Cora, of Turin; Dr. Dozy, of Noordwijk; Prof. Pietri, of St. Petersburg; and Dr. Serrurier, of Leiden. Among those who have promised to contribute, the only English names are Gen. Pitt Rivers, Dr. Beddoe, and Dr. Sidney J. Hickson. The present number contains contributions in German,

* May *kasu* not be right, and be connected with *karu*, "pungent" (cf. Eng. *stingy*, from "to sting")?

French, and Dutch; but whether English also is admitted we do not know. The annual subscription is £1, for which will be given six bi-monthly parts, each consisting of thirty-two pages large quarto, with three chromo-lithograph plates. The agents for England are Messrs. Trübner. The two most important articles in this number treat of the arrows of New Guinea, most elaborately discussed by Dr. Serrurier; and the *mandau* or sword (with much besides) of the Dyaks of Borneo. The chromo-lithographs, with which both these papers are illustrated, are admirable examples of the art.

PHILOLOGY NOTES.

In the *Revue de Linguistique* for January Prof. J. Vinson prints a Spanish Basque text of the seventeenth century, the communication of which he owed to the generosity of Mr. B. Quaritch. In the preceding (October) number, Eugène Hins is bold enough to question the received opinion of the derivation of the Romance tongues from the Latin.

Die Hds. des Pricke of Conscience von Richard Rolle de Hampole im Britischen Museum. Von Percy Andrae. (Berlin: Bernstein.) This is a graduation essay by an Englishman, who has just taken the degree of Ph.D. at Berlin. Dr. Andrae has examined the eighteen British Museum MSS. of Hampole's poem; and, by means of a comparison of their readings, chiefly in three different parts of the work, he endeavours to ascertain their mutual relations. His conclusion is that the MSS. are derived from four sources, three of which go back to a common archetype. The fourth, represented by the two MSS. used by Dr. Morris in his edition, is of independent origin, and is by far the most faithful in its rendering of the author's text. Some of the MSS., however, follow different recensions in different parts of the work. Dr. Andrae's investigation is careful and sound in method, and his conclusions deserve to be provisionally accepted, though experience shows that the first attempt at a genealogical scheme of the MSS. of an author is always found to require a good deal of revision. Incidentally the writer calls attention to two oversights in Dr. Morris's edition—the omission of fourteen lines after l. 7509, and the adoption, in l. 6097 of the reading of the Galba MS., where that of Harl. 4196 is obviously preferable.

WE regret to record the death of the Rev. Dr. George Percy Badger, the well-known Arabic scholar, and a valued contributor to the ACADEMY. Next week we hope to give some estimate of his services to Oriental learning.

MEETINGS OF SOCIETIES.

CAMBRIDGE ANTIQUARIAN SOCIETY.—(Friday, February 6.)

PROF. A. MACALISTER, president, in the chair.—Prof. Macalister exhibited six skulls, types of the large Egyptian collection recently acquired by him for the Cambridge University Museum, and commented on their ethnic characters, observing that craniology had as yet given no support whatever to Prof. Huxley's theory that the aborigines of Egypt were akin to the Australoid tribes. He remarked also that skulls from Egyptian sepulchres were scarcely ever of senile subjects, pointing to the prevalence of epidemics, which we know from other sources. Of the six skulls exhibited, one showed prognathous features of the negro type. He also exhibited a number of articles which had been lately found in the coprolite-diggings at Hauxton, Cambs., including coins of Hadrian, Gratian, Nerva, and Constantine, styces of Eanred and Burgred, several bronze and brass rings, buckles and pins; and also iron knives and hooks, and two carved bone handles. These were found

at very different depths in the excavations.—Mr. Magnússon read a paper on four Runic Calendars, originals of three of which were exhibited, one belonging to Mr. Henry Gurney of Reigate, and two to the Cambridge Museum of Local and General Archaeology. Of the fourth, belonging to the Archæological Museum of Mannheim in Germany, Mr. Magnússon exhibited a copy which showed that this book-formed calendar, carved on six plates of wood, was wrought in a peculiar fashion, the lines of each obverse side running from left to right, those on the reverse from right to left with the by-strokes of the runic characters, employed as Sunday-letters, turned round in the same direction. The forms of the runes varied greatly, with the exception of that which stood for the seventh day of the week, which retained consistently the same form throughout. This rude and primitive indicator of time began the year on the December 24, left out the 30th of that month, and consequently indicated a year too short by one day, as did indeed Mr. Gurney's Calendar and one of the two specimens in the Archæological Museum. Mr. Gurney's Calendar was in several points perhaps the most interesting. It began the year on April 14, St. Tiburtius's day; divided it into two semesters, winter and summer half-year, left out December 31, and had Golden Numbers of a type quite peculiar to itself, so far as Mr. Magnússon was aware. They were, with the exception of the signs for Golden Numbers XII. and XIII., derived from the Arabic numbers on the old traditional principle of rune-carvers or rather rune-scratchers—for it was a fact, that should not be forgotten, that runes were originally scratched, with a sharp point simply, and only later were executed by the method of carving—never to let a line run parallel to the grain of the wood on which the characters were carved, and thus it constituted a real curiosity in palæography. This calendar, too, contained the Golden Numbers of the Paschal term and of the term of Pentecost, in accordance with the perpetual lunar calendar of the Christian Church. One of the Museum Calendars also had Golden Numbers of somewhat unusual type, and rather irregularly executed. That also began the year on April 14, and left out December 31. Its lists of saints' days and mark-days was unusually full, and altogether it was a very perfect type of 'Prim-stave' record. These two calendars must be older than 1690, or at least belong to the rune-stave tradition which was in vogue before that date, when, by the labours of the Swedish astronomer, Samuel Krok, the reformed rune-stave was introduced, which by its Golden Numbers showed the true novilunia, and instead of III. had XIX. against January 1, followed by VIII., XVI., &c., in due course. The second stave belonging to the Cambridge Museum was one without Golden Numbers, beginning on January 1 and containing a year of 365 days. The noticeable peculiarity of this runic stick was that the days of the week were so arranged as to give one the impression that it bore traces of the old division of time by pentades. The first five days of the week formed a group by themselves, and the last two, being merely a couple of straight strokes, were joined together by combining strokes throughout. This, so far as Mr. Magnússon knew, was the only runic calendar which dealt with the Sunday letters in this fashion, and was therefore a very valuable and venerable piece of antiquity. For a long time, in fact since the publication of Finn Magnússon's heathen Calendar of the North, in 1828, no doubt had been entertained among the learned of the early heathen time division of the North having been counted by pentades. But this was the first real document that might be appealed to in support of that mode of computation having once been in practical use among Scandinavians. Rune-stave records had as yet been very imperfectly studied. Some people would even make us believe that they were of small worth. Yet it was an obvious matter that they were the last existing proofs of a tradition which once upon a time was as vividly realised as it was wide-spread; and no one could tell the real age of the traditional features exhibited on this stave or that, until a comparative study of rune-staves generally had been made by runic scholars.—Prof. Skeat remarked that he thought that the compound characters for 10, 17, and 19 in the

calendars might be explained as being merely the Arabic numerals. The first was composed of 1 and a small square 0, the two being joined together; the second of 1 and a small 7 joined together; and the third of 1 joined on to a slightly imperfect 9. As to the old puzzle concerning the order of letters in the ancient *Futhork*, or runic alphabet, for which no origin had hitherto been found, he suggested that it was not impossible that it had something to do with the Paternoster. The Paternoster was regarded as a charm, and the letters had magical virtues. Even the order of the letters was regarded with a superstitious reverence, as shown by the curious Anglo-Saxon poem on the subject published by Kemble. A translation of the Paternoster into any Low German dialect would begin, as in Anglo-Saxon, with the words—“Fæder ure, thu on (or in) heofonum”; where the words begin with F, U, TH, O. This gives the first four letters. Of course this is but a guess; but, in the absence of further evidence, it seemed to him to be worth mentioning. That the runes were originally scratched rather than cut is curiously shown by the English word to “write.” It is cognate with the German *reiben*, and meant originally to tear or scratch a surface.

NEW SHAKSPEARE SOCIETY.—(Friday, February 10.)

The Rev. W. A. HARRISON in the chair.—The paper read was on “Elizabethan England and the Jews,” by Mr. Sidney L. Lee. He first dealt with the Jew on the stage, in Gosson's allusion, in the “Three Ladies of London,” in Marlowe's “Jew of Malta,” the popularity of which was remarkable, and probably led Shakspeare to write his “Merchant of Venice” about 1596, whose Jew was a portrait from the life. An anonymous play on Solinus introduced a Jewish physician, who reappeared forty years later in a play by Goff. Dekker's and Brom's Jew plays are lost. The English travelling companies on the Continent acted Jewish plays. Jews are alluded to in very many Elizabethan plays, by Webster, Ben Jonson, in “Every Woman in Her Humour,” &c. The drama should be studied for social history; it was a reflection of contemporary society. All plays below the highest contain historic and social characteristics which the historian must study. In Europe, the continental Jew was nearly as influential in Elizabeth's time as he is now. In England, the popular opinion is that there were no Jews. William Davies, a traveller, writes, in 1597, of foreign Jews, and declares that none were here. Hakluyt, and an English translation of French travels in the Levant, describe in detail Jews abroad. Yet in “Every Woman in Her Humour,” a city dame tells a friend to hire a dress at a Jew's. True, that in 1290 an order in council banished Jews from England. But it was not fully carried out, and its effect must have soon passed away; it remained in habitual abeyance. Commerce brought Jewish settlers here. In 1233 a house for Jewish converts was built on the site of the present Rolls Court and Chapel, and flourished for more than 300 years. In 1367 the Master of the Rolls was made Master of the Jews. In 1490 the Jews expelled from Spain found a home here; and later they came to London, York, and Dover. About 1540 Jews' houses here were searched. In April, 1550, Ferdinando Lopez, a Jew born, was convicted here of gross immorality, and he was banished. In Elizabeth's time, foreign and Jewish merchants, &c., fleeing from foreign religious persecution, settled here. In 1593, Sir R. Cecil contended for English hospitality to aliens. When Elizabeth came to the throne (1559) 3,000 aliens were here; 4,800 in 1563; they soon increased (in 1571) to 7,000; and in James I.'s day (1618) to 10,000. The foreigner is very frequently portrayed on the Elizabethan stage. Among them were many Jews. In 1591 Elizabeth made for a time a Portuguese Jewess a maid of honour. As Jews and usurers were synonymous, Jews must have been here. Stow complains that pawnbrokers and baptized Jews had crept into Hounsditch. Jew doctors, Jacob and Lopez, were well known. Roderigo Lopez came to England in 1559, with his brother Louis. He was the first physician to Bartholomew's Hospital, and was praised by Clowes for his skill. He was elected to the College

of Physicians, and was first physician to Leicester's household. In 1586 he was chief physician to Queen Elizabeth. But he turned to treachery. He quarrelled with Essex and Don Antonio, and was accused of attempting to poison the Queen. In 1594 he was tried, and executed at Tyburn in June; but the evidence against him was weak, and the Queen granted his property to his widow. John Taylor, the Water-Poet, and many others, abused him. In his time, other Jews were here. A miner and chemist, Gaunz, a Bohemian Jew, was arrested at Bristol, and sent to the Privy Council. The Converts' House, in Chancery Lane, went on with its work. In 1577, Nathaniel, a Jew, was baptized in London, and the sermon on the occasion was preached by Foxe, the martyrologist. Jews were also at Oxford. A Jewish settlement existed there continuously. In 1608, two Jews were allowed to read in the Bodleian. Jacob Barnet taught Hebrew there, but was banished in 1613. In 1623, a small pension was granted to a Jew. In 1628, a Jew wrote a sonnet in *Naps upon Parnassus*. Though they were not numerous here, yet here some of them must have been; and the study of Jews in the Elizabethan drama is worthy of the attention of all social historians. The chairman, Dr. Furnivall, Mr. Poel, Mr. Tyler, Miss Latham, and others who joined in the discussion, confirmed Mr. Lee's facts and arguments.

ENGLISH GOETHE SOCIETY.—Manchester Branch.—
(Wednesday, January 25.)

CONSUL E. LIEBERT in the chair.—Prof. Schuster delivered a lecture, illustrated by most interesting experiments, on "Goethe's Theory of Colours." The lecturer first pointed out that there is nothing essentially antagonistic between poetry and science, and that, as a matter of fact, Goethe possessed in a very high degree the power of observation, so necessary to the scientific student, and also that of classification and generalisation, which is so helpful to the satisfactory prosecution of scientific inquiries, particularly in their preliminary stages. And it was just in those branches of natural science which were in the preliminary stage that Goethe was most successful. His theory of colours, however, though worked out with marvellous patience and acuteness, is but the last brilliant flicker of mediæval science, which ignored the fact that the physical world is ruled by definite numerical laws, and that a physical theory must be able to stand the test of mathematical demonstration. Goethe held that a close observation of what is going on around us in nature will teach us for more than we can learn by experimentation; and particularly did he abhor those experiments which render it necessary for the observer to shut himself in a dark room and admit the light only through a narrow aperture. He refused to break up light, and took it as an ultimate thing in itself. The fundamental facts from which he starts—the blue sky and the sunset colour—are just those which, according to Newton's theory, are most complicated and difficult to explain; and, moreover, whilst we have been driven by continued experience to look on the human senses as the most fallible and deceptive of guides, Goethe takes men's judgment as the only possible test of colour sensation. Hence his theory, while argued out with perfect logic on the grounds from which it started, fails to stand the ultimate test of all physical truth—that of numbers. It does not allow us to get numerical relations which we can verify or disprove by experiment. The last part of Goethe's work on the *Farbenlehre* gives a historical account of the progress of optics which, in the lecturer's view, is the most complete and satisfactory history ever written in any department of science, and which should be read by every student of physics.

(Saturday, February 18.)

DR. WARD, president, in the chair.—Prof. Lobenhoffer read a paper on Frederick Theodor von Vischer, Professor of Literature and Aesthetics, at Tübingen, and afterwards at Stuttgart, who died in September last at the ripe age of eighty-one. Having been first a pupil and later on a colleague of Vischer in the Stuttgart Polytechnicum, the lecturer was able to bring before his hearers a vivid picture of the man himself, as well

as of his work as teacher and writer. To illustrate his method as an æsthetic critic, Prof. Lobenhoffer, from his own notes taken when a student, gave the substance of Vischer's criticism of the "Prologue in Heaven," in Goethe's "Faust." (It is hoped that this portion will be printed in the transactions of the society.)—In the discussion which followed, the president drew special attention to one point insisted upon by Vischer—viz., that the absence of supernatural intervention on the side of good throughout Goethe's play (in contrast with the Volksbuch and the puppet-play) was no oversight on the part of the poet, but was deliberately intended to mark the truth that, as Vischer puts it, "whatever magic power evil may exert, good must ever finally triumph, even without miracles."—After the discussion of the paper, the president called attention to an article by Dr. Bielschowsky, "Die Urbilder zu Hermann und Dorothea" (*Preussische Jahrbücher*, 1887, Heft 4), in which the suggestion is made that, in sketching both the character of Dorothea and her adventure with the soldiers, Goethe had in his mind Lili Schöne-mann and her perilous flight from Strassburg, in 1794. This suggestion did not commend itself to Dr. Ward.—The secretary mentioned that the source of Goethe's song, "Der Goldschmiedesegell," has been shown by Dr. J. Goebel (*American Modern Language Notes*, May, 1887) to be Henry Carey's "Bally in our Alley." Viehoff had suggested that further inquiries would no doubt show that Goethe's poem was based upon some popular song, and an entry in Riemer's diary makes this perfectly clear: "12 September (1808). In the evening Goethe turned an English song given to me by Frau von Fliess into a German one."

FINE ART.

The Electrum Coinage of Cyzicus. By William Greenwell. (Rollin & Feuardent.)

THE well-known series of monographs on the numismatic history of the more important Greek states, which commenced ten years ago with Prof. Gardner's *Coinage of Syracuse*, has again received an addition. This is the first volume which has not come from the pen of one of the staff of the British Museum. It is written by Canon Greenwell, of Durham, one of our leading English collectors, and a specialist in early Greek issues. The subject of which it treats is the electrum coinage of Cyzicus—a large, interesting, and hitherto rather neglected class of coins. It is probably due to their rarity that they have remained comparatively untouched by numismatic writers. Although the types are numerous, not one of the varieties is common. A hundred years ago they were actually unknown. The great Eckhel declared that the Cyzicene stater was merely money of account; and large last-century collections, such as that in the Bodleian at Oxford, do not contain a single specimen. Even of late years, since the coins have become better known, only two or three casual notices of them, in the *Numismatic Chronicle* and other publications, have appeared. Canon Greenwell is one of the few private collectors who possess a long series of these beautiful coins. Unless we are much mistaken, he has the second largest existing cabinet of them, and his collection might be envied by any national museum. He is, therefore, eminently fitted to investigate the questions which arise in connexion with the date and history of the coinage, and with the class of subjects which its types represent.

The Cyzicene stater is one of the most marked and unmistakable coins which exist. Its peculiarity lies in the preservation of the most ancient and primitive form—the thick

dumpy bean-like shape of the earliest issues—at a time when art had reached its perfection, and coin types were at their best. The shape of the Cyzicene and the subject represented on it give each other the lie. The one points to the seventh century, the other to the end of the fifth. There is no cause to wonder if the coins were for a long time puzzles to the numismatist; for the beautiful work of the figures on the obverse stands in strange contrast with the primitive reverse, where the old "incuse square" was never replaced by any representation.

Not less noteworthy than the form of the Cyzicene is the class of types which it displays. It was the almost invariable practice of a Greek city to make its state badge the most prominent feature of its coins. Every Athenian coin displays the owl, every Corinthian the Pegasus, every Metapontine the corn-ear, as its chief device. But at Cyzicus the custom was entirely different. Not only was the name of the town invariably omitted; but its badge—the tunny-fish—was kept in a subordinate position, crammed into the exergue, or made a minor portion of the main type of the coin. The subjects which were chosen for representation were of the most varied character. A good many of them relate to the local gods and heroes. Persephone, Apollo, and Cybele, the chief deities of the town, Cyzicus, its eponymous hero, the Argonauts and Heracles, who figured in its legends—all are frequently represented; but, in addition to them, appear a number of personages and objects without any such associations. Of these the majority are borrowed from the mythology of other states, in most cases those with which Cyzicus is likely to have had close commercial relations. Thus we get figures of Cecrops, Erichthonius, and even of Harmodius and Aristogeiton from Athens. Panticapæum is represented by the Scythian archer and a head of Pan, the latter exactly similar to the one which appears on the staters of that town. The winged boar of Clazomene, and the seated griffin of Abdera, are also unmistakable; but it is strange to find that some of the types of the Cyzicenes reproduce the emblems of very distant places in Italy and Sicily, which cannot have had any direct commerce with the Propontis in the fifth century. We find, for example, the swimming man-headed bull of Gela, the head of Arethusa from Syracuse, and the figure of Taras bestriding his dolphin from Tarentum, each accurately reproduced on a stater of Cyzicus. For this phenomenon it is hard to account. Canon Greenwell suggests that

"it may well have happened that persons of importance in the state, connected as magistrates with the coinage, had intimate relations of one kind or another with foreign, and even far-distant, places. Such persons may have sought to distinguish that connexion by placing upon the coinage of their own city types selected from coins of the states with which they were holding intercourse; or the town itself may have wished to ingratiate itself with other places with which it was connected by trade or treaty."

We confess that neither of these guesses seems satisfactory to us. We have examples of other states where the magistrate's symbol constantly appears; but that symbol is never the well-known badge of a great Greek city.

It is some distinctive and individual device, bearing in many cases a punning allusion to the owner's name, as may be noticed in the series of the magistrates of Abdera. On the other hand, we cannot see how it is likely that the state of Cyzicus should have had important relations with, and desired to conciliate, such distant towns as Poseidonia or Gela. On this difficult point we await further suggestions.

The way in which the tunny is combined with the larger and main type of the coin is often quaint and ingenious. On the coin with the Tarentine device which we mentioned above, Taras holds out a small tunny in his hand; in other cases, the fish forms the support of a seated or standing figure; but, though invariably present, it is never obtruded on the sight.

As to the date at which the coins were issued, we thoroughly agree with Canon Greenwell. They run between the years 500 B.C. and 360 B.C., and mainly lie in the central part of that period, the pieces struck before 470 B.C. and after 390 B.C. forming only a small portion of the whole. M. Lenormant, when he assigned the coins to the period 404-330, was overriding every indication of date which is supplied by the style of the art on the greater part of the series. There is only one coin whose issue we should be inclined to place at a different date from Canon Greenwell. This is the first piece in the whole book, Pl. i. No. 1. The Canon fixes its appearance at a very early period, somewhere about 600-590 B.C., with a century dividing it from the rest of the Cyzicenes. We much doubt this. There is nothing but the extreme rudeness of the incuse reverse to make us send it so far back; and at Cyzicus the incuse was never a sign of age, but an archaic survival. For our own part, we do not see that the issue of this coin need have preceded that of the other staters by any very great interval. It may as well be the first electrum coinage after the cessation of the Lydian gold staters, as the last electrum coinage before that series obtained the temporary possession of the markets of Asia Minor. This, however, is a matter of opinion.

The method of classification which Canon Greenwell has adopted in arranging the Cyzicenes is not the chronological one which has prevailed in the earlier numbers of this series of monographs. Such an arrangement would in this case be almost impossible, as there is no change in epigraphy, or in the method of striking, to help out the indications given by the style of art displayed by the coins. There are some pieces which we can attribute to a period very little posterior to the commencement of the fifth century, and others which fall well within the fourth; but any minute subdivision into classes would be quite impossible. Canon Greenwell has therefore made the subjects of the types his criterion of division, all devices relating, *e.g.*, to Zeus, Apollo, or Dionysus being placed side by side. A number of nondescript types, whose religious character it is hard to discover, come together at the end.

Had space permitted, we should have much liked to enlarge on the art of the Cyzicene coinage. The series is remarkable for containing many coins which appear to be direct

copies of famous statues or of subjects from the metopes of temples. Great skill has in almost every case been displayed in fitting these subjects into the limited space of the coin. Sometimes dignity suffers to a certain extent, *e.g.*, the kneeling Zeus of No. 2 and the stooping hoplite of No. 91 are in decidedly uncomfortable positions; but the effect is never unpleasing, and the ingenuity always remarkable. Some of the pieces—notably Nos. 13-14, with the head of Demeter; Nos. 36-37, with that of Dionysus; and Nos. 20 and 23, with the full-length figures of Apollo and Helios—are among the most beautiful Greek coins existing.

Perhaps we may be permitted to point out one slip in this excellent work. Harmodius and Aristogeiton were not brothers (p. 90), nor, indeed, relations at all.

The autotype plates deserve the usual commendation due to works brought out under the auspices of the Numismatic Society.

C. OMAN.

LETTER FROM EGYPT.

Cairo: Feb. 12, 1888.

I HAVE to make a correction and an addition to the letter I sent to the ACADEMY last week. On looking over my notes of the inscription on the *naos* I found at El-'Arish, I see that the hieroglyphic name of the city seems to have been (Her-)heren, reminding us of the first part of the classical name Rhino-koloura, the temple to which the *naos* belonged being apparently "the temple of the city of the house of the sycamore" (*nebes*). I hope that Mr. Griffith will start shortly for El-'Arish and make a copy of the inscription, and will also visit, on his way, both the mounds of Pelusium and the other ancient sites mentioned in my last letter. I may notice, by the way, that Lepsius has entirely misplaced the site of Tel el-Hir, which he identifies with Avaris. The Tel, as I have stated, is really a small mound, containing the ruins of a Roman fortress, at the south-western extremity of Farama.

I also find that I forgot to say anything about a curious ethnological fact which I observed during my recent journey. The casts and notes taken by Mr. Petrie last year have shown that the Amorites of the Egyptian monuments were a white-skinned, fair-haired, and blue-eyed population. Now the population of the coast-land from Gaza (or rather Khan-Yûnas) to El-'Arish is predominantly of this character, and stands out in striking contrast to the swarthy Beduin population by which it is surrounded. It is difficult to believe that the Crusaders can have left so permanent a record of their presence in this part of the country; and what makes it probable that the population in question is descended from some early race (like the Kabyles in Algeria) is the resemblance between their features and those of the Amorites as depicted by the Egyptian artists. The sheikh of El-'Arish, for instance, whom I had plenty of opportunity of observing as he squatted by our camp-fire, might have sat for the portrait of the Amorite king, reproduced by Mr. Tomkins in his *Life and Times of Abraham*, so exactly did he resemble the latter, even to the little red beard at the end of his chin.

Mr. Naville and the Count d'Hulst arrived here a few days ago, and leave on Wednesday, together with Mr. Macgregor, for Bubastis, in order to resume there the excavations of last spring. Mr. Griffith has also arrived from Assiout, where he has been copying the inscriptions of the tombs, and has made some interesting discoveries. He is now working at

Heliopolis. Mr. Petrie is at Howâra, the imaginary site of the Labyrinth. I hear that he has disinterred some mummies there.

A. H. SAYCE.

EGYPT EXPLORATION FUND.

M. NAVILLE'S LECTURE ON "BUBASTIS AND THE CITY OF ONIAS."

II.

(Continued from the ACADEMY of January 21.)

HAVING failed to find the hieroglyphic name, can we at least say with certainty that this was the city built by the high priest Onias under Ptolemy Philometor? I can only reply that it is very probable; but that to my mind not yet quite certain. Let us turn to Josephus, and see what the Jewish writer says of the city built by his countrymen. He relates that at the time of the conquest of Judaea by Antiochus Epiphanes, Onias, son of the high priest, was compelled by the persecution to leave his country and to take refuge with Ptolemy Philometor, who, being an enemy of Antiochus, received him kindly. The Jewish writer quotes the letter in which Onias begs the Egyptian king to grant him a territory in the nome of Heliopolis. He points to the ruined city of the lions (Leontopolis) near the fort dedicated to Bubastis agria. The king received his request favourably, and gave him the place he asked for, whereupon Onias built a small city in the likeness of Jerusalem, and a temple which was smaller than its model, with a tower sixty cubits in height. This temple existed until the reign of the Emperor Vespasian, who, at the time of the frightful persecution of the Alexandrian Jews, ordered it to be destroyed. There is no doubt that the locality of Tell-el-Yahoodieh belonged to the nome of Heliopolis. Several of the hieroglyphic monuments are dedicated to Harmakhis, and the name of On (Heliopolis) occurs frequently on the texts of Rameses III. So far, an agreement exists between the description of the Jewish writer and the place. But Josephus adds two geographical names—the fort of Bubastis agria and the city of Leontopolis. Bubastis being the Greek name of the goddess Bast or Sekhet, the goddess in the form of a lion, or with a lion's head, both these names must refer to a place in which the worship of Bast was established. Brugsch says he saw in the place fragments of statues of Bast which had stood originally in the temple of Maut at Thebes; and I purchased from the fellahen several small porcelain statuettes of this goddess. But I found no actual dedication of Tell-el-Yahoodieh to Bast. I conclude that Josephus has in his description made confusion between several Jewish settlements which stood at the same time not very far from each other, and that he referred the three names to the same place. For if we go about ten miles north, we find in the desert, close to the Ismailieh canal, another Tell-el-Yahoodieh, a settlement of Roman time, with brick constructions, but where at present no stone monument has been discovered. Six miles further north, we reach the present city of Belbeis, on the summit of a high Tell of ruined houses. In the course of my excursions, I went twice to Belbeis, and hunted in the houses for all the inscribed stones which might exist there; and the result was that I there discovered fragments of a sanctuary built by Nekthorheb (Nectanebo I.) to the goddess Bast, while from the inscriptions I gathered that the city belonged to the nome of Bubastis. Thus, Belbeis might be either a Leontopolis or a fort dedicated to Bubastis agria; but then it would not be in the Heliopolitan nome.

The decisive proof that the large Tell-el-Yahoodieh where we excavated was a Jewish

settlement was furnished by the necropolis. Situate one mile further east, in the desert. For a distance of more than half a mile, the ground is quite honeycombed with tombs. It is one large cemetery, on which are built two villages. The most interesting of these tombs are those on the southern side of one of the villages. They are all cut in the rock, generally on the same plan, and made with more or less care. A slope or a rude staircase gives access to a chamber, on all sides of which open horizontal niches of the length of a human body. The entrance to the chamber was originally closed by a limestone slab, which has been removed. The tombs have in all cases been rifled in ancient times, not for the precious things which they contained, for they had none, but for the limestone slabs and tablets. After they had been robbed, the staircase was filled in with basalt stones and sand. Here and there we found a body *in situ*. There were no traces of mummification, no ornaments of any kind; but invariably a brick under the head, which is a distinctive feature of Jewish burials. The niches were not all oriented from west to east, though such was the case with the mother and daughter, whose names we found painted over their heads, and who each had her brick pillow. A few tablets have escaped the general destruction, and the names which they contain fully confirm the conclusion which might be derived from the mode of burial. Some of the names are Jewish, but with a Greek termination. Eleazar is purely Jewish: Mikkos, Salamis, Netharneus, Barchias, remind one at once of names often met with in Holy Writ. Other names are Greek, but of frequent use among the Jews, such as Aristoboulos, Agathocles, Onesimos, and Truphaina, whose body we found turned towards the east. The tablets are generally simple, without the mention of any divinity, or anything connected with the other world, which is also a Jewish feature. The only sculptured ornament found is the bunch of grapes. The form of the inscription is nearly always the same: *χαίρε*, "Farewell." The epithets to the deceased are kind—*χρηστε*, "Loving to all"; "Loving his children"—*φιλοτρεκε*; "Without pain"—*ἀλυσε*; and also a poetical word, "Who dies before his time"—*ἀσπε*.

The most interesting tablet is a broken one of which only eight lines remain, in which the author seems to have had the intention of writing verses. There are sometimes poetical words mingled with expressions which are decidedly mistakes made by some one who was not well acquainted with Greek. The inscription is obscure, but there is an interesting passage in which it is said how great was the faith and the friendliness, *πίστις καὶ χάρις*, of the deceased. This, which sounds rather strange in a Greek funerary inscription, is merely the translation of the Hebrew *אֱמוּנָה וְחַסְדִּים*, which occurs on a considerable number of tablets.

A name which leads us directly to the point I am trying to prove is the name of *Ὀριον*, which is engraved on a stone cut in the form of a cornice. The beginning is broken off, so that part only of the *O* remains, and we do not know whether *Ὀριον* was the end of a name or a name by itself. However, it looks very much like the name we are looking for.

On the northern side of the village, the rock is of finer quality, and the tombs more carefully made. They are on the same plan; there are generally three steps leading to a well-cut square door, the lintels of which are sometimes made with baked bricks and Roman cement. This door leads to the sepulchral chamber, from which horizontal niches open on all sides. One of the chambers had been covered with stucco, on which remained some painted ornaments. They are all on the Jewish plan; but they may have been re-used, as in

one of them was a bone-pit with remains of cartonnage, which implies mummification, and excludes all idea of Jewish burial. These tombs cannot be earlier than the Roman emperors. The conclusion which may be derived from all the foregoing facts is that the necropolis of Tell-el-Yahoodieh points distinctly to a Jewish settlement, which must have been the neighbouring Tell. Considering the size and importance of the place, it is reasonable to suppose that it was the site of the establishment made by Onias, and when he built a temple, especially as this place belonged to the nome of Heliopolis.

I believe that Tell-el-Yahoodieh is known to us also by a Latin name. Just at the foot of the high mounds of the eastern side of the enclosure is a Roman city built regularly along two main roads going towards the desert. I think we may here recognise, as Mr. Griffith suggested to me, the *castrum veteranorum* or "Camp of the Veterans," mentioned in the Itinerary of Antoninus, on the road from Heliopolis to the Red Sea, along the canal; and this supposition is the more likely as the next station, *Vicus Judaeorum*, would be the other Tell-el-Yahoodieh near Belbeis.

In Egypt, it is not always necessary to excavate, and a mere visit to an historical place may give important results. It is most interesting to explore a city, looking for everything which is inscribed. Very often, fragments of hard stone are inserted in walls of houses; or they are inside the houses, where they are used as boards for washing, or as mortars, or as mill-stones. It is not always easy to see all the stones, and especially to dissipate the fears and prejudices of the inhabitants. They begin by denying with the strongest oath—by the life of the Prophet—that they ever saw or knew of anything like an inscribed stone. It is generally a boy who reveals the first, and who, of course, gets a few pence as *bakshish*. Then a great number of men immediately offer themselves as guides. They all know of a stone somewhere; and so at last I succeeded in seeing a great number of inscriptions. Thus, after having been in perhaps twenty-five houses at Belbeis, I found out that there had been there a temple of some importance built by Nekhtorheb (Nectanebo I.); that it was dedicated to Bast, and that it belonged to the Bubastite nome. The one royal name which I repeatedly discovered was Nekhtorheb; and I once found the inevitable *Rameses II.*

In several other places which I explored in the same way, I gathered interesting information, especially relating to the invasion of Piankhi, the Ethiopian king who conquered the whole of Egypt, and put down all the petty princes reigning in the different cities of the Delta. Some of those princes left stone monuments in the cities which they occupied; the descendants of others filled distinguished posts under the following dynasties. In this respect the excursions which I made to Samanoud and Abusir were among the most fruitful.

Samanoud is a very picturesque city, a little higher up than Mansourah, on the Damietta branch of the Nile. A large Tell indicates the site of the city. At the northern end stood the temple of the god Anhur, a great many blocks of which are still extant. Samanoud is clearly the old Sebennytus. The name has not been translated. The old Egyptian *Thebnuter*, the divine calf, has taken a Semitic form which gives to the word in Arabic a sense which has nothing to do with the original meaning. Samanoud means the sky of Noud. Noud, as the people tell you there, was a great king who built a large palace covered with a crystal sky. I heard this legend from Arabs as well as Christians, and was even told that remains of that sky were sometimes met with on the Tell;

while the Arab with whom I was staying asked me to relate to him something about King Noud. In the city itself I was shown several fragments of Nectanebo I. and Ptolemy Alexander. Some blocks of the temple which lay in the water contained fragments of a list of names of Nekhtorheb; but the most interesting monument was a sitting statue with the head and feet broken, which is used as a seat at the entrance to the police-station. As there are inscriptions on the sides and back of the statue, I began making paper casts, wetting my paper and beating it into the inscription with a brush. A crowd of more than a hundred people, which I had some difficulty to keep off, watched the whole proceeding with intense interest. The result was that a feeling of mistrust mingled with fear spread among them. I had one more stone to see in one of the houses, and when I arrived there the owner was away. Another time the key was with a neighbour who would not return for sometime, and then the man spoke to the bystanders with great eloquence, appealing to them, saying that the stone would go, and what would he have? At last, after much entreaty, I succeeded in going in, but only after a most solemn promise that I should not beat a paper on the stone. There was no necessity for it, as the stone turned out to be a broken Roman statue; but the next day I discovered the meaning of the opposition of the owner, and of his words "The stone will go." The people of the place fully believed that the beating of the paper, as they called it, was nothing but magic, and that the stone at the police-station would suddenly fly away to my country; and actually a great number of them got up early the next day, and came to the spot to see whether the stone was still there, or to witness its sudden disappearance at daybreak.

The statue belonged to the high priest of Anhur in the time of Psammetik I., called Aakanoush, who was very likely the grandson of the prince of the same name who reigned at Sebennytus at the time of Piankhi's invasion.

Not far from Samanoud is the city of Abusir, in which it is not difficult to recognise the name of Busiris, the house of Osiris. I went on purpose to see a granite block observed there last year by Mr. Petrie, bearing the name of Darius. As the monument ought to come to England, I made an attempt to purchase it from the rich sheikh-el-beled (village mayor) before whose house the block stands; but my efforts were unsuccessful, although I offered the high sum of £10. The sculpture represents a sitting goddess called Menkhheb. So far as I know, it is the first time this name occurs. Menkhheb is a verb which is found in the inscription of Saft-el-Henneh. It refers there to an altar, and means to provide abundantly with offerings, to enrich; so that this new goddess may be considered as the goddess of abundance or plenty. At Abusir, a man in the bazaar brought me a fragment of limestone, of which I copied the text. It is part of a funerary inscription of a person called Sheshonk. Sheshonk is also the name of the prince who held Abusir against Piankhi.

The most curious find of this kind occurred in the excavations at Tuh-el-Karmus. You have seen the foundation deposits discovered in the middle of this most disappointing temple, about which we could only ascertain that it had been built by Philip Arrhidaeus; but, in one of the neighbouring brick storehouses, we found a perfect vase, painted in blue enamel and bearing a large hieratic inscription burnt in with the paint. This vase is now in the Boolak Museum. It is a dedication to the god Horsesis by the chief of a foreign nation or tribe, called Panarma. The name of the foreign nation is destroyed, but it may very well be the foreign guard, or a foreign police,

like the Mashuash, which are so often mentioned in the inscriptions. Curiously enough, Panarma is the name of the general who was either one of the officers of Piankhi, or who had remained faithful to him. It was to him that Piankhi gave orders to oppose Tafnekht, the prince of Suis, who was marching southward, and who had already reached Hermopolis; and after Piankhi's victory, he was sent to receive the submission of Tafnekht.

(To be concluded.)

NOTES ON ART AND ARCHAEOLOGY.

MESSRS. J. WATSON NICOL, Charles W. Wyllie, Herman Herkomer, and Yeend Young have been elected members of the Institute of Painters in Oil Colours.

MESSRS. DOWDESWELL will open two exhibitions next week in their galleries in New Bond Street: (1) a collection of marine paintings and sketches in oil by Mr. Edwin Hayes, including scenes in Italy, France, Holland, and the Channel Isles, as well as the British coast; (2) a show entitled "Dots, Notes, Spots," by Mr. A. Ludovici, jun. Mr. Robert Dunthorne will also have on view, in Vigo Street, an exhibition of sunset sketches and mezzotints, by Mr. J. Aumonier.

WE may also mention that the collection of "Shakspeare's Heroines," by various artists, commissioned by the proprietors of the *Graphic*, is now on view in Brook Street.

MR. POYNTER's works have not been very much engraved, when we take into account that there is hardly one of them which does not lend itself to skilled reproduction; but, of those that have been reproduced, none have been translated more happily than his "Diadumene" and "The Corner of the Market Place," which the Berlin Photographic Company, established in New Bond Street, are now issuing. The "Diadumene" was in a recent Academy, where it was recognised as a learned and exalted study of the nude. The "Corner of the Market Place"—a bit of classical *genre*, if the expression may be permitted, a thing such as Mr. Alma Tadema might have conceived, but would have conceived with less of human sympathy—appeared at the Grosvenor. Our readers will remember how highly finished it was in detail, as well as how engaging in sentiment. Other works of Mr. Poynter should follow by the same process, as it is proved to interpret him so well.

WE quote from the *Nation* of February 9 the following account of the excavations conducted during last autumn on the site of Sicyon by the American School of Classical Studies at Athens:

"The orchestra and its entrances have been cleared of the layer of earth which covered them. The new finds have not been numerous, but are of considerable importance. The chief is the head of a statue of Parian marble, of good Greek workmanship, about life-size. It was broken into three pieces, but the face is uninjured, with the exception of the nose and one brow slightly marred. It is pronounced to be a Dionysus with extreme feminine traits. A torso was found to which this head may prove to have belonged. Another head was brought out from some retreat by a peasant, and removed to Athens by the Government. A large head of mediocre workmanship was also found in the excavations. These are valuable as the only known specimens of Sicyon art."

MUSIC.

RECENT CONCERTS.

THE programme of last Saturday's Crystal Palace Concert contained two new English works. The first was Mr. C. T. Speer's Cantata, "The Day Dream," which gained the Jubilee Gold Medal of the Bath Philharmonic Society last year. The poem on which it is founded is the well-known one by Lord Tennyson—a few verses not essential to the narrative, the Moral, L'Envoi, and Epilogue being omitted. It is somewhat difficult to do justice to Mr. Speer's work. First of all, he set himself a most difficult task. The poem, admirable in itself, does not lend itself easily to music; and Dvorák himself, with all his programme-power, would have found the yawning king, the drinking butler, the screaming parrots, and the striking clocks somewhat troublesome subjects. And then, placed almost at the head of a Palace programme, one expected naturally to hear something important. The Cantata did not deserve such an exalted position. Had it been produced at a students' concert, we could have praised the composer for his easy and unpretentious music, for the good intentions shown, and for the frank way in which he borrows from other composers. Mr. Speer has yet much to learn in the art of development, and also in orchestration; but he is young, and may yet surprise the world. The other novelty was a setting of Campbell's ballad, "Lord Ullin's Daughter," for chorus and orchestra, by Mr. Hamish McCunn. Quite recently we spoke in terms of praise of an overture of his, and again we have to call attention to a young composer who shows brilliant promise. The ballad is not an elaborate work, and it is impossible to say how Mr. McCunn will succeed when he attempts severer forms of composition; but there is an unmistakable vigour and freshness about his music, and in his handling of the orchestra there is decided originality. Between these two works came Schubert's unfinished Symphony in B minor, and the performance was well worthy of Mr. Manns and his band. The solo parts in Mr. Speer's Cantata were effectively sung by Miss Thudichum and Mr. Harper Kearton. The concert concluded with Delibes' charming Suite de Ballet "Sylvia."

A private concert was given at the Grand Hotel, Eastbourne, last Friday week, at which was heard a new instrument called the Clavi-harp. It is the invention of M. Dietz, civil engineer, of Brussels, the grandson of the M. Dietz who, in 1810, invented an instrument *à cordes pincées à clavier*, which may be considered the parent of the Clavi-harp. As the name suggests, this instrument consists of a harp, with metallic strings covered with silk, and a keyboard. On touching the keys the strings are set in motion by an ingenious action imitating the movements of a harpist's fingers. It has two pedals—the one damps the strings, the other effects a division of the strings producing the octave harmonics. From this brief description it will be seen that it possesses advantages over the old harp. The strings are said to keep in tune as well as those of a piano. The only question is as to the quality of the tone produced; how far, in fact, it resembles that of an ordinary harp. From the clever performances of Mdlle. Dratz from the Brussels Conservatoire, who played solos, accompanied Mr. Burnett in a violin solo and in some songs sung by Miss Ambler and Mr. W. H. Cummings, we think it imitates wonderfully, especially in the upper notes, the tones of the harp. One will be able to judge it better in a large concert room, and also when it is heard with the orchestra. It has been exhibited in

Paris, and will no doubt soon make its way to London.

Mdlle. Mathilde Wurm, a pupil of Mdlle. Schumann—whose appearance we are glad to see announced for next Monday—was the pianist at the last Monday Popular Concert. She played Schumann's "Papillons," one of the composer's early but most characteristic works. Mdlle. Wurm has improved in touch, but she lacks power. Her reading of the "Papillons" was simple, neat, and refined; but her *tempi* in Nos. 5 and 7 were too slow. She was well received, and forced to give an encore. She took part in Mendelssohn's in C minor; but here, in spite of good playing, her want of power was too evident. Beethoven's Quintet in C, with Herr Joachim as leader, was, of course, a grand success. Miss Marguerite Hall was recalled for her graceful rendering of Brahms's "Geistliches Wiegenlied," the viola obbligato part of which was admirably given by Mr. Hollander. Herr Joachim's solo was Leclair's "Sarabande et Tambourin."

Brahms' Violin and Violoncello Concerto was repeated at the Fourteenth Symphony Concert on Tuesday evening. A second hearing of the intricate opening movement reveals more of its power and of its unity. It is certainly made of stuff that will last. We doubt, however, whether it will become popular; for it will not always have two such interpreters as Herren Joachim and Hausmann, who not only conquer the technical difficulties, but throw their whole soul and mind into the music. The beautiful Andante needs no further comment. The Finale, as at the first hearing, impresses us less than the first and second movements. Mr. Hamish McCunn is rising rapidly into fame. His Choral Ballad at the Crystal Palace last Saturday, as noticed above, was a success; but his ballad for orchestra, "The Ship o' the Fiend," performed at this concert, was a still greater one. The Scottish ballad, which the music seeks to illustrate, is founded on the legend treated by Burger in his "Lenore," and is the foundation also of the "Spectre's Bride." The composer's power of imagination is keen, but he is never tempted to do anything extravagant or grotesque. And he handles the orchestra not with the timidity of a beginner, but with the experience of a master. He conducted his own work, and at the close received an ovation. Mr. McCunn is only in his twentieth year, and a great future seems in store for him. Programme-music seems to be at present his fancy. Of its kind it is very good; but, after all, it is only one kind, and that not the highest. So now, having shown how successfully he can draw musical pictures of land and sea, he should give us a piece of purely abstract music.

Space compels us to notice very briefly the "Novello" performance of "The Golden Legend" on Wednesday evening. The choral singing, especially of the ladies, was good. Of the principal soloists—Mdmes. Nordica and Patey, Messrs. Lloyd and Mills, we need only mention the first. Mdlle. Nordica commenced very doubtfully, but improved as she went on. Dr. Mackenzie conducted; but was scarcely up to time in the Evening Hymn and in some of the music in the third scene. The news of the election of this gentleman to the post of Principal of the Royal Academy of Music gained for him an ovation both from choir and audience.

Mr. Henschel gave his third and last vocal recital at Prince's Hall on Wednesday afternoon. The hall was crammed, and the performances of the concert-giver and his wife gave the utmost satisfaction.

J. S. SHEDLOCK.

LITERATURE.

The Odyssey of Homer. Done into English Verse by William Morris. Vol. II. (Reeves & Turner.)

IN April, 1887, the present writer had the opportunity of expressing, in the ACADEMY, the hope that Mr. Morris would not long "leave half-told" the story of Odysseus. That hope has found fulfilment far sooner than, in such cases, is usual. There are few things, perhaps, on which people differ more widely than on the merits of a translation—and the reason is not far to seek. A masterpiece like the *Odyssey* possesses nearly every poetical merit that could be named; but it by no means follows that it presents each of those merits to each of its readers in an equal degree. We have instinctively a favourite literary quality, and we carry into our reading of a translation an unconscious desire to find in it, above all things, that quality of the original which we prefer. We do not, perhaps, adequately examine ourselves whether what we like best in the *Odyssey*, or any such poem, is its highest quality—so hard is it, even with the aid of Homer, to cry "Sursum mentes!" and rise above our lower to our higher appreciation. I recognise this so fully that I am half-ashamed that I cannot express any other opinion on Mr. Morris's second volume than that which I formed about his first. Of all verse translations of Homer that I have seen this seems to me to be the best, to have most of the matter and the manner of the original. But I am fully aware that a defective appreciation of the original, in matter and manner, will vitiate one's judgment of a translation. I know that good judges find Mr. Morris's version faulty, particularly in mannerism and the coinage of compound words in English. There is nothing for it but to plead one's plea, illustrate it as far as one may by extracts from the translation, state the qualities which it seems to share most fully with the original, and leave the verdict to the jury that is always sitting—the lovers of Homer.

The *Odyssey*, perfect as an epic, is, if possible, more perfect as a romance or fairy-tale. It bears, I think, a much stronger mark of individual genius than the *Iliad*. I never have felt any intrinsic difficulty in believing that certain parts of the *Iliad* are by a different hand or hands, while the *Odyssey* seems to me so intensely one as to make the idea that it is a compilation almost visionary; the art of collaboration would have reached the miraculous stage. And this individual genius in the *Odyssey* seems to me pre-eminent in the art of story-telling, of romantic narrative. We may prefer the *Iliad*, we may challenge the *Odyssey*, or any other poem, to match its best passages, its most memorable lines; but few will say, I

think, that, tale for tale, it is told with the perfect, simple, unconscious art of the *Odyssey*. It is finer in episodes; not so fine or complete as a whole. If this be so, the presence of this same skill in a translator would, in my own view, cover a multitude of minor sins. It is a *sine qua non*, though not the only one.

Secondly, for a verse translation, some approximation to the dignity and rapidity of the Homeric measure is essential. The couplets of Pope, the Spenserian stanzas of Worsley and Conington, form the high-water mark of what can be done in those directions; but the antitheses, the forced pause, of the one, and the festooning of the separate stanzas, by the others, cancel a quality of the original which, as probably the translators themselves felt, even more keenly than their readers must feel can very ill be spared. Of the first of these two qualities—that of poetic power in romantic narrative pure and simple—Mr. Morris is completely master. I hazard the opinion that no English poet, since Chaucer, has possessed exactly this gift in so eminent a degree. There may be higher gifts, but this is a peculiar one that all can recognise and enjoy. It is the common quality in poems otherwise so widely different as "The Lovers of Gudrun," "The Hill of Venus," "Bellerophon in Lycia," and this version of the *Odyssey*. Anyone to whom this gift conveys a special pleasure will find it hard to make much ado about the mannerisms which undoubtedly appear in Mr. Morris's style—defects on which a surely superfluous stress has been elsewhere laid. I do not myself admire, e.g., the rendering (book xiv., l. 73) of "ὄθι θῆνα ἔρχατο χοίρων" by "where penned were the piglings' crew"; on the other hand, the much-criticised version of book xiii., l. 388—"Τροίης λύομεν λιπαρὰ κρήδεμνα"—"We loosed aforetime the shining coil of Troy," seems to me exactly what Homer says, exactly the metaphor in which Euripides followed him, exactly a case in which Mr. Morris is both bolder and wiser than his critics. Let anyone read for himself the passages (pp. 249, 245) where these expressions occur, and judge if mannerism can be charged upon them as a whole. My strong impression is that half these "mannerisms"—I do not say all of them—are more careful approximations to Homer's manner than some critics have discerned. As to the "Phaeacians ear-fain" (p. 232, l. 36) for Φαιήκεσσι φιληρέμουςι, what is the objection? We speak of a person as "heart-sick," of Carlyle as "world-weary," without scruple or blame; why may not the Phaeacians be "ear-fain"? Homer calls them so by a compound, not a periphrasis. Suppose "ear-fain" is not elsewhere used in English literature—well, somebody once used "heart-sick," or "world-weary," for the first time.

On the second point—the suitability of the metre of "Sigurd" as a representation of Homer—most people have made up their opinion one way or other. I cannot deny that, for translating Homer, rhyme is a fetter as well as a grace; that all rhyming couplets, in whatever metre, do break up "the pure line's gracious flow," the Homeric music, in some degree. The couplet, in fact, diverts our thoughts somewhat from the line or the

paragraph—even Mr. Morris cannot overcome this result, though at times (to repeat an illustration from vol. i.) he touches the actual harp of Homer.

ἀκραῖ Ἰέρφουρον, καλὰ δὲ οὐρ' ἐπὶ εἰνῶπα πόντον.

"The north-west piping keenly across the wine-dark sea."

The difficulty lies in the fact that rhyme inevitably balances two lines in some degree; and Homer never balances his lines.

But it is time to fulfil the pledge made above, and to be silent while Mr. Morris shows us, in English, his idea of Homer. Let the scene be the slumber of Odysseus, in the magical bark of the Phaeacians, while she speeds him over the sea for the last time (book xiii., ll. 79-92, p. 234).

"E'en then upon his eyelids did sleep and slumber speed,
Sweetest, and most unbroken, most like to death indeed;
But she, as over the plain the stallions' fourfold yoke
Rush, driven on together by the whiplash and the stroke,
And rear aloft and speed them, and easy way they make,
So rose her stern on the sea waves, and following on her wake
Rolled on the dark blue billow of the tumble of the sea:
So all unscathed and steady she sped, nor swift as she
Might fly the stark gerfalcon, the swiftest of all fowl,
As swiftly running onward she cleft the sea-flood's roll,
Bearing a man most like to the gods for his wisdom and guile,
Who many a sorrow had suffered, and was soul-tossed on a while
As he went through the warfare of men and the terrible deeds of the deep;
But slept there now unafraid, and forgot all woes in sleep."

As poetry and translation, this must speak for itself; but, one may say in passing, what a scene is here for an artist! The slumbering chieftain, and the men of Scheria in their mystic bark, not to see Scheria again! And the voyagings and toils of Odysseus, like that other weird of which Shakspeare wrote, are thus "rounded with a sleep."

The warning of Odysseus to Amphinomus, to escape from the imminent doom of the Wooers (book xviii., ll. 130-50, p. 333), seems to me at once one of the gentlest and one of the most impressive things in the *Odyssey*; nor does it suffer in Mr. Morris's hands:

"There is nought more mightless than man of all that earth doth breed,
Of all that on earth breatheth and that creepeth over it.
For while God giveth him valour, and his limbs are lithe and fit,
He saith that never hereafter the vale shall he abide;
But when the gods all-happy fashion his evil tide,
Perforce that load of sorrow his stout heart beareth then;
For in such wise still is fashioned the mood of earthly men,
As the Father of Gods and of menfolk hath brought about their day.
Yea, e'en I amongst men was happy in times now passed away,
And wrought full many a folly, and gave way to my heart's desire.
... Therefore indeed let no man in unrighteous fashion live,
But hold in peace and quiet such things as God may give."

But O me! how I see of the Wooers what
fearful folly they plan,
Whereas the goods they are wasting, and shaming
the wife of the man,
Who not for long I tell thee from his well-loved
fatherland
Will yet be aloof; nay, rather e'en now he is
hard at hand.
But thou—God lead thee hence, that this man
thou may'st not meet
When he hath gotten him homeward to his land
the dear and sweet;
For when under his roof he cometh, and they
deal betwixt and between,
The Wooers and he, nought bloodless shall be
the work I ween."

It is hard to read this without a touch of sorrow that not even so could the courteous and kindly Amphinomus escape his doom and the "mighty edge" of Telemachus' spear.

Every reader of "Sigurd," with the "Day of the Niblung's Need" in his memory, will turn instinctively to book xxii., the *Μνηστήροφονία*. It is beautifully translated; yet I think that the physical horrors of the slaughter—which Homer, in his direct simplicity, will not spare us—do not altogether suit Mr. Morris's mood. He is better when his hand is more at liberty, when he can show us the tossing strife in the hall of Atli, with Gudrun looking upon it in the silence of many memories and one great resolve. To the final scene, however, he gives all the Homeric directness (book xxii., ll. 380-90, p. 411):

'But about his house peered Odysseus, if yet a man there were
Who, shunning the black doom-day, was left a-lurking there;
But adown in the dust and the blood he beheld them all lying about,
Yea, as many as the fishes which the fishers have drawn out
With a net of many meshes from out the hoary sea
Up on to the hollow sea-beach; there heaped up all they be
Cast up upon the sea-sand, desiring the waves of the brine;
But the sun their life is taking with the glory of his shine.
Thus, then, in heaps the Wooers on one another lay."

Of minor criticisms I have not many to make. In vol. i. Mr. Morris always wrote *Aegisthus* for *Aegisthus*, in vol. ii. he insists (see book xxiv., *passim*) on calling them the Cephallenians, one sees not why. In book xiii., l. 166, the epithet *δολυχῆρες* looks odd in the form "long-ear-wont"; the word *ingates* = "entrances" (p. 235) is certainly unfamiliar; so, I think, is "twi-car" (p. 268), and "wrap," in the sense of "snatch" (p. 275); "godless" hardly conveys, in English, the idea of "unprompted by a god," "conveying no heavenly omen," which is certainly the meaning of book xv., l. 531; in book xvi., l. 401, *γένος βασιλῆϊον κτείνειν* is something more than "in a kingly house to kill"; there is a tendency to throw an apparently superfluous "then" into the emphatic place at the end of the line (see book xvi., ll. 2, 421, &c.). The press seems to have made slips in book xvii., ll. 8, 207; there is something uncomfortable in the rhythm of ll. 69, 284, of book xiv., l. 87 of book xviii.; some awkwardness in the order of l. 62 of book xvi. But these are small matters. I can but conclude with repeating an opinion that this version of the *Odyssey*, now happily completed, is, not perfect but, worthy of the

pen that wrote "Sigurd" and "The Earthly Paradise." Few would desire higher praise.

E. D. A. MORSEHEAD.

Papers, Literary, Scientific, &c. By the late Fleeming Jenkin, Professor of Engineering in the University of Edinburgh. Edited by Sidney Colvin and J. A. Ewing. With a Memoir by Robert Louis Stevenson. In 2 vols. (Longmans.)

THE late Prof. Fleeming Jenkin, if not a very eminent man, was unquestionably a very interesting personality. His intellectual activity was immense; his occupations and accomplishments were distressingly numerous; his heart was warm to a fault; he was sincere to brusqueness, to impatience, although not to intolerance. He accomplished little, either in literature or in science, that is of permanent value. He did nothing immortal at all, indeed, beyond making Mr. R. L. Stevenson fall in love with the better, yet more feminine, element in his character. He wrote papers and delivered addresses distinctly above the ordinary magazine and lecture-room average, on the almost innumerable subjects that he flirted with in the course of his life.

"He was in many ways a Greek," says Mr. Stevenson; "he should have been a sophist, and met Socrates; he would have loved Socrates, and done battle with him staunchly, and manfully owned his defeat; and the dialogue, arranged by Plato, would have shone even in Plato's gallery."

This is merely the extravagance of obituary enthusiasm. Jenkin was fond of Greek plays, and had a quick eye for the artistic, and still more for the inartistic, in drapery. He had the Athenian love of novelty. Knowing something of everything, he was an inexhaustible talker, an irrepressible disputant, as the jack of all topics invariably is, as the master of one—struck dumb by the consciousness that even his mastery is temporary and relative, not eternal and absolute—never is. But one looks in vain for Hellenic graces in the numerous papers of Jenkin—literary, theatrical, socio-economical, scientific—which the pious love of Messrs. Sidney Colvin and J. A. Ewing has collected and published; or in the three-act drama of "Griselda," with its

"Young sir, these are wild words. I am a very simple person and I wish for a simple answer, who and what are you?"

and
"Filomene seems venomous. She thinks me a devil, and despises Griseld. Her head was turned by young Count Malatesta's flattery. She has seen the boy four times, and believes that she could never love another man. Well, he shall marry her. I wish him joy."

Fleeming Jenkin was a capable electrical engineer. Sir William Thomson, who knew him in his professional capacity more intimately than any of his contemporaries, says so; and the fact that, in spite of his intellectual divagations, he became a professor of engineering, first in London, and then in Edinburgh, while yet a young man, proves the accuracy of Sir William Thomson's estimate. He had a passion for amateur theatricals, and seems to have been an excellent stage-manager, although but an indifferent actor. He had a liking, as had Stanley Jevons, for the dis-

cussion of questions of an economical and industrial character, although his style in treating these is as inferior to Jevons's as Jevons's is to Bagehot's. So much is proved by two-thirds of this work, the two-thirds that are not Mr. R. L. Stevenson's.

Mr. Stevenson's contribution to these memorial volumes is a fascinating piece of pedigree-tracing and character-analysis; but it no more proves that he has the true talent of the biographer than do his exercises in the Scotch dialect which appear in *Underwoods* prove that, were he so minded, he could express sympathetically the aspirations of the Scotch peasantry of to-day. He gives us a great deal of Fleeming and too little of Jenkin; a great deal about the pleasures, accomplishments, and superficial characteristics of his friend, and too little about that friend's inner life, his conduct as a father and a professor, his ethical and religious creed. Not that Mr. Stevenson gives us nothing of Jenkin—on the contrary, he dwells upon and illustrates his friend's intense affection for his wife and family, and his sensitiveness in all matters of conscience. One would gladly have seen a little more of the family life of Mr. and Mrs. Jenkin, especially in their early ante-Edinburgh and *res angusta* days, even at the cost of losing much information about Fleeming's journeys and activities, his trips to Styria, his appearances at the Saville Club, and his experiences as a stage-manager in Edinburgh. It is eminently likely, however, that if Mr. Stevenson had taken this view of his duty, he would not have produced a book at once so readable and so Stevensonian. In the hands of almost any other writer than Mr. Stevenson, Fleeming Jenkin's memoir would have probably been only a prosaic record of professional energy brought to a close at the early age of fifty-two. He had no romantic adventures, no great misfortunes in his life, which began at Dungeness in 1833 and ended in Edinburgh in 1885. He was happily married; and although, after his apprenticeship to the business of his life in Fairbairn's works in Manchester, he had his struggles, they seem to have been in no way severer or more dispiriting than those of most members of most professions. He had his fair share of work in the way of laying cables, and Mr. Stevenson prints extracts from his letters descriptive of his sensations when so engaged. The style of these is much to be preferred to that of his graver essays, but they are not otherwise remarkable.

The charm of Mr. Stevenson's biography, indeed, depends mainly on its graphic genealogy. Fleeming Jenkin came of a queer stock, somewhat Bohemian, and even blackguardly, both on the father's and on the mother's side. Some of Jenkin's paternal relatives more especially look as if they might have figured in *Treasure Island*. But he was emphatically his mother's son.

"She gave her son a womanly delicacy in morals, to a man's taste—to his own taste in later life—too finely spun, and perhaps more elegant than healthful. . . . To some of her defects she made him heir. Kind as was the bond that united her to her son, kind and even pretty, she was scarce a woman to adorn a home; loving as she did to shine; careless as she was of domestic, studious of public, graces. She probably rejoiced to see the boy grow up

in somewhat of the image of herself, generous, excessive, enthusiastic, external; catching at ideas, brandishing them when caught; fiery for the right, but always fiery; ready at fifteen to correct a consul, ready at fifty to explain to any artist his own art."

Jenkin was, from first to last, as Mr. Stevenson insists, "an arrant schoolboy"; but a schoolboy always tied to the apron-string of his mother's teaching, although we are told that "iron-bound, impersonal ethics, the procrustean bed of rules, he soon saw at their full value as the deification of averages." Mr. Stevenson's study of the man whose friendship he made, and of whose character he discovered the sterling integrity when pretending to attend his university class, is a minute one, even although it does savour a little of idealisation, if not of deification. In its self-consciousness, and in its exquisite affectations, this biography resembles Mr. Stevenson's earlier work more closely than his later, and brings back the day when he made his first appearance in literature, the fully-equipped Sir Pierce Shaffton of the New Euphuism.

WILLIAM WALLACE.

Personal Reminiscences of the late Duc de Broglie. Translated and Edited by R. L. de Beaufort. (Ward & Downey.)

We have read these volumes with the greatest interest. The Broglies are one of the few houses of the French noblesse of the old régime which have survived the tempests of the last century, and which, for a long and eventful period, have given eminent names to the service of the state. These memoirs from the accomplished pen of the father of the distinguished minister who did much, not many years ago, to raise France from her fallen state after the disasters of 1870-71, and who may yet play a great part in her history, record the experiences, from earliest life to maturity, of one of the most remarkable and celebrated members of the Broglie family, who was an eye-witness of the great Revolution, was in the public service of Napoleon I., filled a conspicuous place in the Chamber of Peers under Louis XVIII. and Charles X., held high office from Louis-Philippe, and, having seen the Revolution of 1848 and the imperialist revival of Napoleon III., died full of honours a few months before the tremendous events of Metz and Sedan. Reminiscences of this kind would, in the case of almost anyone, be of no little interest; but the late Duc de Broglie was no ordinary man. One of the old noblesse, yet a sincere patriot; brought up in the worst schools of politics—the Directory and the First Empire, yet an enlightened lover of true liberty; though not faultless in a long career, possessing the instincts of a real statesman; a clear-headed and acute observer, if somewhat cynical in his views and judgments, he was a remarkable figure in French history; and these "Recollections," therefore, are in every way attractive, important, and of sterling value. The translation, we should add, is very fairly done, though somewhat wanting in animation and force.

The late Duc de Broglie was born in 1785. His grandfather, Victor François, a marshal of France, the only commander who maintained the honour of the lilies during the

Seven Years' War, is best known to history as the chief of the troops who, in July 1789, gave the signal of the Revolution in Paris. His father, Victor Claude, was one of the reforming nobles in the National Assembly from 1789 to 1791; but, like most of his order, he refused to betray the royal cause after August 10, and he perished under the axe of the Reign of Terror. The earliest years of the child were passed amid the scenes of violence and hideous anarchy that marked the triumph of the mob in Paris; and he had to beg his bread from a brother of Robespierre, in a village close to the dismantled château where his ancestors had ruled in feudal grandeur. After Thermidor, he fell under the care of M. D'Argenson, one of the enthusiasts of 1789, who had become the husband of his widowed mother; and the Liberalism to which he was inclined through life was probably caused in him by his stepfather's influence. Having had an education excellent for those days, young De Broglie entered the civil service of the First Empire in 1809, and held a subordinate place until 1814 in the state council of Napoleon I. His character and parts were not of the kind that made way under the imperial régime. Independent, straightforward, and somewhat prone to show contempt of mere grandeur and display, he was in no sense a Napoleonic satellite; and he did not redeem the objections to noble birth, like many of his fellows, by obsequious flattery. He evidently disliked the great emperor, in whose presence he repeatedly was. He had an antipathy for the coarse brusqueness and the charlatan pomp of the *parvenu* Caesar; but he fully appreciated the commanding genius of the new ruler of France, spite of faults and foibles, and he has given us rather an impressive picture of Napoleon's governing and administrative powers. Napoleon, the warrior, in his judgment, was not superior to Napoleon, the author of the Code Civil, and the restorer of order; and he has left on record some striking instances of the ability shown by the imperial disputant in discussing social, legal, and even commercial questions, with the best experts in the council of state. Napoleon, he has told us, though one of the best of writers, had none of the art of spoken eloquence:

"He was a lengthy speaker, without much sequence of thought, and very incorrect, making use of the same phrases over and over again; and, I must say it with all humility, in his disconnected and often trivial speeches I never remarked those eminent qualities which he evinced in the memoirs which he dictated to Generals Bertrand and Montholon."

The Duc de Broglie always remained a subordinate in the imperial service. The numerous missions on which he was sent, and the many parts of Europe he in turn visited, give us a clear notion of the vast extent of the empire in its brief term of greatness. We find him in Spain, in Holland, in Poland, in Germany, hurrying from the Tagus to the Elbe and the Niemen. He was an eye-witness of the conspiracy of Bayonne, and has given us this sketch of the wretched king and queen as, fascinated, they yielded to the imperial spoiler:

"The king did not stop an instant in the apartments which had been prepared for him, but went striding through the chateau and

gardens calling out 'Godoy,' 'Godoy.' . . . He had quite the air of King Lear, though it was only a false air. The queen, on the other hand, took possession of her apartments, and did not leave them."

The rising of Austrian opinion against France, despite the efforts of the astute Metternich, at the news of the reverses of the Grand Army in 1812, is thus significantly described:

"Such was the state of the ruling opinion that, in high society, no one would dare to receive a Frenchman, unless he was obliged to do so by state duties or by his official position."

These memoirs contain many details of interest about the famous negotiations of 1813. Even to the last Metternich dreaded war—such was the terror of the emperor's name—and hesitated at joining the allied cause. The following is striking and, to us, new:

"M. de Metternich took me by the arm, and led me rapidly into his study. . . . His eyes were moist, his hands worked nervously, and his forehead was covered with perspiration. He explained to me in detail the designs he had formed . . . hastening to add that no one knew better than himself how formidable the Emperor Napoleon was, and that no one had the least illusions as to the risks which Austria was ready to run."

The Duc de Broglie took no part in the intrigues against Napoleon in 1814. At the first restoration he became a member of the newly created Chamber of Peers; but, as he was still under thirty, he was unable to sit. He figured in the ignoble and short-lived assembly convened by Napoleon, after the return from Elba; and, like the majority, he forsook the emperor when Waterloo had declared against him. In his memoirs the Duc looks both with regret at his votes and his conduct at this crisis; but he nobly atoned for these shortcomings. When nominated again to the Chambers of Peers, he was one of the very few of that body who condemned the sentence of death on Ney; and his brief speech even now is interesting. From this trial until 1830, the Duc de Broglie filled a prominent place in the Parliamentary annals of France; and this was the best part of his distinguished career. A noble of the highest rank yet a sincere Liberal, and connected by his marriage with Mdlle. de Staël, with what was most cultivated in French intellect, he became a chief ornament of that eminent set of men who rose out of the ruins of the First Empire to oppose despotism in every form, and to vindicate rational and well-ordered freedom, and who also laboured for years to reconcile the Bourbon monarchy with parliamentary government. His conduct throughout this critical period was that of a right-minded and patriotic statesman; some of his speeches are of a very high order; and he was always judicious, prudent, and moderate. He usually supported the government of the day until the accession of Charles X.; but he strongly opposed the invasion of Spain, and he repeatedly warned the extreme Royalists—the reactionaries of the White Terror—against their extravagant hopes and pretensions. From 1825 onward he was almost always in opposition to the ministry in power; he denounced the celebrated law

of sacrilege—a stroke of the Inquisition in the nineteenth century—in language that made a profound impression; he condemned the covert attempts being made to revive feudalism in modern France—his sketch of the essential difference between the old *noblesse* and the nobles of England is admirable for its clearness and force; and, with nearly all his distinguished colleagues, he warned, from the benches of the Left Centre, the ministers of the ill-fated king that they were bringing the throne to the edge of an abyss.

During this period the Duc de Broglie was naturally in the first ranks of the most brilliant and high-born society of the French capital; and he saw a good deal of the Whig party in more than one visit he paid to London. His memoirs abound in reminiscences of those days, but his judgments on men and things are somewhat harsh and cynical; and they want the delicacy and grace of the best French criticism. He was fond of seizing and bringing out the weak points in the characters of even the most distinguished personages. For example, he sneers at Wellington in this way, though he had little of the feeling against the great duke entertained by the French nation as a whole:

"Towards the Duke of Wellington I felt much respect, though little sympathy. As regards the chief outlines of his character, he was a regular Englishman—an Englishman of the old stamp. His mind was free from affectation, upright, solid, and cautious; but harsh, stiff, and rather narrow. Besides, his position, as well as his fame, contrasted singularly with the awkward and intrusive gallantry which he affected towards young and handsome ladies, and which, it is said, he carried as far as he was permitted to do. He preserved these manners even until his very old age; and the anxious care with which all parties vied with each other in throwing the veil over the ridiculous side of the character of the hero of Waterloo is one of the chief proofs of the good sense of the English nation."

Lamartine, Chateaubriand, Erskine, Brougham, and others, are treated in the same style; and this is a caricature of Byron:

"His face was handsome, but lacked expression and originality; his figure was round and short, and he did not move his crippled leg with as much ease and carelessness as did M. de Talleyrand. His conversation was heavy and fatiguing because of his coarsely literal commonplaces and of his paradoxes, and was seasoned with impious jokes, such as are very common in the language of Voltaire. M^{de} de Staël, who used to turn everybody to account, tried hard to make something of him, but did not succeed; on the whole, as soon as curiosity was satisfied, his society had nothing attractive in it, and no one cared for him to call."

The Duc de Broglie took little part in the Revolution of July 1830. After that event he became a member of the council of state of Louis Philippe; and he was foreign and prime minister of France in 1832 and 1835. He was a devoted follower of the Citizen King; and when in power served the state ably, but not, perhaps, with peculiar distinction. He remained a leader in French politics until the Revolution of 1848. But he then passed away from the scene; and after the *coup d'état* of 1851, like most of the best

public men of France, he kept aloof from what he believed to be a *régime fatal* to his country's welfare. He lived down to the last year of the Second Empire, but happily died before the war of 1870 had more than verified his worst forebodings. His memoirs are a work of no common interest, and ought even in England to find many readers.

WILLIAM O'CONNOR MORRIS.

China: its Social, Political, and Religious Life. From the French of G. Eug. Simon. (Sampson Low.)

To some minds generally received opinions on any subject are distasteful. There is a dull uniformity about them which robs them of all attraction, and drives their contemplators to the necessity of seeking novelty by running tilt against them, even if by so doing fiction has to be substituted for fact. M. Simon is evidently the possessor of such a mind. His countrymen have been in the habit of accepting the views on China and the Chinese which they have received from the missionaries and others who have spent their lives among the people of the Middle Kingdom. From these guides they have learnt that, though possessing many and great good qualities, the Chinese stand on a distinctly lower level, as regards morality, respect for human life, and religious aspirations, than the people of the more favoured nations of Europe; that the government, though admirably designed in theory, is yet in practice too often used as an engine of extortion and wrong-doing; and that the lives of the people are subject to vicissitudes which not unfrequently make suicide appear a tempting alternative to existence.

All this M. Simon declares to be unfounded. He has lived in China, and he can, therefore, assure his readers that all these assertions are entirely baseless. Far from regarding China as a country where the ills of life press heavily on large classes of the population, he sees in it a very respectable counterpart of the Elysian fields. The land is portioned out among the inhabitants with such an even measure that almost every householder may repose under his own fig tree; while the taxes are so light—3 francs a head as against 100 francs in France—that they are unfelt by the payers. A patriarchal system of village government secures to everyone immunity from wrong, and help in times of distress; and a complete system of education is provided by the same beneficent authority for the young. Crimes of violence are almost unknown—only one murder was committed in Hankow during a period of thirty-four years—and so bountifully are the people endowed by nature that every mechanic is proficient in several arts, and every servant is a practised musician.

All this sounds like a dream, and it has this characteristic of a dream that it is the opposite of fact. It would be tedious to traverse in detail M. Simon's statements, and it would not be worth while to do so. By anyone possessing the least knowledge of the subject the book will stand condemned as misleading and visionary.

ROBERT K. DOUGLAS.

History of the Christian Church. By George Park Fisher. (Hodder & Stoughton.)

THEOLOGICAL students have long felt the need of some book which would, within a reasonable space and yet with the necessary fulness, give a general view of that large and complicated subject—the history of the Christian Church. Dr. Fisher's work will, to a great degree, supply this want. He has a command of the broad outlines of the vast series of events he has to record. He has an accurate knowledge of details, and possesses that power of arrangement that can only come from long and intimate familiarity with his subject, accompanied by the habit of setting forth its principles and details to others. The great outlines of the history are laid down with ease and boldness, while minuter matters will be found recorded within them in their proper places and in their due subordination to the whole.

Such a work will always be more valuable as a book of reference than interesting to read for its own sake, and hence the present volume does not always escape that dryness which is proper to works of its kind. The many coloured panorama of Gibbon, the concentrated fire of Milman, the picturesqueness of Stanley can hardly be expected here. But the narrative everywhere flows easily along. The characteristics of eminent men and famous books are distinctly, if briefly, given; while disputed questions and the characters of men of mixed reputation are stated with an impartiality too often found wanting in more "interesting" books on the subject.

Dr. Fisher tells us in his preface that he is especially desirous to "exhibit fully the relation of Christianity and the Church to contemporaneous secular history." He fully redeems his promise, as any one familiar with the subject will see who follows him through the tangled mazes of the contest between the Church and the Empire in the history of the Middle Ages or through the devious paths of the English Reformation. At the same time, we would advise any student who is going through the mediæval part of this book to have Prof. Bryce's work beside him, that he may "know where he is," while Hallam's *Literature* or some kindred book will be required for reference a little later on in the wilderness of books and authors that are of necessity mentioned or alluded to in Renaissance and Reformation times. The very completeness of this work constitutes a danger. It is a brief cyclopædia of its subject, and a reader who would avoid the evils of "cram" must be careful to supplement it by reference to more detailed treatises as he goes along.

A part of this work which treats of a subject almost new to "Church History" is that which gives an account of the planting and progress of Christianity in its various forms on the New Continent. There is a brief sketch of the early efforts of the Roman Catholic missionaries among the Indians of the North, and of the work of the Jesuits in Paraguay; but of more interest is the history of the Puritan founders of New England, and the subsequent course of religion in what was destined to become the great Republic of the United States.

It is difficult for anyone not a born New Englander, if he knows the facts of their

history, to feel much enthusiasm for the "Pilgrim Fathers" and their spiritual successors. Not even the genius of Longfellow or of Hawthorne can render that gloomy and sordid narrative other than painful reading. A sort of mythical halo had gathered round them as around so many founders of great things. Good Mrs. Hemans's spirited song embodies this well. But that halo has been dispersed of late years; and, to do him justice, Dr. Fisher makes little effort to restore it. He does not venture to represent the Pilgrim Fathers as champions of religious liberty, but contents himself with the questionable argument on their behalf that "at that time no political community existed in which religious liberty was recognised, and it was no part of the design of the Puritans to frame one." But religious liberty had been known under the Roman Empire; and even in the sixteenth century some attempts in that direction were made by William the Silent, and in another part of the world had been carried into effect by the Emperor Akbar, of whom to be sure the Pilgrim Fathers could not be expected to know much. But when all this is said, we may admire the stern endurance of these men amid hard surroundings and their unbending conscientiousness in following such lights as they had. If we cannot regard the *Mayflower* as an ark which carried the sacred fire of freedom, either religious or political, we can read with sympathy Dr. Fisher's account of the early history of the settlement at Plymouth in December 1620:

"The lands were purchased by the pilgrims—as was true of the New England Puritans generally—of the Indians for what under the circumstances was a fair equivalent. The first winter passed by the heroic and patient band of Christians who built their log-houses on the bleak coast was one of almost unexampled hardship. No man whose heart is not of stone can read without deep emotion the simple record of one of their number—the historian Bradford. They comprised only one hundred and ten persons. Before the spring came they had buried under the snow one-half of the little company. At one time only six or seven were strong enough to nurse the sick and attend to the burial of the dead. The Plymouth colony grew slowly. It never became strong in numbers. But the "old colony," as it came to be called in after times, made up for its comparative weakness from a material point of view by the moral influence which flowed from its example of Christian courage and excellence, and through its greater charity in respect to religious differences."

We can commend for brevity and candour the account of recent events in the religious history of England. The Oxford movement has its due place, as well as the controversies respecting *Essays and Reviews*, and the works of Bishop Colenso; while the rise, progress, and present condition of the various non-conforming bodies is told at adequate length. Englishmen who are accustomed to regard these matters as of the first importance will find it instructive to see how small a part they occupy in a complete Church History when given in their due proportion to the whole.

We could point out several slips of the pen in names and dates which may be corrected in future editions. A special feature in the work will be found in the maps which

accompany every important period of the history, and add much to the reader's clear understanding of his subject.

H. SARGENT.

NEW NOVELS.

Husband and Wife. By Marie Connor. In 3 vols. (White.)

A Life Interest. By Mrs. Alexander. In 3 vols. (Bentley.)

Margaret Dunmore; or, a Socialist Home. By J. H. Clapperton. (Sonnenschein.)

A Phyllis of the Sierras, &c. By Bret Harte. (Chatto & Windus.)

Mad or Married? A Manx Story. By Hugh Coleman Davidson. (W. H. Allen.)

Jan Vereloots. By Matthew Strong. (Bristol: Arrowsmith.)

The Hanleys; or, Wheels within Wheels. By Mrs. Caumont. (Elliot Stock.)

WHEN a story begins with a marriage instead of ending with one, the experienced novel-reader makes up his mind that trouble is ahead. He knows that the course of matrimonial existence will not run smooth; that either the husband or the wife is destined to fall in love with somebody else; or that, if they continue true to each other, they will not escape some terrible misunderstanding which shall, while it lasts, effectually destroy not only their own comfort but the comfort of those who read their story. In Miss Marie Connor's clever and interesting, though gratuitously harrowing, novel we are spared the misunderstanding—for which, I suppose, we ought to be very thankful; but then, as a set-off against this relief, we have the faithlessness in its most aggravated form. It may be, and I fear is, in accordance with human nature that a poor, vain, shallow, invertebrate creature like Edward Galbraith should feel and act in the way represented in the pages of *Husband and Wife*; but his is a kind of human nature with which no ordinarily constituted human being can possibly desire to make intimate acquaintance. That he should tire of the sweet angelic wife, whose only fault is that she is far too bright and good to be the daily food of such a poor thing as himself, is not in the least surprising, though even the Edward Galbraiths of the world do not often touch the depths of caddish degradation to which he descends by sheer specific gravity. His alienation from his wife may be human—that is, it may be natural to his kind of humanity—but when that alienation is intensified by the blindness which would have appealed to the most elementary chivalrous instinct, it becomes inhuman and revolting; and whatever pleasure we may derive from the cleverness of the story is swallowed up by an irritating regret that we cannot see one character in it kicked or horse-whipped. Still, the story of Galbraith's infatuation for Lady Elcheater is very skilfully told; and she herself is a vividly and veraciously conceived figure, all the more realisable because we are allowed to feel the beating of a woman's heart beneath the surface incrustation of unwomanly cynicism. Her brother, M. Hector Flamant, seems to me a good deal less successful, not certainly

for want of painstaking on Miss Connor's part. The handling is undoubtedly clever, but the effect is unreal. His cynicism, unlike his sister's, is overdone, and we do not believe in it. His cold-blooded utterances in the presence of death are only saved from being revolting by being simply incredible; and altogether he cannot be considered a success. As a whole, however, *Husband and Wife* is, from both an intellectual and a literary point of view, a strong and interesting story. Still, it might have been equally strong, equally interesting, and a good deal less miserable.

There is a general impression abroad that the cruel stepmother of fiction is as extinct as the dodo; but she appears with all her pristine life and vigour in Mrs. Alexander's novel, *A Life Interest*. There is, however, a certain wicked freshness about Mrs. Acland, for she is even worse as a mother than she is as a stepmother; and she is, indeed, as objectionable a specimen of feminine humanity as I have met with for a long time, even in fiction, where people achieve an all-round perfection of depravity which happily seems unattainable in real life. Having bigamously married a second husband, she robs him of a large sum of money, and persuades him that the true criminal is her own son; and, having thus rid herself of her boy, she attempts to rid herself of her stepdaughter Marjory by the pretty expedient of conniving at her seduction. The would-be seducer, Mr. Vere Ellis, is a soul-satisfying sub-villain, while there is a third black sheep in the person of a very objectionable Mr. Blake, who knows Mrs. Acland's secrets, and has her in his power; so that people who find imaginative enjoyment in bad society will have in *A Life Interest* a book to their taste. On the other hand, Dick Cranston, the ill-used son of Mrs. Acland, is a fine, manly, and truthfully drawn hero; and, though old Mr. Cartaret, the virtuous, is not a specially amiable person, he is exceedingly life-like. The novel is really good of its kind, though the kind is far from being the highest. It is compact and symmetrical in structure, workmanlike in its handling of character and incident; and the inevitable improbabilities of such a plot are skilfully minimised.

Margaret Dunmore is not a mere flimsy purposeless novel, written with an eye to the circulating libraries. It is intended to combine the most solid instruction with the most rational entertainment, being a popularisation—for weak brethren and sisters—of the gospel of "scientific meliorism," which Miss Clapperton has expounded more didactically in another volume. This description may not sound appetising, so I must hasten to say that the story is by no means lacking in interest; and to any reader endowed with a moderate sense of humour it will afford a good deal of genuine amusement, none the less enjoyable because unconsciously provided. An anonymous critic, whose words are quoted upon the flyleaf, recognised in Miss Clapperton "an advanced thinker of a rare and high order"; and we know how difficult it must be for a superior person of this kind to condescend to the apprehension, or adopt the phraseology, of the Philistine majority. On the whole, Miss Clapperton is very suc-

cessful. The superiority is implicitly admitted rather than aggressively obtruded, and her style is such as can be "understood of the common people"; but now and then the instincts of the advanced thinker are too strong for her. Of Walter Cairns we are told that

"at the age of eighteen he fell in love with a pretty face, and in utter ignorance of the phenomena of life, he mistook a transient passion, indicative merely of virile manhood, for that master passion which diffuses satisfaction through the entire complexus of the civilised man."

"Virile manhood" is a phrase which savours of the advanced writer as well as the advanced thinker; but "entire complexus of the civilised man" is good, though perhaps too scientifically melioristic for the common herd who, like Walton, are apt to fall in love without serious consideration of the phenomena of life. I must confess that, personally, I do not take kindly to the "unitary home" of which Miss Clapperton is enamoured. She tells us that

"personal affinities are certain to declare themselves in a unitary home. The bonds of affection and links of connexion will form freely in adaptation to individual natures; and as these are distinctive and richly varied, so the subjective emotional relations are bound to be equally diverse."

Here are words which, so far as sound goes, are as rich in blessing as the word "Mesopotamia"; but even in Miss Clapperton's unitary home the declaration of "personal affinities" between Frank and Margaret Dunmore appears to have caused considerable discomfort to Frank's nice little wife Rose. Perhaps had Rose been more "altruistic" she would have been less uncomfortable, but the carnal mind cannot help sympathising with her and liking her best as she is. It is to be feared that Carlyle would have called the "unitary home" a "Morrison's Pill." The pill is certainly prettily gilded, but the trademark of Morrison is very apparent.

In the first of his two new stories Mr. Bret Harte seems to have made an attempt to combine his own peculiar methods with those of Mr. Henry James, and the result is not very satisfactory. The allusive, touch-and-go manner is specially irritating when it is adopted by a writer to whom it is not natural; and the general prejudice in favour of stories which have an end as well as a beginning will surely not be eradicated by "A Phyllis of the Sierras," which, though in parts very charming, is, in the mass, decidedly tantalising. "A Drift from Redwood Camp" is much more characteristic and much more pleasing. The change in the character of Elijah Martin when he, the despised pariah of the camp, is accepted by the Indians as a heaven-sent chief is one of Mr. Bret Harte's most original and masterly conceptions.

Mr. Davidson again lays his scene in the Isle of Man; but *Mad or Married?* is very different from either of his previous stories, being not a novel of the ordinary kind, but a decidedly ingenious and interesting romance. The hero and heroine, who are quite unknown to each other, have a simultaneous dream or trance, in which they imagine they are married, and the descriptions given by both

of the surroundings of the ceremony are identical. Ultimately, of course, they meet in the flesh; but I will not spoil the reader's pleasure by indicating the course of the clever and exciting plot.

In the struggle for the mantle of Hugh Conway the largest fragment has fallen to the lot of the author of *Jan Vereloots*. There are also indications that he has gone to the school of the late Lord Lytton, and has taken some hints from *A Strange Story*. His weakness is a too great prodigality in the matter of marvels, and his invention has a tendency to run away with him; but there can be no doubt that he has produced a very creepy and thrilling tale which most readers will be impelled to devour at a single sitting.

The Hanleys is rubbish. Life is too short to afford time for the justification of this brief verdict. Those to whom it is unsatisfactory may try to read the book, and after the attempt can pronounce a verdict of their own.

JAMES ASHCROFT NORLE.

CURRENT LITERATURE.

Reminiscences of William Rogers, Rector of St. Botolph, Bishopsgate. Compiled by R. H. Hadden, Curate of the same. (Kegan Paul, Trench & Co.) Among the city clergymen the rector of Bishopsgate holds a prominent place—due not to theological attainments nor to eloquence as a preacher, but to unfailing *bonhomie*, ready wit, and no small administrative skill. Everyone knows him and likes him; but there is a chance of his really great services to popular education being forgotten in these days of constant change, and we are therefore glad that this amusing autobiography has appeared to revive—without any intention of so doing—our recollections of what Mr. Rogers has done in his generation. Born in 1819, he had the questionable advantage of entering Eton under Dr. Keate, of whose despotic rule he gives some entertaining anecdotes. From Eton, then under Hawtrey's milder and fairer government, he passed to Oxford, where he, at any rate, had the distinction of rowing in the university crew. The slender stock of theology with which Balliol had supplied him was replenished by a year's residence at Durham, and in 1843 he was ordained by Bishop Blomfield to the curacy of Fulham. From thence he was promoted—partly because his vicar had a strong suspicion that he was a Puseyite in disguise!—to the incumbency of St. Thomas, Charterhouse. The parish, or district, was and is as unlovely and disheartening as one can readily be found; but for eighteen years Mr. Rogers worked away there on his own lines, and, at last, his zeal was rewarded by his old college tutor, Bishop Tait, who placed him in his present position. The chapters in his life which are of most value and most interest are those in which are given his experiences on the Royal Commission on Education (1858-1861), and in connexion with the middle-class schools of the city. We observe that one of the suggestions of the Commission was the formation of county and borough boards of education—a suggestion which has just now been repeated with all the appearance of novelty. There are plenty of good stories, shrewd remarks, and humorous observations scattered through the pages of this little book; and it is impossible to read it without an increased regard for the genial and tolerant city rector, whose like we may not see again.

Women and Work. By Emily Pfeiffer. (Trübner.) This little book contains a very

temperate and luminous discussion of the chief objections that have been urged against the claim of women to an enlarged sphere of action and a more advanced education. The sentimental, economical, and physiological objections are in turn fully considered and fairly met by appeals to fact and the balance of probabilities. There is not much in the essay that has not been said over and over again; but nowhere before have we found so exhaustive an exposition of the whole subject comprised in so small a compass, or written with so much appreciation of both (or all) sides of the question. The influence of work upon women is discussed with the light of growing experience; but nothing is said, for the time is not yet ripe, of the influence for good or for bad of women upon work. Mrs. Pfeiffer has not convinced us, only because we were convinced before, of the truth and justice of the cause for which she pleads so well; and we trust that many doubters will be induced by her established reputation to give her a patient hearing and an impartial verdict. We do not think that the author's style is quite so good in prose as it is in poetry; and we must beg her, in a second edition, to spell Jane Austen's name aright.

THIS is not the day of essays that are light as well as thoughtful; learned at times, yet written with grace. Mr. Dunphie's essays then—*Chameleon* he calls them, and they are published by Ward & Downey—are doubly welcome. They are upon all sorts of subjects: no magazine is quite so miscellaneous: they are as miscellaneous as Elia's own, and, they have indeed, touches which recall Charles Lamb. For such a phrase as this—such an *éloge* as this—we are bound to give justification. We do it, in a measure at least, by saying that Mr. Dunphie is wholly genial, in the range of his sympathies he is delightfully unacademic, he is very observant, he is very reflective; and, like Charles Lamb, he can talk about himself in the quaintest of ways. He can talk engagingly about his own cough. In his essay on "October" he strikes a vein of poetry; his observation of nature is less elaborate than that of Jefferies or John Burroughs, but, within its own limits, and for its own quite different ends, it is as satisfactory. But, fond as Mr. Dunphie is of nature, he is much fonder of people. The ways of men and women are really the favourite subjects of his half-humorous, half-pathetic studies. His "People who have seen Better Days," is a very humane and tender, and withal a penetrating analysis of the man who, like Dogberry, "hath had losses." No one would read *The Chameleon* through at a sitting. Its variety is too great for that. But to take an essay or two once in the day—in the ten minutes in which you are waiting to dine—or later, when not only the "epicure" we trust, may be "serenely full"—is to adopt a course very profitable, very conducive to good temper, to a benevolent and lively view of life.

Vert de Vert's Eton Days, and other Sketches and Memoirs. By the Rev. A. G. L'Estrange. (Elliot Stock.) Of the papers which fill this little volume, the first—in which the author's experiences of Eton some thirty years ago are given—is by far the best. Dr. Hawtrey was then head-master, and the old order of things still prevailed, though year by year some concession had to be made to popular opinion. Inconsistency was everywhere conspicuous. Rules, strict and far-reaching, were administered with injurious laxity, and the recognised system of "shirking" seemed to imply that moral delinquency consisted wholly in being found out. Mr. L'Estrange gives an account of the successive magazines in which, during the last century, Eton boys have found a field for their literary enterprise. The

Microcosm, edited by Canning, and the *Etonian*, supported by Moultrie, H. N. Coleridge, and others, are well-known; but perhaps the most interesting of the series is the *Miscellany*, which Mr. Gladstone conducted under the name of Bartholomew Bouverie. An extract from the future statesman's "Ode to the Shade of Wat Tyler" is worth quoting at this juncture for its political rather than for its poetical expressions:

"Still, 'mid the cotton and the flax,
Warm let the glow of freedom wax;
Still, 'mid the shuttles and the steam,
Bright let the flame of freedom gleam;
So men of taxes, men of law,
In alley close and murky lane,
Shall find a Tyler and a Straw,
To cleave the despot's slaves in twain."

This is, indeed, poor stuff, but in 1827 the schoolboy's knowledge of English poetry was very limited. Mr. L'Estrange himself ventures occasionally into verse; and he betrays in his lines upon "The Primrose" that Wat Tyler's panegyrist is not of his way of thinking, though, in our opinion, they are *cantare pares*.

The *Four Gospels translated into Modern English from the Authorised and Revised Versions*. By Ernest Bilton. (Paisley: Alexander Gardner.) Mr. Bilton is sure to meet with a great deal of harsh or contemptuous criticism, and there is much in his work with which it is possible very reasonably to find fault. We prefer, however, to point out that he has made an honest and not wholly unsuccessful attempt to supply a real want. The archaistic style of the English New Testament has undoubtedly a special charm and impressiveness of its own, and it would be in many ways a serious loss if the English people ceased to be familiar with it. But the very characteristics which give to the Authorised Version so much of its literary and perhaps something of its religious value, are, from another point of view, a positive disadvantage. A good translation is one which, so far as possible, produces on the reader's mind the same impression as the original work must have produced on the minds of the readers for whom it was first intended. The Gospels were primarily written for readers whose ordinary language was Hellenistic Greek. Except so far as they quote the Old Testament, or allude to it, they were written, not in any sacred or picturesquely old-fashioned style, but in the common dialect of everyday life. A translation which employs forms of expression that are considered appropriate only to sacred subjects, and which abounds in antiquated, and indeed in foreign idioms, cannot possibly convey anything but a distorted impression of the original. If it be desirable that the English readers should really understand the New Testament, he ought to have a translation of it into English which is to him as plain and natural as the Greek of the original writers was to the Hellenistic Jew. Such a translation Mr. Bilton has tried to produce, his purpose, as he explains in the preface, having, in the first place, been merely to ascertain for himself what the evangelists really meant to say. It is certainly to be regretted that he was not qualified to translate from the original instead of translating from "the Authorised and Revised Versions"; and it would be easy to discover instances of bad taste in the choice of expressions—the very worst, perhaps, being the use of the word "boycott" in Luke vi. On the whole, however, we are more struck by the degree of success which Mr. Bilton has attained than by the points in which he has fallen short. A good many faults may fairly be pardoned in consideration of such felicitous renderings as the following: "Have no anxiety for the morrow, for to-morrow will bring its own anxieties. The day's trouble is enough for the

day." Mr. Bilton has had the good sense to recognise the character of the poetical and impassioned passages, and not to vulgarise them by reducing them to the level of familiar prose. He has also very properly allowed the Old Testament quotations to retain some of the formality of expression with which they appear in the Authorised Version. Altogether the book is an interesting experiment, and may be cordially recommended until some person of greater scholarship and culture than Mr. Bilton will brave the sneers of reviewers, and produce a more satisfactory work on the same lines.

Essays and Poems. By Frances Mary Owen. (Bumpus.) It is seldom nowadays that we can take up a volume of "collected" essays without some misgivings, the result of bitter experience, but the name of the late Mrs. Owen should be sufficient to disarm us in the present instance. And we may say without fear that it is seldom that, among the minor essayists, we have read a volume with so much sustained interest. Mrs. Owen wrote with all a woman's tenderness upon the spiritual side of the best literary thought of our day. Those, indeed, who knew her indefatigable efforts for her fellow beings will not need to be told whence she drew her inspiration. The essays in this volume are chiefly on Shakspeare, Browning, Christina Rossetti, Wordsworth—all of whom she admired devotedly. Her comparison of the heroines in Shakspeare and George Eliot is particularly thoughtful. But the most beautiful essay in the book is, perhaps, one written upon Jean François Millet after the appearance of Sensier's life of the artist. The following passage, on Browning's "Flight of the Duchess," shall speak for itself:

"It is dangerous ground to look for meanings where they are not supposed to be—many would say it is wholly inadmissible; but in the interpretation I am about to suggest, I would say, when we have enjoyed the story to the full . . . we have a right to let it say what it will to us. It does not spoil a work of art that those who look at it should see more than the artist had designed that they should see. It must have been present to him, whether consciously or unconsciously, or they could not see it. Neither is it necessary that works of genius should bear the same interpretation to all who study them."

In an early essay it is claimed that Wordsworth is the poet who has penetrated most deeply the spiritual thought of our time, but later essays seem to show that Mrs. Owen modified this opinion. Her life was probably too active to allow her to spend much time over poetic creation, and she probably did not set a high value on her own productions; but it allowed her to say, with the worker in her poem entitled "The Children's Music":

"I can hear the music
Which the little children hear."

The volume shows an activity and thoughtful tenderness which are not too common.

Noctes Shaksperianae. A Series of Papers by Late and Present Members of the Winchester College Shakspeare Society. (Castle & Lamb.) There is something unique and stimulating about this volume. It is an admirable example of what school societies may do. Wykehamist boys and masters—those who have gone away and made for themselves a name in the world of letters, and boys who may yet do so—all have united here, the one link between them being their common membership. The book is the result of honest Shaksperian study—bold, yet not the less modest. The members, working from a set scheme, have produced a series of papers, all of them interesting, and some of exceptional merit. The best are the two first, on "Shakspeare's Library"—a paper, however, very unequally written—and on "The Classical Attainments of Shakspeare,"

a contribution to Shaksperian study (by Mr. A. H. Cruickshank, now a Fellow of New College, Oxford) which is as incisive as it is adequate. And a third paper on "Shakspeare as a Historian," written with all the delicacy of miniature painting, is worthy also of note. The article on "Shakspeare and Goethe" has disappointed us from its sparse treatment of the subject; and that on the "Stagecraft of Shakspeare" equally fails to satisfy the ambitious promise of its title. After this it is refreshing to come upon a paper written with such choice of diction and suggestiveness as that on "The Fools of Shakspeare," which we are disposed to rank as high in pure criticism as Mr. Cruickshank's paper in scholarship. The contributions henceforward fall below the earlier promise of the book, being more redolent of the class-room than of the study. But, altogether, Winchester is to be congratulated on such a production. "The conclusions," as one of the writers says, "are neither startling nor definite"; but where method is everything it seems that Winchester, *portante seule une torche allumée*, has answered once for all the vexed question of the usefulness of school societies. While others have been dragging on a precarious existence, the W. O. S. S. has preserved, for twenty-three years, the good tradition of Bishop Cotton when at Marlborough. It is time for masters to change their practice of half-hearted toleration, when, under proper guidance, such a book as *Noctes Shaksperianae* can be produced. In the happy words at the conclusion of the preface, "the veteran among the public schools of England challenges all others to the field of letters."

A Concordance to the Poetical Works of William Cowper. By John Neve. (Sampson Low.) It may be doubted whether a Cowper concordance is likely to find many purchasers. Such a book will be useful to dictionary-makers, and will, no doubt, be welcomed by very devoted admirers of Cowper; but the two classes together are hardly numerous enough to constitute a "public." That, however, is Mr. Neve's affair. The business of the reviewer is to give him the praise that is his due for the accuracy and fulness of his work. The book does not, like Cleveland's concordance to Milton, contain merely a list of single words with references to the passages in which they occur. The entire line is quoted in every case. The only defect we have to notice is that acknowledged in the preface: the work "does not include translations, except the more important ones from Vincent Bourne, and only a few of the minor poems." Why was it not made exhaustive?

Both Sides of the River: a Tale. By Mrs. Selby Lowndes. (Seeley.) This is one of the best books for girls which this season has produced, and may be unreservedly commended. It is, indeed, a love-story—girls, perhaps, would not care much about it if it were not; but the tone is healthy, and other sentiments beside what is usually called love are called forth. The interest chiefly centres around Madge Dickson, a bright and pleasant girl, who has to undertake the difficult post of governess to her orphan cousin, Rica, who lives with her grandparents, and whose life has been overshadowed by their austerity. How the gloom is dispelled by the happy presence that has been introduced, and a mystery which had long baffled curiosity is cleared up, we must leave it to Mrs. Lowndes to relate. It is enough to add that the printer and the binder have done their part to make the book attractive.

We have also received a reprint of Quarles's *Emblems Divine and Moral* (Paterson), containing reproductions of the quaint original engravings. There is a "Preface to the Present

Edition," evidently written by a lady in whom the qualities of the heart are more prominent than those of the head.

NOTES AND NEWS.

We understand that the Trustees of the British Museum, at the instance of the Delegates of the Clarendon Press, have resolved to give special facilities to Mr. Henry Bradley for his work as joint editor of the Philological Society's New English Dictionary.

William the Conqueror, by Mr. E. A. Freeman, the first of a series of "Twelve English Statesmen," announced by Messrs. Macmillan a little ago, will be published next week. Mr. H. D. Traill's *William III.* is to follow in April, and Prof. Creighton's *Wolsey* in May. Mr. John Morley has undertaken no less than three volumes in this series—Walpole, Chatham, and Pitt; while Mrs. J. R. Green will write on Henry II., Mr. F. York Powell on Edward I., Mr. James Gairdner on Henry VII., the Dean of St. Paul's on Elizabeth, Mr. Frederic Harrison on Oliver Cromwell, and Mr. J. R. Thursfield on Peel.

MESSRS. MACMILLAN will also publish immediately four public lectures delivered at Oxford by Mr. Freeman last year, dealing with the Teutonic conquest of Gaul and Britain.

Facts about Ireland: a Curve History of Recent Years, by Mr. A. B. MacDowall, which will be issued immediately by Mr. Stanford, of Charing Cross, is a novel attempt to bring to the elucidation of the burning question of the day one of the methods of science. It will show in a number of diagrams, with accompanying letterpress, the fluctuations over a series of years in matters of population, crops, live stock, holdings, education, emigration, evictions, crime, consumption of spirits, bank deposits, occupations, &c.

MESSRS. HENRY STEVENS & SON will shortly issue by subscription another volume that will help to preserve the memory of that prince of bibliopoles, the late Henry Stevens, of Vermont. This will be entitled *Johann Schöner*; and it will consist of (1) a reproduction in facsimile of the unique copy of Schöner's globe of 1523, illustrating Magellan's voyage of circumnavigation; (2) reproductions of the pamphlet of Schöner accompanying this globe (of which only three copies are known to exist), and of a contemporary letter relating to the Moluccas by Maximilianus Transylvanus; (3) translations of these letters, a bibliography of Schöner's works, &c. The introduction and notes were sketched out by the late Henry Stevens, but have been put into shape by Mr. H. C. Coote, of the British Museum. It is needless to say that the paper, the printing, the facsimiles, and the index will be worthy of the publisher. We may add that he is just now removing his place of business to 39 Great Russell Street, opposite the British Museum. The familiar house in St. Martin's Lane is required for local improvements.

MR. W. T. MARCHANT has made an anthology of the many songs, ancient and modern, literary and dialectal, which owe their inspiration to beer. His work (which will be published by Mr. George Redway) is called *In Praise of Ale*; or, Songs, Ballads, Epigrams, and Anecdotes relating to Beer, Malt, and Hops.

MR. RENNELL RODD, the author of *Feda*, will shortly publish (with Mr. David Stott) another volume of poems, which takes its title from the principal piece, "The Unknown Madonna." The book will have for frontispiece an etching by Mr. B. Richmond.

The Spiritual Decline of the Churches, by Alfred Hill, is the title of a volume announced by Mr. Elliot Stock for immediate publication.

MR. WALTER SCOTT will publish next month a new and enlarged edition (crown 8vo) of Mr. Waddington's *Sonnets of Europe*, of which seven thousand copies have been sold since its publication in December, 1886.

THE Early English Text Society has the whole of its books for 1888 in type; and the first of them, the text and translation of the unique Treatise on the Vices and Virtues, circ. 1200 A.D. (Stowe MS. 240, Brit. Mus.), edited by Dr. F. Holthausen, is now ready, but will be kept back to go out with the 1887 books, which, though ready in text last May, were delayed for the want of introductions. These are the earliest version and form of the great collection of Early English Lives of Saints (from a Laud MS.), and the late Life of St. Werburgha, by Henry Bradshaw (Pynson, 1521), both edited by Dr. C. Horstmann; with a list of the contents of all the collected Saints-Lives' MSS. These are for the society's original series. For the extra series, the last book for 1887—a revised edition of the romance of *Torrent of Portyngale*—wants only the return of a revise to free it from the press. The 1888 books will be a medical and a surgical one: William Bullein's Dialogue against the Fever Pestilence, 1573, edited by his name-sakes, A. H. and Mark Bullen; and the first English "Anatomy"—Thomas Vicarie's *Anatomie of the Body of Man*, 1548—edited from the unique copy of 1577, by Dr. F. J. Furnivall and his son Percy Furnivall, of Bartholomew's. The latter book will contain, in an appendix, the Ancient Ordynarye of the Barber-surgeons of York, Henry VIII.'s Statutes relating to Surgeons, the City of London's Orders for the Regulation of Bartholomew's in 1552, documents relating to Vicary, Henry's payments to Holbein, &c.

THE Rev. W. H. Dallinger will, on Thursday next (March 8), begin a course of three lectures at the Royal Institution on "Microscopical Work with recent Lenses on the Least and Simplest Forms of Life"; and Mr. William Archer will, on Saturday (March 10), begin a course of three lectures on "The Modern Drama—French, Scandinavian, and English."

THE fifth working meeting of the West Branch of the English Goethe Society was held last Saturday evening at the residence of Miss Patteson, in Gloucester Road, when Goethe's "Egmont" (Schiller's adaptation for the stage) was read by the members. The proceedings were opened by a pianoforte performance of Beethoven's overture to "Egmont."

WE are glad to hear that the appeal to raise a fund to indemnify Dr. F. J. Furnivall against the costs and damages, for which he was made liable in a recent action at law, has been completely successful.

IN the review of *An Adventuress* (Ward & Downey), under the heading "New Novels" in the last number of the ACADEMY, the author was referred to as "Colonel" Anderson. There is no suggestion, on the title page or elsewhere, that the author is a military man; and, as a matter of fact, we are assured that he is not.

OBITUARY.

JAMES COTTER MORISON.

It is with deep regret that we record the death of Mr. James Cotter Morison, which took place on Sunday last, February 26, at his house in Fitz John's Avenue, Hampstead. He was, we believe, in the fifty-seventh year of his age.

For some time past Mr. Morison had suffered from a wasting illness, which impaired his literary productiveness; and he himself recognised that he would never be able to write the projected history of France for which his entire life's work was, in some sort, a preparation.

But if the loss to his friends be thus greater than the loss to literature, it would be unjust not to call to mind what he actually did accomplish. His first book—*The Life and Times of St. Bernard* (1863)—belongs to the same class as Mr. Bryce's *Holy Roman Empire*, concerning which it is difficult to say whether they show more of promise or of performance. His little study of *Madame de Maintenon* (1885) is marked by the same qualities of skilful delineation of character and consummate knowledge of the surroundings. Of the two biographies which he contributed to the "English Men of Letters" series, the *Gibbon* (1878) is an excellent example of what such popular work should be, while the *Macaulay* (1882) is only less successful because overshadowed by Sir George Trevelyan's full-length portrait. His latest book—*The Service of Man* (1886)—which was written when sickness had already seized upon him, fails to represent adequately the views that he had formed upon Man and Religion, though it has probably attracted more notice than all his other publications. Those who were privileged to enjoy his acquaintance will prefer to judge him by the example of his life and by their remembrance of his conversation. For to the learning of a professor and the austerity of a Positivist he added the brilliance of a French *causeur* and the generosity of an English gentleman.

MR. JAMES CLARKE, the editor of the *Christian World*, died at Caterham, Surrey, on Friday, February 24. For more than a year he had suffered from a heart affection, which carried him off. Mr. Clarke was the son of a Baptist minister, and was born in May, 1824, at the village of Thorpe-le-Soken, in Suffolk, whence he removed at an early age to Ipswich, and afterwards (1846) came to London to obtain employment on the press. For several years he was a reporter in the gallery of the House of Commons, conducting at the same time other work of an editorial and literary kind. In 1857 the *Christian World* was established, and Mr. Clarke was from the first its editor and, after 1873, sole proprietor. Altogether, he founded six other periodical publications of a popular kind, including the *Literary World*, which for a year or two he himself edited. Some years ago he acquired the proprietorship of the *Nonconformist*, and amalgamated with it the *English Independent*. In religious matters, as well as in politics, Mr. Clarke's views were pronouncedly liberal. His journalistic duties left him no leisure for writing books, but he was an enthusiastic bibliophile. Next to his journals his library was his greatest interest, and few private libraries could surpass it in general literature.

MR. EVAN DAVIES, or, according to his *nom de guerre*, "Myfyr Morganwg," died on Thursday, February 23, at Pontypridd, Glamorganshire, in his eightieth year. He was known as the Arch Druid of Wales, in which office he succeeded Mr. Edward Williams (Iwlo Morganwg), one of the learned compilers of the *Myvyrian Archaeology of Wales*. In his earlier years Mr. Davies won a high position as a bard, but latterly he relinquished poetry in favour of archaeological studies. He became the chief exponent of that school of Neo-Druidism which brought Celtic studies into such discredit. Druidism was, in fact, his religion, and he succeeded in making a number of disciples, who periodically visit the famous rocking stone at Pontypridd Common, to perform the ancient rites and ceremonies of the bards and druids of the Isle of Britain, "in the face of the sun and the eye of light." On this account he held aloof from the Eisteddfod, and would not participate in the Gorsedd ceremonies held in connexion with it. He explained and advocated his Neo-Druidic doctrines in several bulky

tomes, of which the best known are *Gogoniaut Hynafol y Cymry* ("The Ancient Glory of the Welsh People"), and *Hynafiaethau Barddas* ("The Antiquities of Bardism").

CORRESPONDENCE.

FORS FORTUNA.

Oxford: Feb. 25, 1888.

I have to thank Mr. Henry Bradley for his careful and only too indulgent review of my *Biographies of Words*. He gives me credit for treating philological questions with greater caution than in my younger days. But even that I cannot claim as a personal merit. Our whole science has grown more cautious, not to say timid. The assurance with which Bopp could derive *aestimo* from *adhi-tumo* belongs to the heroic days of the science of language. We know now but too well the many traps which vowels, even more than consonants in their manifold changes, have everywhere laid for us. We remember how often etymologies which no one dared to doubt have had to be surrendered; and here, as in many other spheres of scientific research, our belief in finality has been rudely shaken. We hardly dare to speak any longer of phonetic laws, of Grimm's Law, of Verner's Law, of Ascoli's Law; but we call them by the more modest name of rules, and allow for sporadic exceptions or the disturbing influence of analogy even within the narrow spheres of the best established phonetic tendencies.

But philological science has not only grown

more timid, it has also grown more distrustful of authority. Formerly an appeal to Bopp, Pott, Grimm, Benfey, or Curtius was supposed to silence all opposition. When, in my younger days, I ventured to say, for instance, that Bopp was wrong in deriving Beng. *bohini* from Sk. *svasari*, when I declined to admit a transition of *h* into *ll*, postulated by Pott as possible in Greek, because the Etruscan *Pultuke* was the Greek *Polydeukes*, when I protested against Curtius deriving both *thas* and *se* from *tva-tvi*—I was considered very bold. "Bopp and his school hold this," "Curtius and his pupils teach that," was supposed to be a sufficient reply. All that is changed, and is changed for the better. We do not hear "Brugmann says this" and "Osthoff says that"; or, if any one should venture to use such arguments, he would be met at once by the rejoinder, "Yes, but Ludwig says this," or "Schmidt says that." We have, in fact, become more democratic; and it is but seldom that a scholar speaks of himself, as Mr. Henry Bradley does, as a mere apprentice, and not a master. We are all masters, and only those who have the misfortune of being of a certain age—such as Curtius towards the end of his life, Delbrück, Fick, nay, of late, even Schmidt, and soon, it may be, Brugmann—are in danger of being pushed aside as antiquated.

I thought it right on several occasions to protest against this want of reverence with which some of our more youthful grammarians have allowed themselves to speak of such scholars as Curtius, Benfey, Grimm, and Bopp; but I should not have gone so far as to say, what Mr. Henry Bradley avers, that no "living philologists are equal in intrinsic greatness of achievement to the founders of our science." It is so difficult to say what is great and important. No doubt the world was younger, the hearts were warmer, and the ideals of our science were more elevating in the days of Humboldt, Bopp, and Grimm than they are now. A new world was being discovered, or, rather, the old world was lifted out of its sockets, and the historical conscience of mankind was entirely reconstructed. Still, what I call the filigree work of the present generation, such as, for instance, Schmidt's article on "Das Suffix des Participium perfecti activi" in *K. Z.* xxvi., p. 329, possesses a charm and importance of its own, and requires for its execution peculiar gifts in which the founders of our science were often deficient. I have not a word to say against *ἄσσοι* *viv* *ἄσσοι* *εἰσω*, though I do not think that all who write *a₁*, *a₂*, *a₃*, *k₁*, *k₂*, who call Curtius an *ignoramus* and Bopp an anti-diluvian, are *ipso facto* great grammarians. But that our science has advanced rapidly through the labours of some of these younger scholars, that through a clearer insight into the vowel system, and through the discovery of the continuous working of the Sanskrit accent in the other Aryan languages, our science has reached a far higher degree of perfection, I am the very last to deny. The real workers are always the most ready to recognise the merits of their fellow-workers, and of those in whose footsteps they have followed. I quite agree, therefore, with Mr. Bradley, when he says that the views from attic-windows are often more comprehensive than those from the *bel étage*; and I hope with him that the next generation of comparative grammarians may build still higher watch-towers, and discover regular movements of stars where to our eyes much is still vague and nebulous. It is the same in all sciences; but there is this painful difference—that, whereas in astronomy, for instance, no one is blamed for not having known that a star was double before it was discovered by Herschel, or for not being familiar with Neptune before it was discovered and proved by Leverrier and Adams, men of such merit and eminence as

Curtius are abused like schoolboys because they did not know that K was a double star before Ascoli saw it, and that there was a real cause for phonetic disturbances in Sanskrit till Collitz and others discovered and proved it in the forgotten vowel *ḍ*.

Why should our science alone be disgraced by this magisterial arrogance and pharisaical air of infallibility, or by what Mr. Bradley justly calls precipitate dogmatism? I fully admit that, as in all other sciences, so in the science of language also, mere authority goes for nothing—*οὐ γὰρ πρὸς γὰ τῆς ἀληθείας τιμητὸς ἀνὴρ*. But, in the science of language, as in all other sciences, we ought to show respect to those who came before us, and by whose efforts, even when they were unsuccessful, the vantage ground on which we stand has been secured.

It may be said, no doubt, that I am myself a great sinner, and that in denying that *Fors* was derived from *fero*, I showed but scant respect for authority. But I abused nobody, and I simply gave my reasons for differing from all other scholars. Every Roman, no doubt, was fully convinced that *fors* came from *ferre*. It had the full sanction of *Volks-etymologie*. Classical scholars, caring little about the mythological antecedents of the old *Fors*, acquiesced. A few only, such as Meyer, seem to have been startled at the idea that *Fors* should have been originally conceived as a carrier, and, therefore, suggested other roots, such as, for instance, *dhar*. After a more careful study of the fragments left to us of *Fors* as a mythological being, I became convinced that she must be considered as an old deity, being with Ceres and Pales one of the Penates, possibly one of the oldest gods on the soil of Italy; and, in looking for a possible background, I thought I could discern that originally she was one of the many names of the Dawn. To those who hold with me that ancient mythology is chiefly based on the broad phenomena of nature, and that among those natural phenomena the first place belongs to the Sun and to the Dawn, any etymology of *Fors* pointing to the Dawn would naturally be most welcome. I, therefore, looked out for a derivation that would be in harmony with my conception of *Fors*, and I found that the root GHAR, which had yielded the name of *Charis* in Greek, would yield a perfectly correct etymology of *Fors*. Mr. Henry Bradley admits all this: "The derivation from *ghar*," or, as he prefers to represent it, *gher*, he writes, "is doubtless linguistically possible." So far, then, we agree; but afterwards we differ. Mr. Henry Bradley thinks "I ought to have proved that the generally received etymology is inadmissible with regard to meaning." I deny this. The two etymologies are so far on a perfect level; and the authority of Roman grammarians, or even of Bopp and Curtius, adds no real weight whatever to either of the scales.

But though it was not necessary to do more than to show that *Fors* could be derived from GHAR quite as well as from BHAR, I myself was not satisfied with this. I did show to the best of my power why the meaning of the *Bright* was more appropriate to *Fors* than that of *Bearing*, and to my mind the mythological reasons which I produced seemed so convincing that I did not feel inclined to enter into the phonetic objections that could be raised against the derivation from the root BHAR. Only when met by the old argument—*Non est cur a textu recepto recedamus*—did I point out that the root BHAR does not in any of its numerous derivations take the vowel *ḍ*. I quoted Brugmann, because in his chapter on general phonetics he shows that *ḍ* may in Latin be represented by *z* and *i*, but only under very special conditions by *ḍ* (§ 172, 3). The ground being cleared so far, all that remained to be considered were the ordinary changes, due to what I still call

Ablaut. In these changes, as I tried to show, the root BHAR avoids throughout the vowel *o*. *Fordus* is no pratyudāharana, because it has a secondary form *hordus*, which points in a different direction, and because I see no analogies to a *krit*-suffix *da*. If, in spite of this, we derive *fors* from *fero*, we must treat it as a single exception (sporadic, as Curtius would have called it), or as influenced by some kind of hidden analogy; while, if we derive *fors* from GHAR, we have no such difficulty, and may even go so far as to say that in most, if not in all its derivatives, this root shows a strong predilection for the vowel *o*, as in *formus*, *formidus*, *fornus*, *fornax*, &c. These predilections which have been carefully considered by De Saussure and others, and which as yet cannot always be accounted for by the general rules of the *Ablaut* or by the influence of neighbouring consonants or vowels, must be taken into account. If some scholars, for instance, still derive *tripodare* from *pes*, *pedis*, the same question returns, whether *pes* ever shows the *o* vowel in what are called the *Hochstufen*, and whether, therefore, the old etymology of *tripudium* and *repudium* from a root PU (Lat. *pavire*) is not decidedly preferable (Corssen ii., p. 359).

Other cases of the same kind will have to be considered far more carefully than they have hitherto been; but, in order to finish this long discussion on *Fors Fortuna*, may I in conclusion ask these simple questions: Is the derivation of *Fors* from GHAR phonetically correct? Is the conception of *Fors* as the Dawn mythologically correct? Is there, besides *Fors*, any other derivative from BHAR which shows *o*? Is there any other ancient Roman deity like *Fors*, the carrier? Yes or No?

F. MAX MÜLLER.

THE TEUTONIC EQUIVALENT OF "FORS."

Oxford: Feb. 27, 1888.

I have received this morning from Prof. Kluge, the well-known author of the *Etymologisches Wörterbuch der deutschen Sprache*, a very interesting and valuable contribution to the discussion of the history of the Latin word *fors*. Prof. Kluge directs my attention to the fact that both I and Prof. Max Müller have overlooked one very important piece of evidence in favour of the view which connects *fors* (*fort-is*) with the Indo-European root *bher*, and which holds that the word was used in the sense of "chance" long before it attained divine honours in a Roman temple. The learned Jena professor points out that within the Teutonic domain the Latin *fors* is represented by a word phonetically equivalent, in the same vowel-grade, and at the same time used in precisely the same sense. This word is the Old-High-German (*gi*)*burt*, the Anglo-Saxon (*ge*)*byrd*. For evidence that *giburt* was used in the sense of "sors," see Graff, iii. 160; for *gebyrd*, meaning "fate," see Bosworth-Toller, p. 378. This absolute correspondence of the two words *gi-burd* and *fort-is*, both in form and in meaning, lends support to the view that there was an Indo-European *bhrti-*, having the meaning of "chance," before the separation of Italian and Teuton.

A. L. MAYHEW.

"THE CRAFT OF LOVERS."

Cambridge: Feb. 21, 1888.

I have just made an interesting discovery which exactly fixes the date of this poem, which some have ignorantly attributed to Chaucer. The last stanza, as printed in Chaucer's Works, ed. 1561, fol. 341, back, professes to give the date:

"In the yere of our Lorde, a x by rekeninge,
cccxi, and viii yere following."

Anyone who understands Middle-English must

see at once that the century is wrong. It cannot be 1348, but it might be 1448; and it occurred to me that the "c" has been dropped.

I am extremely pleased to find, on the best authority, that my guess is correct. I have found the original MS., and it has four c's, not three (see MS. Trin. Coll. Camb., B. 3. 19, fol. 156).

WALTER W. SKEAT.

THE FIRST AUSTRALIAN POET.

London: Feb. 25, 1888.

I am pleased to have been so fortunate as to have brought Barron Field, as a poet (or versifier, rather), to the knowledge of Mr. Sladen in time for his new edition. I trust he may select "The Kangaroo," in which Charles Lamb detected some "relish of the graceful hyperboles of our elder writers"; and which he could have "conceived to have been written by Andrew Marvell, supposing him to have been banished to Botany Bay."

I fear, however, that I must correct myself, and again, Mr. Sladen, in the matter of chronology, by carrying him back to a still earlier Australian rhymist. In Mr. J. H. Heaton's useful *Australian Dictionary of Dates* (1879), under the article "Drama," I find it recorded that the first Sydney Theatre, which cost £100, was opened on January 16, 1796:

"George Barrington, the notorious pickpocket, is the accredited author of the celebrated prologue which was read on the rising of the curtain, as follows:

"From distant climes, o'er widespread seas we come,
Tho' not with much *éclat* or beat of drum;
True patriots all, for be it understood,
We left our country for our country's good," &c.

The second couplet has ever since been one of the most familiar of "quotations"; but the whole prologue is clever, and deserves to be included in any Australian anthology. I do not know who wrote it, nor do I know whether Barrington in his book claims its authorship (for, unlike Mr. Sladen, I am all unlearned in the history of Australian literature); but it must have been written by somebody who was resident—voluntarily or involuntarily—in Sydney in 1796, and who drew his inspiration from what were then the most prominent local circumstances. The prologue is probably (for I would be cautious) the very earliest Australian poem extant in print, and it is suffused with local colour—so that it fulfils the conditions which Mr. Sladen has wisely laid down for himself.

I should like to be permitted to take this opportunity of suggesting that Mr. Sladen might advantageously make room for "The Kangaroo" and the 1796 Prologue, by omitting "The Black Gin," and "My other Chinese Cook"; and, especially, the comparison made in "Notes" (p. 274) between the writer of these verses and Calverley, who was incapable of writing down to the level of a fourth-rate comic journal. I never heard of the Australian writer before; but if, as Mr. Sladen says, "the essential quality of his work is subtlety—subtlety of humour, subtlety of metre, and subtly beautiful expression and feeling," it is hardly fair that he should be represented, even partially, by work from which these qualities are not merely essentially, but very conspicuously, absent.

J. DYKES CAMPBELL.

London: Feb. 22, 1888.

As I possess some Sydney printed verses, odes, &c., of much earlier date than Barron Field's, it follows that he could claim the title of the first "Austral Harmonist" as little as some of the verses which his friend Lamb gently in-

sinuated were "thefts so open and palpable" that he could almost "surmise that the author must be 'an involuntary exile' or some unfortunate wight sent on his travels for plagiarisms of a more serious complexion." Turning over the leaves of early volumes of the *Sydney Gazette* (those for 1805-6) I find the "Poets' Corner" frequently occupied by original pieces, quite as meritorious as anything which Field wrote. The earliest (Jan. 20, 1805), is a piece of twenty-four lines, entitled "The Tomb" and signed "Melpomene." In the issue of June 16 following there is a colonial hunting piece in four stanzas of six lines each, by some unknown Lindsay Gordon. Space forbids quotation, or even mention of the titles of other pieces.

Towards the end of the decade, however, a brilliant star arose in the Southern Hemisphere. One Michael Robinson recited at the levée at Government House, Sydney, June 4, 1810, a "Royal Birthday Ode"; and so much was the composer's talent appreciated that he continued to recite a new ode every year thereafter for eleven years, with an interlude occasionally upon the queen's birthday. And Michael Robinson was himself rivalled. Young Alfred Edward Howe, son of the printer of the *Sydney Gazette*, wrote "Lines on first hearing of the Princess Charlotte's death," which were duly inserted in his father's paper (February 13, 1819). The same theme, by the way, inspired a portion of Robinson's ode when the king's birthday again came round. By this time the new Judge Advocate (Barron Field) had arrived in the colony; and, quite ignoring the existence of any other writers of poetry—Michael Robinson and his odes included—issued two short pieces, which he entitled *First Fruits of Australian Poetry*, with the now familiar motto adapted from Bishop Hall:

"I first adventure, follow me who list,
And be the second Austral harmonist."

This was printed for private circulation (4to, 9 pp., Sydney, 1819). A copy is before me. A second edition was printed in 1823 (8vo, 19 pp.), with additional pieces, also for private circulation. Copies were duly forwarded to this country. I have seen the presentation copies inscribed by the author to Southey (in the British Museum), to Coleridge (my own copy), to J. Payne Collier (in the York Gate Library), and a fourth, which, I believe, was once Mrs. Field's. Michael Robinson was determined not to be ignored, and subsequently to Field's first edition issued the following announcement, which I copy from the *Hobart Town Gazette* of March 23, 1822:

"Royal Birthday Odes, written in New South Wales, and recited at the Levées at Government House, Sydney 1810-1821, comprising twenty-one Odes, with some hitherto unpublished pieces of poetry. Accompanied by an engraved portrait of the author from an original painting by Mr. Reid, Sen."

So far as I can ascertain, Robinson's collection was never published. Peter Cunningham, when writing his book on the colony (about 1826), mentioned it as then about to appear. (See *New South Wales*, 1827, vol. ii., p. 119.)

While on this subject, I may as well correct an impression as to the first book of poems published in Tasmania. It is generally supposed that *Poetic Trifles*, by J. Knox (Hobart, 1838), stands first in chronological order. Indeed James Knox, in the dedication of his little book to Lieut.-Governor Sir John Franklin, says it is "the first publication of the kind in the colony." I have a MS. of Knox's *Songs from a Far Land*, dedicated to Mrs. Peach, of Bath, and dated from Hobart, September, 1835. The contents are the same as in the printed volume (1838). But Knox, who had been in the colony only a short time, evidently was not aware of

the existence of the following work, published eleven years before:

"*The Van Diemen's Land Warriors; or the Heroes of Cornwall: a Satire, in three Cantos.* By Pindar Juvenal. 8vo, 32 pp. Tasmania: printed by Andrew Brent, 1827."

This work satirised the military force, because it had not been able to suppress bushranging in the island. A copy is now before me. In it numerous passages are underlined, and a MS. note at the end of the first canto censures them as "libellous"; and the writer adds, "My opinion of this work is that it should be suppressed, and every existing copy burnt.—J. A. T." Across the title-page is written J. A. Thompson—I believe the Crown Law Officer of that period. As this copy is the only one I have ever seen or heard of (I have not seen the title in any bibliography or catalogue relating to Tasmania), doubtless the work was seized and rigorously suppressed.

EDWARD A. PETHERICK.

Abbotsford Grove, Kelso, N.B.: Feb. 29, 1898.

If this correspondence proceeds much further the public may be led to believe that Australia is a country specially favoured of the Muses. So far from this being the case, it is to be feared that, Mr. Sladen's volume notwithstanding, the true poet has yet to come and sing in that sunny land. Tested by the canons of criticism which we should apply to the works of our own living poets, there has been no poem yet produced under the spell of the Southern Cross which deserves other than a local immortality. Most Australian poetry, to reverse a phrase, has hitherto been meant for a neighbourhood, and not for mankind. No one will deny that much is forcible in local description, and that wild "bush life" is narrated in appropriate rollicking verse; but this alone does not constitute poetry. One of your correspondents refers to Barron Field's "Ode to a Kangaroo." Here are the first few lines; and who that is interested in the history of Australian verse will not blush to read them?—

"Kangaroo! kangaroo!
Spirit of Australia,
That redeems from utter failure,
From perfect desolation,
And warrants the creation
Of this fifth part of the earth."

But the primary object I had in writing was to ascertain if Mr. Sladen, when he gets Barron Field's poems inserted in his little volume, will be satisfied that he has then secured the fruits of the first Australian poet, assuming Wentworth not to be such? Has he not heard the story of the convicts, Sparrow, Green and Company, who, in the year 1796, were privileged to afford the few emigrants then settled at Sydney the pleasures of a rustic theatre? Can he not recall the poem, which, in the hands of Mr. Sparrow, did honour at the opening of that theatre—the really first poem of Australian inspiration, and one which, for smart wit, has no equal among the more pretentious ones of later and more prosperous days? Here, then, we have the opening and closing lines as recited by the famed convict:

"From distant climes, o'er widespread seas we come,
Though not with much *solat* or beat of drum.
True patriots we; for be it understood
We left our country for our country's good.
No private views disgraced our generous zeal,
What urged our travels was our country's woe.
And none will doubt but that our emigration
Has proved most useful to the British nation."

Sometimes, indeed, so various is our art,
An actor may improve and mend his part.
'Give me a horse,' bawls Richard, like a drone,
We'll find a man would help himself to one.

Grant us your favour; put us to the test,
To gain your smiles we'll do our very best;
And without fear of future Turnkey Lockits,
Thus, in an honest way, still pick your pockets."

And, again, what has become of Dr. Lang, the severe critic of Barron Field, and, if not the second, certainly one of the very earliest of Australian versifiers? The following lines from one of his longer poems may be fairly considered on a level with the best in Mr. Sladen's collection. They are descriptive of course, but true melody is there:

"'Tis a most beauteous sight. The great South Sea's
Proud waves keep holiday along the shore;
And as the vessel glides before the breeze,
Broad bays and isles appear, and steep cliffs hoar,
With groves on either hand of ancient trees
Planted by Nature in the days of yore."

"But all is still as death! No voice of man
Is heard, nor forest warbler's tuneful song.
It seems as if this beauteous world began
To me but yesterday, the earth still young
And unpossessed. For though the tall black swan
Sits on her nest and stately sails along,
And the green wild doves their fleet pinions ply,
And the grey eagle tempts the azure sky,
'Yet all is still as death. Wild solitude
Reigns undisturbed along the voiceless shore,
And every tree seems standing as it stood
Six thousand years ago."

I may notice, in conclusion, that Mr. Michael—a poet to whom Henry Kendall owed much—is also passed over. His gatherings are not the least meritorious of Australian verse.

EILDON DOUGLAS.

London: Feb. 29, 1898.

I think everyone interested in Australian literature should be grateful to Mr. Dykes Campbell for directing Mr. Sladen to Barron Field's *First Fruits of Australian Poetry*. But, after all, the question of priority between Field and Wentworth is purely antiquarian. The first Australian poet, in any rational sense of the phrase, was Charles Harpur, as Mr. Mackenzie Bell very properly points out. Mr. Henniker Heaton has applied his powerful mind so unremittingly to the Penny Post that his dictum on the minor question of colonial poetry should not be taken as final. I am glad that Mr. Sladen means to see to the spelling of the name "Harpur," not "Harper." And this also applies, as I have privately assured him, to "Lindsay," and not "Lindsey," Gordon, however the name may have been spelled in the school roll at Cheltenham College. I had for years a copy of his *Sea-Spray and Smoke-Drift*, with his autograph written in full—"Adam Lindsay Gordon." He was not a little proud of his kinship with the "lightsome Lindsays" and "Gallant Gordons" of old Scotia's stirring story.

A. PATCHETT MARTIN.

M. RIBOT'S CHAIR AT THE COLLÈGE DE FRANCE.
Paris: Feb. 29, 1898.

The ACADEMY of February 25 (p. 132) says that M. Ribot "has been appointed to the new professorship on evolution founded at the Collège de France by the municipal council of Paris."

Will you allow me to state (1) that in the Collège de France there is no professorship founded by the municipal council of Paris; (2) that M. Ribot has been appointed professor of *experimental psychology*; (3) that this professorship is not exactly a new foundation. On the retirement of M. Frank, the chair of "droit de la nature et des gens" has been, in conformity with a wish expressed by the council of the professors of the Collège de France,

altered to a chair of experimental psychology, to which M. Ribot has been recently appointed.
PAUL MEYER.

IS IT A PIG OR A SWAN?

London: Feb. 24, 1898.

The new edition of Bosworth's *Anglo-Saxon Dictionary* contains the following article: "ILNETU *cicris* [P. v. Du Cange '*ciourris domesticus sus*'], Wrt. Voc. ii. 16, 15." For *ilnetu* read *iluetu* [*ilvetu*] = Anglo-Saxon *ilfetu* (swan); for *cicris* read *cicnus*. HENRY BRADLEY.

AI POINTMENTS FOR NEXT WEEK.

- MONDAY, March 5, 5 p.m. Royal Institution: General Monthly Meeting.
5 p.m. London Institution: "Glimpses into the Parochial History of the City as gathered from the Records," II., by Mr. Edwin Freshfield.
8 p.m. Society of Arts: Cantor Lecture, "The Modern Microscope," II., by Mr. John Mayall, jun.
9 p.m. Victoria Institute: "Oriental Etymology," by the Rev. Dr. F. A. Walker.
9 p.m. Aristotelian: Short Papers on various subjects.
TUESDAY, March 6, 8 p.m. Royal Institution: "Before and after Darwin," VIII., by Prof. G. J. Romanes.
8 p.m. Society of Arts: "South African Goldfields," by Mr. W. H. Penning.
8 p.m. Civil Engineers: Discussion, "Manganese in its Application to Metallurgy," and "Some Novel Properties of Iron and Manganese," by Mr. R. A. Hadfield.
8 p.m. Biblical Archaeology: "Le Manuscrit Copte, No. 1 de la Bibliothèque de Lord Zouche (containing the Gospels of S. Matthew and S. Mark, with Commentaries)," by Prof. Amelineau; "Textes Egyptiens et Chaldéens relatifs à l'Intercession des Vivants en Saveur des Morts," by Prof. and Dr. Revillout.
8.30 p.m. Zoological: "The Carpus and Tarsus of the Anura," by Prof. G. B. Howes and Mr. W. Ridewood; "Some New Species of Birds from the Island of Guadalcanar in the Solomon Archipelago, collected by Mr. C. M. Woodford," by Mr. R. Bowdler Sharpe; "The Classification of the Ramidae," by Mr. G. A. Boulenger; "A Species of Worm of the Genus *Aeolosoma*," by Mr. Frank E. Bedford.
WEDNESDAY, March 7, 8 p.m. Society of Arts: "Frame-work Knitting," by Mr. W. T. Bowlett.
THURSDAY, March 8, 8 p.m. Royal Institution: "Microscopical Work, with Recent Lesons on the Least and Simplest Forms of Life," I., by the Rev. W. H. Dallinger.
6 p.m. London Institution: "Sound-producing Organs in the Animal World," by Prof. Charles Stewart.
8 p.m. Telegraph Engineers: "The Present State of Fire Telegraphy," by Mr. R. von Fischer Treuenfeld.
8 p.m. Mathematical: "Isostereans," by Mr. R. Tucker.
8.30 p.m. Antiquaries.
FRIDAY, March 9, 7.30 p.m. Civil Engineers: Students' Meeting, "The Prevention and Extinction of Fires," by Mr. Alfred Chatterton.
8 p.m. New Shakespeare: "Shakespeare's Accentuation of Proper Names," by Mr. B. Dawson.
9 p.m. Royal Institution: "S. T. Coleridge," by Mr. Leslie Stephen.
SATURDAY, March 10, 8 p.m. Royal Institution: "The Modern Drama, I. French," by Mr. W. Archer.
3 p.m. Physical: "A Reflecting Galvanometer," by Mr. G. L. Addenbroke; "A Theory concerning the Sudden Loss of Magnetic Properties of Iron and Nickel at a High Temperature," by Mr. Herbert Tomlinson.
3.45 p.m. Botanic: General Monthly.

SCIENCE.

An Introduction to Greek Epigraphy. Part I., The Archaic Inscriptions and the Greek Alphabet. Edited by E. S. Roberts. (Cambridge: at the University Press.)

THIS book, so modestly described as an Introduction, is a valuable contribution to Hellenic learning. It deals with "archaic" Greek inscriptions—i.e., roughly speaking, with documents earlier than 400 B.C.; and it is to be followed by another volume which will traverse a wider field, but will hardly surpass the present one in importance. The volume before us, in the words of the author, "contains, without counting coin-legends, about 500 inscriptions, nearly all of which are adduced with the object of illustrating the

gradual development of the Greek alphabet" (p. x.). It would not be far from the truth to say that Mr. Roberts's book reads like a course of lectures illustrating, explaining, expounding, and in places qualifying, the masterly researches of Prof. Kirchhoff, whose *Studien zur Geschichte des Griechischen Alphabets* were re-issued in a fourth and revised edition some ten months ago.

The oldest Greek inscriptions go back into the sixth and seventh centuries, when writing was still a novel acquirement. Inscriptions were then usually brief, like the early sepulchral inscriptions of Thera and Melos (pp. 23-38), or the dedications from Miletus and Branchidae (pp. 161 foll.). It was while writing was yet a new toy that the Greek found a pleasure in transcribing his alphabet. To such *abecedaria*, usually painted on vases, we are indebted for important data as to the geographical distribution of Greek alphabets (pp. 16 foll.). An unusual exception to the brevity and jejuneness of the early inscriptions is to be found in the elaborate law-codes which have lately come to light in Crete—so curiously confirming the statements of Greek philosophers respecting the Cretan legislation—and the engraved bronzes discovered by the German explorers at Olympia. It is manifest, therefore, that the chief interest of the earliest specimens of Greek writing is the illustration they give of the history of the Greek alphabet and the Greek dialects.

Rightly, therefore, has Mr. Roberts devoted this volume almost entirely to the study of the Greek alphabet. He begins by attacking the perplexing problem of the origin of the Greek characters. His summary of the present state of the controversy (pp. 7 foll.), as also of the history of *Βουτροφιδόν* writing (p. 5), being admirable specimens of learned, but terse and lucid, exposition. In his general classification of the alphabet, he is at one with Kirchhoff. But, in the detailed examination of the inscriptions under the head of the individual localities, he departs somewhat from the master's method. He begins with the oldest documents, instead of working back from the more recent, as Kirchhoff. He proceeds to "trace the development of the alphabet in each case through the later inscriptions down to the time when the epichoric alphabet was supplanted by the Ionic variety." Beginning with that branch of the "Eastern" group—viz., the inscriptions of Thera, Melos, and Crete—which approximate nearest to the Phoenician mother-alphabet, and where the "non-Phoenician letters," *υ, φ, χ, ψ*, have "hardly begun to exist," he passes to the "intermediate region" of Attica, Argos, Corinth, where the alphabet is all but Ionic in character. From these he makes an easy transition to the alphabets of the Asiatic coast—of Rhodes, Samos, and the Ionian colonies. Last of all, in striking contrast to the rest, follow the inscriptions of the "Western" group, belonging to the mainland of Hellas at large, with Euboea and the Chalcidian colonies.

The study of the Greek alphabet is inseparable from the study of dialects. In this field also Mr. Roberts shows himself a trustworthy guide. His discussion of the dialect of old Chios (pp. 343 foll.) and of Elis (pp. 360 foll.) may be cited as specimens of his method. It is but seldom that he permits himself to

enlarge upon the historical and human interest of the documents he is editing; but when he does, he does it well. Nos. 45 and 46^a may serve as samples, both of them first published by Prof. Köhler. No. 45 records the occupation of Salamis by Athenian settlers somewhere between B.C. 575-560, that is, fifty years and more before what has hitherto been the oldest known instance of the cleruchy-system—viz., the settlement of a cleruchy in Euboea, as described by Herodotus (v. 77). No. 46^a relates to the private life of the Athenians. Here we have a dedication by a "washerwoman" (*πλυνεῖς*) found on the Acropolis, and an Attic epitaph upon a washerwoman (*πλύντρια*). Mr. Roberts comments as follows:

"Köhler remarks that the mention of the profession, together with the name of the person, is in Attic epigraphy . . . very rare. Three professions, however, must be excepted—those of the Physician, the Actor, and the Washerwoman or Washerwoman. . . . If it is surprising to find the Physician and Laundress treated as of equal rank, we must remember that both the one and the other were *Advauroi*."

These flashes of light upon old Greek life relieve the discussion of palaeographical or linguistic minutiae. Yet a moment's reflection will invest even the latter with a deep human interest; for what is this whole volume but a tribute to the genius of that wonderful Ionic people of Asia Minor who were destined in respect of their alphabet, as in their philosophy, poetry, and architecture, by enlightening and inspiring the genius of Attica, to reign supreme within the limits of Hellenic culture, and, finally, to transmit that culture as the inheritance of our own race?

Mr. Roberts's book does honour to English scholarship and to his own university. Not without reason does he speak of himself as following the steps of Rose, the scholarly editor of *Inscriptiones Graecae Velustissimae*. He has spared no pains to bring all his information up to date; and none but those who are workers in the same or a similar field are aware how seriously every month's discoveries may modify or enlarge our existing knowledge. Thus, on p. 259 we are given the true heading of the inscription upon the famous tripod-stand at Constantinople ([T]ο[ῦδε τὸν πόλεμον [ἐ]πολέμ[ε]νον), as decyphered by Dr. Fabricius in 1886; and on p. viii. is a note on the latest discussion of the purport of the dedication. Again, on p. 374 is an appendix, in which the results of Prof. Bechtel's work upon the Ionic inscriptions are gathered up. So full, indeed, throughout is the writer's information, and so closely is it packed, that were it not for his admirable lucidity the reader's attention would be sorely taxed. As it is, the cross references are a trifle distracting, and also the two-fold running numbers—one referring to the paragraphs of the commentary, the other to the illustrative inscriptions. This difficulty, however, is removed by means of a capital index. We are under a deep obligation to Mr. Roberts, and to the beautiful printing of the Cambridge Press, for providing us, in so handy a shape, with a trustworthy text of so many of the most important early documents. Of many of these, especially of the Eleian bronzes, the excellent facsimiles of Röhl have been mechanically reproduced on a rather smaller scale, but with

minute accuracy, as I can vouch for after comparison. I have noticed only one text that is not minutely accurate, and this does not profess to be a facsimile. It is No. 53, an inscribed fragment of a sepulchral column now in the British Museum. I am familiar with its look, and an impression now lies before me. Mr. Roberts's copy rather departs from that of Kirchhoff in the *C.I.A. i. Suppl.* 477a, whose facsimile would be perfect if it did not lengthen too much the left leg of M.

Enough has been said to show that this volume will be indispensable to all Greek scholars. It remains to ask what positive additions it makes to epigraphic science. This collection contains, I believe, no document that has not been published before. Nor has the editor had much occasion to re-read and verify the inscriptions with which he deals. But on p. 341 he and Sir Charles Newton have between them offered a new and convincing restoration of line 8 of the famous "Lygdamis" document, whereby the entire heading becomes at last intelligible: [π]ο[ῦ] ἐν τοῖς μ[υ]νονας. Much original matter is also to be found in the examination of the Eleian *rhetrai* (pp. 362 foll.), and of the decree respecting the "Hypoconemidian" Locrians (p. 347). A work like this, upon a somewhat technical subject, will be recommended to the confidence of scholars generally by the moderation and sobriety of judgment which it everywhere displays. Indeed, the caution of the writer seems at times excessive, where his own learning and insight entitle him to an opinion which he hesitates to give. Thus, on p. 72, he might easily have suggested a better restoration of No. 32 than the doggerel he borrows from Prof. Comparetti; and on p. 15 he might have recommended more decidedly the sensible suggestion of Dr. Deecke that the Greek characters *Υ, Φ, Χ, Ψ* were derived from the Cypriote syllabary.

On one point of present controversy, Mr. Roberts is certainly right in maintaining an attitude of suspense. It is still too soon to pronounce a final opinion upon the antiquity of the pottery inscriptions discovered by Mr. Flinders Petrie and Mr. E. A. Gardner at Naucratis in 1885. Mr. Gardner, indeed, maintains that these represent the oldest type of Ionic writing; and he would depose the famous inscriptions on the legs of the colossi at Abu-Simbel from the place of honour they have hitherto held by virtue of their supposed seniority. The correspondence columns of the *ACADEMY* last autumn bore witness to the learning and ingenuity with which Mr. Gardner defended his opinion against the vigorous attack of Prof. Hirschfeld. Perhaps the important paper of the latter in the *Rheinisches Museum* (xlii., pp. 209 foll.) has hardly received in England the attention it deserves. This is not the place to review the controversy in detail. Prof. Kirchhoff (*Studien*, p. 47), Bechtel (*Inchriften des Ion. Dialekts*, p. 153), and G. Hirschfeld all accept the express statement of Herodotus (ii. 178) that Amasis gave the Greeks Naucratis as a place of residence (about B.C. 560), and that then the Milesians built at Naucratis their temple of Apollo, in which this pottery was found. Herodotus obtained this information, no doubt, from Milesian residents on the spot. Is there

any overwhelming evidence afforded by the Naucratis inscriptions to force us to assign them to an earlier date? Mr. Gardner appeals to certain peculiar shapes of letters. But let any one, before forming an opinion, examine this Naucratis pottery in the British Museum. He will find that the inscriptions comprise a very limited range of words and formulae, and are mostly scratched by all sorts of careless or illiterate hands, often with evident marks of haste, besides not unfrequent blunders. Only one or two (Roberts, No. 132 *bis*) are inscribed with evident care, and in these no peculiarities occur. When, therefore, Mr. Gardner's theory of the old Ionic Alphabet leads him to say of the Abu-Simbel inscriptions: "They must be left outside the connected series of Ionic inscriptions which we now possess; they, in fact, represent a local and quite distinct variety of the early Greek alphabet, and cannot properly be called Ionic at all," we may suggest that abnormalities may be more easily accounted for in the Naucratis pottery than in the Abu-Simbel inscriptions. Mr. Roberts sufficiently convinces me that I was mistaken in preferring the date of Psammetichus II. for the Abu-Simbel inscriptions; probably Kirchhoff was right all along in assigning them to the reign of Psammetichus I. But just as Mr. Roberts, while reserving his judgment (pp. x.-xi.), leans rather to the priority of the Naucratis writing (pp. 151, 157, 324), I would rather myself—pending further and decisive evidence—abide by the positive statement of Herodotus and the weighty inductions of Kirchhoff.

The volume has been most carefully corrected for the press. I have noticed only two misprints—*πλυνεύς* (p. 83) for *πλυνεύς*, and "fragments" (p. 231) for "payments." The work is appropriately dedicated to the memory of the celebrated Gruter. The information will be new to most scholars that the great Dutch epigraphist laid the foundation of his learning as an *alumnus* of the very college of which Mr. Roberts is now an ornament. E. L. HICKS.

OBITUARY.

THE REV. DR. G. P. BADGER.

ALL oriental scholars will share the feeling of regret at the death of the Rev. Dr. George Percy Badger. His attainments are well known in the literary world; but his loss will be especially deplored by students of Arabic. Dr. Badger knew Arabic not only theoretically, but as a living tongue. In its colloquial use few Europeans have ever surpassed him; and there can be little doubt that his English-Arabic Lexicon is the best extant.

Dr. Badger was born in April, 1815, at Chelmsford, Essex, and was brought up in Malta. Afterwards he went to Beyrout, where he studied Arabic. In 1841 he returned to England, and was then ordained. He afterwards was elected by the Primate and the Bishop of London as delegate to the Nestorians of Kurdistan; and his book on the *Nestorians and their Rituals* is of permanent value to the students of theology.

In 1845 Dr. Badger was appointed chaplain on the Bombay establishment, and afterwards he was transferred to Aden, where he completed his term of service in 1862. He was awarded the Persian War medal for the valuable help rendered to Sir James Outram during the

Persian Expedition in 1857. Sir James Outram further availed himself of the services of Dr. Badger during his visit to Egypt. When the late Sir Bartle Frere was sent to Zanzibar on a special mission by the government, Dr. Badger was selected as his confidential adviser; and, later, when the Sultan of Zanzibar visited this country, Dr. Badger was appointed to attend him. The relations thus established led to an intimate and regular correspondence with the Sultan, from which both Zanzibar and this country have derived much benefit.

In 1873 Dr. Badger received the degree of D.C.L. from the Archbishop of Canterbury. He was a knight of the Crown of Italy by royal letters patent, and a knight of the Gleaming Star of Zanzibar. He was also a Fellow of the Zoological and Geographical Societies, and of the Society of Antiquaries. Among his many works the following deserve special mention: *The History of the Seyyids and Imāms of Omān, Christianity and its Relation to Islām, Description of Malta and Gozo, The Government and its Relation with Education and Christianity in India, The Travels of Ludovico Varthema in India and the East, 1503-8.*

Dr. Badger, though of late years in infirm health, was ever active in promoting the advancement of oriental learning in this country. It may be said of him, in the words of an Arab writer:

"Whatever my faults may be, I have written that which will check the murmurs of censure, and raise the song of gratitude; and, though I die, in my works I live again, to guide the young to learn."

CORRESPONDENCE.

A NEW KANISHKA INSCRIPTION.

Vienna: Feb. 20, 1888.

Of late Dr. J. Burgess has begun, at my request, fresh excavations in the Kankali Tila at Mathurā, where Sir A. Cunningham found the important inscriptions from the reigns of the Indo-Scythian kings—Kanishka, Huvishka, and Vāsudeva, published in vol. iii. of his *Archæological Reports*.

To-day I have received from Dr. Burgess, as the first result of his labours, two excellent impressions of a most interesting fragment of an inscription, found on January 30. It is dated in the year 7 of the *mahārāja rājātirā[ja]* *Shāhi Kanishka*, and mentions a *vāchaka*, or Jaina preacher, of the *Aryyodeha* (or perhaps *Aryyadeha*) *gana*, and of the *Nāgabhūta kula*. Both these subdivisions of the Jaina monks occur in the longer list of teachers in the *Kalpāsūtra*, p. 290 of Dr. Jacobi's translation, where it is stated that *Nāgabhūta* is the first *kula* of the *Uddeha gana*. The inscription proves that this school—which, according to the Jaina tradition was founded about 200 B.C. in Magadha—flourished at Mathurā about the end of the first century A.D. I shall publish the inscription in the next number of the *Vienna Oriental Journal*. G. BÜHLER.

SCIENCE NOTES.

A GEOLOGICAL memoir, entitled *Étude sur le Bassin Houiller du Tonkin*, by M. Sarrau, has just appeared. The author, accompanied by experienced miners, visited Tonkin in 1885; and, in accordance with official instructions, undertook a detailed study of the coal formation, and opened up workings on some of the seams. The coal measures form a long band, stretching in an east and west direction for nearly 200 kilometres. They rest upon either carboniferous limestone or Devonian sandstones, and are overlain by variegated clays and sandstones, reputed to be of Permian age. M. Sarrau gives analyses of a large number of samples of

the coal, showing its value as a steam-coal for the Navy. He concludes that "le Tonkin possède une richesse immense en excellent combustible."

PHILOLOGY NOTES.

PROF. HENRY NETTLESHIP was to deliver a public lecture at Oxford to-day, March 3, on "The Evidence of the Ancient Latin Grammarians regarding the Pronunciation of Latin."

THE Clarendon Press will publish very shortly a volume of *Selections from Polybius*, by Mr. J. L. Strachan Davidson, with prolegomena and appendices.

MESSRS. TRÜBNER & Co. have in the Press an Arabic-English Dictionary, on a new system, by Mr. Habib Anthony Salmoné, which will be published under the patronage of the Government of India, and therefore at a low price.

THE Royal Danish Academy of Sciences has offered a gold medal for the best essay on the following subject: "What position did Sanskrit occupy in the general development of language in India? To what extent may it be assumed to have prevailed as a living language, and when did it cease to exist as such?" From the remarks in the prospectus in which this question is propounded, we gather that the essayists will be expected to discuss the validity of the evidence on which it is usually supposed that Sanskrit was a dead language in the days of Kālidāsa or of Somadeva, and—if the current view be accepted—to account for the employment of a purely learned language in works which, like those of the authors mentioned, have the appearance of having been written not merely for scholars, but for the ordinary educated public. It is pointed out that a complete solution of these questions would be of value, not only on account of its immediate bearing upon the history of the Indian languages, but also for the light which it would throw on many problems relating to the development of languages in general. Essays must be sent in before October 31, 1889. The adjudication will take place in the following February.

MEETINGS OF SOCIETIES.

UNIVERSITY COLLEGE LIBRARY SOCIETY.—(Monday, February 13.)

THE PRESIDENT in the chair.—Mr. F. H. Cockle read a paper on "Tennyson's Early Poems." Having glanced at the poems contained in the earliest volume, he turned to the poems published three years later, in 1833, and found a difference between the strong poetic sentiment, the artistic purpose thoroughly carried out in the latter, and the mere maudlin sentimentality, and much that is aimless in the earlier volume. Tennyson was striving to extend his range in most varied directions, and to attain to perfect integral completeness and finish in limited poetic forms. Having discussed "Mariana in the South" and "The Lady of Shalott," which he called poetical monochromes, he passed to a group of four typical love poems—English, Oriental, Greek, and Gothic. He contrasted the "Miller's Daughter" with "Fatima," which remind us of the lines in the "Princess":

"Bright and fierce and fickle is the South,
And dark and true and tender is the North."

"Oenone" was characterized by the sentient element, whereas in the Gothic poem of "The Sisters," its forcefulness and wildness stand in antithesis to the spirit of great beauty and culture, fully expressed in the thesis of Lessing—that Gothic invention imitated the nature of phenomena, but ignored the nature of our feelings and emotions. Of "The Two Voices" and "The Lotus-Eaters," the one asks the question, Is life worth living? the other, Is life worth acting? The one is dialectical and ethical, the other purely poetical. The "Dream of Fair Women" is a graft on a

Chaucerian stock, with suggestions taken from Dante, but full of modern colour. The poems were then discussed as regards more general points.

ANTHROPOLOGICAL INSTITUTE.—(Tuesday, February 14.)

FRANCIS GALTON, Esq., president, in the chair.—Prof. Flower described two skeletons of Akkas, a small negro race from Central Africa, which have been lately sent to the British Museum by Emin Pasha. Since these remarkable people (probably the origin of the stories of pygmies told by the Greeks) were discovered in the Monbutto country, to the west of the Albert Nyansa, by the intrepid German traveller Schweinfurth in 1870, they have received considerable attention from various anthropologists; and descriptions and measurements of several living individuals have been published, but hitherto no account of their anatomical character has been given. The skeletons obtained by Emin Pasha are the first that have been sent to Europe, and are, therefore, of great interest, especially as they fully confirm all that has been said of the diminutive size of these people, and prove them to be the smallest existing on the earth, smaller even than the natives of the Andaman Islands or the Bushmen of South Africa. These two skeletons, though both of full-grown people, are scarcely four English feet high; and a woman of the race, carefully measured by Emin Pasha, was still shorter. They are well formed, and present most of the characteristics of the negro race, except that the skull is rather rounder in shape than is usual. With respect to their character, it has been long ago pointed out by the French anthropologist Hamy, that in Equatorial Africa, extending from the West Coast, far into the interior, are scattered tribes, interspersed among the more ordinary negro population, and distinguished from them by this form of head and by their diminutive stature. They appear to constitute a distinct branch of the great negro race to which the name of "negrito" has been applied, and they bear the same relationship to their better grown neighbours as the small negritos of the Indian Archipelago do to the larger Melanesians or Oceanic negroes of the same regions. It is to this negrito race that the Akkas, whose characteristics have now for the first time been fully described, belong. As was pointed out by Prof. Flower, they differ in many important respects from the Bushmen, to whom Schweinfurth was inclined to ally them.

PHILOLOGICAL SOCIETY.—(Friday, February 17.)

A. J. ELLIS, Esq., V.-P., in the chair.—Dr. Joseph Wright read a paper on "The Dialect of Windhill, in the West Riding of Yorkshire." After discussing the qualifications necessary for an investigator of dialects, and the principles upon which a dialect grammar should be made, and stating that dialect work was almost worthless unless it was done by a man with a sound theoretical and practical training in phonetics and philology. Dr. Wright mentioned, from his own dialect and standard English, several sound laws which could only be grasped upon philological principles, such as the change of initial *ki-* to *ti-* and *gi-* to *di-*; the change of final *t* to *r* in monosyllabic words, when *t* is preceded by a short vowel and the next word begins with a vowel, e.g., *a mist* beside *a mer* in "I met him"; the Windhill forms *brig*, *rig* (back), *lig*, *mig*, *soog*, *neog*, *sig*, *stik*, *reik*, beside standard English *bridge*, *fledge*, *ridge*, *lie*, *midge*, *saw* (a tool), *gnaw*, *haw* (in hawthorn), *fitch*, *reach*; the development of *b* between *m*—*i*, *m*—*r*, and of *d* between *n*—*i*, *n*—*r* in standard English, where the Windhill dialect has not developed them, *umel* "humble," *tremel* "tremble," *slumer* "slumber," *lumer* "lumber," *anel* "handle," *kinel* "kindle," *thumer* "thunder," *ganer* "gander"; or why the *w* in words of French origin has influenced the *s*, *t*, in standard English words like *sugar*, *future*, &c., but has simply been diphthongised to *ui* in the Windhill dialect, *suger*, *futer*, &c. He next proceeded to show the great use to which dialect work might be put, to clear up many unsettled points of Old and Modern English phonology; as that the *w* in O.E. *rust* "rust," *sluma* "slumber," must have been long, because

in the Windhill dialect the vowel in these words now appears as *ɔ*, *rɔst*, *slɔm*, "slumber," which presupposes an old long *u*. The Windhill dialect still keeps quite apart, O.E. *ɛ* (=W. *i*), *æ* (=W. *io*), and old *ɛ* in open syllables (=W. *ei*), all three of which have become *i* in standard English; and several other vowel sounds which have regularly fallen together in the literary language, such as *jɛd* "yard" (=3 feet) and *jɛt* "yard" (=enclosed space), *wɔk* "work" verb, and *wɔk* "work" noun, *li* "to lie" (mentiri), *liɔ* "to lie down," &c. Dr. Wright strongly condemned the prevalent tendency to assign undue importance to Scandinavian influence upon English. And, although he granted that there is a sprinkling of Norse forms in English, he quoted several forms generally supposed to be due to Norse influence, but which he maintained had been regularly developed on English ground from their corresponding O.E. forms; such as the development of O.E. *d* to voiced *th* in words like father, mother, weather, gather, hither, thither, whither, &c., where *d* has become *th* through the influence of the following *r*. He said that in very many English dialects, as in the Windhill dialect, intervocalic *d* followed by *r* invariably becomes voiced *th*, even in words of French origin, as *pɔther* "powder," *consither* "consider," which shows the absurdity of assuming Norse influence upon such words. After this he gave a phonetic description of the vowel system of the Windhill dialect, tracing each sound back to its O.E. form. In the historical part, he was obliged to confine himself almost exclusively to the Windhill development of the O.E. vowels and diphthongs of accented syllables, mentioning here and there only what their development was in other than chief accented syllables. But Dr. Wright volunteered to treat the rest—the vowels of other than chief accented syllables, the consonant system (which he said contained many peculiarities) and the accidence—at some future meeting. He also promised a paper on "Some Mistaken Notions of the Principles of English Philology, as illustrated in Modern Etymological Dictionaries."

ARISTOTELIAN SOCIETY.—(Monday, February 20.)

SHADWORTH H. HODGSON, Esq., president, in the chair.—A paper was read by Rev. E. P. Scrymgeour on "The Real Essence of Religion." He began by insisting on the comprehensive character of philosophy, considered as rationally encyclopaedic, its progress involving, of necessity, a vast intellectual co-operation. To such co-operation, as pre-eminently marking modern life, he pointed as the origin of that peculiar idea named consciousness, considered as the problem of philosophy; which, accordingly, he found to fall into four natural divisions, in each of which the same problem is studied successively from a more comprehensive point of view. These he named (1) conception, (2) community, (3) science, (4) conscience. Under the first head we study the mode in which all real objects whatsoever are grasped by means of a progressive understanding of their mutual relations. Under the second, attention is fixed on that sort of real objects already distinguished as persons, and we observe how these are progressively known to one another by means of their mutual relationship, and how the establishment of such personal community depends upon a common knowledge of real objects generally. Having thus obtained a sufficient apprehension of the function of knowledge in the establishment of community, we observe under the third head how the progress of this knowledge brings to light a new set of objects under the name of laws—objects which must be recognised as real by the note of their permanent interest, which he maintained to be everywhere the criterion of reality. Seeing that the knowledge of law is pre-eminently the means by which community is established, we have finally to mark more decisively that this knowledge is progressive, and, therefore, voluntary. Under the fourth head consciousness appears as well, and as such it is the domain of religion. Healthy life is briefly described as conceptual endeavour, issuing spontaneously in reasonable action. But such progressive endeavour cannot be imposed upon an individual otherwise than as duty. Law is the utterance of superior power; but this power is not force. It acts upon

the individual as influence, persuading, convincing, constraining—not compelling. He may resist its authority, and so destroy himself and injure others; and there is nothing to overcome such resistance but conviction of the majesty of law as rationally supreme. The conception of law as force the reader maintained to be demonstrably untrue. As rational superiority, acting through knowledge, he contended that it is the saving power in human life. As permanent influence constraining to progressive rational endeavour, it is the supreme will, and therefore personal. Conceptual endeavour, in its perfection, is the fulfilment of supreme will on the part of an individual—it is a perfect act of will, essentially progressive and beneficent. But, because it is an act of will, it has of necessity its counterpart in opposition, more or less pronounced. Such opposition is an act of will in the negative sense, essentially retrogressive and destructive. Such bare assertion of will in defiance of admitted superiority, the reader maintained to be the real essence of evil. In the act of sin, vital progress is arrested, degradation is its necessary consequence—wantonly self-abandonment alternates with blind selfishness, until, by a real act of will, moral vitality is restored. As free obedience to acknowledged superiority, such an act of restoration is essentially religious; and it is in view of such restoration, preeminently, that supreme power appears as beneficent. God is good because He rescues man from the peril of sin, which is inherent in the nature of consciousness as will. As the sustaining energy of progressive endeavour, God is the saviour of that community of which He is the head. It is true that law, as actually known, appears fragmentary, and, in part, conflicting; but in its perpetual unfolding, it bears within it a promise of perfected reconciliation. The central secret we may not expect to possess otherwise than prospectively—we are constrained to seek it; and the intrinsic purpose of this perpetual unfolding is manifestly known as the progressive perfection of the civil life.—The paper was followed by a discussion.

ROYAL ASIATIC.—(Monday, February 20.)

SIR FREDERIC GOLDSMID in the chair.—Mr. Bendall exhibited some leaves of an interesting palm-leaf MS. of the *Lankavatara*, and pointed out the importance of obtaining such MSS. from Nepal. Mr. Reginald Stuart Poole gave an address on the "Political Relations of Shah Ismail I. and Tahmasp, the Safavis, with Babar and Humayun, Emperors of Delhi," on which valuable light had been thrown by new coins acquired at the British Museum.—Mr. Howorth confirmed Mr. Poole's views on the authority of parallel notices from the Mongolian side, and a discussion followed.

ROYAL SOCIETY OF LITERATURE.—(Wednesday, February 22.)

SIR PATRICK COLQUHOUN, president, in the chair.—A paper was read by Mr. J. Offord, jun., on "Recent Discoveries in Egyptian Papyri." The author confined himself to papyri containing historical matter, commencing with the information derivable from them as to the nations inhabiting Western Asia, Africa, and the basin of the Mediterranean in pre-historic times. After alluding to the gradual completion of the list of Egyptian monarchs which in a fragmentary form is contained in the Turin papyrus, reference was made to the immense value of the demotic papyri in various European collections. An explanation of the origin, nature, and history of this difficult form of writing was given, explaining the results achieved by continental scholars who have been foremost in its decyphering; and the historical information obtained from these papyri was passed in review, especially the demotic chronicle of the later dynasties, and the light thrown upon the history of Egypt under the Ptolemies. In conclusion, a résumé was given of the papyrus in the possession of Lord Monk-Bretton, containing the anathemas of a Pagan mother against her son for becoming a convert to Christianity.—At the conclusion of the paper the President complimented the reader upon the able and lucid manner in which he had treated his subject, and said that, looking at much of what had recently been discovered in Egyptian papyri, and comparing it with what was now passing in England, one might well

say *l'histoire se répète*. He thought that in some respects we knew more than the ancients themselves did of Egyptian history.—Dr. Leitner, who followed, drew attention to the fact already alluded to by the reader, that the same word in old Egyptian sometimes meant either a year, a day, or even other measurements of time.—Dr. W. Knighton compared the history of Ceylon with that of Egypt, especially in regard to the action of the priestly caste; and Mr. E. Gilbert Highton, after briefly adverting to a corroboration of Herodotus furnished by one of the papyri in regard to King Amasis, stated that the famous lost works of Eratosthenes, the chief librarian at Alexandria under Ptolemy Euergetes, treating of the whole field of history and geography, were a proof that the learned ancients knew far more than perhaps we should ever do of the annals of the earliest times and of the origin of nations.

FINE ART.

COLLECTORS OF PICTURES, CHINA, &c., can insure against fire in the best offices at reduced rates and upon a special system which provides a guarantee (which an ordinary policy does not) of full payment in the event of claims, by applying to the FINE ART INSURERS PROTECTION SOCIETY, 43, Botolph-lane, Eastcheap, E.C.

GREAT SALE OF PICTURES, at reduced prices (Engravings, Chromos and Olographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—Geo. REES, 115, Strand, near Waterloo-bridge.

THE ROYAL SCOTTISH ACADEMY.

THE present exhibition of the Royal Scottish Academy is one of more than ordinary excellence; but it is an exhibition which it takes some time fittingly to appraise, for its merit lies less in a few prominent pictures than in its generally high average of accomplished and successful work.

Most of the large and notable figure-pictures come from London, for several of the leading Scottish figure-painters have this year been prevented from exhibiting in their usual force. Mr. W. E. Lockhart, for instance, has been busied with his royal commission for the memorial picture of the "Jubilee Service in Westminster Abbey"; and Mr. Robert Gibb has not been able, as yet, to complete his important subject of the "Battle of the Alma." Among the leading London works are Mr. Pettie's vigorous—if rather melodramatic and forced—picture of "The Chieftain's Candlesticks," and his "Scene from *Peveril of the Peak*," Mr. Britton Reviere's "Old World Wanderer," Mr. E. J. Poynter's refined and scholarly "Visit of Aesculapius," lent by the Royal Academy; and, among landscapes, Mr. MacWhirter's "View of Edinburgh from the Salisbury Crags," and Mr. Henry Moore's large sea-piece, "Calm before a Storm." The foreign pictures include a delicate grey landscape by Corot, and a rich and mellow cattle-piece by Van Marcke.

Mr. W. M'Taggart is always prominent in these exhibitions by reason of his bold and masterly brush-work, and the sense of brilliant sunlight and boundless atmosphere which he manages to introduce into his subjects. He exhibits "Corn in the Ear"—a graceful little picture of a pair of children seated beside a harvest-field; a large subject—singularly fresh and spirited—of boys bathing in the sea; and a brilliant coast-scene, with a fishing-boat making the harbour bar. Mr. W. Hole paints with great vigour a dark impressive subject of a knight returning from Flodden, bearing the torn banner of his country—the most successful work that he has yet produced; and Mr. W. D. M'Kay contributes a careful picture of a party of labourers resting at midday in the hayfield. During the past year or two the pictures of Mr. G. O. Reid have attracted much attention by the precision of their execution and the keen truth of their character-painting. To the present exhibition he sends a delightful cabinet-sized interior, depicting a Scottish rent-day—or "Oor Laird's Court Day" as the painter titles it—filled with

admirably expressive little figures; and a larger example representing a last-century author about to read some cherished literary productions to a party of friends. Mr. T. Anstey Brown is another of the extra-academic painters who is coming rapidly to the front. This year he has entirely changed his style of work, and, adopting a method founded upon that of the modern Dutch figure-painters, he has produced several very striking quietly coloured subjects of gypsy and peasant life, admirably vigorous and expressive in handling and satisfying in tone and relation; while from Mr. R. Payton Reid are some graceful, but rather feebly coloured, studies of Bavarian life.

In the department of landscape the Academy is, as usual, distinctly strong. Mr. George Reid sends a singularly pure and pearly view of Northam, and a low-toned winter view of St. Mary's Loch, distinguished by great unity of sombre feeling. Mr. W. D. M'Kay paints with more than his accustomed vigour of handling and force of colouring a south-country lane scene in a breezy "October Afternoon"; and Mr. J. Lawton Wingate, one of the most delicate and sensitive of Scottish landscape-painters, contributes liberally, his most important subject being "The Woods in Winter"—a scene amid the forest, with a lonely pool at which deer are drinking. Mr. J. Campbell Noble shows several striking studies of sky and sea, hardly equal, however, to some of the landscape work that he has recently exhibited; and Mr. Robert Noble has a view of Preston Mill, admirably rich in colour and mellow in effect, while his "Fête Champêtre" is a bolder, if less fully successful, experiment in potent chromatic harmonies.

Among the works of portraiture, Mr. George Reid—who also exhibits two notably delicate and splendid examples of flower-painting—has a head of Dr. Skene, the historian, solid in handling and silvery in tone; and a refined little bust-portrait of Sir Douglas MacLagan. Mr. J. R. Reid contributes a very richly coloured half-length of a lady. Several graceful female portraits are among the examples of the refined and cultured art of the late Mr. Robert Herdman, in whose footsteps his son, Mr. Duddingstone Herdman, is closely following, as is evident from his full-length of "Mrs. Newton, of Castlandhill," and other works upon the walls. Mr. W. E. Lockhart's contributions include a characteristic likeness of the Rev. Dr. Cairns, and that graceful portrait of two children in fancy dress which he sent last year to Burlington House. Other prominent exhibitors of portraits are Mr. Otto Leyde, Mr. C. M. Hardie, Mr. W. Hole, and Mr. R. P. Bell. Mr. R. Alexander, the Academician elect, shows a masterly picture of a donkey and her foal.

In the water-colour room the most notable works are a series of small landscapes by Sir W. Fettes Douglas, admirable for precision of touch and quiet harmony of colour; and Mr. Tom Scott's "Autumnal Landscape, near Earleton, Berwickshire," and his "Return to Selkirk after Flodden"—a striking combination of landscape and figure painting.

JAPANESE XYLOGRAPHY AT THE BURLINGTON CLUB.

POSSIBLY before this article is published the Japanese pictures in the British Museum will be open to public inspection, and, with the aid of Mr. Anderson's catalogue, the study of the pictorial art of Japan will for the first time be possible in England. But this collection does not illustrate the progress of wood-engraving in Japan; and the present exhibition at the Burlington Fine Arts Club has a special interest of its own. Wood-engraving is an art practised by the Japanese centuries before it was

known in Europe; and in the production of coloured wood-engravings printed from a number of blocks they are unrivalled. The walls of the Club's gallery in Savile Row are now hung with specimens of Japanese chromo-xylography from the beginning of the eighteenth century to the present day, arranged in chronological order; and numerous glass cases are filled with books coloured and uncoloured, the open leaves of which present a variety of pictures of smaller scale, but not less beautiful or interesting.

Some specimens are also shown of archaic wood-cutting, one of which (No. 1) is a representation of India, rudely cut on a large block of pearwood which is still preserved at the Temple of Shibamata, near Tokyo, and attributed to the Abbot Nichiren (1222-1282). The priests seem to have been the first encouragers of the art, and Mr. Anderson says in the preface to the catalogue:

"There are still preserved in the temples of Japan a number of pictorial blocks attributed to the early native fathers of the Buddhist religion, from the seventh century downwards; and, although most of these engravings are obvious frauds, the evidence in the case of a few is unassailable."

The one here shown is rude enough; but it is not wanting in a barbarous vigour, and will at least be interesting to experts like Mr. W. J. Linton for the very bold use of "white line"—a feature that disappears in the more modern work, which, however perfect in execution, follows faithfully the lines of the original drawing, which was pasted face downwards on the block.

Like the drawings on the walls, the books in the cases are carefully arranged; and as much information about both as can be afforded in the space occupied is given by Mr. Anderson in the excellent catalogue, for which a great deal of the material is contained in the author's catalogue to the collection in the British Museum and the *Pictorial Arts of Japan*. From the latter are also taken a good many of the black and white illustrations, which render the catalogue still more interesting and valuable, as they are well chosen to mark various phases of Japanese art. Of the books it is impossible to say more than that they range from the early illustrated books of the seventeenth and eighteenth centuries, such as the *Isé monogatari* (1608), an ancient romance, and the *Jokio hidden* (1649), a pictorial mirror of instruction for women, to the *Ainu Stories*, told in English by B. H. Chamberlain, illustrated by the living artist Sensai Yeitaku, and published at Tokyo in 1887. A whole case is occupied by books illustrated by the popular Hokusai and his school; and the place of honour over the mantelpiece is assigned to an original drawing by Hokusai, one of a set of a hundred drawn for the engraver, but never cut. The remainder are, or were, in the possession of Mr. Ernest Hart.

It is the "single sheet" chromo-xylographs upon the wall which form the most attractive feature of the exhibition. Some of the comparatively early ones like (10 and 12) groups of women by Nishimura Shigenaga and his pupil, Ishikawa Toyonobu, are charming in artistic feeling and delicate arrangement of colour. More beautiful, however, are the mosaic-like harmonies of Shunchō (14 and 52), and his designs are also remarkable for their grace of posture and line. The theatrical sheets of Shunchō are masterly in colour as well as in vigorous drawing; and indeed, if we accept the Japanese ideals of grace and dramatic action, there is little on the north wall of the room which is not admirable of its kind. As beautiful as any are the portraits of women by Kitawo Masanobu and Utagawa Toyokuni (64, 69, 72). The latter artist is also seen to advantage in larger compositions—such as "Women crossing

the Tama River" and "Girls fishing in the Tama River," where the motion of the river is wonderfully given by a clever convention, and the decorative value of the composition and arrangement of colour is of a high order.

Since 1825, it is said that the art of printing in colours has declined, and, in recent years, the colours themselves have sadly deteriorated in quality. Signs of this are visible on the south wall, but nevertheless there is little even there which is not fine. Few of the sheets are more beautiful in colour than the "Interior of Morita Theatre" (150), by Kunisada; nothing more grandly decorative or impressive than "The Great Storm in the Bay of Ōura" by the same artist (148); and few groups more finely dramatic than that by Kuniyoshi, where Jurō and Gorō are waiting for vengeance at the door of Kudo Suketsuné (153). It must, however, be owned that in delicacy of colour the later pictures cannot be compared with those of Mr. Anderson's fifth period (1769-1825), and that gaudiness and want of harmony are too frequent as one nears the door. C. M.

EGYPT EXPLORATION FUND.

THE NEIGHBOURHOOD OF TARRĀNEH.

Stout: Feb. 6, 1888.

[THE following report—the first of the present season—has been received from Mr. F. L. Griffith, the student attached to the Fund.—Amelia B. Edwards, Hon. Sec.]

On New Year's day I opened the campaign on the western edge of the delta at Tarrāneh. The mounds there, called Kûm abū Billū, are very extensive, and of considerable height. They lie on the edge of the desert at a point where the principal road from the Natron Lakes enters the Delta. The date of the surface rubbish seems to be early Arabic, and late Roman red brick extends as deep as one can conveniently excavate. The cemetery, which is very large and surrounds the town on three sides, is for the most part equally late; but a gravestone that I found is, perhaps, of the second century A.D. The tombs in the cemetery are rectangular and awkwardly domed, not arched. They are built in the main of crude brick, but have been much pulled to pieces for the sake of red brick, which was used in some part of the construction. They appear to contain no antiquities of importance, though there have been glass vessels in some. Epitaphs on limestone have been abundant, but generally only chips of them remain.

The name of the city was no doubt Terenuthis, surviving still in Tarrāneh. The latter is a small village one mile east of the mounds; and a mile south-east of Tarrāneh, but across the river, is a second mound, also large, but low. On the surface it seems to be moderately late Roman, and, though dug out by the fellahin to water level, it does not show anything certainly earlier than Roman times. Some large granite columns prove its importance at that date. One of the blocks of granite (reworked) has the name of Rameses II.

There are no early sites of importance in the neighbourhood, so far as I could ascertain; and Prosopis and Momemphis must be at some distance.

Notwithstanding the late date of Kûm abū Billū I found several early antiquities there. On the late Roman rubbish lay part of an *ushabti* of a man named Raneferab, after Psammetichus II. No doubt this has been used as an amulet. To the same category must be attributed a much-worn scarab of Amenhotep III. recording his marriage with Thē, and his lion hunts. Of more importance is a large block of hard Gebel Ahmar sandstone in the mosque at Terrāneh, which has the ovals and standard of Necho in the centre. The king is

styled friend of Neith of Sais, so far as I could decipher the fragmentary inscription. This block would seem to have been a way-mark for the road to the Wady, or something of that kind.

The Ptolemies, too, seem to have paid especial attention to the place. Strabo mentions Menelaus as the name of a city in the neighbourhood; and probably, like the Menelaite nome south of Alexandria, it was called after the brother of Ptolemy Soter. If we may not compare the name of Abū Billū with Menelaus, it is at any rate significant that a sufficiently handsome temple was built by Soter and Philadelphus at the side of the road to the Wady, just at the crest of the rise to the desert hills. In later times the city of Terenuthis, founded at the edge of the desert, spread along the road until it reached the same point, and the mounds of Kûm abū Billū partly overlap the old temple site.

The enclosure of this temple, with its chambers and the wall of the foundation, are still partly traceable, but not a single block of stone remains. The whole of the limestone had been cleared out of the loose sand and gravel, and I found a good part of it in the centre of the town built into a wall, the remnants of which are now fifteen feet in rubbish. Several feet above the foundation of this wall is a tile pavement with small marble columns lying upon it. It is evident that we have here the site of successive churches; and the earliest of them was built of stone taken direct from the pagan temple, and built in without any reworking. This reminds me of a passage quoted by Champollion from a Coptic author, where it is related that the governor of Letopolis, on receiving an imperial edict in favour of Christianity, immediately pulled down the temple, and built churches on the site. It is seldom that limestone remains are found in the Delta. It is evident that the town grew very rapidly in height in the Coptic period; and the limestone walls were gradually buried in buildings outside, the pavement of the church being raised without moving the walls, and this contributed to the preservation of the lower courses.

The inscriptions on the blocks are of no great interest. The cartouches of Ptolemy Soter, who rarely appears in person as a builder, though he reigned twenty years after the death of Alexander IV., and those of Ptolemy Philadelphus recur continually, with dedications to the cow goddess Hathor, of Mafkal, "the splendour of Bast." I can find no special local reference in any of the inscriptions, and it is clear that no ancient centre of worship existed here. There is a block from the same place bearing the name of the Hemnopolite Thoth, with part of a late cartouche that I cannot identify.

I did not work out the site completely, as it was not very promising. I have had all the interesting pieces of sculpture sawn off and taken to Bulaq, as the only means of saving them from the limekiln. A number of sculptured blocks have been found in former years, and taken to the village or built into *sagieh*s.

It is probable that the nation, salt, and bull-rushes of the Wady Natrūn were made use of in very ancient times; but it is within easy reach of the Delta, and at the present day much is collected by the fellahin from Terrāneh. The remains in the Wady are few. The monasteries have been the chief feature of the place since the introduction of Christianity; and, while the Ptolemies and Romans no doubt placed garrisons in the neighbourhood to protect the frontier and keep the wandering tribes in order, and also worked the produce of the Wady more systematically, the most flourishing time in the history—both of the Wady and of Terenuthis—was the period of Coptic monasteries.

F. L. GRIFFITH.

THE ARCHAEOLOGICAL SURVEY OF INDIA.

THE Survey Party of the North Western Provinces and Oude circle, under Dr. A. Führer and Mr. E. W. Smith, conducted operations in the districts of Allahābād, Bānda, and Hamirpur during the cold season of 1886-87.

Accurate and detailed drawings were made of the ancient Buddhist and Brāhmanical remains at the village of Manknār, near Bithā; of the mediæval Brāhmanical temples and statues in the fort of Garhwā, near Bhargarh; of several Jain images excavated at Kosām; and of the rock-cave of Gopāla at Prabhāsa on the Jamnā in Allahābād district; of the Chandeli temples at Barhā-Kathura, Rāmāgar, Rauli-Golā, Rāsin, and Kālānjar in Bānda district; and of those at Mahobā and Rāhilya in Hamirpur district. Excavations were made in the ruined forts of Bithā and Kosām, and near the large *lingam* temple of Nilakantha at Kālānjar, which yielded, among other relics, a number of ancient Buddhist coins, enamelled beads, and pottery, which have been deposited in the Lucknow Provincial Museum.

The report submitted on this tour treats of the history, architecture, and archaeology of Allahābād, Jhūsi, Bithā, Deoriyā, Manknār, Bihar, Garhwā, Bhargarh, Barhā-Kathura, Rikhian caves, Kosām, Prabhāsa, Rithaura, Pūra, Rāmāgar, Lokhri, Rauli-Golā, Rāsin, Bīrpur, Kālānjar, Mahobā, and Rāhilya. It is accompanied by the texts and translations of 10 Arabic, 24 Persian, and over 250 Sanskrit inscriptions, among which there are 24 new Gupta ones, and over 35 belonging to the sixth and seventh centuries. The most successful event of the season, however, was the entering of the almost inaccessible cave of Gopāla, high up in the face of the hill of Prabhāsa, by means of a wooden crib let down from the overhanging rocks of the hill, with the result of obtaining three inscriptions of the Indo-Scythian period, the oldest of which is dated Vikrama samvat 10 (B.C. 47), besides five Gupta inscriptions.

NOTES ON ART AND ARCHAEOLOGY.

MESSRS. J. S. VIRTUE & Co. announce as a re-issue, a library edition of *Knight's Pictorial Shakspeare*, in eight monthly vols. Each volume will contain about 500 pages of text, and 150 illustrations by Sir Joshua Reynolds, C. W. Cope, O. R. Leslie, G. S. Newton, Richard Redgrave, J. M. W. Turner, Frank Stone, Sir J. Noel Paton, and others. The first volume, containing "Romeo and Juliet," "Hamlet," "Cymbeline," "Othello," "Timon of Athens," and "King Lear," will be published at the end of March.

THE spring exhibition of the New English Art Club will be held at the Dudley Gallery. The selecting jury and hanging committee of this society are elected by the members and exhibitors of the previous year, all works, even those of members, being submitted to the jury.

THE last number of the *Transactions* of the Leicester Literary and Philosophical Society (Leicester: Gibbons) contains a paper on "The Roman Pavement in Jewry Wall Street," together with a photograph from a drawing. This handsome, though fragmentary, example of tessellated pavement was first discovered in 1832; and it has recently been acquired by the corporation of Leicester, who purchased the house beneath which it lies in order to its better preservation.

MR. VINCENT ARTHUR SMITH, of the Bengal Civil Service, has conferred a great service upon all students of the early history of India by compiling a general index to all the twenty-three reports of the archaeological survey, pub-

lished yearly under the superintendence of Sir A. Cunningham. The work consists of just 200 pages, besides a glossary. It seems to be arranged on sound and useful principles, one of the chief features being that it identifies, so far as possible by district or state, the villages and other petty sites so often vaguely mentioned in the original reports. It is published by the superintendent of government printing, Calcutta, at the price of six rupees (say 10s.).

THE STAGE.

THE "LADY OF LYONS" AT THE GLOBE.

THE "Lady of Lyons" was done for the second time at the Globe Theatre on Wednesday afternoon, before a crowded and enthusiastic audience; and there can be no doubt that the interpretation was as able and as satisfactory as any that has been seen in London for many years. We liked the playing, though we cannot say that we liked the piece. The piece, indeed, is one about which the opinions of actors and the public on the one hand, and of literary men upon the other, are pretty sure to be divided. The public recognises the broad appeal of Lord Lytton's drama to our common human sympathies; the actor recognises that, and, to boot, the technical skill of a dramatist who through five entire acts has hardly lost one possible opportunity for stage effect. But the literary man is annoyed at the very second-rate quality of the poetry; at the want of verisimilitude in more than one of the characters; and he declines to be moved by the expression of very obvious sentiments, as, for instance, that the husband's roof is ever the temple of the wife's honour, and that, whatever divorces are pronounced, there can never be divorce between mother and son. But to a fine and telling interpretation—like that in which Mr. Wilson Barrett and Miss Eastlake have the principal parts—the literary man may at all times be as willing as the public to do justice. Nay, perhaps the writer who analyses may be yet more alive than the public to the feat which is accomplished when the characters of Lord Lytton's stage romance are endowed with vitality by the actor. It is too late in the day to discuss the play in detail, but we will point out two or three of the most excellent features of the Globe performance; and, as a performance so successful is certain to be repeated, this will be worth doing.

Mr. Wilson Barrett cannot look otherwise than picturesque as Claude Melnotte, but we prefer his appearance as a successful soldier in the last act to his appearance as the poetic peasant in the earlier portion of the play. He is so thoroughly a master of the demands of the part that it is a little difficult to say what he does best; but he is certainly especially sympathetic in Claude Melnotte's first renunciation of his bride in the cottage scene in the second—or is it the third?—act, and he is extraordinarily spirited in that scene in the fourth act in which Claude Melnotte is afforded the opportunity of departing for the wars. In the first of the scenes we have mentioned, he touches us hardly less than he touched us in his illustration of the very different troubles of Chatterton. In the second his very manner of execution gives evidence of his sagacity of conception; to have reserved himself more or less for this outburst, of the fourth act, is to show plainly his opinion that it is here that the crisis of the play is really reached. Miss Eastlake is a sympathetic and powerful Pauline, but her power is shown less in the expression of scorn and of wounded pride than of the fascination which she feels in Claude's presence and of her real affection for him. Of course, Miss Eastlake is proficient in the habitual business of the part;

but from an actress of her thoughtfulness and inventiveness we expect fresh suggestions, nor—time-worn though the part is—do we fail to receive them. There is an extraordinarily successful clutch of reproach and irritation administered by her to Claude Melnotte in the cottage scene, which reveals a world of feeling—testiness, disappointment, uncertainty, nervous irritation. That is only one detail, but it is as effective as it is possible to make it. A wholly fresh rendering of such a character as Pauline's would be impracticable, for the dramatist has laid down quite clearly the lines on which alone the actress may proceed. A greater poet is very likely more indefinite—leaves more room to the imagination. Several of the minor characters—if minor they may be called—are played with a good deal of spirit. Mr. George Barrett is extremely likeable as Damas. Mr. Austin Melford is quaint and old-world looking as Pauline's father, the successful merchant or manufacturer of Lyons. Mr. C. Hudson—who still, unconsciously no doubt, has his moments of imitating Mr. Irving—is a realistic Beauséant: very clever and acceptable, we think. And, finally, Mr. Charles Fulton relates with befitting passion the indignities to which, as Claude's messenger, he has been subject.

STAGE NOTES.

THE Browning Society's performance of "A Blot on the 'Scutcheon'" has necessarily been postponed till Thursday, March 15—next Thursday having been appointed for the Olympic production of "Christina," and it being obviously impossible for Miss Alma Murray to play the heroine of both pieces in the course of the same day. The cast for "The Blot" includes, besides the "star" actress, Messrs. Fulton, Rodney, Webster and Foss, and Miss Alexes Leighton.

THE Olympic cast for "Christina"—which, after the experience of last summer, is said to be assured already of a certain run—is particularly strong. Besides Miss Alma Murray, there are numbered among the ladies Miss Rose Leclercq, Miss Carlotta Addison, and Miss Helen Leyton. Mr. Yorke Stephens, Mr. Frank Archer, and Mr. Brandon Thomas are among the best-known men; and an important part is also to be played by Mr. Willard, who is accounted by all real students of the stage as one of the most interesting actors now in London.

M. COQUELIN has re-appeared at the Royalty Theatre, along with Mdlle. Kalb—a very competent and mirth-provoking actress of pure comedy, who got a prize at the Conservatoire several years ago, and has since been at the Français.

AFTER the "Pompadour"—which has yet to be produced—has run its course at the Haymarket, there will be brought out a new play by Mr. H. A. Jones, to which, we hear, the finishing strokes have been already put.

By the death of Mr. John Clayton, which occurred this week, almost suddenly, at Liverpool, the stage loses an actor who was much admired and a man who was much liked. Mr. John Clayton, whose real name was Calthorpe, was but forty-three years of age. He looked, perhaps, somewhat older. Many years ago he was a subtle and unctuous Joseph Surface. He first made a distinct mark with the large public by his discreet and chivalrous and extremely pathetic performance of the hero of Mr. Palgrave Simpson's and Mr. Merivale's "All for Her"—an adaptation of *A Tale of Two Cities*, in which it was Mr. Clayton's happy lot to impersonate the character that stands for Sidney Carton. Afterwards Mr. Clayton made at the very least a *succès d'estime* in a little piece

of which we forget the title, but of which the main theme is the momentary love of a guardian for the ward whom he has nurtured. It was founded, if we mistake not, on Mr. Besant's and Mr. Rice's *My Little Girl*. Later Mr. Clayton developed comic qualities of the "full-bodied" sort, such as were better suited to modern farcical comedy than to the classic English comedy in which he had been seen long before. Thus, in two pieces of Mr. Pinero's—wholly farcical in idea but written with the utmost smartness—he was very peculiarly successful. These were "The Schoolmistress" and "Dandy Dick." Both were produced and had long runs—at the Court Theatre, where Mr. Clayton was associated with Mr. Arthur Cecil in management and with Mrs. John Wood and Miss Rose Norreys in acting. Had Mr. Clayton lived, he would, during the present spring, have opened the new Court Theatre, almost on the site of the old.

MUSIO.

RECENT CONCERTS.

MR. J. A. DYKES, whose Pianoforte Trio was recently performed at the Popular Concerts, gave a pianoforte recital at Prince's Hall on Friday, February 24. Bach's Chromatic Fantasia and Fugue and Mendelssohn's "Variations Sérieuses" tested his mechanical powers, and he came well out of the ordeal. In Beethoven's Sonata (Op. 27, No. 2) there was some good playing, though, at times, a little heavy. In three numbers from Schumann's "Phantasietücke" (Op. 12) and in a Nocturne and Scherzo by Chopin, one could scarcely hear the music for the notes—too much finger, too little soul. Mr. Dykes is young, and has, therefore, time to develop into a good pianist.

Mdme. Schumann appeared at the Monday Popular Concert, and interpreted Beethoven's Sonata in E flat (Op. 81A) as if she understood and felt every note. We need not dwell on her finished mechanism, delicate touch, and wonderful gradations of tone. There is no falling off whatever; and, judging by this first night's performance, Mdme. Schumann is likely to equal her triumphs of previous seasons. What makes her rendering of a great work so thoroughly satisfactory is the way in which she gives herself wholly up to the spirit of the music. Few, indeed, are the artists who can bring us into immediate contact, as it were, with the composer, and thus make us forget for the time the interpreter. Mdme. Schumann is one of these few. A hearty welcome greeted her when she ascended the platform, and, of course, the public insisted on an encore. Mdme. Schumann was gracious, and gave, with wonderful fire and charm, Schumann's Romanze, in D minor, from Op. 32. Mr. Chappell's programme included another attraction. Beethoven's Quartet in C sharp minor, with Messrs. Joachim, Ries, Straus, and Piatti as interpreters, is perhaps one of the greatest treats which the *habitués* of these concerts can have. Wagner spoke of it as an "immediate revelation from another world." What it is a revelation of, or whence it comes, we do not know; but this much is certain, that it carries us far away from ordinary everyday existence. Miss Liza Lehmann was the vocalist. The concert concluded with Mozart's Divertimento in E flat, played by Messrs. Joachim, Straus, and Piatti.

On Tuesday evening an oratorio, entitled "Judith," by Dr. Jacob Bradford, was given at St. James's Hall, under the direction of the composer. Dr. Bradford, in selecting the story of the wise and beautiful widow who deceived Holofernes and cut off his head with a falchion, and thus delivered Israel out of the hands of their enemies, hit upon a stirring and, in a way, romantic

tale. But to make it interesting it required to be well told and well set. A series of verses from the book of Judith and passages from the Bible strung together without art or judgment, and music feebly imitating Handel's style, is, however, all that Dr. Bradford was able to offer. From the canons and fugues scattered through the score, it would seem as if the oratorio had been written as an exercise for the Doctor's degree at Oxford, which Dr. Bradford took some years ago. If so, the authorities must have winked at some of the passages. To get a degree no invention or gift of melody is needed; but a man ought to show a respectable knowledge of form, tonality, and be able to write for voices and instruments in an orderly and sensible manner. There was one little bit of local colour in the score, though we do not know if it was intentional on the part of the composer. "Drums, trumpets, and cymbals brayed and clashed in the Assyrian concerts," says Mr. Rowbotham, in his *History of Music*; and this sentence came to our mind in listening to some of Dr. Bradford's choruses. He was less happy in making the Israelites sing part of the Te Deum to the "Old Hundredth" (this was left out at the performance, chorus No. 7 being substituted for it) and indulge in a hymn, at sunset in the valley of Bethulia. We did not stop for the second part, not being tempted even by the prospect of an instrumental description of the decapitation of Holofernes, followed by a recitative and chorus of Assyrian soldiers, to the words "Behold Holofernes lieth upon the ground without a head. Woe unto us, who shall deliver us?" Of the performance it will suffice to say that Miss Anna Williams and the other vocalists did their best to make their parts acceptable. Mr. Stedman's choir boys sang well in the Sanctus.

The programme of the ninth orchestral concert at the Westminster Town Hall, on Wednesday evening, included no less than three English compositions by living artists. Such prominence given to native art deserves recognition. First came Dr. Bridge's Overture "La Morte d'Arthur," recently performed with great success at one of Mr. Henschel's concerts. It was conducted by the composer, and well received. Mr. J. F. Barnett contributed a Pianoforte Concerto in D minor, which was given at the Crystal Palace in 1876. The showy pianoforte part was fluently played by Miss E. Barnett. The music must have been written when the composer was strongly under the influence of Mendelssohn. There is a touch, too, of Weber in the second and third movements. In the second part of the programme came the first movement of a symphony by Mr. C. S. Macpherson, conductor of the society. The music and scoring betray a young hand. Wagner, not Mendelssohn, seems to be Mr. Macpherson's model. If it is fair to judge by one movement, we should say the composer would be heard to greater advantage in music of freer form. Songs were contributed by Miss M. Hall and Mr. Fulkerson. The room was crowded.

J. S. SHEDLOCK.

MUSIC NOTES.

THE *Meister* (No. 1) is a journal started by the London Branch of the Wagner Society. Translations from the master's literary works are to form a main feature of the undertaking. This first number, however, contains only a letter written by Wagner to Berlioz in 1860. Besides editorial articles there are others with signed names. It is to be hoped that this journal, while pursuing the laudable purpose of making Wagner's works and theories better known, will abstain from anything that may savour of man-worship, that it will be catholic in its judgments, and fair towards the opponents of Wagner's art-views.

INTERNATIONAL SCIENTIFIC SERIES.

The New Volume in the above Series, entitled "**THE GEOLOGICAL HISTORY of PLANTS**," by Sir J. WILLIAM DAWSON, C.M.G., LL.D., F.R.S., will be published next week. Crown 8vo, with Illustrations, 5s.

LONDON: KEGAN PAUL, TRENCH, & CO.

NOW READY, large crown 8vo, cloth, 6s.

THE GOVERNMENT YEAR-BOOK:

Being a Record of the Forms and Methods of Government in Great Britain, her Colonies and Foreign Countries, 1888. With an Introduction on the Diffusion of Popular Government over the surface of the Globe, and on the Nature and Extent of International Jurisdictions. To which is added a Review of the Chief Occurrences affecting National and International Governments during the Past Year. Edited by LEWIS SERGEANT, Author of "New Greece," "England's Policy," &c.

"The valuable information described in the title is conveniently and clearly set forth."—*Daily News*.
 "It is choke-full of matter of the greatest value and interest for all political speakers, and indeed for all interested in political institutions."—*Glasgow Herald*.
 "It deserves high praise for the thoroughness, accuracy, and good condensation of its information."—*Scotsman*

A NEW VOLUME OF "THE STORY OF THE NATIONS."—JUST READY.

THE GOTHES. By Henry Bradley. Maps and Illustrations. Large crown 8vo, cloth, 5s.

RECENTLY PUBLISHED.

CHALDEA. By Zenaide A. Ragozin. IRELAND. By the Hon. Emily LAWLESS. Second Edition.
 "Full of fascinating interest and remarkable ability."—*Scottish Leader*.
 "This clear and temperate narrative."—*Spectator*.

THE SENTENCE: a Drama. By Augusta Webster, Author of "In a Day," &c.

Small crown 8vo, cloth, 4s. 6d.
 "The working out of the tragical theme is nothing less than masterly."—*Pall Mall Gazette*.
 "It is choke-full of matter of the greatest value and interest for all political speakers, and indeed for all interested in political institutions."—*Glasgow Herald*.
 "In the days of Macready this play might have found interpreters."—*Daily News*.

The Century for MARCH contains an Article on BISMARCK and HIS POLICY, with Two PORTRAITS; "The Escape from Libby Prison," Illustrated; "Some Pupils of Liszt," Illustrated; "Life on the Great Lonely Plains," Illustrated; and a Richly Illustrated Paper on Salisbury Cathedral. Price 1s. 4d.

LITERATURE.

The Life of John William Colenso, D.D., Bishop of Natal. By the Rev. Sir G. W. Cox, Bart. In 2 vols. (Ridgway.)

THE life of an English bishop, whether home or colonial, is ordinarily not worthy of being had in such everlasting remembrance as biography has to confer. As a rule, the intellectual interest of such a life is nil, being either non-existent or suppressed; while, as regards its political or ecclesiastical interests, these have rarely the historical value which would entitle it to posthumous record. But the life of Bishop Colenso must be pronounced wholly exceptional. For the greater part of its chequered course it formed the centre of an enormous amount of controversial stir and activity—ecclesiastical, critical, and political—so that there can be no question of its claim to the biographical honours which Sir George Cox has in these portly volumes conferred upon it.

Whether the time has yet quite arrived to which the good bishop confidently appealed in his oft-quoted "*Securus judicatoribus terrarum*" may perhaps be doubted. The memories of the bitter controversies associated with his name are too recent for the *securus* judgment of at least that fragmentary and excitable portion of the *orbis terrarum*, the "religious world" of England. But Sir George Cox's book is so far opportune in that it is a statement of the case for the defence when the pleas for the prosecution had already been set forth in their most *ex parte* form. The lives of Bishop Colenso's arch-foes, Bishops Wilberforce and Gray, have for some time been before the world, and it is no more than just that the case for the Bishop of Natal should be set forth with at least equal knowledge and amplitude. The *orbis terrarum*, if it still lacks the remoteness of time needed for impassivity, has now at least sufficient material for arriving at impartiality.

In his treatment of the bishop's early life, Sir G. Cox displays the tact of the skilled biographer in laying stress on those precise attributes in the child and young man which developed into the conspicuous and memorable characteristics of the bishop of after years, especially his ingenuousness and unswerving devotion to truth. Like most of his contemporaries who were susceptible of such influences, young Colenso came early under the thought compelling inspiration of such teachers as Coleridge and Maurice, though it is clear that these extraneous forces were hardly more than accelerative. In the words of the Italian proverb, they aided *secondar l'onda corrente*, "to help onward the rolling wave" of his own eager truth-loving disposition. The crisis of his life came with his

appointment to the bishopric of Natal in 1853. Sir George Cox has correctly diagnosed the effect of this promotion on a man of Colenso's intellectual tendencies and moral temperament. It gave him just that independent scope and comparative freedom from traditional surroundings best adapted for bringing out his own native originality. It became a "new departure" as well of his intellectual and spiritual as of his ordinary life. The bishop describes the self-analysis thus forced on him in words so genuine and characteristic as to deserve quotation:

"To teach the truths of our holy religion to intelligent adult natives, who have the simplicity of children, but withal the earnestness and thoughtfulness of men—to whom these things are new and startling—... is a sifting process for the opinions of any teacher who feels the deep moral obligation of answering truly and faithfully and unreservedly his fellow man looking up to him for light and guidance, and asking—Are you sure of this? Do you know this to be true? Do you really believe that?" (vol. i., p. 156).

Probably not a few clerics among ourselves who teach the Christian faith with the somnolent acquiescence that long-existing methods and formulas engender would be considerably benefited by the galvanic shocks which the earnest queries of a thoughtful Buddhist or Brahmin, or even "an intelligent Zulu," would be likely to impart. As a rule, Christian teachers live so persistently in the upper stories of their ecclesiastical superstructure that they have lost sight of its foundations. Colenso was not the man to shirk questions dictated by the *saora fames* of knowledge or profound reverence for truth; nor, again, could he employ equivocation or subterfuge in answering them—least of all was he likely to suppress them with an *ex officio* assumption of superior knowledge or sacerdotal authority. Accordingly, when he came to deal with the questions, intellectual or moral, which his new life forced upon him, nothing can exceed the ingenuousness and straightforward candour of his method. One of the first difficulties he had to encounter was the question of polygamy. This he took up and determined, not from the standpoint of customary missionary usage—surcharged as it was with sacerdotal and dogmatic pretensions—but from the broader point of view of justice and Christian charity. In a similar spirit he considered the difficulties in Biblical criticism which the rudimentary teaching of his new flock and his translation of the Bible into the Zulu language forced on his attention. In short, Bishop Colenso's conduct as a missionary was animated by principles of simple justice and large-hearted Christian charity, which, however obvious they may seem, were not then, any more than they are now, the most conspicuous attributes of missionary work. The other worker in the same field with whom it is most natural to compare him was Bishop Selwyn, with whom, indeed, Colenso had many points in common. Probably Selwyn's intellectual interests and susceptibilities were less than Colenso's; but both were at least agreed as to the imperative need of civilising and humanising native converts before proceeding to induct them into the esoteric mysteries of Christianity. While not a few of Colenso's fellow missionaries in South Africa demonstrated their radical unfitness for

Christian pioneering by masquerading before their barbarian neophytes in fawdry ritualistic garb, and demanding from them instantaneous acquiescence in such dogmas as the apostolical succession, the eternity of hell torments, &c., Colenso, while limiting his teaching to such simple truths as the All Fatherhood of God, put forth his practical energy in educating his people, teaching them as well by example as precept to build better houses, to cultivate their fields, to read their language, and in that language to peruse portions of the Bible and other books which the bishop's labours as a translator and printer continually set before them.

That the bishop's manly independence and undeviating devotion to truth, both in the fields of missionary work and of Biblical criticism, should have exposed him to hostility seems to me inevitable. His conclusions as to the teaching best adapted for Christian missionaries were set forth in his commentary on the Epistle to the Romans published in 1861; while his lectures on Biblical criticism, begun about a year later by the publication of the first part of his work on the Pentateuch, were continued in a series of similar works up to 1874. On the effects of these publications, and the manifold controversies to which they gave rise, I have no space to dwell; nor, indeed, is it needful. The events themselves are recent, and Sir George Cox's recapitulation of them, which I heartily commend to readers of the ACADEMY, is so complete and exhaustive as to render further remark superfluous. No unprejudiced reader could, in my opinion, rise from the perusal of the narrative—whether it comes before him for the first time, or recalls to his memory what he has already known—without a feeling of pained disgust at the petty and ignoble persecution to which the good bishop was subjected for so many years. Societies for the promotion of the Gospel and Christian knowledge, with a curiously ironical disregard of their fundamental functions; bishops and clerics of all kinds, with a terrified apprehension which augured little for the stability of their own convictions; the so-called religious press—all combined together in maligning, persecuting, obstructing, and boycotting both ecclesiastically and socially, the Bishop of Natal. Doubtless the decisions of the law courts were in his favour, and he could claim besides a minority headed by Bishops Thirlwall and Tait and Dean Stanley, who were not able, in their zeal for traditional Christianity, to forget the rudimentary obligations of sobriety, justice, and charity; but, on the whole, the attitude of the English Church to one of the wisest and most devoted of her sons during the greater part of his life was such as to leave an indelible stain on her history. As a personal friend of the bishop, Sir George Cox's standpoint in describing these events is that of a partizan; but his partizanship is avowed and justified. Professing to hold a brief for Colenso, he continually places before his readers extracts from the briefs of his enemies. Indeed, so far from disregarding the position of the bishop's foes, he has been unduly lavish of his attentions. It was hardly worth while wasting so much ratiocination on the puerile critical lisplings of the Speaker's Commentary; and the imbecile proceedings of the

so-called Cape Town trial are treated at a length wholly out of proportion to their intrinsic worthlessness.

If the main object of a biography be not only to record a history, but to present a true and lively portrait—what the Germans call a *Charakterbild*—there can be no question of the success of Sir George Cox's work. His volumes depict a strikingly noble and generous character; and the result is attained, not by the partial leniency of a devoted friend, but mainly by the unconscious instrumentality of its object's self-portraiture in letters and private documents, which were never meant to see the light. The good bishop's behaviour under trials and difficulties of no common magnitude has already secured the cordial approval of all genuine Christians, and its record in these volumes constitutes the best religious biography of our time. The author may have had a certain artistic intention in dwelling—with what some would call undue length—on the bishop's noble warfare with Philistinism and obscurantism. He may have wished, by attention to the minutest details, to make the traits and colours of his portrait more impressively faithful. Certainly nothing can be more remarkable than the achieved result. To meekness, ingenuousness, and an unfaltering devotion to truth, Colenso united indomitable courage and an inflexible patience. To more than one of his vituperative foes, who had learned Christ in the school of sacerdotal intolerance, he might have retorted in the words of an old commentator on Boethius, "Tu didicisti maledicere, sed ego didici maledicta contemnere." Probably the bishop's lot would have been happier had the harmlessness of the dove in his disposition been blended with a larger adulteration of the wisdom of the serpent—had he been endowed with an ampler capacity for circumspection, diplomatic astuteness, and mere mundane prudence and reticence. No instance in recent biography is more conclusive as to the inexpediency of a man's "wearing his heart upon his sleeve for daws to peck at." The daws in his case were not unmindful of their ignoble propensities. We cannot, therefore, wonder that he bore to the grave a torn and lacerated, if not broken, heart.

Sir George Cox describes his biography as a vindication of his maligned and persecuted friend; but the bishop has another and still more potent vindication—that of his own favourite court of final appeal—the impassive sentence of the *orbis terrarum*. All the causes which he advocated against such powerful odds are already triumphing. The humaner methods and principles of missionary work which he helped to inaugurate are forcing themselves with increasing emphasis on Christian churches. The dogmas of traditionalism which he opposed are continually receiving larger and more liberal interpretations. The late date of the Hexateuch—the great question of his life—is become (as readers of the *ACADEMY* might have noticed for themselves in Dr. Neubauer's recent review) a generally received opinion, both among continental critics and leading Hebraists in this country. In a word, the objects for which the good bishop suffered such unmerited persecution are asserting themselves as unquestioned verities; and the prophecy

uttered by Dean Stanley in the rooms of the Society for the Propagation of the Gospel, and, therefore, in the very focus and parliament of Colenso-persecutors—that the bishop's memory would live when his enemies were forgotten—is now in rapid process of fulfilment.

The space at my disposal is exhausted, and I have no room to discuss the bishop's intervention in South African politics during the later years of his life, though Sir G. Cox's luminous narrative of these events forms one of the most interesting portions of his biography. That Colenso was actuated by the purest of motives is now universally admitted. What is not so well known is that his political foresight has been amply justified by the events. But the story of the miserable incertitude and incredible mismanagement which seems to characterise our Colonial Office in its administration of South African affairs is humiliating to the last degree, though its truth is fully borne out by Mr. Froude and other independent judges. If this is a fair illustration of the method in which our imperial concerns are managed, the stability of the empire which could survive such maladministration will soon have to be based upon the miraculous supervision by which the Jew in Boccaccio's story accounted for the power of the church of Rome.

That Sir George Cox's *Life of Colenso* is destined to achieve a permanent literary success I cannot doubt. It will have no small value, independently of its biographical narrative, as a masterly vindication of Liberal Christianity; while to those who know personally or by fame the late bishop it will have the further worth of an enduring memorial. Mr. Ruakin recently gave his large diamond to the nation on condition that it should bear Colenso's honoured name. Not less lustrous or permanent is Sir George Cox's monument, on which he might have inscribed Mr. Ruakin's characteristic words: "In honour of his friend, the loyal and patiently adamant first Bishop of Natal."

JOHN OWEN.

Transcripts and Studies. By Edward Dowden. (Kegan Paul, Trench & Co.)

PROF. DOWDEN possesses in a remarkable degree the power, of which he speaks in one of these papers, "of getting to the heart of great books." He has also the rarer power of getting to the heart of great writers of books. If he were regarded only as a critic and interpreter of other men's works, and of their lives and genius, his criticisms are so much informed with sympathy, and his interpretations are so fresh and living and vigorous, that they would give a new significance to the office of critic and interpreter. But no one who is familiar with Prof. Dowden's writings, and especially no one who reads this volume, will deny to him those higher qualities which go to the making of literature. While he gives us the key to other men's thoughts he throws light upon them by the effulgence of his own. Literature, as he tells us, is itself an interpretation, while it is also an independent revelation of human life; and, in a like sense, Prof. Dowden's interpretations reveal to us new possibili-

ties and fresh ideals—they make human life bigger, nobler, and more beautiful. That, I think, must be the feeling of any student who follows Prof. Dowden through two, in particular, of the papers in this volume—the articles on "Victorian Literature" and "The Interpretation of Literature." I confess that they have awakened in me quite a new sense of the greatness of what I dimly realised to be great before. They have set men and ideas in a true perspective; and, above all, they have brought out the divine idea of the literature of the later half of the century with a clearness and fullness scarcely given to it before. To get at the secret of such minds as Carlyle's and Newman's, of George Eliot's and Robert Browning's—to realise how much and how little we owe to the true and false prophets, to the wise and vain teachers—to do this in the space of a hundred pages implies no ordinary power of teaching in the writer.

Prof. Dowden's is a devout mind. The discoveries of science have not made man's life less spiritual for him by the new light thrown on the material past of humanity. This very past suggests, indeed, an admirable reflection:

"If, moreover, the conviction that we and all that surrounds us have been so largely determined by the past sometimes weighs on us with tyrannous power, the thought that we in our turn are shaping the destinies of future generations becomes a moral motive of almost irresistible force, compelling us to high resolve and dutiful action."

In a passage of keen satire he rebukes the critical spirit in which a well-known writer treats of things pertaining to religion:

"Theology, once the science of sciences, is said to be superseded, and in its place we have got a 'science of religions.' God, to whom once all highest hopes and fears tended and were referred, the living God whom man, His creature, might love and adore and obey, has been superannuated, and we are requested to cultivate henceforth enthusiasm on behalf of 'a stream of tendency' which 'makes for righteousness.' Or perhaps it is more in harmony with the principles of a scientific age to direct our devout emotions to the great ensemble of humanity: 'O ensemble of humanity, thou art my ensemble; early will I seek thee: my soul thirsteth for thee in a dry and thirsty land where no water is.' Or yet again may it not be that we can dispense with this awkward ensemble—a leviathan of pettinesses—and recognising the existence of an Unknowable, may possess in that recognition the essence of all religions: 'Sing unto the Unknowable, O ye saints of its, and give thanks at the remembrance of its unknowableness.'"

It would certainly, as Prof. Dowden says, take us some time to get used to the new psalmody.

Within the covers of this volume are papers on (or concerning) Carlyle, Shelley, Shakspeare, Spenser, Milton, Wordsworth, Browning. Nor do these exhaust the list. They are all reverently written, in the spirit which the writer tells us is better than hero-worship—that of "cheerful and trustful fraternity."

"The great master is better pleased to find a brother than a worshipper or a serf; and only to a brother, no matter though he be a younger brother, will he lay bare his heart."

The Carlyle paper is a transcript of parts of

eleven out of twelve lectures, "On the History of Literature, or the Successive Periods of European Culture," delivered by Carlyle in London in 1837-38. The transcript has a peculiar interest from the fact that the lectures have not been printed. If the MS. of the report of the eleven lectures is at Prof. Dowden's disposal will he not publish the whole of it? Carlyle is evidently one of the elder brethren whom Prof. Dowden has lived most with. His intense earnestness and tenderness, his strong loves and antipathies, are all qualities discernible in these pages. Though there is no resemblance of style, yet in the more plastic diction which we have here the bold and vehement thoughts that continually flash out are very suggestive of Carlyle. In the "Last Words on Shelley," Prof. Dowden supplements his Life of the poet by a critical estimate of his genius and character. The Life was properly left to tell its own story and present its own portraiture; but since no one is better qualified than Prof. Dowden—and few are so well qualified—to pronounce a critical judgment on Shelley, it is well that he has given us this further chapter.

I am conscious that this is a very meagre and inadequate notice of a book of exceptionally high mark. But with all earnestness I commend the book itself, to the student and general reader alike, as one of the best literary first-fruits of the year.

GEORGE COTTERELL.

Commons and Common Fields. By T. R. Scrutton. (Cambridge: University Press.)

MR. SCRUTTON'S essay on the history and policy of the laws relating to commons obtained in 1886 the Yorke Prize, which was founded a few years ago in the University of Cambridge for the promotion of the study of the law of property. The author has wisely limited the scope of his work to two principal points, with the addition of some general suggestions as to the preservation of open spaces near large towns. The first part of the essay deals chiefly with the current theories of the origin of commoners' rights in England. Mr. Scrutton seems to prefer the view that they began in almost every case with an actual grant from a Norman landowner. He perhaps hardly allows sufficiently for the tolerance which retained the ancient agricultural usages among the tenants of the new lords, even when the extent and meaning of those usages were very imperfectly understood. In connexion with this part of the subject he is compelled to attack the vexed question of the origin of manors in this country. He appears to be attracted by the theory made popular by Mr. Seebohm, which represents "manors" as existing in Roman times, and as being taken over bodily by the English invaders; but he reconciles the followers of Blackstone with the believers in a continuity of the imperial civilisation by pointing out that, at any rate, every estate was given at the Norman Conquest to some absolute owner, without whose leave no ancient tenure or rights of common could have continued to exist. He does not go very fully into the question as to how it was that

the system of estate management which prevailed under the empire came to be copied rather closely in the case of a French fief, and more distantly and vaguely in the case of an English soke. Nor do we find much fresh light in his account of the ancient agricultural tenures. A full history of the English manor will have much more to say about the freeholders, who are often confused, under the common title of *villani*, with the serfs by birth, and with the freemen who held lands on the same terms as the serfs, except that their contracts were terminable.

The second part of the work, which deals with a subject better known in detail and more interesting to the general public, contains a lucid and well-sustained account of the policy of the legislation and the practice of the landowners with regard to inclosures. Mr. Scrutton has studied the subject thoroughly, and will carry his readers with him, without any flagging of interest, through several chapters in which he describes the earliest improvements effected either under the Common Law or the Statutes of Merton and Westminster, the growth of sheep-farms and the change of husbandry, caused incidentally by the influx of the precious metals from America, the extension of deer parks, and the terrible depopulation of the villages under the Tudor sovereigns. In his account of the seventeenth century he enlarges especially on the draining of the fens, and on the revival of the royal rights in the forests, which were soon to be disafforested and broken up after the close of the Civil War. The eighteenth century is marked by "the policy of agricultural gain"; and Mr. Scrutton here draws a very just distinction between the advantages accruing from the division of the ill-managed common-fields and the less obvious gain resulting from the inclosure of the wastes and commons which had never been subject to cultivation. The great rush of Inclosure Acts may have been good for the country as a whole; but there is no doubt that the interests of the poor were treated with a carelessness which has led to very evil results. The movement for supplying allotments to the labouring class would not have been required had proper provision for fields, gardens, and pasture fields been generally made upon an inclosure. The policy of the present day is to maintain open spaces in the neighbourhood of crowded towns, not only for purposes of recreation, but because they are also required as lungs and breathing-places and as a protection against "the adulteration of the air" in thickly-populated districts. Mr. Scrutton traces the course of modern legislation on this part of the subject from the introduction of the Metropolitan Commons Act to the Commons Act of 1876, with which, as he points out, the statutory history practically closes, "though the battle of inclosures is fought every year in Parliament" in connexion with a few schemes of the Land Commissioners and a good many private bills of railway companies and other public bodies.

C. ELTON.

TWO BOOKS ON SOUTH AMERICA.

Zephyrus: a Holiday in Brazil and on the River Plate. By E. R. Pearce Edgcombe, (Chatto & Windus.)

The Amazonian Provinces of Peru as a Field for European Emigration. By H. Guillaume. (Wyman.)

Zephyrus is the result of a flying visit made to parts of Brazil, Uruguay, and the Argentine States by the author and his wife early in the year 1886. It records some novel experiences and many shrewd observations on the social and political condition and future prospects of those lands in a pleasant vivacious style, which, however, occasionally becomes slightly familiar, as when the so-called "Bahia oranges" are described as "such juicy fellows, melting in the mouth." Nor are the historical references always quite trustworthy, as when we are told that Rio de Janeiro, rightly enough stated to be a misnomer, was so called because its Jesuit (*sic*) discoverers first entered the bay on St. John's day. Here the conversion of the valiant French Huguenot, Nicholas Durand Villegaignon, into a Romish Jesuit is only equalled by the confusion between St. John and the month of January (Janeiro).*

But such slips are rare, and wherever Dr. Edgcombe speaks at first hand his statements may be accepted with implicit confidence. On many points his remarks are of considerable value, and he deserves no little credit for being almost the only English writer who carefully distinguishes between the hopelessly degenerate Brazilian whites of the tropical regions and the vigorous enterprising Hispano-Lusitanians of the southern provinces. Thus the pure Portuguese element in Pernambuco

"seemed as if they drooped under the scorching blaze of the tropical sun, many of them looking as if visibly touched by the finger of death. To the effect of the climate are probably due, in a large degree, the many cripples and deformities in human shape we could not avoid noticing."

The moral standard is at the same low ebb, the universal dishonesty being summed up in the remark made to the writer by a native in somewhat broken English—"There is no place where they miss more the truth." Hence the decided antagonism that exists between these decrepit and unprogressive peoples and "the comparatively energetic dwellers in South Brazil"—a feeling which, combined with other causes, may lead to the dismemberment of the empire after the death of Dom Pedro II., and the union of the southern provinces with the conterminous and far more congenial state of Uruguay.

In the Banda Oriental, as this republic is familiarly called, the holiday-makers met with some unpleasant experiences. The country was just then in the throes of the revolution which resulted in the attempted assassination

* Villegaignon was not the actual discoverer, as the bay was sighted in 1515 by de Solis, but he was the founder of the first European settlement. It was named Rio de Janeiro ("River January") by the Portuguese navigator Martim Affonso de Souza in 1531, because he sailed into the bay, supposing it to be a river, on January 1 of that year. No Jesuits were heard of on this seaboard until after the expulsion of the French Protestants by the Portuguese in 1567.

and expulsion of President Santos, and the appointment of his successor, General Tajes. Hence, on reaching Salto on the Uruguay river, the first sight they saw was

"a long cavalcade of soldiers and national guards in charge of a large number of the most scrubby, miserable, dejected-looking wretches one ever would wish to see. Following the cavalcade came a train of waggons containing the wounded, who uttered groans as the great lumbering, springless vans, each drawn by eight or ten horses, jolted horribly over the rough road. The streets were thronged, but dead silence reigned, for the sympathies of the people were with the beaten revolutionists."

The disastrous effects of these incessant and mostly aimless disturbances are here clearly pointed out; and, strange to say, the cause of the evil is partly traced to the presidency, which, both in Uruguay and "Argentina," is practically a despotism. This office gives to the head of the state an enormous amount of personal influence, which, on the one hand, makes the presidency the prize of rival factions, and on the other holds out every inducement to the party in power to cling to office, on the principle of *beati possidentes*.

"Everywhere the sweets of power are attractive, and men are reluctant to descend from the presidential throne. Why is it, one cannot help asking, that republics have presidents? Surely the logical position of a republic is that of a state without a president. Switzerland is the true ideal republic."

These words seem to acquire a deep significance from recent events in France, where for the moment it appeared as if the presidency had fallen into irrecoverable disrepute.

But a worse institution by far than the presidency our travellers found the lazaretto at Monte Video, where they were detained in quarantine for a week because of the prevalence of yellow fever in the Brazilian ports whence they hailed. The lazaretto occupies a low rocky islet in the La Plata estuary, ironically named the Isla de Flores, where not a blade of grass will grow, but where a more plentiful crop of human miseries may be gathered than in any other spot of equal extent, except perhaps a Russian State prison.

"The real hardships of the lazaretto were the unsavoury food and unsavoury smells. We were given black coffee and sour bread every morning. There was butter, too, but it was quite uneatable. Milk was an extra, costing eight shillings a pint. After the airing of garments was over we had *déjeuner*, with oily soup and various chunks of hard meat cooked in oil, about as tough and gristly as the hardest india-rubber, some very repulsive vegetables, an apple each, *vin ordinaire*, and black coffee. Dinner at five was somewhat more ample, as far as food went, but not more palatable. Our meals were one prolonged groan from beginning to end from the partakers thereof. . . . The only vestige of amusement we could extract from our dinner arose from the erratic times at which the pudding appeared, often at the beginning, sometimes in the middle, but never at the end. Once we tried a very lean and hungry chicken, for which, being an extra, we paid eight shillings. The only satisfactory extras we indulged in were poached eggs at tenpence a piece."

There is a hospital attached to this establishment, which, however, the doctors do not visit through fear of infection, "but prescribe by telephone!"

Things were, on the whole, much pleasanter in the Argentine States, although even here the mosquitoes were found to be a terrible nuisance in some of the riverain districts. Travellers bound for regions infested by this pest will be glad to hear that a sure and simple remedy is a candle,

"the flame of which should be held about an inch off the wall, and four inches above the mosquito, as he sits perched, airing his hind legs on the wall; then slowly lower the flame down upon the enemy, and when it reaches him he will give a splutter and fall dead into the hot grease. Mosquitoes seem to be spell-bound by a candle flame; and by resort to this method of destruction a room may be converted in a few minutes from a veritable inferno into a place of rest."

Like all recent observers, Dr. Edgcumbe speaks highly of the rapid progress and future prospects of the more favoured states of the Argentine Republic. These new and fertile lands are already attracting an enormous stream of Italian immigration (as many as 125,000 in the year 1886), and persons well acquainted with the British colonies

"assured me that not one of them could be compared with the River Plate as to natural advantages. Their opinions appear to be confirmed by the fact that I came across several persons who were settled in the Plate and doing well, after having tried their luck without success either in Australia, New Zealand, or the Cape."

But this statement, which is not here made for the first time, must be received with great caution, as it by no means applies to all classes of British emigrants. The same remark is still more needed in respect of the attractive picture held out to English capitalists and intending settlers by Mr. Guillaume on behalf of "the Amazon Provinces of Peru." His book may be described as an enlarged English edition of a pamphlet issued in Lima in the year 1885 by an association calling itself the "Society for the Exploration and Colonisation of Peru," of which society Mr. Guillaume is the delegate member, as well as Consul-General for Peru in Southampton. Some idea of its multifarious but somewhat ill-digested contents may be had from the sub-title, which runs:

"A statistical and geographical review of the country and its resources, including the gold and silver mines, together with a mass of useful and valuable information, with map and illustrations."

The map, which is on a large scale, being based on Paz Soldan's excellent atlas, will be found trustworthy, although not very clearly printed. There are several other smaller maps, which appear to have been prepared by Erhard Frères for a French edition, and which here retain their French nomenclature. The illustrations are also numerous, and on the whole much better than might be expected in a work of this sort. Among them is a charming photograph of "A Party of Ladies and Gentlemen of Lima giving a Concert for a Charitable Purpose," which conveys an impressive idea of the decidedly handsome Limeño type. A large portion of the work is naturally devoted to the vast mineral resources of the country; and this section, which is excellently done, is supplemented by a long appendix on "The Gold Mines of Peru," translated from A. Raimondi's

paper in the *Anales de Construcciones Civiles y de Minas del Peru* (Lima, 1857).

Most of the rest of the work consists also of translations or extracts generally from good authorities—such as Orton, Clement Markham, Olivier Ordinaire, Patson, Von Tschudi—on the climate, geology, natural history, inhabitants, trade, statistics, railways, industries and so forth, of the whole of Peru and not merely of its Amazonian Provinces.

Everything is, of course, placed in the most favourable aspect for the compiler's object, which is confessedly to attract British capital and British settlers to the eastern provinces of Peru, drained by the Amazons and its numerous head-streams. Thus, the somewhat glowing description of the climate contains the statement that "instances are not rare of Indians living to 120 or 130 years of age, and retaining full possession of their bodily and mental powers." Then follows the passage from Stevenson about the remarkable longevity of the Indians in the Barranca district, and especially the case of the Jauja Indian said to have been born in 1697 and still alive in 1839, consequently 142 years old in that year. Ten years more and Peru also would have its Old Parr. In the preface surprise is expressed that "this immense territory, so fertile and abounding in the richest mercantile products should still remain ignored by commercial enterprise." But surely Mr. Guillaume must be aware that the Peruvian bondholders could, if consulted, readily explain the enigma.

A. H. KEANE.

Wealth and Welfare. By Commander Hastings Berkeley, R.N. (John Murray.)

Of the couple designated by the title the external factor first comes under attention. "The present economic condition of the United Kingdom" is considered in the light afforded by the Royal Commission on the Depression of Trade. The author balances the report of the majority with that of the dissentient minority. He inclines to the more depressed scale—the less hopeful estimate. This is not the place to do justice to an argument which turns upon a nice manipulation of figures. We recommend to the statistical expert a careful consideration of our author's political arithmetic. The moderation of his tone, his willingness to admit that those with whom he sides are liable to error, create a pleasant impression of candour. We may say as much of his chapter on recent changes in distribution. He concludes that the diminution in large manufacturers' profits has been partly compensated by the rise of small capitalists.

In entering on the consideration of distribution we pass to the second portion of the joint subject. The relation of wealth to welfare, the subordination of means to ends, is philosophically conceived:

"We must not look solely to the 'how much of gain here and loss there, but, if I may so express it, to the 'how borne' of it. You may strike a thousand different men with a feather and not do one of them an injury; but if you strike one man with the accumulated force of the thousand blows you will kill him."

This image is employed to illustrate the possible effects of a well-directed policy of

protection. Consumers in general might suffer a slight and almost inappreciable inconvenience; while one class of producers—in particular the agricultural interest—might be saved from ruin. This consideration of the advantages which, in conceivable cases, might result from protection appears to us to form a useful intellectual exercise; but we regret that Commander Berkeley, in his attacks upon the "orthodox political economy," should have taken for his guide Carlyle, whom he compares to the prophet Isaiah. Had he studied the new, instead of declaiming against the old, political economy, he would have found almost all his speculations anticipated in a recent work upon the principles of political economy. Under the government of an evenly balanced intellect, he would have poised more justly the considerations to which he attaches so much weight. He might have doubted whether a government could be found wise enough or strong enough to carry out the beneficent regulation which he contemplates. He would have asked less confidently

"whether the present Board of Trade, invested with greater powers, might not, in conjunction with the Chancellor of the Exchequer, exercise a selective action, guided in it according to the changing condition of production in our own and foreign industries."

A mild tincture of protection is not the only remedy prescribed by our author. He is in favour of taxing luxuries. He would impose a heavy, not to say a confiscatory, legacy-duty on the inheritance of "paper property"—that is shares and scrip of all kinds constituting "orders on the property or productive industry of others." Without accepting his particular suggestions, we think he does good service in clearing away the general prepossessions—the idols of the market-place—by which many powerful minds are deterred from even entertaining projects of social reform. The rigid dogma of *laissez-faire*, as laid down by Mr. Herbert Spencer, is soon disposed of. The doctrine of "differentiation and specialisation of parts" does not go far to prove that political decentralisation is the law of evolution. Commander Berkeley asks with authority—

"How does the reader suppose it would answer to curtail the authority of the captain on our modern line-of-battle ships, on the ground that the services to be performed by the several parts of the whole are now more difficult and complicated than they were in Nelson's day?"

Again, the Darwinian struggle for life is shown to have a very indirect bearing upon the principle of industrial competition. If the writer is asked, To what limit are we to push interference with open competition? he replies, "To the limit which commonsense and honesty of purpose shall in every case point out to us."

"That middle," he says, "which has been excluded from the realms of metaphysical thought has taken refuge and will bring comfort to the common of mortals. . . . Is it not, after all, he asks, that the *very fin mot* of legislation is neither Conservatism nor Radicalism nor Socialism, but Opportunism in its best sense?"

These and other remarks directed against the "Principle-mongers" appear to contain much

common sense. If they are not very original, they are at any rate well worth repeating. If they are not perfectly accurate, they are at least what an increasing number of intelligent persons regard as truth.

F. Y. EDGEWORTH.

NEW NOVELS.

The Woman he Loved. By A. N. Homer. In 3 vols. (White.)

A Voice in the Wilderness. By Caroline Fothergill. In 3 vols. (Ward & Downey.)

Virginia Tennant. By the author of "Christina North," &c. In 2 vols. (Hurst & Blackett.)

The Island; or, An Adventure of a Person of Quality. By Richard Whiteing. (Longmans.)

Four Ghost Stories. By Mrs. Molesworth. (Macmillan.)

A Romance of the Queen's Hounds. By Charles James. (Chatto & Windus.)

Mrs. Smallbrams's Lodgers: a Christmas Tale. By Henry Hammond. (Sonnenschein.)

Izora: a Mystery. (Kegan Paul, Trench, & Co.)

THE development of a soul through the influence of love is by no means a novel subject in fiction, but it is one capable of almost infinite diversity of treatment; and Mr. Homer has shown, in *The Woman he Loved*, that he is fully competent to deal with so subtle a theme. For that is the real text of the book. All side issues apart, the purification of Ada Devereaux is the main source of interest, and the point upon which the chief action of the piece turns. She is a young widow, highly gifted, both physically and intellectually, but utterly devoid of heart, whose one object in life, in the Indian home where we are first introduced to her, is to ensnare men for the dear delight of laughing them to scorn. This rather fiendish amusement is a systematic revenge upon the sex for her own ill-treatment as a girl. It seems a little improbable that a mere disappointment in love should so harden and embitter a warm and loving nature; and, since there is no hint that she had in any way committed herself as a girl, one hardly sees why Ada should so much have dreaded the fact that Geoffrey Carelesse was aware of her identity. Carelesse, an officer stationed at Calcutta, is one of the fair widow's many victims, whom she appears, for her own ends, to encourage, while secretly receiving the advances of his friend, Gerard Clarencourt, a young Cornish squire on his travels, little more than a boy, whom she supposes to be very wealthy, and determines to marry. As a matter of fact, the young squire, as simple hearted a gentleman as ever lived, was, until his majority at twenty-five, almost entirely dependent upon his mother, a scheming woman of fashion, whose love the poor lad had vainly tried to win, and who hated him as the prospective owner of her late husband's wealth. Carelesse is ordered to the Afghan frontier, and leaves, after registering a terrible vow of vengeance against any man who may find favour in his mistress's eyes; while she, as soon as the coast is clear, starts for home in

Gerard's company. The episode of their voyage is, perhaps, the most striking in the novel, and gives Mr. Homer scope for the exhibition of descriptive powers of a high order. It need only be noted, in particular, that the hero rescues a sailor from drowning, through whose gratitude both he and Mrs. Devereaux are saved when the ship founders; and that, after sundry stirring adventures, they arrive safely in London, and get privately married. There Ada lays aside her mask. The truth as to Gerard's circumstances—of which he had never thought for a moment—is revealed; and, after enduring a torrent of abuse, he leaves her, stunned and horrified by the discovery of her treachery. He goes abroad, striving to forget her; but, impelled by his unconquerable love, he returns, only to find that she has vanished, and settles down moodily at the paternal estate. The fact is that, after his departure, remorse awakened in Ada's breast; and, on becoming a mother, she discovered that she had insensibly fallen in love with her husband, refused to touch his allowance, and, reassuming her former name, retired to Sidcombe, the next village to his estate, to live in seclusion and yet be near him. So there they live, close to each other, and yet Gerard is ignorant of the fact. Is it not rather unlikely that this could have happened in a gossiping little seaside place? Meanwhile, Carelesse has been cashiered, on account of a gross breach of military discipline for which every gentleman must hold him excused, and comes home to find himself disinherited and reduced to a state of poverty, which cannot have been so very abject, since he smoked cigars, instead of contenting himself with a pipe. He traces Ada to Sidcombe, and then comes the tragedy of the story. It is neither necessary nor desirable to describe this exactly; suffice it to say that the excitement is worked up to the highest pitch, yet without a suspicion of melodrama. The novel is a good one, and may very likely be followed by others equally good, or even better. The *dramatis personae* are well and individually drawn, many of the scenes are striking, and, as has been said, there is considerable descriptive power. But Mr. Homer must be warned against slipshod construction. In the second volume we find the following passage, *à propos* of Sir George Fabyn: "The fortunate Croesus sat within, surrounded by every luxury that money could pay for and art devise—easy lounges, rich Eastern mats, a superb *physique*, a first-rate cigar."

Notwithstanding a certain amount of cleverness, *A Voice in the Wilderness* must be described as an uncomfortable book; and—if we except, to a certain extent, the hero and heroine—Miss Fothergill may claim to have originated about as objectionable a set of people as it has ever been our ill-fortune to meet with. It is not so much the Hardcastles—they were merely humdrum, wearisome Philistines; but what is to be said of the Wentworth household? Imagine a family in which the children were allowed to turn the drawing-room into a bear-garden, to insult their parents' guests with impunity, and to use a gallows as their favourite toy! The author may have thought that she was depicting nice, spirited children—after the manner of *Ravenshoe*—but she has only succeeded in drawing a parcel of vulgar brats, who, if

their mother had not been a perfect fool, would have been well whipped and sent to bed. Then the Richmonds, brother and sister: Bertha all but proposes to a married man, and she and the doctor lay themselves out to prove to him that he may justifiably live in open, if legalised, adultery with another woman, because his unhappy wife has become insane. But worse of all is the bigoted fanatic—the Rev. Mark Haalam. Where on earth the author got her idea of such a monstrous character is best known to herself. Here is a man, holding the office of an Anglican priest, habitually studying the *Imitatio Christi*—it must surely have been an expurgated edition—and using a crucifix in his private devotions, who has the impudence to preach rank Calvinism both in the pulpit and in private. And now it may be said that Antoinette Howard and her unacknowledged lover Richard Burland stand out brightly from amid their surroundings, though Antoinette was, perhaps, just a little inclined to be strong minded. Still she was a noble woman, whom it would have been a thousand pities to have seen sacrificed to the anomalous parson; and there is much true pathos in the brave way in which, on discovery of her own secret, she sets to work to live it down. It would have been too bad had such courage and fidelity gone unrewarded. Richard also is a fine, staunch fellow—although we think for our own part that he made a great if chivalrous mistake in keeping his mad wife under his own roof; of course, there came a moment when her attendant was off her guard, with a consequent catastrophe. There are some good scenes in the book, notably a graphic description of Antoinette and Burland lost in the mist on the Welsh mountains—the vivid truth of this must appeal to all who have ever been in a similar predicament; also the heroine's final refusal of Haalam, and their subsequent parting, are well told. May we point out that to "join issue" with other people does not mean to agree with them.

Virginia Tennant is as pretty and sympathetic a story as we have met with for a long time. There is nothing striking or sensational about it. The course of the heroine's trials is traced in a style which is simplicity itself, up to the happy ending; but there is a freshness and originality about the narrative which give it an indescribable charm. Virginia is the only child of a wealthy officer in the army, who, being obliged to go on active service, sends her with her French duenna, Mademoiselle Joseph, to stay with his sister, Mrs. Stansfield; whence arises an embroilment. There is a stepson at the park, to whom the estate will, under certain contingencies, eventually come, and whose position in the house is consequently none of the most comfortable, since, although he is virtually the master, he is always being made to feel himself *de trop* by his stepmother and her children. The proud, self-contained man, yearning for the affection that none will give him, and stigmatised by all as morose and hard, is a good study. Virginia, fresh from her quiet French home, comes as a new revelation to him, with her innocent prattle and unconventional ways; and need we say what was the result? The author excels in character drawing. The best figure, apart from

the chief two, is the kind-hearted old pessimist, Mademoiselle Joseph, always expecting the worst with the calmness of despair, and adoring her charge as she would have done an only daughter. We hope they let her live at La Vallière when all was set right, she would be so much happier there! The Stansfield family are also well drawn, especially the hypochondriacal invalid Emmeline, who, after all, had some warmth of feeling under the crust of selfishness, and Jack, a delightful young pickle, and perfect example of a public schoolboy. It strikes one that Virginia was rather an unreasonable young lady, as regards her relations to Norton, and it is well her impulsive conduct had no worse results; but we heartily recommend the book to all who can enjoy a pretty story. The author seems to have rather Spartan views, judging from the remark that Colonel Tennant had a fire "though it was early in October." For our own part, we have often been glad of one in June in this precious climate!

Mr. Whiteing has rather marred a very pretty romance of the South Seas by the introduction of a great deal of irrelevant satire on modern society in this country; all of which is bitter, some of it just, and a great deal of it very one-sided. For instance, when he indulges, as at p. 97, in diatribes against English Sundays, he must know that it is not true, in the present day, that in churches there is "the division of classes" of which he speaks; and in what sense can we be said to "have for ever lost" the secret of the brotherhood of man? No doubt there is a good deal of truth in what he says as to the condition of the poor; but the evil will not be set right by attempting to do away with distinctions of class. Even supposing such a state of things to be arrived at, how long could it last? And when he counsels the rich to "cut off some of the work that ministers but to your ease and luxury," one would fain learn how he proposes to recompense the toilers for the loss of that very work which is to them their daily bread. But there is wholesome, if bitter, satire in the chapter in which the wanderer, urged on by Victoria, advises the Ancient how to bring the so-called blessings of civilisation into Pitcairn's Island; and the materialist Yankee captain, who wanted to utilise all the brute creation down to the singing birds, is very funny, though he must have been a fearful trial on board-ship, where one could not get away. The idea of the story is that a certain young lord, finding the world out of joint, flees from civilised life, and is by accident cast on Pitcairn's Island, where he is most hospitably entertained by the gentle inhabitants, and lives happily in the company of the beautiful Victoria and her father until circumstances summon him home again. The description of the manners and customs, of the island, its laws, ceremonies, &c., are both curious and amusing, and are, we should imagine, the result of actual experience. The appeal in the cat case is particularly comic, and so is the idea of its being a legal offence for sweethearts to cut their names on a tree. All this is so good that we could have wished there had been more of it, and less of the "preachee-preachee," which can hardly have edified Victoria, and has certainly bored us.

Everything that Mrs. Molesworth writes is worth reading; but it might be almost a question whether she was altogether well advised in her latest attempt. It is superfluous to say that these Ghost Stories are well told; but, unless we are to understand that the author vouches for the actual truth of them, it seems almost a pity to make a little child, as in "Unexplained," the ghost-seer, the poor thing would be so frightened. Doubtless Mrs. Molesworth has some authority for so unusual a construction as "I should not have went." On the whole, "Lady Farquhar's Old Lady" is perhaps the most natural of these four tales.

A very pretty, though painfully tragic, story is *A Romance of the Queen's Hounds*. One can hardly believe in such a fiend as Bravo, and it was too bad of Mr. James to kill poor little Di Chesney; but it must be admitted that the story of her devotion is admirably told.

Mr. Hammond's little book is extremely amusing, as good a shillingworth, indeed, as we have met with for a long while; and we advise all who can enjoy a hearty, innocent laugh to make acquaintance with the troubles of the Smallbrane household. The good woman herself is almost worthy of a place by the side of the immortal Mrs. Brown, and the scene of the capture is capital. We shall be pleased to meet with Mr. Hammond again.

We must frankly own that we do not understand *Ixora*. It has to do with a mysterious Jewess who was burnt at Madrid, and then took to "walking," as the country folk say; but why she did so we have failed to discover. The verse in which much of the book is written is tolerable, in spite of a few cockney rhymes such as "dawning" and "morning." But if *Ixora* owned a New Testament, and prayed in the words here recorded, how came she to be burnt as a Jewess? B. MONTGOMERIE RANKING.

SOME FRENCH BOOKS.

Lettres Autographes composant la Collection de M. Alfred Bovet, décrites par Etienne Charavay. Ouvrage imprimé sous la direction de Fernand Calmettes. (Paris: Charavay Frères.) *Scripta manent*. Causeries à propos de la Collection d'Autographes de M. Alfred Bovet, par Philippe Godet. (Neuchâtel: Attinger Frères.) During the months of February and June 1884, and of June 1885, there was sold at the Hôtel Drouot the almost unrivalled collection of autographs gathered during the preceding fifteen years by M. Alfred Bovet, a gentleman of Swiss origin now domiciled in France. The number of lots exceeded 2,000; and the aggregate sum realised was 113,524 frs. (say £4,540). But totals of this sort fail to express the peculiar character of this collection. For M. Bovet was no mere amasser of miscellaneous signatures, such as we may conceive the vulgar autograph-hunter of America. He was an amateur of literary MSS. and historic documents—things which are capable of yielding as elevated a pleasure as the proofs of prints or the fine states of coins. It is understood that he has now succumbed to the modern weakness for specialisation; and that he parted with these treasures in order to concentrate his passion upon the autographs of composers and documents illustrating the history of music. But, though his collection is now scattered—some of the most valuable lots have, we believe, crossed the Atlantic—its fame will be rendered

imperishable among bibliophiles by this *édition de luxe* of the sale catalogue, which he has had prepared by M. Etienne Charavay, the scholar and palaeographer. The book, indeed, is worthy of the collection. It consists of about 1,000 pages grand quarto, printed by Claude Motteroz on specially manufactured paper, with a red border round each page. Almost every autograph described is reproduced in facsimile; while there are, in addition, no less than forty-nine photogravure plates of the most important documents. Here—to take a few French examples, which of course predominate—the curious may see the excessively rare signature of Molière, as surety to a bond, which M. Alexandre Dumas acquired for £100; four stanzas of Alfred de Musset's "Ballade à la Lune," with a sketch by the poet at the foot; the letter in which Victor Hugo announced his marriage to Lamennais, with these words:

"Je vais me marier . . . Je vous ai dit plusieurs fois que s'il y avait quelque dignité et quelque chasteté dans ma vie, ce n'était pas à moi que je le devais";

and the holograph documents in which A. Thiers, Jules Favre, Henri Rochefort, Jules Simon, and Jules Ferry swore obedience to the constitution and loyalty to the emperor before their election to the Chamber of Deputies in 1869. Among English men of letters we may mention Bacon (Fr. Verulam Canc., i.e., before he was created Viscount St. Albans); a beautiful specimen of Swift's calligraphy, written so late as 1735; a bond of Fielding in favour of his publisher for £1,892, sealed with a cameo; a letter of Hume to a French countess announcing his approaching death, which took place five days later; a letter by Byron, begging for a translation into Italian of a "plaguy long dissertation" at the end of a German version of *Manfred*; one from Shelley, at Pisa, to Byron, at Ravenna (September 17, 1820), referring to Allegra, asking for more cantos of *Don Juan*, and inquiring: "If I were to go to the Levant and to Greece, could you be of any service to me?" [this letter, we learn from Prof. Dowden's *Life of Shelley* (vol. ii., p. 330), had been sold in London at the Ridgeway sale in 1879. At the Bovet sale it fetched £20, the highest price for an English autograph being £32 for a letter of Burns]; and one from Thackeray to Philaret Chasles, with a characteristic sketch. To examine such documents as these, as we are permitted to do at our leisure in this Catalogue, may almost be termed a liberal education. The second title put at the head of this most inadequate notice is that of a privately printed quarto booklet, consisting substantially of articles that appeared in the *Bibliothèque Universelle* of Lausanne at the time of the sale. They are written by a compatriot of M. Bovet, who naturally draws attention to the Swiss documents in the collection. We must give a word of commendation to the Neuchâtel typography.

Poésies, traduites de l'anglais de Mary Robinson. Par J. Darmesteter. (Paris: Lemerre.) It is commonly asserted that poetry, if not frail unto death, is at least in a parlous state. Of the reading public there are three classes: those who never read poetry; those who talk a great deal about it, but seldom glance at anything in verse save a new volume by Lord Tennyson or Mr. Browning; and enthusiasts to whom it is the flower of literature and the best thing in life. It were needless to state that the first class constitutes an immense majority; but it is quite certain that the last class is far larger and more widespread than is generally supposed. Curiously enough, it is in France that the keenest love for poetry manifests itself. Not content with Chénier and Lamartine, Musset and Leconte de Lisle, François Coppée and Victor Hugo, and several

young men of promise, there seems to be a large number of French readers eager for the best work of contemporary German and English poets. Tennyson is fairly widely read abroad, and Browning is read about; as for Rossetti, his name is certainly more familiar in Parisian literary circles than is that of any contemporary French poet after Victor Hugo among ourselves. A magazine like *Le Monde poétique* is in itself a refutation of the prevalent assertion that the Muse has withdrawn from our midst in disgust. Putting aside M. Taine, Prof. Guizot, and the late J. Milsand, there are five young French writers who have done great service by their admirable essays upon, and translations of, English poets of the nineteenth century—MM. Paul Bourget, Lemaitre, Gabriel Sarrazin, Emile Hennequin, and James Darmesteter. It is the last of these who, with a profound belief in poetic enthusiasm, has here translated into French prose the verses of one of the most charming of our younger poets. M. Darmesteter has the triple advantage of a wide and sympathetic acquaintance with modern English literature, swift poetic insight, and an exceptionally delicate and nervous style of his own. Certainly Miss Mary Robinson could have had no abler translator; and, though there will always be a divergence of views about the relative value of prose and verse renderings, there can be little doubt that in the present instance M. Darmesteter's instinct towards a translation in prose guided him aright. The selections from Miss Robinson's four published volumes are made with discrimination, and, in the main, are so admirable that the French reader must wish he knew English for proof that the renderings were not superior to the originals. Of course, the absence of metrical cadence is a serious loss, more particularly when the translator comes to render the artificial measures which prevail in Miss Robinson's latest book, the *Italian Garden*. It is in the translation of the Strambotti, the Stornelli, the Riformate, and the Rispetti, that M. Darmesteter is least successful.

"Ce sont toujours les oliviers, gris ou blancs, comme l'amour est toujours l'amour dans les tourments ou la joie: Ce sont toujours les oliviers, froissés ou au repos, comme l'amour est toujours l'amour dans les pleurs ou le rire,"

is rhythmic prose, but it conveys little of the music of:

"But they are olives always, green or white,
As love is love in torment or delight;
But they are olives ruffled or at rest,
As love is always love in tears or jest."

On the other hand, how admirable is this prose rendering of the ultimate quatrain of the poem entitled "Dawn-Angels";

"Ils chantaient, et, comme un fleuve puissant, le flot de leur voix balaya la nuit: de l'Orient au Couchant courut un frisson blanc et leur chant grandissant devint le jour."

Among the longer pieces the "Conquest of Fairyland" and the "Prologue" to *The New Arcadia* are particularly excellent. The volume has an additional attraction in that it concludes with some five or six of Miss Robinson's best short poems, none of which has appeared in any of her books. That entitled "Darwinism" is a fine poetic presentment of a scientific theory, but hardly merits the importance attached to it by M. Darmesteter when he writes:

"La destinée, pourtant, est-elle absolument sans espoir? Non, répond la science même qui, la première, l'avait condamnée, et un Darwinisme idéaliste, héritier inattendu de la foi antique, jette soudain sur l'avenir de l'humanité le rayon d'une espérance étrange."

Histoire de Beaumarchais. Par Gudin de la Brenellerie. Edited by Maurice Tournoux. (Paris: Plon.) There are certain books of

which it is hardly a paradox to say that they are worth printing in order to make it clear that there is nothing particular in them; and the *Life of Beaumarchais*, by Gudin de la Brenellerie, hitherto "anecdotic" and known only by the extracts of M. de Lomenie, is in this class. Gudin, an industrious literary hack, was a very intimate friend of Beaumarchais, and was present at divers incidents of his friend's life—such as the scuffle with the Duke de Chaulnes; but he was also a friend of Beaumarchais's widow, and his "Life" has a little too much the character of an authorised and official apology to be really of first value, and much too much of that character to give any satisfaction on the subject of the famous Angellucci-Hatkinson mystification, Beaumarchais' own story of which he repeats with imperturbable gravity and an enviable conviction. But the life is well written and readable. There are a few anecdotes in the other and popular sense of the word, including one—not, it is true, of much importance—about Marie Antoinette (who is said to have in the Temple expressed contrition for the royal treatment of Gudin's immaculate friend), and the whole is a characteristic example of a kind of eighteenth-century work which was not the worst kind. M. Tournoux's editing is, it is hardly necessary to say, admirable; the introduction on Gudin being, in brief space, exhaustive; and the notes, though not lavish, always to the point and adequate, and sometimes—as in the case of the Angellucci business—copious enough to make reference elsewhere for ordinary purposes quite unnecessary. There has been a great burst of second-hand literature about the creator or recreator of *Figaro* lately. This is a first-hand piece of work of a first-rate kind, though in a small way.

La Rage et St. Hubert. Par Henri Gaidoz. (Paris: Picard.) This is the first volume of a series entitled "Bibliotheca Mythica," of which M. Gaidoz is the general editor, and which is to consist of works on religions, mythology, and folklore. The editor has set before his collaborators a model of excellence which they will find it difficult to surpass. The book, while full of matter which will be valuable to the student, is thoroughly entertaining from beginning to end. The subject itself is admirably chosen. The fame of St. Hubert as a curer of hydrophobia, although not much known in England, is in France, or at any rate in Belgium, even now scarcely inferior to that of M. Pasteur himself. The reason why the aid of this saint is supposed to be peculiarly efficacious against rabies is that he is regarded as the patron of hunters, whose occupation renders them peculiarly liable to become victims to this malady. The earliest biography of the saint, however, contains no hint of his having anything to do with the chase; but, as the district of the Ardennes, which he evangelised in the seventh century, was a hunting country, he was naturally often invoked for deliverance from the perils incident to huntmen, and in time succeeded to the attributes of the hunter-god whom the people had worshipped in their heathen days. His fame as the patron of hunting spread from the Ardennes to the neighbouring lands; and in some parts of France, as M. Gaidoz points out, he was actually confused, in popular fancy, with the "Wild Huntsman," who in expiation of the sin of too great love for the chase is doomed to ride nightly through the air until the day of judgment. The modern legend of St. Hubert is almost entirely a tissue of plagiarisms from lives of earlier saints. Even the story of his conversion from a sinful life by a vision seen by him when hunting is borrowed, in every detail, from the biography of St. Eustatius or Flacidus. M. Gaidoz traces minutely the gradual development of the

legend from its original nucleus as exhibited in the earliest life of the saint, and gives a full account of the method adopted for the cure of rabies by his miraculous powers. The author, when visiting the town of St. Hubert, was informed that some persons who had undergone M. Pasteur's treatment had afterwards taken the additional precaution to submit themselves to the operation of *la taille*, which consists in the insertion under the skin of the patient of a thread from the stole which St. Hubert received from the Virgin Mary by the hand of an angel. The book also contains chapters on the other saints who have been credited with powers similar to those of St. Hubert, and on the history of the medical treatment of hydrophobia in ancient and modern times. An appendix, "De l'emploi thérapeutique des reliques à l'intérieur," contains some extraordinary anecdotes of this grotesque development of popular superstition.

NOTES AND NEWS.

A NEW monthly review will make its first appearance in May, which will differ considerably in plan from any of the existing reviews, although its price will be the same as theirs. One of its features will be its international character, and it will in consequence be termed, in all probability, the *Universal Review*. Its proprietor, who will also be the editor, is a gentleman well-known in literary and artistic circles, and some time critic to the *Times*.

MR. W. F. TAYLOR has conceived the happy idea of editing the marginal notes written by Coleridge in the books which at various times he owned or borrowed. The volume will be issued in a limited edition, in handsome quarto form, and printed on handmade paper. It will be illustrated with three portraits, including the rare one painted by Northcote and engraved by W. Say. Subscriptions will be received by Mr. David Nutt.

MESSRS. MACMILLAN will publish immediately a volume of tales by Mr. J. H. Shorthouse, which will take its title from the leading one, "A Teacher of the Violin."

The Goths, by Mr. Henry Bradley, will be published immediately by Mr. T. Fisher Unwin in the series entitled "The Story of the Nations." The author claims for this volume that it is the first English book expressly treating of the history of the Goths.

THE Cambridge University Press will issue very shortly a reprint of the first text of the Reformed Breviary of Cardinal Quignon, edited by Dr. John Wickham Legg. Copies of this first text are very rare; doubt has even been expressed by bibliographers whether any part of the recension had survived beyond the few pages of the preface that are preserved in the great library at Paris, in the Rue de Richelieu.

A VOLUME of poetry is shortly to appear which, besides contributions to the attempted naturalising of Provençal forms, will contain the first *Gloses* printed in our language. Mr. R. Greeven is the writer; and the book will be published by James Thornton, Oxford, under the title of *Rhymes by a Novice*.

DR. BENJAMIN WARD RICHARDSON has written a novel, which Messrs. Longmans will publish shortly in the orthodox three volumes. It is entitled *The Story of a Star: a Romance of the Second Century*; and it deals with Bar-Cohab, the last of the great leaders of the Jewish people in the final struggle for national independence.

THE fourth volume of *Expositions*, by Dr. Samuel Cox, will be published directly by Mr. T. Fisher Unwin. The book, which concludes the series, is dedicated to the late Rev. Thomas Toke Lynch.

MESSRS. LONGMANS will publish in a few days a book entitled *A Missing Chapter of the Indian Mutiny*. It is written by Lieut.-General Charles Lionel Showers, who was at that time political resident in the Meywar states of Rajputana.

MR. ARNOLD FORSTER's new work, entitled *The Laws of Everyday Life*, will be ready for publication during the course of the present month.

MR. ELLIOT STOCK announces that the next volume of the "Book Lovers' Library" will be a collection of Noodle Stories by Mr. W. A. Clouston, author of *The Story of Sindbad*.

The Premier and the Painter, a fantastic romance, by Mr. J. B. Freeman Bell, will be published next week by Mr. Spencer Blackett.

MR. EGMONT HAKE, who has been for some time engaged in studying the relations between capital and labour, has embodied his conclusions in a pamphlet, entitled *The Unemployed Problem Solved*, which will be issued immediately by Messrs. Hatchard.

MESSRS. CHAPMAN & HALL will issue in a few days a translation of *Plus d'Angleterre* ("The Last of England"), which is having a large sale in France.

THE committee formed at Plymouth to commemorate the tercentenary of the repulse of the Spanish Armada have agreed upon the form which the permanent memorial shall take. It is to be a granite column, surmounted by a figure of Britannia, with medallions of the English captains and other ornaments below. The design selected is by Mr. Herbert A. Gribble, the architect of the Brompton Oratory, and himself a Plymouth man. It is estimated that the total cost will be not less than £2,000. The day chosen for the local celebration is July 19, when the Armada was first sighted off the English coast. The programme will probably include historical processions, an exhibition of Armada relics, the striking of a medal, and the publication of commemorative literature.

THE Westminster Review still maintains its old custom of withholding the names of its contributors. But we are not violating any confidence in stating that the opening article on "Local Government" is by Mr. Arthur F. Leach, and that entitled "Hans Sachs, the People's Goethe of the Sixteenth Century," by Mr. Karl Blind.

UNIVERSITY JOTTINGS.

MR. JAMES WESTLAKE, Q.C., formerly fellow of Trinity, has been elected to the Whewell professorship of international law at Cambridge, vacant by the death of Sir H. S. Maine.

By the selection of Prof. Isaac Bayley Balfour to the chair of botany at Edinburgh, formerly occupied by his father, the Sherardian professorship at Oxford is rendered vacant. We hear that Dr. S. H. Vines, reader in botany at Cambridge, and the translator of Sachs's Text-book, will probably offer himself as a candidate.

THE list of candidates for the vacant chair of political economy at Oxford includes the following: among Oxford men—Mr. Thorold Rogers (a former professor), Mr. Phelps (the present deputy professor), Mr. F. Y. Edgeworth, Mr. I. S. Leadam, Mr. William Sidgwick, Mr. Ashley, and Mr. Price; Mr. Cunningham, from Cambridge; and Mr. Dunning Macleod.

DR. M. AUREL STEIN, the Hungarian scholar of Zend and Persian—whose name will be familiar to readers of the ACADEMY—has been provisionally appointed principal of the Oriental College at Lahore, and registrar of the Lahore University.

SIR WILLIAM WILSON HUNTER, Prof. A. A. Macdonell, and Prof. Ethé have been appointed examiners in the new Oriental school at Oxford.

WITH reference to a memorial from the Association for the Improvement of Geometrical Teaching, the following regulation has been sanctioned at Cambridge for the previous examination:

"Elementary geometry—viz., the substance of the first three books, the definitions 1-10 of book v. and the substance of the first nineteen propositions of the sixth book of Euclid's elements. Euclid's definitions will be required, and no axioms or postulates except Euclid's may be assumed. The actual proofs of propositions as given in Euclid will not be required, but no proof of any proposition occurring in Euclid will be admitted in which use is made of any proposition which in Euclid's order occurs subsequently."

THE *Oxford Magazine* of March 7 contains a notice of the late James Cotter Morison, signed T. F., which is of special interest as giving information about his undergraduate days at Lincoln College.

ORIGINAL VERSE.

BALADE DE BON CONSEIL.

Dwel fer fro swiche as putten hem in prees
To sitten hye upon the whirling whele
Of fals Fortuue, blind and rewthelless;
For into wo she chaungeth al hir wele,
So sodainly can she her strokes dele;
Abyd in oon estaat, thogh low it be;
And Deth shal lyk a frend receyve thee.

Perform thyn honest labour yee by yere,
Ne grucche nat on swiche as swinken never;
For worldly wele is holden ay in fere,
And idelnes fro wo shal nat discever;
Disce on plesaunt sinne awaiteth ever;
Hold wel thy cours in trouthe and honestee;
And Deth shal lyk a frend receyve thee.

Thogh men thee scornen, be nat evel apaid,
But greet hem wel with gentle curteseye;
Give frendes help, of foos be never afraid,
But let hem goon her way, with noon envye;
Be trewe in love, withoute Ieloysye;
Thy thankful chere men shull gladly see,
And Deth shal lyk a frend receyve thee.

LENVOY.

Thou gretè God, that fro Thy trone on hy
Beholdest men whos lyves passen here,
Graunt me to liven wel and trewely
In lowly suffisaunce, and nat in fere
Of wo, disce, or sodain strook severe;
So mote I dwelle in pees and charitee,
And lyk a frend may Crist receyve me!

(Fer, far; swiche, such; putten hem in prees, throng eagerly; hir wele, their prosperity; grucche, murmur; swinken, toll; evel apaid, displeased; mote, may.)

WALTER W. SKRAT.

MAGAZINES AND REVIEWS.

MR. BRAILSFORD's paper, entitled "Antiquarian Memories," in *The Antiquary*, is eminently picturesque and pleasant. It not only brings before us places that have suffered sad mutations within our own time, but persons also who are no longer with us. The unsigned article on "National Portraits" is a history of the collection that goes under that name. The National Portrait Gallery is one of the many children of the great Exhibition of 1851. It began in a very humble way, and the state has always been niggardly in its support; nevertheless, it has developed into noble proportions, and we may confidently look forward to its future. Mr. E. W. Cox's paper on the sculptured stones recently found at Chester is of interest, but we want a much fuller account than this to make some things intelligible. Is the stone which seems to represent

a priest in eucharistic vestments a relic of the Middle Ages or is it Roman? We have our own opinion about it, but the question is beset with difficulties. Mr. Walter Haynes continues his extracts from the Stanford churchwardens' accounts. Some of the entries are of great interest. Here, as elsewhere, there seems to have been a building known as "The Church House." At Stanford some of the church's goods were kept in it in the reign of Edward VI. It is a matter of some interest to enquire what was the object for which these church-houses were built. There seems to be some evidence that occasionally they were used as market-halls at fair-times, and for purposes of festivity on the numberless occasions when ale had to be drunk for the public good. There is an entry of the first year of Mary which brings before us the rapid variations in religion on which the state from time to time insisted. The churchwardens received five shillings for "a tabull with a frame ye whiche served in ye churche for ye Communion in the wycked tyme of sysme." When another change came over the minds of those in authority, the latter words of this sentence were run through with a pen, though they can still be read.

THE *Expositor* for March cannot be accused of heaviness. Even the second article, which bears the learned name of Neubauer, is enlivened by several flashes of a sprightly wit, which will not let even controversy be tedious, and brings erudition within the range of the ordinary understanding. Of course, even Dr. Neubauer cannot condense history into a few pages, and we must still wait for an English Graetz. At any rate, the *Pugio Fidei* will not again be treated with supercilious contempt in England. Dr. Bruce's opening paper on the Epistle to the Hebrews, and Dr. Davidson's article on Joel, are clear and instructive enough; but the latter strikes us as having had its most important parts cut out. Mr. Taylor Innes presents the author of the Apocalypse of Esdras to us as "a forgotten poet." Dr. C. H. H. Wright opens a series of articles on commentaries and other students' aids. His acquaintance with the literature on the Pentateuch and Joshua is very wide, his judgment discriminating, and his advice to the student deserving of much attention.

CORRESPONDENCE.

SHAKSPERE'S PORTRAITS.

Trinity College, Cambridge: March 5, 1888.

It is rash to take for granted that the smallest seventeenth-century allusion to Shakspeare has escaped notice; but that to which I am about to refer has certainly not been recorded by Dr. Ingleby in his *Shakspeare's Centurie of Prayse*, nor even in Miss Lucy Toulmin Smith's revised and much enlarged edition of the same in 1879. It occurs in a wretched poem by Tom D'Urfe: "*Collin's Walk through London and Westminster: a Poem in Burlesque*. By T. D., Gent. 12mo., 1690." In this worthless imitation of Butler, a countryman, one Collin, is taken over London on successive days, and in the fourth canto, "*Wednesday's Walk to the Play-House*," he is introduced to the Theatre Royal, where it would seem that Ben Jonson's "*Bartholomew Fair*" was being revived:

"To this rare place where Wit is taught,
The Major now had Collin brought;
The House was Peopled with all sorts,
The Citie's Product and the Court's;
An Ancient Comick Piece they knew
Intituled The Fair of Bartholomew.
Collin first thought, as he came in,
It had a Conventicle bin,
And that, mistaking of the day,
The Major brought him there to pray;
He saw each Box with Beauty crown'd,
And Pictures deck the Structure round,
Ben, Shakspear, and the learned Rout,
With Noses some, and some without."

Doubtless the last line refers to the famous portrait of Davenant, with a profusion of laurels round the brow and no nose whatever. It strikes me, however, as interesting to find the pictures of Shakspeare and Jonson adorning the theatre so early as 1690; and it occurs to me to ask whether some of the half-genuine and certainly seventeenth-century portraits of Shakspeare may not be paintings, partly traditional and conventional, made for the theatres of the Restoration? Might not this probably account, for instance, for the Jansen portrait and the Ashbourne portrait? EDMUND GOSSE.

THE SARPI MEMORIAL.

Ca' Torresella, Zattere, Venice: Feb. 27, 1888.

I wish, with your permission, to call the attention of readers of the ACADEMY to the fact that a committee has been formed in Venice with a view to raising a monument in honour of Fra Paolo Sarpi. Should any of your readers desire to subscribe towards this object, I am sure that such a token of sympathy from England to Venice would be highly appreciated here.

I shall be happy to receive and acknowledge any money sent me for this purpose; or subscribers may communicate directly with the secretary to the committee, Prof. Occioni Bonafons, 740 Sant' Agnese, Venice.

HORATIO F. BROWN.

THE "FORTNIGHTLY REVIEW" ON LORD HERBERT OF CHERBURY.

London: March 3, 1888.

I have unfortunately only just seen an article, entitled "*A Jacobean Courtier*," by Mr. Arthur Benson, in the February number of the *Fortnightly Review*. Had I known earlier that it claimed to be "a study of the life and work of Lord Herbert of Chisbury, K.C.B. (sic)," it would not have escaped my attention so long. The subject has interested me for many years; and I think I may say without presumption that my edition of the autobiography (issued in 1886) shows that I have paid it some attention. Perhaps you will allow me, even at this late date, to enter a protest against the publication

(in a review with the *Fortnightly's* reputation) of so incompetent and inaccurate an essay on an important theme.

I tabulate a few of the errors or mis-statements in the order in which they appear.

1. Mr. Benson tells us that Herbert is "practically unknown" and is suffering "undeserved neglect." This is a bold statement for a writer to make who has a very inadequate knowledge of the autobiography, knows less of Herbert's other works, and is obviously ignorant that M. de Rémusat lately devoted a volume to an exhaustive examination of Herbert's life and writings; or that Sir William Hamilton succinctly analysed Herbert's *De Veritate* in his notes on Reid, or that Mr. Churton Collins re-printed Herbert's poems with an admirable preface in 1881, or that the autobiography was newly edited with notes and hitherto unpublished documents in 1886.

2. Lord Herbert was "twenty-seventh in descent from Pepin, son of Charlemagne." This Mr. Benson puts forward as authentic biography. Herbert himself is content to trace his ancestry no further back than to the fifteenth century. Scholarly genealogists have carefully examined the pedigree of the family, and, needless to add, reject the absurd claim to Carolingian descent.

3. Herbert, according to Mr. Benson, was born in 1581. This date, which has been assigned by early editors of the autobiography, conflicts with at least three statements that appear there. Lord Herbert's birthday was undoubtedly March 3, 1582-3, as Mr. Benson may see when he examines with proper care Herbert's autobiography, poems and letters, and the Oxford matriculation register.

4. His mother was (according to Mr. Benson) nothing more than "a Shropshire heiress." This is a singularly inappropriate mode of speaking of that accomplished lady, Magdalen Herbert, nee Newport, who has been immortalised by two of the finest prose-writers of the seventeenth century—her friends, Izaak Walton and Dean Donne. Walton's and Donne's accounts of Lady Herbert must, of necessity, be read many times by anyone who would write fittingly of her eldest son, whose education she directed.

5. "Six of his brothers were gentlemen-adventurers of the sword: two [i.e., George and Charles] were scholars." Herbert had six brothers in all. Only two can be accurately described as mere soldiers. A third, Henry, was the well-known Sir Henry Herbert, master of the revels. A fourth, Thomas, was a captain in the navy.

6. Mr. Benson speaks with pitying contempt of Lord Herbert's remarks on education, apparently on the ground that Lord Herbert was ignorant of modern science. Milton's and Locke's treatises deserve condemnation on the same ground. But Mr. Benson obviously knows little of the scientific and philosophical writings which Lord Herbert recommends to the student. Mr. Benson tells us that "*Titellius's Astrology*," is part of Lord Herbert's curriculum of study. This is very gross blundering. Lord Herbert rejected everybody's system of astrology, as careful students of the autobiography, of his *Religio Gentilium* and his *Dialogue* well know. Titellius is an old misprint for Telesius (of Cosenza), who was not an astrologer at all, but an acute critic of "the ordinary Peripatetic doctrine." Telesius was a very early advocate of scientific experiment, and Bacon was much indebted to him, as Mr. R. L. Ellis's introduction to Bacon's *De Principiis* fully shows.

7. Mr. Benson's remark that "the divinity of the School-men" forms part of Lord Herbert's educational system is quite unfounded. No School-man is mentioned.

8. "Finally," we are told that Lord Herbert

"threatens . . . to make a particular treatise, or *recherche*, about behaviour in general, based on Guazzo, *De Civili Conversatione*, and Galatens, *De Moribus*." Lord Herbert threatens nothing of the kind. He says, at the close of his excursus on education, that he has "collected many things to this purpose"—i.e., about education—and intends "to make a little treatise concerning these points." Mr. Benson does not seem to know that all this was accomplished in Herbert's "Dialogue between a Tutor and a Pupil" (not issued till 1768), which, so far from confining itself to "behaviour in general," covers the whole range of secular and religious education. Lord Herbert merely refers to the two Italian books as supplying "precepts conducing" to good behaviour, and says nothing about making further use of them. But what are we to make of "Galatens, *De Moribus*"? Mr. Benson, like Horace Walpole, the old transcriber of the autobiography, clearly imagines Galatens to be, like Guazzo, the name of the author of a book *De Moribus*. What Lord Herbert, of course, intended was a reference to the well-known Italian courtesy-book, entitled *Il Galathea*, whose author, Giovanni della Casa, was Archbishop of Benevento (1544-1556). Mrs. Lynn Linton, in an article in the same number of the *Fortnightly*, speaks (p. 255) correctly of "teaching the Galathea."

9. Mr. Benson talks of the Siege of Juliers in 1610 as that of "St. Julien," and calls Sir Edward Cecil, the commander-in-chief of the English army there, "one of the English generals."

10. In 1617, according to Mr. Benson, the great Duke of Buckingham was "plain George Villiers." As a matter of fact, he had been knighted in 1615 and created Viscount Villiers a year later.

11. "The notices of his life are, after this [i.e., 1624, when the autobiography closes], rather scanty." If Mr. Benson examines the Powysland Club collections, the Calendars of State Papers, and the Parliamentary Journals, he will find full accounts of the last quarter of a century of Lord Herbert's life. Herbert's numerous extant petitions for public employment render the helpless theorising by which Mr. Benson tries to account for Herbert's absence from public life singularly unfortunate and unnecessary. Of the cowardly part Herbert played in the Civil Wars Mr. Benson says nothing; yet no conclusion as to Herbert's real character is possible without a careful examination of this critical portion of his career. In the latest edition of the autobiography, there may be found a continuation of Lord Herbert's life, with full references to, and extracts from, the numerous original authorities.

12. Mr. Benson tells us that "*Dr. Anthony Master*" was Lord Herbert's "laborious friend." This is a characteristic reference, I suppose, to Thomas Master, B.D., Fellow of New College, Oxford.

13. In his imperfect list of Lord Herbert's writings, Mr. Benson brackets *Religio Gentilium* and *Religio Laici* together as forming one of Herbert's books. The former appeared in a volume by itself in 1663; the latter was issued in 1645 as part of an interesting volume (not mentioned at all by Mr. Benson), entitled *De Causis Errorum*, from the name of the first of the three important tracts which it includes.

14. According to Mr. Benson, Lord Herbert's poems are "undeniably feeble," "the scrapings of a courtier's pigeon holes," &c. Such remarks are mere impertinences when applied to the ablest of all Donne's disciples, to a writer who has notably influenced Lord Tennyson, and sometimes wrote nearly as well as Herrick. Mr. Benson should look at the

admirably just and appreciative criticism from the pen of Mr. Churton Collins, prefixed to the reprint of Herbert's poems (1881).

15. *The History of Henry VIII.* was, according to Mr. Benson, "collected for no end, digested for no purpose." Lord Herbert's letters prove him to have had a very practical object when he took up this work with a view to regaining royal favour. "I do not depreciate its value [Mr. Benson continues] as a nearly contemporary record; but it is on that ground only that it can take its stand." Nearly contemporary! Henry VIII. died in 1547, and Lord Herbert's history was published in 1649. Lord Herbert's history is a remarkable collection of carefully selected original papers, and a vindication of Henry's statesmanship; but Mr. Benson complains that "it is not in fact a contribution to political philosophy, and consequently wanting in direct interest." One might as rationally condemn an oak because it does not happen to be a rose tree.

16. Mr. Benson's description of Herbert's philosophical opinions hardly merits discussion. He has skimmed the autobiography, and imagines that thence are to be deduced all Herbert's philosophical views, and that a glance at the *Religio Gentilium*—the only one of Herbert's purely philosophical books that has been translated into English—is only needed to confirm one's first impressions. Herbert's really great book is the *De Veritate*, but Mr. Benson gives no hint that he has read beyond the title-page. How otherwise are we to account for his total silence as to Herbert's remarkable theory of perception, or to his argument in support of innate ideas, which are the chief features of his philosophical system? There is no excuse for Mr. Benson's ignorance of Lord Herbert's metaphysical position, since M. de Rémusat and Sir William Hamilton have fully expounded it. It is impossible to explain Herbert's religious doctrines without carefully studying the *De Veritate*.

17. Mr. Benson talks of the Deists as "a body of uncertain origin": "generally men of acute and subtle minds, they devoted themselves to literature and philosophy, and proselytised," &c. To regard them as an organised sect implies a strange misconception of their history in England. Lord Herbert was not, as Mr. Benson says, known to his contemporaries as "the chief patron of Deism," or "Fameux Deiste." I believe Leland, in 1754—106 years after Herbert died—first gave him the title of Deist.

18. "They [i.e. the Deists] then appeared as a rare and pestiferous vermin, capable of utter annihilation, in such treatises as Leland's *Short and Easy Method with the Deists*." Lord Herbert's views were criticised from many points of view in the seventeenth century and later. But the criticisms, so far as I know them, never treat him or his sympathisers as "rare and pestiferous vermin." See especially N. Culverwel's *Light of Nature* (1658), and Baxter's *More Reasons for the Christian Religion*, 1672. No such book as Leland's *Short and Easy Method with the Deists* exists. In 1754 a full examination of Herbert's writings was issued in vol. i. of Dr. John Leland's *A View of the Principal Deistical Writers that have appeared in England in the Last and Present Century*. This book is not short, nor particularly easy. It attempts to refute deistical opinions without the slightest rancour, and with much learning. Its opening chapters treat of Lord Herbert, and Leland invariably speaks of him with the utmost courtesy.

It is unnecessary to pursue Mr. Benson further. It would be easy to prove in greater detail the inadequacy of his account of Herbert's doctrine. But, since almost every syllable betrays ignorance of his works, the task would weary your readers, I could point out other

minor errors in matters of fact; but when a writer describes Lord Herbert in the first line of his essay as a "K.C.B."—a distinction of very modern invention—it is difficult to deal with him exhaustively. SIDNEY L. LEE.

FORA FORTUNA.

London: March 3, 1888.

Prof. Max Müller's phonological argument against the connexion of *fora* and *fero*, as now re-stated, seems to rest on the proposition that each particular Aryan root has, in Latin, a sort of elective affinity for some one vowel-grade rather than another. This *might* be only a mode of formulating certain well-known facts; but it seems to me an inconvenient mode, not merely because it is of limited application, but also because it suggests a conclusion which the facts themselves do not warrant. This conclusion Prof. Max Müller appears to have drawn when he argues that an exception to a general rule of elective affinity (such as *fora* would be if derived from *bher*) must needs be due to "hidden analogy" or some other obscure cause. This reasoning is without force if it be true—as is now generally admitted—that originally the vowel-grade of root-syllables, in Latin as elsewhere, depended on causes such as the nature of the suffix, the habitual position of the word with regard to sentence-accent, and so forth, and that the apparent elective affinities are themselves due to analogy or other disturbing causes.

There is only one point with regard to which I can complain that Prof. Max Müller has mistaken my meaning. I did not say that a "received" etymology has any such prescriptive right that it ought to be proved inadmissible before any alternative etymology can be regarded as equally worthy of consideration with it. What I did say was that an etymology must not be "accepted and treated as a historical fact" until every other plausible etymology has been shown to be inadmissible. When it is shown that Prof. Max Müller's derivation of *fora* is, on the score of meaning, more probable than the "received" etymology, the latter must, of course, retire into the background. At present it seems to me that the received etymology offers no difficulty on the ground of meaning, and that the proposed substitute offers great difficulties. The former is now reinforced by the Teutonic analogy pointed out by Prof. Kluge; and the Anglo-Saxon *byre*, "favourable opportunity," has also been compared. Can Prof. Max Müller show that any recognised name of the Dawn-goddess became, in any Aryan language, a familiar word for chance? The Latin *fora*, and its swarm of derivatives, were used in quite a trivial way as far back as the extant Latin literature will carry us. That, indeed, is not relatively so very far back; but we have also to remember that some of the other Italic dialects had *forti* in the sense of "luck." The burden of proof surely rests on those who affirm that "*forte evenit*" literally means "it happened by the intervention of the Dawn-goddess," and not on those who deny this.

HENRY BRADLEY.

GERMAN WORDS IN MIDDLE ENGLISH.

Berlin S.W., Kleinbeerenstr. 7: March 3, 1888.

Prof. Kluge, in his review of Prof. Skeat's *Principles of English Etymology in the Literaturblatt für germanische und romanische Philologie* for February (p. 57) points to *teserie*, *siker*, *keiser*, and *pilgrim* as Middle English words undoubtedly borrowed from the German. There can be no question about *keiser*, I think; but I entertain some doubt as to the German origin of *pilgrim*, the first two vowels of what appears

to be the oldest form of the word in English (*pelegrim*) being those of Latin *peregrinus* and French *pelerin* (cf. Dutch *pelgrim*), and not those of Old High German *pilgrim*. On the etymology of the other two words I must join issue with Prof. Kluge. In my opinion, *siker* is the continuation of Old English *stior* (in King Alfred's Pastoral Care 425-6 *ne bto we no dæa sicore*), which, as well as the Old Saxon *sicur*, &c., is derived from the Latin *securus*. *Tenserie* is a Romance word, derived from the Old French *tenser*, "to protest." Cf. *tenseria* in Ducange s.v. 1. *tensere*, where also *tensamentum* is defined by "*pensitatio, quæ a vasallis aut subditis pro protectione exolvebatur*."

JULIUS ZUPITZA.

THE FIRST AUSTRALIAN POET AND BARRINGTON'S PROLOGUE.

London: March 5, 1888.

Your correspondents are incorrect in stating that the first theatrical performance in Sydney was given in 1796, and that the prologue alleged to have been spoken upon that occasion, including the lines—

"True patriots [we], for be it understood
We left our country for our country's good"—

was written by George Barrington. Mr. Rusden has pointed out in his *History of Australia* (vol. i., p. 49) that the earliest theatrical performance was in 1789, and that the "Prologue" of 1796 is "believed to have been written by an officer."

No one who knows anything of the volumes which bear upon their title-pages the name of "George Barrington" believes that they were his productions. Barrington himself disclaimed the authorship of works he knew of only by report as about to be published. They are compilations from Phillips's *Voyage to Botany Bay* and Collins's *New South Wales*. One needs only to compare "Barrington's *Voyage*" and "Barrington's *History*" with these works to discover their origin. Especially is this the case with Collins's work, which "Barrington" follows paragraph by paragraph, opening, of course, and ending with personal remarks about himself as a disguise. But, coming to the account of the theatrical performance of January 16, 1796 (Collins, 1798, pp. 448-449; Barrington, 1802, pp. 151-153), while both agree in minor details—Collins gives the names of the principal performers in a foot-note, Barrington in the body of the work—Collins adds that the performers' motto was modest and well-chosen: "We cannot command success, but we'll endeavour to deserve it." This remark is not given in "Barrington"; but, instead of it, we find a 48-line "Prologue," which Collins knows nothing about. It is also to be noted that a previous and inferior edition of "Barrington" (1800) says nothing of a prologue. What are we to infer from this?

I take it that the celebrated "Prologue" was written by the compiler, or one of the compilers, of "Barrington," and (until some other evidence is produced of its origin) that it did not come from "Botany Bay," but that it emanated from some writer resident in this country.

The proprietors, in announcing the first part of the edition of 1802, said that "nothing can impede the regular publication of the work, as the MS. has all arrived." They might, with just as much truth, have said: "Some of it has been printed before."

Mr. Sladen will therefore act prudently in omitting it altogether from his Australasian anthology.

It has always seemed unaccountable to me that Collins himself, who was in London during the period that these works were being published (1796-1802), did nothing to stop the

"Barrington" books. His books were his own property, and their sale must have been hindered by the wide circulation of works of the "book-aneers." He could not have been a party to their issue, for the first edition of "Barrington's *Voyage*" was issued in 1795, and he could ill afford to lose his profits, as he was occasionally in need of money; and when he left this country finally as "Lieut.-Governor of Port Phillip," towards the end of 1802, his expenses far exceeded his means, and he was "obliged to incur a debt to enable him to leave England with credit."

My letter in the ACADEMY of March 3 was incorrectly dated February 22—a misprint for February 29.

EDWARD A. PETHERICK.

"AUSTRALIAN BALLADS AND RHYMES."

London: March 5, 1881.

In reply to Mr. Dykes Campbell's last letter may I be allowed to ask if it was possible for me in any Australian selection to omit a poem like "The Black Gin," which I may say, without any exaggeration, is in Australia almost as well known and as popular as the *Ingoldsby Legends*. Mr. Dykes Campbell's strictures on Brunton Stephens seem to me unjustifiable. If he will only take the trouble of reading "A Brisbane Reverie," "The Power of Science," and that admirably parody of E. A. Poe—"Quart Pot Creek," he will surely modify his opinion.

In reply to "Eildon Douglas," evidently a student of Australian literature, I may say that Mr. Petherick, the chief authority on Colonial bibliography, tells me that Barrington's prologue was actually written in London in 1789; and I would wish to ask if, before he wrote "tested by the works of our own living poets, there has been no poem yet produced under the spell of the southern cross which deserves other than a local immortality," he had read over again the purely New Zealand part of "Ranolf and Amohia" and Kendall's "Orana," "Bell Birds," and exquisite "After many Years." Is there nothing memorable in the poem that contains these lines:

"The soft white feet of afternoon
Are on the shining meads,
The breeze is as a pleasant tune
Among the happy reeds."

Or in the poem beginning—

"The song that once I dreamed about,
The tender touching thing,
As radiant as the rose without,
The love of wind and wing—
The perfect verses to the tune
Of woodland music set
As beautiful as afternoon
Remain unwritten yet."

In the new edition I have taken "Eildon Douglas's" hint that people might be glad to see Dr. Lang's lines on D'Entrecasteaux's Channel, which, perhaps, he saw in Longfellow's *Poems of Places*, though for myself I think their interest is principally antiquarian—to show us what Dr. Lang saw and how Dr. Lang wrote.

And, indeed, I am indebted to this correspondence in the ACADEMY for several other valuable hints which I have duly taken advantage of. Where the component parts of one's work had been scattered carelessly over a whole continent omissions were inevitable.

DOUGLAS B. W. SLADEN.

BRITISH MAP-MAKERS AND BRITISH POSSESSIONS.

Edinburgh: March 5, 1888.

My attention has just been directed to a letter in the ACADEMY of February 25 from Dr. Muir, of Glasgow, in which, under the above heading, he bewails the serious shortcomings of British map-makers, their discre-

pancies and inaccuracies. His criticism is the result of a comparison between three atlases of the British Empire published last year by Bartholomew, W. & A. K. Johnston, and G. Philip & Son, respectively.

As one of the map-makers implicated I wish simply to point out that, so far as Bartholomew's atlases are concerned, we are not to blame in the matter. The inconsistencies existing between the atlases arise, to a great extent, from the fact that they were each published at different periods—Bartholomew's appeared at the beginning of the year, Johnston's in the middle, and Philip's at the end—so that it can readily be understood that they might differ through changes or new information having been ascertained in the intervals. For this Dr. Muir makes no allowance, neither does he consider the difficulties of the map-maker in doubtful points, of which in geography their exist so many. I do not intend to refer to the other two atlases, but just to show in the five instances of discrepancy mentioned by Dr. Muir that if, not correct throughout, we were correct according to existing knowledge at the time.

(1) *The Ellice Islands*.—These are British. They are included in the "Western Pacific High Commission." (Also see notice of annexation, *Scott. Geog. Mag.*, vol. ii., p. 571.)

(2) *British North Borneo*.—At the time of our atlas going to press we had not received definite information of the annexation of the territory from the Sultan of Brunei, now called Dent Province. We, therefore, could only delimit the province to the best of our available knowledge at the time.

(3) *Pisheen Valley*.—This, although occupied by British troops, was not definitely annexed until some time after our date of publication. Of course, it would never do to consider all territories occupied by British troops as British.

(4) *Aden*.—The area of British Protectorate around Aden, as shown in our atlas, is correct according to official sources.

(5) *North Somali Coast*.—The 400 miles of coast coloured in Philip's map is merely a claim. It is not annexed, except a small portion at Samavonak.

These are all the points mentioned by Dr. Muir, and, therefore, all that I will reply to, although there are other cases where the atlases differ. I would, however, personally most strongly resent the charge of want of interest in geography, which Dr. Muir brings generally against the map-makers of this country.

JOHN GEORGE BARTHOLOMEW.

THE "SAD FLORENTINE" OF DU BELLAY AND SPENSER.

Berkeley, California: Feb. 17, 1888.

The Oxford professor of poetry, in his interesting letter on Dean Plumptre's *Dante* (ACADEMY, January 28) has himself fallen into a slight error, it would appear, in the very act of correcting the Dean. In my copy of Du Bellay (ed. Marty-Laveaux, Paris 1867), I find a note upon the first four lines of Sonnet XIII., as follows:

"Plus riche assez que ne se monstroît celle
Qui apparut au triste Florentin,
Iettant ma veue au riuage Latin,
Je vy de loing surgir une Nasselle.

Dans ces vers on a reconnu Dante apercevant la barque de Caron (troisième chant de l'*Enfer*)."

Du Bellay was unacquainted with neither Dante nor Petrarch, for he associates their names in Ode IV. of his *Recueil de Poesie* (Marty-Laveaux, I. 241):

"Quel siecle esteindra ta memoire,
O Boccace! et quels durs hyuers
Pourront iamais seicher la gloire,
Petrarque, de tes lauriers verds?
Qui verra la vostre muette
Dante, et Bembé à l'esprit haultain!"

But that he had no particular affection for Petrarch is shown, I think, by his poem, *Contre les Petrarquistes* (Marty-Laveaux, I., 333-8) beginning

"J'ay oublié l'art de Petrarquizer.
Je veux d'Amour franchement deuliser,"

and continuing with a lengthy travesty of Petrarchan phraseology. ALBERT S. COOK.

THE "GAY GORDONS."

London: March 6, 1888.

There is an oversight in Mr. Patchett Martin's letter on the Australian controversy in your columns. The epithet of the Gordons was not "gallant." They were known as the "Gay Gordons"; the Grahames were the "Gallant Grahames."

ONE OF KIN TO GORDON AND GRAHAME.

AI POINTMENTS FOR NEXT WEEK.

MONDAY, March 12, 7 p.m. London Institution: "Characteristic Qualities of the Works of the Great Composers," by Prof. Ernst Pauer.

8 p.m. Society of Arts: Cantor Lecture, "Alloys," I., by Prof. W. Othander Roberts Austen.

8.30 p.m. Geographical: "The Peaks, Passes, and Glaciers of the Caucasus," with Illustrations by Dioptric Lantern, by Mr. Douglas W. Freshfield.

TUESDAY, March 13, 8 p.m. Royal Institution: "Before and after Darwin," IX., by Prof. G. J. Romanes.

8 p.m. Colonial Institute: "The Postal and Telegraphic Communication of the Empire," by Mr. J. Henniker Heaton.

8 p.m. Civil Engineers.

8.30 p.m. Anthropological: "Exhibition of Inscribed Tablets from Babylon," by Mr. Outhbert Peck; "The Races of the Babylonian Empire from the Monuments," by Mr. G. Bertin.

WEDNESDAY, March 14, 8 p.m. Society of Arts: "Agricultural Education and Dairy Instruction," by Prof. John Wrightson.

8 p.m. Geological: "The Monian System," by the Rev. J. F. Blake; "The Gneissic Rocks off the Lizard," by Mr. Howard Fox, with Notes on Specimens by Mr. J. J. H. Teall.

8 p.m. Microscopical: "The Type of a New Order of Fungi," by Mr. G. Massee.

8 p.m. Shelley Society: "Shelley's Metres," by Prof. J. B. Mayor.

THURSDAY, March 15, 8 p.m. Royal Institution: "Microscopical Work, with Recent Lenses on the Least and Simplest Forms of Life," II., by the Rev. W. H. Dallinger.

6 p.m. London Institution: "A Generation's Changes in the Manufacture of Iron and Steel," by Mr. E. Riley.

8 p.m. Linnean: "Monograph of the *Thelophoraceae*," by Mr. George Massee; "Descriptions of Three New Marine Algae," by Mr. Edward A. L. Batters; "Exhibition of the *Osfontalis* of a Hornless Stag, with Remarks on such Abnormality," by Mr. J. E. Harting.

8.30 p.m. Antiquaries.

8 p.m. Chemical: Election of Fellows.

FRIDAY, March 16, 8 p.m. Society of Arts: "The Origin, Progress, and Influence of Universities in India," by Dr. F. J. Mouat.

8 p.m. Philological: "Irish Gaelic Dialects," by Mr. T. O'Flanagan.

9 p.m. Royal Institution: "The Structure, Origin, and Distribution of Coral Reefs and Islands," by Mr. J. Murray.

SATURDAY, March 17, 8 p.m. Royal Institution: "The Modern Drama, II., Scandinavian," by Mr. W. Archer.

8 p.m. Society of Arts: Mann Lecture, "Protection of Buildings from Lightning," by Prof. J. Oliver Lodge.

SCIENCE.

The Politics of Aristotle. With an Introduction, two Prefatory Essays, and Notes Critical and Explanatory. By W. L. Newman. In 2 vols. (Oxford: Clarendon Press.)

MR. NEWMAN'S edition of the *Politics* has been looked forward to for half a generation. During a too brief tenure of office at Oxford as Reader in Ancient History he so impressed his hearers that his lectures are still talked of, even after twenty years, and men of that standing who did not attend the lectures have discovered from many signs and tokens how good a thing they missed. It has been understood that Mr. Newman was employing his

leisure upon a study of the *Politics*, and much has been expected from that study. Hence it is with no small interest that readers will take up the present instalment of the promised work, and we can assure them that they will not be disappointed.

The first volume is entirely occupied by a general introduction to the subject; the second contains two prefatory essays (on the history of the *Politics*, and on the MSS.) and text and notes for books i.-ii.

The introduction may be briefly described as a most valuable independent study, based on a thorough knowledge of all which has been written upon the subject. The manner of it is something like the manner of Prof. Jowett's introductions to the several dialogues of Plato, but the treatment is more exhaustive. Point by point Mr. Newman goes over the matter. He thoroughly hammers out one topic (as slavery, trade, or whatever it may be) and then passes on to another. He begins with a careful examination of the fundamental notions of teleology, necessity, nature, and so forth, trying, as he says, to view Aristotle's political teaching in connexion with the central principles of his philosophical system. If we are to feel sure that the state is a natural institution, we must see clearly the relations of politics to nature and other governing ideas. Such a short statement as that "the state is not merely forced on man by his needs, but foreshadowed by his nature, and requisite to give full play to his faculties; man bears marks of being intended for life in the state . . ." contains really a number of technicalities which need full explanations. The discussion is all the more interesting to students who find discrepancies in their "Aristotle," and would like to know how an author could say in the *Politics* that the state is based on nature, when he spoke in the *Nicomachean Ethics* (8.14) as if it (or, at least, *πολιτικά φιλία*) rested on compact: *οἷον γὰρ καὶ ὁμολογίαν τινὰ φάσκοντα εἶναι*.

After the central ideas come the successive topics of the *Politics*; and these are worked over in order, with some reference to other Greek speculation, earlier and later, and to contemporary or earlier facts of Greek history. Something is said of important views of later ages, as well as of those notions of Isocrates and Xenophon which Aristotle seems so often to have tacitly in his mind; and it is amusing when a series which begins with Socrates can be traced down to the *Times* or the *Saturday Review*. But it was not, of course, Mr. Newman's intention to write a history of opinion on matters political. It is trouble enough to disentangle, to ascertain, and to reconcile Aristotle's own views.

Mr. Newman's systematic treatment of these grave questions is often relieved by incidental remarks of pithy and pregnant character. Such are the pages in which he puts together what would probably be Aristotle's criticisms on the Athens which he knew (and which he was afraid to criticise openly) as distinct from the Athens of Solon. Such, again, are the remarks that "from the Lacedaemonian state Aristotle learnt much, though rather in the way of warning than of example"; or, about festivals, that "perhaps the modern State has lost something in losing this bond of union"; or that Aristotle "knows nothing of the historical mission of

states." The familiar contrast, he points out, between Europe and Asia is no longer true as it used to be. "Europe has become the chief home of thought and contriving skill; and, if Asia has fallen into the rear, the element of spirit in its character has certainly been strengthened by Mohammedanism." Here is another happy contrast, happily brought out:

"In mediaeval Europe, at the moment when the customary morality of feudal times was losing its power, the moral vigour of the world was opportunely restored by the Reformation and Puritanism. Greece, on the contrary, at a somewhat similar epoch in its development found itself in the hands of the Sophists" (p. 391).

Unfortunately Mr. Newman has not cared to press modern history much into his service. When he does come down a few centuries for an illustration, what he finds is generally good enough to make us wish for more. The comparison hinted at between the work of Pythagoras at Kroton and that of Calvin at Geneva is very neat. There is of course much to be said for keeping to instances drawn from Greek history. They answer more fully than any modern ones can to what Aristotle had in his mind. But then the value of Aristotle's conclusions depends so much upon their being found applicable to cases and circumstances which he had not in his mind that it is a pity that readers should not more fully have the opportunity of testing what they read under a new set of circumstances. To say nothing of the scholar's joy in an apt illustration, or the malicious pleasure of crying "Distinguo" to the illustrations of someone else, we want to see the results of the *Politics* tested on new ground, and to learn whether there be reason for confidence that they are something more than empirical laws, good only within the limits of the time and space within which they were drawn up. The *Politics* is, after all, a political treatise, and we want to know how far it holds good. Our own conviction is that the laws of human affairs disclosed in this treatise come as near to universal validity as any generalisation on man's action can; and that, therefore, while translations of most classical works have value, few books read in a translation could do so good service as Mr. Welldon's version of the *Politics* may do to our electorate. There the electors will find the inevitable tendencies of what they are doing, or are asked to do. But for this view we should have liked to find more countenance and support from Mr. Newman's wide knowledge of history.

It is the more difficult to bring Aristotle into relation with modern history, with great kingdoms and wide federations, because of his silence about Macedonian affairs:

"No reference to the relation of Greece to Macedon appears in the *Politics*; the fact that a mighty power had suddenly arisen on her northern frontier is absolutely ignored. For all that appears to the contrary in its pages, the *Politics* may have been written while Thebes was still the leading power. Not a particle of Aristotle's attention is diverted from the *πόλις* to the *θῆνος*. The improvement of Greece is the central object of the work. It is the *πόλις*, not the *θῆνος*, which Aristotle makes it his aim to reform. It is the *πόλις* that brings men completeness in respect of good

life, as distinguished from completeness in respect of necessities. It is in Greece, not Macedon, that the future of human society is to be made or marred.

"Aristotle writes as a Hellene and a disciple of Plato, not as one whom circumstances had more or less attached to the fortunes of Macedon. The great spirits of antiquity, and Aristotle among them, seem to draw their creed from sources too deep to be greatly affected by accidents such as that which had connected him with Macedon. He still follows in the track of his philosophical predecessors, and especially of Plato, with whom he stands in complete filiation. The object of the *Politics* is to carry on and complete the work that Plato had begun—the work of readapting the *polis* to the promotion of virtue and noble living. Aristotle's relation to Plato was the critical fact of his life, not his relation to Philip or Alexander. He broke much fresh ground, it is true; yet over great regions of thought he found a track already made by his predecessor. In fact, it is the close sequence of two minds of this calibre, and in this particular order, that forms the most exceptional feature of the history of Greek philosophy, and goes far to account for its greatness" (vol. i., p. 477).

If the circumstances of Aristotle's life did not make it certain that he knew what was doing on the north frontier of Hellas, we should have taken his tone to be the expression of unaffected ignorance; but as it is, the silence must be deliberate. What account Mr. Newman gives of it we have seen; but it is possible that the subject was ignored out of a distaste springing from other causes. It may be that, while he saw that a *polis* under one governor could take any reasonable desired shape, a body so comparatively vast as an *ethnos* could not or would not do so.

"Passionate loyalty, or patriotism, or religious feeling, passionate enthusiasm for an idea of any kind, find no place in his notion of the popular mind. The world had not yet drunk deep of the creeds which more than aught else have made men fanatics and robbed the lawgiver and the statesman of their command over things; nor did it then know much even of those non-religious popular movements ('national' movements, for example), which have so often proved beyond the control of statesmanship" (p. 73).

Passionate enthusiasm, religious exaltation, and popular movements of all kinds would be far less under control in an *ethnos* than in a *polis*. In the absence or comparative calmness of these phenomena in a small state Aristotle had an advantage hardly less notable than that which he derived from a foundation to his state of people who were not citizens, and who must needs endure their position without inconvenient outcries.

We have left ourselves no room in which to speak of Mr. Newman's treatment of the text; but it will be found to be marked by the same qualities of caution, keeping vigorous originality under restraint, and of scientific German solidity, which make his introductory matter so valuable. He points out that, "though there is a certain amount of unity about the *Politics*, it is not a well-planned whole." The fit of the parts is not perfect; and Mr. Newman, showing the imperfectly closed joints, explains the fact on the theory of Aristotle "working successively at different parts of the treatise." It may be so; but we cannot help leaning to the view that we have,

both in this work and in most of the *Nicomachean Ethics*, the notes of pupils on different courses of lectures put together and imperfectly edited—edited, that is, less successfully than Niebuhr's lectures, which also were published from pupils' notes. Perhaps with Aristotle, too, as with Niebuhr, nearly all his sentences were anacoluths. Mr. Newman is obliged to come round to something not very unlike this theory to account for the specially disorganised condition of c. 12, book ii.

If we may venture to point to what seems a blemish on the commentary, we would say that it occasionally verges on obscurity by talking round a thing instead of explaining it directly. To take an instance, which is both plain and short, in 1255 b 29, "*πρό*, according to Suidas, properly meant *ἀντί* in this proverb; but Aristotle quotes it in a different sense." Would it not be well to say plainly what sense? Two very excellent notes may be found on 1255 b 5 and 1260 a 8 sq., the latter of which throws clear light upon a very obscure passage; while the former gives us the choice of two new explanations of a passage already explained by commentators in two other ways. Of the four alternatives thus presented, we should prefer Mr. Newman's suggestion that *οἱ μὲν* and *οἱ δὲ* mean *οἱ ἥτις*, as such, and *οἱ κρείττους*, as such. All the other ways will yield meanings which fit the extremely general language, and the extremely loose cohesion of the chapter; but they all require too much to be supplied from the mind of the reader to the elucidation of the writer, Dr. Congreve's view requiring most and the view of Bernays least. Is it quite necessary in 1274 b 24 to explain *οὐ* by *νόμος*, latent in *νομοθέτης*? Would it not be possible to refer it to the lawgiver himself?

FRANKLIN T. RICHARDS.

THE JUBILEE OF DR. BÖHTLINGK.

Festgruss an Otto von Böhtlingk zum Doctor Jubiläum, 3 Februar, 1888, von seinen Freunden. (Stuttgart: Kohlhammer.)

WITH this publication, the Sanskrit scholars of Germany appropriately offer to their Nestor, Otto Böhtlingk, the congratulations he so well deserves upon the fiftieth anniversary of his attainment of his doctor's degree.

Born in the year 1815, Böhtlingk stands before all living Sanskritists, not in age alone, but also in the untiring activity which he continues to display. The world will long have occasion to wonder at the thoroughness and astonishing industry exhibited in his numerous and comprehensive works. It is seldom that Böhtlingk seeks labour in remote fields; his works are always in the very focus of the science, and each of his writings marks a distinct stage in the advancing march of Sanskrit studies. His works, furthermore, have the advantage over those of many of his fellow-countrymen in being practical, concise, and comprehensive.

From him we have the first European edition and interpretation of the Indian grammarian Pāṇini (1839); the first critical edition of an Indian drama (Çakuntalā, 1872); the first useful Sanskrit Chrestomathy (1875), of which a second edition followed in the year 1877. In the great Sanskrit Dictionary (1855-1875), which has grown to a true Thesaurus, Böhtlingk did the lion's share. Hardly was it finished when this scholar, already advanced in life, is found undertaking a Sanskrit Dictionary in more concise form, but more comprehensive in

material. Before the last part of the work appeared, this giant of industry, returning to his first love, surprises us with a new and era-making translation of Pāṇini.

It is a fitting custom to celebrate the jubilee of so talented a pioneer with a special publication for the anniversary. The present work is a *potpourri* brought together from all portions of Sanskrit philology. The Veda, the classic literature, and inscriptions, all find their appropriate place. Names of the greatest eminence—Bühler, Pischel, Roth, and many more—adorn the pages. Personal friends also of Prof. Böhtlingk—such as Sievers and Miklosich—have, from their special subjects, contributed their mite. The book is published in elegant form by the house of W. Kohlhammer in Stuttgart.

KARL GELDNER.

CORRESPONDENCE.

ETRUSCAN MOON-NAMES.

Barton-on-Humber.

If Mr. Abercromby (*vide* ACADEMY, January 21, 1888, p. 47) will refer again to my letter (ACADEMY, November 12, 1887, p. 323), he will find that I have not said there was any connexion in meaning and derivation between *Kave* and *Kuu*; and, *apropos* of the latter, I may next examine some Turanian moon-names. We find:

Akkadian		
As. Turkic	—	<i>a-i</i> = "the moon."
Osmanli		
Akkadian	—	<i>a-a</i> , (<i>ilu</i> <i>Aa</i> , the lunar "goddess Aa," consort of the Sun-god).
Homerio—	<i>a-l-a</i> (the lunar isle ¹).	
Akkadian—	<i>i-d-u</i> (the walking, increasing half-moon ²).	
Hesychio—	{ <i>ā-i-δ-ā</i> } = <i>ἡ σελήνη παρὰ</i>	
Greek myth—	{ <i>ā-i-δ-ḡ-s</i> } = <i>Χαλδαίος</i> .	
	<i>a-i-ḡ-t-ḡ-s</i> (the lunar King, i. son of Heliōs.)	
Etruscan—	{ <i>a-i-vil</i> }	= (<i>annus</i> , as moon-marked.)
Siberian Tatars—	<i>a-y</i>	
Ostiaks—	<i>i-r-s</i>	"the moon,"
Taugy—	<i>i-r-i</i>	= (from Strahlenberg).
Tomakoi Ostiaks—	<i>i-r-r-a-en</i>	
Buriat—	{ <i>ha-r-a</i> }	
	{ <i>sa-r-a</i> }	
	{ <i>j-i-r-y</i> }	= "the moon."
Samoiéd—	<i>e-r-s</i>	
	<i>ā-r-s</i>	
Akkadian—	{ <i>i-d-u</i> }	
	{ <i>i-t-u</i> }	= "month."
	{ <i>i-t-i</i> }	
Etruscan Latin—	{ <i>i-t-i-s</i> }	the half month,
	{ <i>i-t-u-s</i> }	= time of the half-moon. ³
	<i>i-d-u-s</i>	
	<i>i-d-u-ā-s</i> †† = the sheep sacrificed at the Ides.	

* *Vide* The Myth of Kikkē.

† When become the Full-moon called *Idu-lai*. The Aryan *Ið* ("the Goer") presents a similar idea.

‡ "Aisian Kikkē" the female moon, is naturally most closely related to him, and so is styled *ἀντοκασιγνήτη Αἰήτας* (Od. x. 137).

§ Cf. the Lapponic *ai-mo*, "ævum"; Akkadian *mu, me*, "year." Hence *ai-vi-i* (*ai-mi-i*) = Moon + period + belonging to, i.e., the period marked by the moon = *annus*. Cf. Numa's 12-month lunar year.

|| Macrob. Sat. i. 15.

¶ An Etruscan word (Varro).

** The originally lunar *Istar*, consort of Dumuzi (Tammuz), is the goddess "Fifteen," as connected with the Ides.

†† Cf. the Akkadian *lu*, "sheep" (collectively), *luim*, "ram"; Samoiéd *uldr*, "sheep." *Idul* seems a contraction of an original *idu-luli* = *id-ula(r)* = *id-u-li-s*.

We next come to the *Kuu*-group of moon-names:

Akkadian—	$\begin{cases} a-g-u \\ a-k-u \end{cases}$	= "the exalted."
Tungusic—	$\begin{cases} b-g-a \\ k-u \end{cases}$	
Ethiopian—	$\begin{cases} k-u \\ k-u \end{cases}$	
Finnic—	$\begin{cases} k-u \\ k-u \end{cases}$	
Mordvin—	$\begin{cases} k-u \\ k-u \end{cases}$	
Ostiak-Samoied—	$\begin{cases} k-h-i \\ k-h-i \end{cases}$	
Arintzi—	$\begin{cases} k-h-i \\ k-h-i \end{cases}$	(As to <i>is</i> , vide ACADEMY, November 12, 1887, p. 323.)
Kamacintzi—	$\begin{cases} k-u-i \\ k-u-i \end{cases}$	
Yenisei-Ostiak—	$\begin{cases} k-u-i \\ k-u-i \end{cases}$	
Magyar—	$\begin{cases} k-u-i \\ k-u-i \end{cases}$	
Jakuti—	$\begin{cases} k-u-i \\ k-u-i \end{cases}$	(Strahlenberg).

With *uix*, cf. 'Απὶ-ἄχ (LXX., in Gen. xiv. 1) = Eri-aku, "the Servant of the Moon-god." There is also a third group, and one of special interest in connexion with Etruscan; and here we must remember that in Ak. *m=v*, and that the same word may appear in such forms as *dim*, *tim*, *tiv*, *ti*.

Akkadian—	$\begin{cases} d-i-m-e \\ d-h-i-m \end{cases}$	= "to create," = "change" (time).
Koibal—	$\begin{cases} t-i-m \\ t-a-m \end{cases}$	= "point of time."
Lapponic—	$\begin{cases} t-i-m \\ t-i-fi \end{cases}$	= <i>hora</i> , <i>tempus</i> . = "time."
Samoied—	$\begin{cases} t-i-lis \\ t-i-lis \end{cases}$	= "moon," "month."
Etruscan—	$\begin{cases} t-i-v \\ t-i-v-s \\ t-i-v-r-s \end{cases}$	= <i>luna</i> . = <i>lunas</i> . = <i>mensium</i> .

The ideograph, one of the values of which is *dhim*, originally represented a foot, and also means "to set," Time being marked by the moon walking in brightness. So, the ideograph *du* = two legs, the walking moon. *Tiv*, "moon," and *Ust*, "sun," are two Etruscan words, the meaning of which is certain from internal evidence. So the moon appears as "the Goer," "the Exalted," and "the Time-marker."

We find, then, *iti-s*, *itu-s*, and *tiv* as Etruscan words; and the next question is, Are the forms corresponding with *aku* and *idu* found as moon-names in Etruscan? The Foiano libation-bowl inscription (Gamurrini, Appendix, 912 bis), which I regard as addressed to the Moon-goddess, begins with the word *Eku*. This is not the well-known *eca* ("hic," Deceke; "hoc," Pauli), which, as Pauli notes, appears as *cen* (original form), *cn*, *ecn*, *ca*, and *eca*; and exactly corresponds with the Akkadian demonstrative pronoun *gan*, which is abraded to *ga* and *ya*. The "Vorschlags-e" (Pauli) corresponds with such forms as the Akkadian "eme, dérivé du radical verbal *me*, par le moyen d'une voyelle prosthétique" (Lenormant).

Eku occurs again in the Semelê inscription (Fab. 1916 bis), "specchio con graffito che rappresenta Giove alato nell'atto di apparire a Semele, della quale il corpo già estinto dal fulmine." The following translation is merely provisional and suggestive, and intended to illustrate this particular word. The words are divided in the original:

$\begin{matrix} xual \\ mi \end{matrix}$	$\begin{matrix} tiliuia \\ Kakinia \end{matrix}$	$\begin{matrix} EKUX \\ ITVita \end{matrix}$	$\begin{matrix} ite- \\ ite- \end{matrix}$
Ides-(is)-this.	Oecnia	to-the-Moon-on-the-Ides	
$\begin{matrix} puðxi \\ the-metal-plate \end{matrix}$	$\begin{matrix} iib \\ in-the-shrine-of-the-goddess \end{matrix}$		
(dedicates).			

The χ in *ekux* = "and," -c and -x, according to Deceke and Pauli, representing a loan-word, the Latin *que*. Whether a loan-word or not (cf. the Lapponic conjunction *k-en*), it certainly means "and," and often appears at the end of Etruscan words. A distinction is preserved between *Eku*, the moon (general name), and *itu*, the Ides-moon.

ROBERT BROWN, JUN.

SCIENCE NOTES.

MR. HENRY O. FORBES, who has returned from New Guinea, will give an account of his explorations to the Royal Scottish Geographical Society at Edinburgh, on April 2. He will subsequently address the branches of the society at Glasgow, Dundee, and Aberdeen.

Proceedings of the Linnæan Society of New South Wales Second Series. Vol. II., part 3 (July-September, 1887). (Trübner.) This part contains the following articles on vertebrate animals. Descriptions of two new species of marsupials and a new species of *Mus*, by Dr. Ramsay, and notes on a species of rat now infesting the western portion of New South Wales, by K. H. Bennett; two articles on the eggs of Australian birds, by A. J. North; and an anatomical memoir on the early stages of the development of the emu, by Dr. Haswell; together with descriptions of four new Australian fishes, by Dr. Ramsay and J. D. Ogilby. In the Invertebrata, there are descriptions of some new Trilobites from Brown- ing, New South Wales, by J. Mitchell; on a species of *Peripatus* from Gippsland, by J. J. Fletcher; the continuation of descriptions of Australian earthworms, by the last-named author; on the Helaeides—a curious group of Australian beetles—with descriptions of sixty-one species of *Pterohelaeus*, by W. Macleay; continuation of a revision of the Staphylinidae of Australia, part 3, by A. S. Olliff; and a note on the splendid moth, *Zelotypia Stacyi*, by the last-named author. Dr. Oscar Katz contributes some curious observations on protective inoculation for bovine pleuro-pneumonia, and on micro-organisms in the tissues of diseased horses. The only botanical articles are a continuation of his memoir on the flowering seasons of Australian plants, No. 7, by E. Haviland; and notes on some indigenous sago and tobacco from New Guinea. The society has also issued a useful list of the contributors (with the titles of their articles) published in the ten volumes of the first series of their proceedings.

MEETINGS OF SOCIETIES.

CAMBRIDGE PHILOLOGICAL SOCIETY.—(Thursday, February 16.)

DR. PAUL, president, in the chair.—Dr. Verrall read a paper on Horace *Odes*, III. 25, the object of which was to show that the difficulties, suggested to the commentators by the prefatory form of this poem and by its place at the close of the Caesarean poems of the Three Books, are increased by the great rarity in Roman literature of any reference to the kind of inspiration associated with the orgiastic religion of Bacchus. This rarity is not accidental, but is explained by the peculiar relations of that religion to the Roman state and to the policy of Augustus. It is probable, for this as for other reasons, that the form of this poem (III. 25) was dictated by some exceptional circumstance. The writer proposed to find this circumstance in the birth of O. Julius Caesar (son of Agrippa and Julius) in 20 B.C. (see *Studies in Horace*, p. 119), and referred particularly in this connexion to Ovid *Art. Amandi* i. 177 foll., a passage proved by its tone and allusions to have been originally suggested by that event.—The president, after congratulating the society on the recent edition of Lucan by one of its members, read the following notes on Lucan: III. 56. *asserit*=as. in libertatem—"sets free" (from slavish subjection). Ovid has the verb alone in same sense: *asserit iam me, fugique catenas*, *Am.* 3. 11. 3. This suits 58. The

* Specimens of this fine insect (which sometimes measures ten inches in the expanse of its wings) have recently arrived in London, where they have been sold at seven guineas a pair. The precise locality was kept secret, but Mr. Olliff informs us that its larva lives in the *Eucalyptus tereticornis* in the mining district of the Manning River and Newcastle, New South Wales.

common explanation "wins over" does not. The full phrase, of course, is *liberal asserere manu*. III. 417. *quos timeant*, &c., not "what gods they have to fear" (interrog. obl.), but "to have no knowledge of the gods they dread" (sub-oblige). They do dread certain gods—viz., those whose attributes are unknown, their statues giving no sign. It is no question whether they are to dread gods or not. III. 419. Part of a very fine passage—one of the finest in Lucan; both in matter and in rhythm free from any of his special faults. Especially the lines 417–421 give a fine word-painting; but 419 (as commonly explained) is wholly out of harmony. The simple sense is that the trees sway as though with wind, though there is no wind (above, 408–412). So, in the next line, there is a burning in the wood—but *no fire*; that is expressly stated (non ardente): but Lucan, having spoken above of the absence of wind, does not repeat it. The whole means: "Often ere now, the story went, the hollow caverns bellowed as the earth quaked, and the yews swaying forward to the earth, upreared themselves again, and there was a blaze as of burning in the wood, tho' no fire was there, &c." The ordinary explanation is out of place, whether fact or not. Besides, procumbentes cannot mean "cut down," nor can Lucan mean that "while being felled (a translation grammatically possible) they spring up again." VIII. 797–805. I doubt here the ordinary explanation of 797 and of obre saxa. 797 seems to mean no more than the utmost limit of earth. Mr. Haakins says it is suggested by *Am.* 7. 225 *audiet et si quem tellus extrema refuso summoet oceano*: true; and surely it means no more. Pendet is Lucan's improvement on Virgil's simpler statement: "where the earth sinks sheer in the sea." Instead of being "he is buried in something which is neither sea nor land" (a point surely out of place here), it is in immediate connexion with the following line, which puts the same fact in different words. Next as to *saxa*. I grant the peculiar license of Latin poets in speaking of tombs and dead bodies: *saxa might* mean a stone marking a tomb (and caespes below is actually=lapis). But can it *here*—with *unus lapis* so immediately following? It is better to explain it as = *Oeta* and *Nysa*. "Hide in the earth those rocks which cry aloud of Heaven's injustice! If Hercules own all *Oeta*, if all the ridges of *Nysa* lie open to the Bromian god—why has Magnus but *one stone* in Egypt?" It seems possible to construe the words "whelm on him rocks" on the analogy of *ruere* with the acc., and the parallelism of *obicit tumulum* favours this. But the word never occurs in this sense.

HELLENIC SOCIETY.—(Thursday, February 23.)

WATKINS LLOYD, Esq., in the chair.—Mr. H. H. Statham, in a short discourse upon "Greek Architectural Mouldings," said that he was not proposing at that moment to bring forward any new facts about Greek mouldings, but to call the attention of the society to the interest of a phase of Greek work of which little was generally known outside the architectural profession. Referring to a small sheet of diagrams which were handed round the meeting, he pointed out the function of architectural mouldings as a means of producing changes of reflected light or shadow by changes in the plane of surface of the material; and that such a modelling of the surface when drawn in profile (as mouldings always were drawn) became a form of lineal design. Examples were given of the profiles accepted since the Renaissance as the orthodox "classic" mouldings, and in contrast with these attention was directed to the varied and delicate curvatures of some of the typical forms of Greek moulding. Some profiles of Doric capitals were also given, showing the variety of treatment which had been practised in this single feature in various ages and localities. In conclusion, Mr. Statham said that his main practical object in calling attention to the subject was to recommend to the Hellenic Society that some special effort should be made, with the help which some of the architectural students at the School of Athens might give, towards forming and publishing a tolerably correct and typical collection of full-size profiles of Greek mouldings, which were at present very inadequately illustrated, and mostly only to a small scale, in published

illustrative works. Such a collection, he said, would be of value both artistically and historically. It seemed a work quite within the scope of the society, and one which would be highly appreciated by architects and students of architecture. The chairman and Mr. J. T. Clarke took part in the discussion which followed. Mr. L. R. Farnell read a paper on "The Classical Museums of Copenhagen, Stockholm, and St. Petersburg," giving a general account of their collections, and discussing certain antiquities that have not yet been published, or not sufficiently explained. Of the collection at Copenhagen, two archaic terracottas, a representation of a Gorgon in relief-style, and a small bust of Demeter were mentioned, certain vases of the best style of Greek vase-painting, a terracotta relief of Ares and Aphrodite, a relief of Atys, probably intended as a sepulchral emblem of resurrection, and a small Etruscan terracotta sarcophagus with the not infrequent "Echelios" scene. Of the Stockholm Museum, of which a scanty account had been published by Wieseler and Heydemann, the following antiquities were described:—(1) An archaic athlete head of Peloponnesian style, not unlike the head of the Chiosseul Gauffrets Apollo. (2) A female head, of which a photograph was exhibited (possibly of Demeter), with a veil at the back of the head and traces of a hand resting upon the cheek, much defaced, but bearing some marks of the Attic work of the latter part of the fourth century, B.C., and, in general outlines, not unlike one of the Mausoleum heads. (3) A mutilated head that was once supposed to have been detached from a Parthenon Metope, but belongs probably to the same period as the last. (4) Two female heads of the later Asia Minor style. (5) A head of uncertain meaning, called, without sufficient ground, Sappho, for the most part modern restoration, but displaying Greek workmanship in the antique portions. (6) The Sleeping Endymion—a motive borrowed in all probability from Alexandrine painting—a work of the Graeco-Roman period, of some formal merit, but not to be regarded as an exact reproduction of the archetype. (7) A head of Zeus-Ammon of the latter and degraded type. (8) A relief of Graeco-Roman style, showing a cippus supporting a tripod that is encircled by a snake, at which a youthful winged archer is shooting an arrow; beneath is an inscription—*MALVS GENIVS BEVTI*—which, if genuine—and it cannot easily be proved to be a modern forgery—would explain the scene as an allegorical representation of the triumph of the Caesarians at Philippi. The motive resembles the well-known emblem of Apollo Pythoctonus on the coins of Rhegium; and the winged figure might be an Agathodæmon, a divine form of Augustus. There are also certain coincidences between the details of the relief and the details of some of the coins of Philippi. The account of the sculpture of the Hermitage collection, of which there has been no systematic description, included the following works: of the archaic period—a relief with the figures of Hermes, Athene, and Artemis; a bronze tripod, upon which some of the labours of Hercules are wrought in relief, belonging to the end of the sixth century; of the period of perfected art—two marble heads of athletes, one showing some of the forms of the Doryphorus; a relief containing the figures of two women, one of whom holds a spindle; of the later Alexandrine period—a head very similar to the "dying Alexander" at Florence, showing possibly the influence of the Pergamene, or Rhodian school, a style which appears also in two somewhat later heads of the collection; of the Graeco-Roman period—a number of works of religious sculpture, e.g., a head of Pallas after the older and severer manner; three statues of Venus, the one similar in motive to the "Venus Genetrix" of the Louvre, the other two replicas of the Capitoline or Medicean type; a colossal Zeus seated on his throne, described and over-estimated by Overbeck as a head of Zeus which Stephanos regards as an immediate copy of the head of the Olympian Zeus of Phaidias, but of which neither the expression nor the forms are such as to bear out his theory; a genre group of Pan and a youthful Faun from whose foot the god is abstracting a thorn; two unpolished sarcophagi, one containing an interesting version of the slaughter of Aegisthus and Clytemnestra.

CLIFTON SHAKSPEARE SOCIETY.—(Saturday,
February 25.)

J. H. TUCKER, Esq., in the chair.—A paper by Mr. J. W. Mills was read, which consisted of "A Review of Mr. W. Watkiss Lloyd's Edition of *Much ado about Nothing*." Mr. Lloyd's edition is described as being "now first published in fully-recovered metrical form," and no part of it is printed as prose. Mr. Mills said that the book under review was another instance, in addition to many which he named, of the craving of this age for sensation and paradox. Mr. Lloyd says, "The distinctive and original feature of the projected, and indeed prepared, edition of Shakspeare, of which this play is a specimen, is the recovery and exhibition of the proper character of the speeches hitherto uniformly printed for pure prose, as being in truth metrical—composed by the poet in a very definite form of blank verse." This is asserted, but nothing worthy of the name of argument is brought forward to support it. It is strange that, until these passages came upon Mr. Lloyd, no ear was ever fine enough to catch this "very definite form" of metre. The metre in question is quite superior to rules, which are what Mr. Lloyd calls "pedantic notions respecting versification"; and yet, with a blind inconsistency he says that only "an ear for systematic metre" can discover this wildly irregular and totally unsystematic verse. According to Mr. Lloyd, the lines may consist of feet with "three, four, or even more syllables," and the only essential is that five of these syllables shall be accented. Yet no hint is given where these accents are to be placed in the most extraordinary lines which Mr. Lloyd points as verse. Not only is the ordinary reader unable to perceive these metrical lines, but poets from Pope to Tennyson, who have been Shakspeare-students, have all missed that which so forcibly strikes Mr. Lloyd's ear. Truly this notion will make another most delicious paradox to suit the prevailing taste. If Mr. Lloyd will but assert it with sufficient dogmatism, he will secure a host of fanatical believers in this sublime discovery anent Shaksperian prose, which, but for him, might have slumbered on in darkness for centuries longer. Mr. Mills gave some passages haphazard from *Quentin Durward* and *Black House*, which could easily be turned into "Lloydian" verse. If the question as to what is, and what is not, metre is to be settled by each individual "ear," without intelligible rules, then the distinction between prose and verse must be utterly and for ever abandoned; for there is not one single prose work in this, or any other, tongue that may not be printed and read as genuine poetry. Mr. Mills then, in detail, showed that the metrical license allowable in Latin comedy, to which Mr. Lloyd, at considerable length, directs attention, lies entirely outside the question at issue.—Mr. Walter Strachan read a paper on "Benedick," saying that the character had been subject to much misconception. Benedick was not a captious, sneering, cynical detractor of, and disbeliever in, what is good in human nature; but an honourable, kind hearted, talented gentleman, who used his wit and his sarcasm to conceal his real thoughts and feelings.—Mr. G. Munro Smith read a paper on "Don Pedro," who is an interesting study, as showing, to some extent, Shakspeare's method of working; for he never "shirks" his characters, but, having the man in his mind's eye, he allows his qualities to appear without the least attempt to hide either the good or the bad. He does not present a batch of certain qualities. Don Pedro belongs to the class of disagreeable men. His sayings are frequently in bad taste, he is constantly showing his good opinion of himself, and his manners generally are nearly as bad as they can be. He is a man spoilt by his social position as prince, and Shakspeare very consistently draws him.—A paper by Miss Louise Mary Davies was read entitled "The Love-Affairs of a Wax Doll." The parallelism between Charles Kingsley's description of a doll and Shakspeare's description of Hero is so close that it cannot escape observation. In connexion with the episode at the masked ball, she tranquilly submits to a course of proceeding we can scarcely follow, even in imagination, so lowering does it seem to girlish dignity. This goes far to warrant Claudio and the others in crediting the slander which is afterwards alleged against her. The

extreme weakness of her nature is further shown by the imbecile way in which she meets the attack of Claudio in the church. Yet it does not seem quite right that she should have suffered so much for this weakness, and it is certainly not poetical justice that she should at last be handed over to an unstable, mistrustful, cowardly, coarse-minded bully.

UNIVERSITY COLLEGE LITERARY SOCIETY.—
(Monday, February 27.)

THE president in the chair.—A paper by Miss Adeline Sergeant, on "The Functions of the Novelist and the Way in which George Meredith fulfils them" was read. This paper contained a record of three conversations. In the first, the speakers dealt mainly with the functions of the novelist. Indignation was expressed at the low estimation in which novels are held by those who read simply for amusement. The novelist's true function was considered, and was declared by one of the speakers to be the formation of a philosophy of life. He maintained that one at least of the novelists of our day has adopted this view; and that this philosophic novelist is George Meredith. In the second conversation, some of the difficulties which beset the reader of Meredith's novels were considered. Is it worth while to study the works of an author who is confessedly so hard to understand? The former champion of Meredith undertook to show that they deserve study, in spite of all that can be said against them. In the third conversation, he endeavoured to prove, chiefly by extracts from the novels, that Meredith possesses (1) a true conception of the novelist's high calling; (2) philosophical insight; (3) pathos, humour, power of characterisation, sympathy, and other qualities which make up the novelist's stock in trade. The conclusion was that Meredith's work deserves attentive study, and should not be lightly dismissed as uninteresting or unintelligible.

FINE ART.

A FRENCH MANUAL OF BOOKBINDING.

Manuel historique et bibliographique de l'Amateur de Reliures. Par Léon Gruel, relieur. (Paris: To be had of the Author at his Bindery.)

THIS handsome volume is divided into two parts: the first consisting of a general sketch of the history of bookbinding, preceded by a paper on the origin of the shape of books; the second, of an alphabetical list of binders with notices of their works. In his preface the author affirms that in his work, the result of long and minute research, he has brought together all that relates to the art of bookbinding from an historical point of view, and all that can possibly interest the serious collector; that if there be some lacunae, these are for the most part voluntary, and due to the author's firm resolve not to put forward any statement which was not to be relied on as established beyond dispute, and for which it was not possible for him to bring forward immediately irrefutable proof. These high words made me turn over the leaves of the book in great hopes of deriving therefrom much useful information, hopes only too quickly disappointed.

Two plates and three pages of text are devoted to what the author absurdly calls the Byzantine style—book-covers adorned with goldsmiths' work, enamels, and panels of carved ivory. Thence he leaps at one bound to the end of the thirteenth century, when, he says, the Byzantine gave way to the Gothic style; but, inasmuch as the art of working in leather was not yet well known, bindings in stamped calf or pigskin were, especially in the

thirteenth century, extremely rare, most of the ornamental leather bindings of this and the following century having been produced in Germany and the North of France. Now, so far from this being the case, the art of binding in leather, exercised with credit in the eleventh century, had before the end of the twelfth attained a very high state of perfection. Indeed, not only have more artistic leather bindings of the period from 1180 to 1225 come down to the present time than from 1225 to 1400, but I do not know a single specimen of the later period which will bear comparison with those of the former, either as regards beauty of design or excellence of the materials used. This, I believe, is to be accounted for by the then prevailing fashion of covering books in velvet and precious stuffs or with goldsmiths' work, the use of which in the earlier period had been almost exclusively confined to Books of Gospels, Sacramentaries, and Psalters, but which in the later, as wealth and worldliness increased, became general and continued in vogue until the Renaissance.

M. Gruel gives one specimen of the latter half of the thirteenth century—a book-cover stamped with fleurs de lys, towers, and monsters of fairly good design. This he alleges to be in pig-skin converted into parchment and stained red—*peau de truie parcheminée rouge*; and he adds the remark that leather stained red was exclusively used for bindings executed for royal persons. It would be easy to draw up a list of a hundred specimens of the twelfth and three following centuries which prove this statement to be quite unfounded.

The remainder of the first part, devoted to the Renaissance and succeeding styles, contains no fresh information whatever. Disappointed with this first portion I turned to the second, on almost every page of which I notice omissions. This part is really nothing more than a list of some of the binders, of whose works specimens are in the National Library at Paris or have passed through the author's hands, together with notices of binders reproduced from previously published works. Netherlandish binders who lived and died in their native country are entered as French, others as German; binders' names are misread and their works misdated. In short, the book, so far as I can check its assertions, is quite unreliable.

The typography of the volume is excellent. The heliographic plates—executed, some by Arents, but most by Charreyre—are very good; a certain number of these, however, are only reproductions of poor German lithographs.

W. H. JAMES WEALE.

MR. EDWIN HAYES'S PICTURES.

THE exhibition which opened last week at the Messrs. Dowdeswells's gallery is one of the soundest and most wholesome which have been held in that place of fashionable resort, Mr. Edwin Hayes being—as real students know—a thoroughly sterling painter, not only content, but determined, to obtain his effects by the means proper to art—the means which time has consecrated; and yet, with all his deference to what one may call a fine conventionality, never relaxing his hold of a nature he is constantly observing. In other words, Mr. Hayes reconciles, as but few men do now a days, the

claims of composition with the claims of fact. He paints scenes; he paints effects; he paints places; but, above all things, he paints pictures. He never satisfies himself with the partial view, with the ingenious fragment, with the dexterous suggestion of the thing that, in a given scene, would strike first, and possibly even strike alone, the superficial spectator. Mr. Hayes—though he can work rapidly, and so the better preserve vividness of feeling—always gives the impression of having thoroughly considered his scene. He approaches his subject with experience, and a fund of knowledge at his back, and approaches it too with a freshness which, under the circumstances, is very remarkable.

At the Messrs. Dowdeswells's, Mr. Hayes has something like 150 pictures and sketches. They are the result of work carried on in many places, and during a great number of years. Some of them are at least twenty years old. Others are of the day before yesterday. There has been no radical change in the artist's style, but it is quite observable that his more recent work is bolder than his earlier. It is painted less thinly: without a trace of timidity—he is, in fact, quite sure of his effect. The public associates Mr. Hayes perhaps a little too much with pictures of a Dutch "pink"—we think that is the word—labouring in dirty grey weather in the very trough of the sea. He is almost unique in these pictures—we grant it willingly—but it is time that the exhibition-goer understood that neither his capacity nor his practice is limited to the most popular, and, it may be, the most characteristic of his themes. The sapphire waters of the Straits of Messina have been painted by him hardly less convincingly than the grey North Sea, and the turbid and tawny stream of the Severn and the Bristol Channel; and more than once upon the English coast—notably perhaps in the engaging and beautifully composed sketch of "The *St. Vincent* in Portsmouth Harbour"—he has revelled in sunshine and calm. We cannot profess, in a brief notice like the present one, to single out those of Mr. Hayes's pictures which most commend him to us as a strong and varied painter of marine themes. Nor is it at all necessary; for he knows his business so well that his work very rarely falls below a certain level. And, moreover, what might, in a dealer's phrase, be styled the more "important" of his pictures are, as a matter of fact, closely rivalled in attractiveness and sterling worth by many of his smaller canvases. Perhaps, however, it is well to particularly mention such distinctly impressive successes as No. 78 and No. 127: the first representing a brigantine which has made signs of distress, and is now to be brought by a steam tug into Gorleston Harbour; the second showing a sea off Yarmouth, swept into hills and hollows by the force of a gale from the north-west. These are remarkable, and, in our opinion, highly satisfactory works; but it is not necessary to see even these in particular to be assured of Mr. Edwin Hayes's place in marine painting. He is of the succession to Backhuysen and Van de Velde, to Cotman and George Chambers.

FREDERICK WEDMORE.

THE NEW ROOMS AT THE BRITISH MUSEUM.

THE new rooms in the British Museum, lately built from funds left by Mr. White some sixty years ago, have been opened to the public. The two principal rooms are large and long and lofty; and one has been devoted to the Museum's fine collection of glass, majolica, and Wedgwood, the other to a selection from the collection of Japanese paintings acquired by the Museum from Dr. W. Anderson. The latter room is quiet and simple in its decoration. The

brown walls, and oak cases lined with gold, make a quiet but rich harmony, and set off very well the delicate colours of the pictures or drawings.

One side of the room is hung with Chinese drawings, which show how greatly the Japanese are indebted to the older civilisation for nearly all the elements of their pictorial art, especially the dignity of their religious paintings, and the truth and beauty of their renderings of bird and flower. One of these antique Chinese drawings is specially remarkable for the drawing of the faces, which, with their fine suggestion of structure and character by means of delicate lines without shade, remind one inevitably of Holbein. The Japanese drawings are all carefully arranged according to schools, and will be most useful for the student, who, with the aid of the small catalogue, will be able to master the general course of Japanese pictorial art without difficulty. The larger catalogue of Dr. Anderson and the stores of unexhibited drawings will enable him to pursue his investigations more deeply. Mr. Sidney Colvin, first by his arrangements of drawings by Raphael, and later by the selection (now still exhibited) of examples of engraving of all schools, judiciously chosen and arranged, has already shown his desire to use the great stores of prints and drawings under his charge for the education of the intelligent public; and this exhibition of Japanese drawings may be regarded as another effort in the same wise direction.

The other rooms are under Mr. Franks, and are approached through those which are already filled by his magnificent gift of Oriental china. To this he has now added a fine collection of English porcelain, principally Chelsea, but including specimens of Bow, Derby, and other factories, among which may be specially mentioned some examples of the rare Longton Hall ware. The British Museum has long possessed some interesting specimens of early English pottery. These are now collected and arranged in a small room with Mr. Franks's English porcelain, and many interesting examples of pottery from the historical collection of Mr. H. Willett, recently acquired by the Museum. The specimens of Tofts' and Wrotham ware, posset-pots, Tygs, &c., with their effective slip-work, make a fine show of the kind, and with the salt glaze, tortoise-shell, and other early English ware, exhibit very fairly the original and often beautiful work of the old English potter. The splendid collections of glass—Roman, Venetian, Bohemian, &c.—of Italian and Spanish majolica, of Rhodian faience, and of Wedgwood, are now seen for the first time to full advantage in the larger room.

OBITUARY.

T. STUART BURNETT, A.R.S.A.

DURING the two past months of the present year the ranks of the Royal Scottish Academy have been sadly thinned by death. First came the loss of Mr. Robert Herdman, certainly—for his rare combination of valuable qualities both as a man and an artist—the very Academician who could least easily have been spared; he was followed by Mr. Norman Macbeth, the portrait-painter, father of Mr. R. A. Macbeth; and now we have to record the death of Mr. T. Stuart Burnett, who was the most talented and successful of living Scottish sculptors, which occurred on March 4—the result, after a very brief illness, of an attack of congestion of the lungs.

Mr. Burnett was born in Edinburgh in 1853, the son of an engraver there, and at an early age was apprenticed to Mr. William Brodie, the late secretary of the Royal Scottish Academy, with whom he afterwards worked as an assistant. He studied in the Edinburgh School

of Design, when he gained the National Gold Medal for his figure of "Antinous," and the Stewart Prize for his group of "Eugene Aram." He also attended the life-class of the Royal Scottish Academy, and afterwards prosecuted his studies in Italy. In 1870 he began to exhibit in the Scottish Academy exhibition; and from that date he was a regular contributor to the yearly displays of the body, of which he was elected an associate in 1883. At first he was represented by portrait-busts—varied by a few landscapes in water-colours; but afterwards his works in sculpture, to which he ultimately devoted himself exclusively, came to include subjects of an ideal character. Among the latter class may be mentioned his figure of a "Highland Athlete," and his bust titled "Innocence," which was among the works which first brought him prominently before the public; his "Bridge of Sighs"; his statuettes of "Davie Deans," "Effie Deans," and "The White Lady of Avenel," for the Scott monument, Edinburgh; his colossal statue of "Rob Roy" (1883); his graceful figure of "Youth" (1884); his "Robinson Crusoe" (1885); his bronze figure of "General Gordon" for Aberdeen, the casting of which has just been completed; and the figure of Burns, which at the time of his death he was preparing for competition in connexion with the statue to be erected in Ayr.

His work in portraiture was individual and excellent, faithful in likeness, possessing considerable dignity of style, and very successful in its suggestion of the softness and delicacy of flesh. Among his best productions in this department were a clever and spirited head of a "Florentine Priest," shown in the Royal Scottish Academy, in 1882; his most characteristic head of "Thomas Forrest, A.R.S.A.," the line-engraver; and the head of a child, the bronze bust of "An African," and the head of "Mr. Edward Burton," the mezzotint-engraver, in the present exhibition of the Scottish Academy.

Personally, Mr. Burnett's genial character and pleasant manner rendered him widely popular, and his sudden loss will be deeply felt by many of his artist brethren in the North.

CORRESPONDENCE.

THE HYKSOS.

Cairo: Feb. 24, 1888.

At the last meeting of the British Association, I pointed out, with general assent, the Mongolic type shown in the features of the Hyksos portrait statues, of which casts were exhibited by Mr. Petrie; and I suggested that the Hyksos invasion of Egypt was the first of those irruptions of barbarian nomads from Central Asia to which the inroads under Attila and Genghiz Khan furnish later historic parallels. Several colossal portrait statues of Hyksos kings, in the form of human-headed sphinxes, are in the museum at Boulaq, and strongly corroborate the theory first suggested by Mr. Petrie's casts. I pointed out these figures to Col. Stewart, H.M. consul for North-Eastern Persia, who is familiar with the Mongolic type of physiognomy. Col. Stewart writes to me to say that these statues

"cannot be looked at without the spectator being struck with the strong Mongolian cast of the features. The very high cheek-bones, the great breadth of the base of the nose, and the immensely broad face, strongly brought before me the Kalmucks that I had met in South-Eastern Russia, and, more strongly still, the Hazaras of Afghanistan and Eastern Persia. These Hazaras, who have retained their Tartar features in all their pristine ugliness, claim to have come westward into Afghanistan with Chengis Khan. I have been for many years much interested in the Hazaras, and know them well, having lived for

some considerable time in a Hazara village in Eastern Persia. Col. Yule, in the latest edition of his *Marco Polo*, has given a likeness of a Hazara; and anyone who compares this portrait, which is a typical one, with the sphinx on the left-hand side would be struck with the similarity of the faces. Without allowing too much weight to a single point, I cannot help thinking that if these sphinxes were portraits of Hyksos kings, as they are considered to have been, we must allow that some of these kings were of Mongolian race, or had Mongolian affinities."

The old theory that the Hyksos were Bedouin shepherds of Semitic race seems to present insuperable difficulties. For instance, on the hypothesis that the Hyksos were Semites, Brugsch is driven to discard altogether the express statements of Manetho as to the animosity with which the Hyksos were regarded by the Egyptians, in face of the evidence supplied by the monuments of the friendly terms on which the Egyptians, about the time of the expulsion of the Hyksos, lived with the Semitic population of the Delta, as shown by their adoption of Semitic names, and by the mania for using Semitic words and phrases in the time of the XIXth and XXth Dynasties. Moreover, none of the undoubted Hyksos names seem to be Semitic; and their chief deity, Set or Sutech, who was also the chief god of the Kheta, does not belong to the well-known Semitic pantheon. The horse, moreover, a native of Central Asia, only appears on the monuments after the Hyksos conquest; whereas, if the Hyksos were merely Semites from Arabia, it is quite inconceivable that it should not have been introduced into Egypt at an earlier period.

Manetho tells us that the Hyksos were "shepherds," but nothing he says implies that they were Semites. Josephus simply says that "people of low origin from the country of the East suddenly attacked the land." The name applied to the Hyksos on the monuments is not any one of the many names used to denote the Semitic races. They are not called Chal, or Char, or Fenekh, or Rutennu; but they are called *Men* or *Men-ti*, a word which may possibly contain the same root as the word *Mon-gol*. Brugsch thinks that in the fishermen of Lake Mensaleh he has found the modern descendants of the Hyksos. He describes them as quite different in appearance from the neighbouring races, "like the features of the Hyksos, with broad cheek bones, and with daring pouting lips." But this conflicts strangely with his theory that the Hyksos were Semites, who are certainly not distinguished, either now or on the monuments, by these characteristics.

ISAAC TAYLOR.

NOTES ON ART AND ARCHAEOLOGY.

THE second annual photographic conference of the Camera Club will be held on Monday and Tuesday of next week, in the rooms of the Society of Arts. At 2 p.m. on each day meetings will be held for the reading and discussion of papers, under the presidency of Capt. W. de W. Abney, who will himself read a paper on "The Theoretical Aspect of Orthochromatic Photography." There will also be an exhibition of photographic apparatus, lantern slides, and photographs. All interested in photography, including ladies, are invited to attend.

THE exhibitions to open next week includes one of pictures and sculpture at the Royal Society of British Artists, which have been contributed towards the relief fund being raised for the widow and children of the late H. W. Sweny, known as an art critic under the pseudonym of "Mahlstick"; and a collection of Mr. F. G. Cotman's drawings, entitled

"Around London," at Messrs. Dowdeswells', in New Bond Street.

THE rage for Cruikshank's etchings, and his earlier works generally, is now about the maddest thing in the world of the collector. Of course, Cruikshank, with all his cleverness, has never been and never can be a prime favourite with the collector of the highest class, who wants Rembrandts and Vandykes and Turners and Meryons; but the collector not of the highest class is just now exceptionally crazy about him. Here are some of the prices fetched the other day, under the hammer, by proofs of some of his works: "The Tower of London," the set, £49; the "Miser's Daughter," £23 10s.; "Windor Castle," £23; the "Life of Sir John Falstaff," £61; Cruikshank's "Table Book"—etchings and woodcuts—£65. Among the books, there occurred a set of the almanacs, in nineteen parts complete, from the year 1835 to the year 1853. It fetched £27 10s. With regard to it—and to the Cruikshank prices generally—a sensible amateur writes to us:

"A few years ago, I declined to buy a set of the almanacs for five guineas, on the ground that I thought the price asked was excessive. Yet it was a better set than the one sold on Thursday. Metaphorically speaking, the Cruikshank Book must be placed on the shelf, by the side of the Whistler. Both are closed."

And our afflicted connoisseur, remembering these deprivations, signs himself, "Yours, very mournfully."

WE have received the first number of the new *Archaeological Review: a Journal of Historic and Pre-historic Antiquities*, edited by Mr. G. Laurence Gomme and published by David Nutt. The programme and the contents alike certainly cannot be said to be wanting in ambition. The general subject is divided—not very logically—into four sections: anthropology, archaeology proper, history, and literature; and under each of these sections are given original articles, reviews, correspondence, index notes, &c. The several indexes to papers scattered among the *Transactions* of archaeological societies promise to form a valuable feature, though we must beg leave to doubt the method adopted—that of the alphabetical order of the writer's names.

MESSRS. SOTHEBY will sell, on Monday Tuesday, and Wednesday of next week, another portion of the valuable collection of Cypriote antiquities formed by Major di Cesnola, and now the property of Mr. E. H. Lawrence.

THE STAGE.

THE middle days of the present week have been busy ones at the theatre; and we shall next Saturday, and afterwards, have something to say, in detail, of the productions. Let it suffice to-day to record that, over and above what we have already announced, there was produced on Wednesday at Toole's Mr. Hermann Merivale's long-talked of play, "The Don"; and on Thursday, at the Vaudeville, an adaptation of *Joseph Andrews*—the last with a cast headed by Mr. Thomas Thorne and Miss Kate Rorke; then at the Royalty, the bill has been changed almost every evening, the indefatigable M. Coquelin dashing from romance to broad comedy, and from broad comedy to literature. M. Coquelin remains with us for several weeks, and it may be of interest to note that the Comédie Française has refused the terms on which he proposed to return to it.

MUSIC.

RECENT CONCERTS.

PURCELL's opera, "Dido and Aeneas," was performed by the Bach Society last Thursday week at St. James's Hall. This work, written by the composer at the age of two-and-twenty, was first given at Chelsea, in 1680, by the young gentlewomen of Mr. Josiah Priest's boarding-school. Though much of the music sounds old-fashioned at the present day, the echo chorus, Dido's last air, and the concluding chorus show great dramatic power. The early death of the composer—snatched way in his thirty-seventh year—was, indeed, a loss to musical art. The libretto, by Tate, consists of sorry verse, and it is wonderful to see how much Purcell accomplished with such poor material. The original orchestration is for strings and harpsichord; and so it was given, excepting that the pianoforte was substituted for the old keyed-instrument. The performance, under the direction of Dr. Stanford, was excellent. The principal vocalists were Miss Anna Williams, Miss Thudichum, and Messrs. Bernard Lane and Thorndike.

Fraulein Marie Soldat made her first appearance in England, and played with great strength, purity of intonation, and marked intelligence, Brahms's difficult Violin Concerto in D. She is a pupil of Herr Joachim; and, if we mistake not, she has before her a brilliant career. Her reception was most enthusiastic. The programme included—besides Dr. Stanford's Elegiac Ode—a work which has fully maintained its popularity since its production at Norwich; and a chorus by Beethoven recently published in the Breitkopf and Härtel Supplement. According to the programme-book, it was given for the first time. It was written with the Overture in C (Op. 124) for the opening of the Josephstadt Theatre in Vienna in 1822, but not performed, according to Sir G. Grove, on that occasion. Herr Nottebohm, however, in his *Zweite Beethoveniana*, tells us that it was sung then; and, further, that it was given at a Gesellschaftsconcert at Vienna on March 23, 1873. The music is bright and Beethovenian, but it can only be looked upon as a *pièce d'occasion*.

The announcement that M^{me}. Schumann was to play Schumann's *Etudes Symphoniques* drew an immense audience to St. James's Hall last Saturday afternoon. The performance of the Beethoven Sonata on the previous Monday was in its way astonishing; but, in her brilliant and vigorous rendering of the trying "Etudes," M^{me}. Schumann fairly surpassed herself. More than fifty years ago Robert Schumann wrote: "Clara must be judged not by her age, but by what she actually does"; and the same may be said of her now. The programme included Schubert's magnificent Quintet for strings in G (Op. 163), most admirably interpreted by M^{me}. Norman-Néruda, and Messrs. Ries, Hollander, Howell, and Piatti, and one of Haydn's quartets. Miss Bertha Moore was the vocalist. On the following Monday evening M^{me}. Schumann played a selection of pieces by Scarlatti, and for an encore a piece by Rameau. She also took part with Messrs. Joachim and Piatti in Schumann's charming *Fantaisiestücke* (Op. 88). Comment is superfluous. The programme commenced with Mozart's Quintet in G minor, and concluded with a Haydn quartet. Mr. Henschel was, as usual, most successful in Loewe's "Erl King" and Schumann's "The Two Grenadiers." For the latter song he was recalled five times.

The second series of the London Symphony Concerts came to a close on Tuesday evening. Mr. F. H. Cowen conducted his clever Symphony in F, which was well received. The programme included Liszt's pleasing symphonic poem, "Tasso," and two excerpts

from the "Ring des Nibelungen." There was a fairly good audience. Mr. Henschel may be congratulated on the energy and perseverance which he has shown. There has been an improvement of late in the attendance, especially in the cheaper parts of the hall. He has had up-hill work, and the public have not supported him as well as one might have expected. Let us hope that he will commence his third season with an orchestra better equipped in the string department. At present, this is a weak point.

We have been unable to notice hitherto the interesting series of concerts being given by Mr. Charles Wade, at the Prince's Hall. On Tuesday evening the Shinner String Quartet played Quartets by Mendelssohn and Haydn. The ladies play with much vigour and intelligence, but in ensemble playing and finish they are not yet all that could be desired. Herr Schönbberger was the pianist, and, as usual, showed his strong and weak points.

J. S. SHEDLOCK.

MUSIC BOOKS.

Verdi, Milan, and "Othello." By Blanche Roosevelt. (Ward & Downey.) The author, in her dedication to Wilkie Collins, speaking of her letters to him, which have grown into this volume, says: "I am sure you will never again ask a woman to write to you, even from Paradise." We fancy, however, that Mr. Wilkie Collins, and also the public, will be very pleased to receive another batch of letters so lively, entertaining, and cleverly written as these which describe Milan at the time of Verdi's last triumph. The first part of the book gives a life of Verdi. It is interesting enough, but M. A. Pougin has already exhausted the subject. The letters from Milan, however, contain new matter. Our author arrived there in January, 1887, in order to be present at the first performance of Verdi's "Othello." But besides music she has much to say about the city with its cathedral, its churches, its theatres, and its pictures. She met with many celebrities in art and literature. She visited the famous printing establishment of Ricordi's, and was permitted to examine the autograph scores of many a famous Italian opera. Her book will interest the general reader, while musicians will be specially attracted by the description of the performance of "Othello," the interviews with Signor Arrigo Boito, and her visit to Verdi. She announced to the latter her intention to be present at his next great triumph. "Au revoir," said the maestro smiling, and then added mysteriously, "Another opera? Mademoiselle, connaissez-vous mon acte de naissance?" Miss Roosevelt writes intelligently about Verdi as a composer; but her immense admiration for Italian music, and her evident dislike of Wagner and his art-theories, will not suit everybody's taste. We can scarcely credit her statement that "Verdi detests Wagner." Also, her technical expressions about music are, at times, peculiar.

Bayreuth and Franconian Switzerland. By E. Milner Barry. (Sonnenschein.) The author gives a pleasing account of her pilgrimage to the Wagner shrine, and anyone intending to visit Bayreuth will find her book interesting and useful. So far as the purely musical part is concerned, the reader must accept her statements with caution. "Tristan" she finds less interesting than "Parsifal," but thinks the scenery in the former very beautiful. And, by the way, she speaks of the work as an "opera." We are told that Wagner's theory "consists of making a succession of harmonies, seldom or never breaking into a cadence." The author managed to enliven her pilgrimage by flying

visits to some of the most interesting spots in Franconian Switzerland, and describes persons and places in an agreeable manner.

MUSIC NOTES.

THE fifth of the series of Novello's oratorio concerts is announced for Tuesday next, March 13, when Dr. A. C. Mackenzie's dramatic oratorio, "The Rose of Sharon," will be performed. The soloists will be M^{me}. Nordica, Miss Hope Glenn, Mr. Lloyd, Mr. Musgrave Tufnail, Mr. Santley; and Dr. Mackenzie himself will conduct.

MR. F. H. COWEN has been appointed Musical Director of the Melbourne Centennial Exhibition for six months. The salary is said to be the largest ever yet paid to a conductor for a similar period. He will have a band of 70 and a chorus of 700. Besides standard compositions he intends to perform a number of English works. He will leave London immediately after the close of the Philharmonic Concerts.

PRIZE STORY AND PRIZE DRAWING COMPETITIONS. See

'ILLUSTRATIONS'

For MARCH, 8d.

(Post-free, 4d.) of any Bookseller, or

W. KENT & Co., 22, Paternoster-row, E.C.

Ready, small 8vo, 18s. Large Paper, £1 11s. 6d.

JOHANN SCHÖNER.

This work contains a facsimile of the unique copy of Schöner's Globe of 1523, recently unearthed, illustrating the voyage of Magellan; a reproduction in facsimile of the Latin pamphlet by Schöner accompanying the Globe, and of the contemporary Letter in Latin of Maximilian Transylvanus describing Magellan's voyage; with translations and notes by the late HENRY STEVENSON, of Vermont, edited with an Introduction and Bibliography by C. H. Coote, of the British Museum.

Elegantly printed at the Chiswick Press, and bound in a novel style, and illustrated with the facsimile of early Globes, a portrait of Schöner, and numerous geographical blocks.

Prospectus on application—

HENRY STEVENSON & SONS, 29, Great Russell-street, London, W.C.

(Removed from 115, St. Martin's-lane.)

Now ready, in 3 vols. royal 8vo, cloth, 1,000 pp., £2 2s. nett.

CLINTON-CORNWALLIS CONTRO-

Very growing out of the Campaign in Virginia, 1781, being—(1) The Six Rare Pamphlets published in 1783; (2) Very numerous important Unpublished Manuscript Notes by Sir Henry Clinton, K.B.; (3) The Omitted and hitherto Unpublished Portions of the Correspondence in the Pamphlets added from the Original Manuscripts, with a Supplement containing (4) Extracts from the Journals of Lord Cornwallis; (5) A French Translation of Papers laid before the House in 1783; (6) Catalogue of the Additional Correspondence of Clinton and of Cornwallis in 1780-81.

Compiled, Collated, and Edited with Biographical Notices in a Copious Index, by B. F. STEVENSON.

London: B. F. STEVENSON, 4, Trafalgar-square.

NEW ILLUSTRATED MILITARY NOVEL.

(Just issued.)

THE FALL OF MOSCOW.

By THOMAS HENRY TEEGAN.

London: SIMPKIN, MARSHALL, & Co. Dublin: SULLIVAN BROTHERS.

LITERATURE.

A Study of Religion. By James Martineau. In 2 vols. (Oxford: Clarendon Press.)

THERE is perhaps no man living better qualified to write a defence of philosophical theism than Dr. Martineau. Erudite, ingenious, and subtle, a master of metaphysical controversy, familiar with every branch of knowledge that can be brought to bear on his main theme, familiar, also, with the arguments of his opponents, as well as candid and generally courteous in meeting them, clothing his thoughts in a style of racy humour and astonishing picturesqueness, finally enjoying the authority that advanced age never fails to confer in England—the late principal of Manchester New College adds to these positive advantages the very appreciable negative advantage of not believing too much. When an ultramontane Catholic, an Anglican, or an orthodox Dissenter comes forward in defence of even the most abstract theology, his arguments will always be received with suspicion, and even impatience, by free-thinkers. There must, they fancy, be a fatal obliquity about the mental vision of one who accepts so much that, to the mass of educated persons, is becoming every day more incredible; and they are quite ready to believe that his religious system forms a logical chain the strength of which is measured by its weakest link. Dr. Martineau, on the other hand, passes for belonging to the most liberal school in the most liberal of all Christian communities; and that portion of his theological belief which remains unstated in these volumes would probably not extend much beyond the ground which they cover, and would involve the believer in no greater difficulties. To all this must be added the more doubtful advantage of virtual immunity from serious and searching criticism. Dr. Martineau will not be met by any antagonist of superior or equal powers. The leading champions on the other side are either dead or disabled, or wholly alienated from speculative interests.

Nevertheless, although Dr. Martineau is certain of popular support, and, although he can point to signs of wavering and defection in the opposite camp, his tone has lost the triumphant confidence that marked it some thirty-five years ago. His theism rests in great part on a metaphysical theory "against which," to use his own words, "all the batteries of modern philosophy are concentrating their fire" (vol. i., p. 179). He holds that "it was impossible to invent a combination of terms more definitely and unconditionally negating the possibility of God than the statement that there is nothing to be known but coexistences and successions of phenomena"

(vol. i., p. 6). Now in England the incriminated doctrine is still very generally held, or abandoned only for some form of Hegelianism, which, when logically thought out, is not less unfavourable to the idea of a personal Creator. Accordingly, Dr. Martineau begins with a very elaborate criticism of the phenomenist theories of perception respectively put forward by Kant and J. S. Mill. For himself he holds, as against every form of idealism, that the existence of an external world acting and reacting on our own personality becomes revealed to us through the combined processes of volition and perception. We simultaneously acquire the idea of causation, which is, in fact, from first to last, identical with that of volition exercised either by our own will or by that of another. Hence the first tendency of the human mind is to conceive the material universe as a vast assemblage of animated beings. But the progress of observation and thought leads to successive reductions in the number of causes, until at last we reach the idea of a Supreme Will, the cause of all phenomena except those produced by human or animal volitions. The great forces of nature are the primary manifestations of this Will, their correlation the proof of its unity. The invariable phenomenal antecedents known to science as physical causes are not causes in the true sense, but signs by which the processes and purposes of the Divine Will are revealed to our reason. Effects are really simultaneous with their causes; and, if we fancy that they are separated by an interval of time, this illusion is due to the transmission of causal agencies through space on the back of material substances—a process for which time is required. Dr. Martineau seems to accept the theory of Boscovich and Faraday that material particles are merely centres of force, thus leaving space alone eternally co-existent with God as the necessary condition of his activity.

Dr. Martineau speaks as if he and Prof. Laurie were the only dualists left; and he is "nae that sure" about Prof. Laurie. It seems as if the professor might retort with a similar doubt. Our author does not add to his other great gifts of style that of lucid and coherent exposition, and I am not always sure of having seized his meaning; but if the analysis just given be correct, he leaves us a universe peopled exclusively with more or less intelligent wills—a theory that most people would call monistic. But whether leading to dualism or not, his argument involves a fallacy at every step. Dr. Martineau is very fond of gibing at those psychologists who profess an intimate acquaintance with what goes on in the infant consciousness. Then how does he know that the perception of an external world first arises in company with the feeling of resistance to our will? And how does he know that will can be opposed by nothing but will? In this connexion it is idle to fall back on the testimony of consciousness, when the author himself unintentionally supplies us with an instance of how mistaken that testimony can be:

"If I know myself at all it is in *trying* 'with all my might' to do something needed but difficult, to heave away a retarding resistance; nor does anything sooner bring home to one the poise and counterpoise between self and nature than the attempt to shut a door against a furious

wind. When thus withstood and resolved to persist rather than desist I am conscious of exercising a causal will to institute or sustain efficient movement" (vol. i., p. 199).

Here what our consciousness seems to tell us is that we are creating the muscular force which at most we are only liberating, and which is just as physical as the opposing wind. We may note in passing that when one physical force is counteracted by another—an event which is continually happening throughout nature—the divine consciousness must be of a singularly self-contradictory character. Again, the scientific proof that physical phenomena come under laws that take them out of the category of voluntary actions like our own is dexterously, though, I think, very inconclusively, used to favour their interpretation as the product of a divine will. But this is only putting off the evil day. If God ever existed as a solitary Will—and that he did so exist is involved in the idea of creation—He must, according to our theologian, have remained plunged in eternal unconsciousness, for, "nothing gets known except through its negation, and . . . we first become alive to our agency by more or less losing it against impediments" (p. 201). Surely it would be the cruelest irony of dialectic were an eminent Unitarian divine driven by his own premises to postulate a plurality of persons at the beginning of things.

Even were the postulate allowed, another and more momentous difficulty would remain unsolved. In these investigations we have admittedly no other guide than human analogies. Now, judging from our own experience, self-consciousness does not as such imply creative power. Dr. Martineau tells us that the Supreme Will operates by "planting out force" in space (vol. i., p. 415). In other words, he "plants out" portions of himself. This is quite beyond me. I can understand planting out trees or colonies, but I cannot understand what is meant by planting out bits of one's own will; and I should be much surprised to hear that our author or anyone else had ever performed such a feat. We have here, in truth, one unintelligibility based on another. The theory requires that we should resolve matter into centres of force, and force without matter is inconceivable. Moreover, the argument assumes throughout that the will is free—that is to say, that it initiates energy—and therefore must go for nothing with a determinist. I cannot help thinking it a serious fault in the arrangement of the work that the defence of Free Will which it at last offers should have been postponed till the middle of the second volume. The defence itself contributes nothing new to this well-worn theme, being mainly an appeal to the testimony of consciousness. Here everyone must speak for himself; and—however disgraceful the admission may be—I can only say that I am not personally conscious of anything but freedom from physical restraint. But I believe in a moral law, and I regard it as a violation of that law for Dr. Martineau to cite the opinions of Diderot as in any way binding on the determinists of the present day (vol. ii., pp. 318, sqq.); such an imputation, however ridiculous, being well calculated to injure them in the opinion of his less well informed readers.

Our author is on much stronger ground when he falls back on teleology. He succeeds, I think, in showing that the Darwinian theory has by no means so thoroughly disposed of the old theistic argument from design as some persons are apt to assume; although perhaps more serious breaches have been made in it than he would admit. It has become clear that what were once thought separate creations are merely transformations of pre-existing types; and to some extent this process has been explained by physical causes the very existence of which was not long ago unsuspected. It is at least remarkable that, with the extension of scientific knowledge, the domain of the supernatural should continually recede. But there is no doubt that an enormous mass of biological phenomena still remain unexplained by mechanical causes; and could they be really explained by recourse to the action of a creative intelligence, we might gladly accept the hypothesis. But no hypothesis is legitimate that reproduces under another form the difficulties it professes to remove, while involving others that did not exist before. Now this is precisely what we object to in the ordinary theism. It must assume that the phenomena of organic life existed under an ideal form from all eternity in the divine intelligence, or that they were evolved from the blank form of its self-consciousness. In the one case, the correlation of organs and the adaptation of organism to environment have to be accounted for as before. In the latter, we must still fall back on evolution; but this time it will be an evolution of a kind that has never been known to occur, for our own ideas group themselves under the guidance of external patterns, and under the impulses of pleasure and pain. Fresh difficulties arise when we try to conceive the embodiment of the divine ideas in material forms. The creation of matter out of nothing is something that we have never experienced, and have no right to assume; while, if matter is co-eternal with God, there must be some relation and harmony between the two whereby the one is fitted to receive the impress of the other's thoughts; and on teleological principles this involves a second designing intelligence. Finally, there is nothing in which we seem to find more convincing evidence of design than in the structure of our own nervous system; but unfortunately it is only in connexion with such a system that designing reason is proved to exist.

The third argument advanced by Dr. Martineau is our consciousness of moral obligation. The existence of a divine law-giver is implied in the existence of the moral law, which can be accounted for in no other manner. This mode of reasoning seems to me so weak as scarcely to deserve refutation. To the intuitionist, as well as to the utilitarian, morality expresses a relation between persons, not something imposed by one person on another. It is as much binding on the Creator as on the creature; otherwise, indeed, no moral attributes could be ascribed to the former. Neither can it be argued that God, as the author of all things, must possess the quality of goodness which he has bestowed on men; or, by parity of reasoning, we must ascribe to him their pains and vices also.

Apart from mystical revelations, we can only judge the Power that created nature by the light of such evidence as nature herself affords. The impartial enquirer has to ask himself whether the distribution of happiness among sensitive beings is so lavish and so exactly proportioned to their deserts as to prove the operation of a perfectly beneficent and just being; or whether the actual arrangements are such as can be reconciled with the existence of such a being, supposing him to be at the same time omnipotent.

Dr. Martineau meets the difficulty here suggested with the most heroic intrepidity and cheerfulness; and perhaps there is nothing in his work so brilliant as the chapter in which he rehabilitates the somewhat discredited optimism of the last century. But the task entails some heavy sacrifices. The divine omnipotence is virtually thrown overboard. On the physical side God's power is limited by his own primary volitions, by the inherent necessities of things, by a dislike to break his own laws, which in a human governor would be thought cruelly pedantic. On the moral side he is limited by human freewill, for which he is much more considerate than the police, making himself even the passive instrument of its behests. We are told indeed that "God burns no heretics" (vol. ii., p. 135); but how can this be reconciled with the fact that the consuming power of flame and the susceptibility of the nerves to its action are natural forces, taken along with our author's reiterated assurance that all so-called natural forces are direct volitions of the Supreme Cause (see especially vol. ii., pp. 151, 172, 176, and 186)? After all, Dr. Martineau never fairly faces the fundamental difficulty, which is, that the creative power has given animals a nervous system susceptible of agonising pain, and has placed them in an environment containing agencies fitted to call forth that susceptibility, such as the "hellish drug curari," and arsenic, which, when swallowed by living beings, feels like live coals in their inside. Will it be said that pleasure and pain "are polar forces, and must either enter in pairs or stay away, . . . for they denote changes, and each is the transition from the other" (vol. ii., p. 82)? For one thing, one fails to see the consistency of this polar theory with the "overflowing preponderance of enjoyment" asserted to exist only two pages further on; but, in fact, many, if not most, pains far surpass any known pleasure in intensity, and many have no pleasure of any kind to counterbalance them.

Like other theists Dr. Martineau reserves precisely as much ground from his optimism as is necessary to support the claim on a future life. The metaphysical argument for this is not pressed beyond the opening of an equal possibility. As the lower animals are spiritual beings, at least to the extent of possessing freewill (vol. i., p. 161), I do not see why the losing chance should be summarily assigned to them (vol. ii., p. 329); except, of course, that their survival forms no part of the Christian tradition by which our philosopher is guided throughout. For the rest, every single argument in his justification of divine providence as exhibited in the present world may be retorted with crushing effect to show that quite possibly there is no other world, and that, if so, we have no right to

complain. Since the divine power is so limited it may be precluded from giving us another existence. But, if so, would Dr. Martineau maintain that we had better not have been created at all, that our baffled hopes and unfulfilled ideals with the reason and conscience whence they inevitably spring are enough to make that life not worth living which he teaches us to believe is not too dearly purchased by all the terrors, the privations and the death-agonies of a merely animal existence?

Dr. Martineau has expanded into two good-sized volumes the two short pages of Tennyson's "Higher Pantheism." But what impressed us all so deeply as the confession of a poet's faith loses much of its force when brought down from the heights of oracular dogmatism to the level of discussion, contradiction and disproof.

ALFRED W. BENN.

History of the Irish Confederation and the War in Ireland. Edited by John T. Gilbert. Vol. IV. (Dublin.)

MR. GILBERT'S present volume covers rather less than a year—from October 1644 to July 1645. Intensely interesting as this short period is in English history, it was a time of slack water in Ireland. The Cessation between the king's forces and the confederate Catholics was still in force, though a state of war still prevailed in Ulster between Monro's Scots and the Irish, and in Munster between the Irish and Lord Inchiquin. Glamorgan did not sign his treaty, nor did Rinuccini appear upon the scene till a somewhat later date. Moreover, the narrative of Richard Bellings, which forms the basis of the volume, is of less interest than usual, as he was absent from Ireland during these months on a mission to the pope and other Catholic princes, and was therefore only able to give information on Irish affairs at second hand.

Yet, though this volume is comparatively less interesting than its predecessors, it is through no fault of Mr. Gilbert's. He has, as usual, added to Bellings's own story a number of highly interesting original documents, chiefly taken from the Carte MSS.—a work which is the more acceptable as the hope of having in our hands a detailed *résumé* of those MSS. must now be abandoned, in consequence of the discovery that the Calendar, which was drawn up some years ago, for the curators of the Bodleian Library is too full of blunders to deserve publication. Every student of English, as well as of Irish, history will therefore turn with pleasure to these pages; though, if he is bent on serious work, they will not exempt him from the duty of seeking among the originals at Oxford for the mass of still unpublished documents.

Even from a purely English point of view there can be no greater mistake than that which regards the Irish history of the reign of Charles I. as a matter to be treated episodically. Events passing in Ireland had a constant effect upon the course taken by statesmen in England, and on more than one occasion news from Ireland influenced the popular feeling and led to the adoption of measures of the highest importance. However much we have for many years been

acquainted with Charles's intrigues with governments and people who were not English, it may be doubted whether the immense effect of this un-English policy upon his fortunes has been sufficiently realised, and still less whether its connexion with the rise of Cromwell, the hero of English independence, passing gradually into English domination, has been enough taken into account. Ireland was, indeed, only one of the strings to Charles's bow, which was certainly not the bow of Ulysses; but it was one on which he persistently counted, and for this reason any new light on Irish matters should be heartily welcomed on both sides of the channel which divides the two nations. To Mr. Gilbert, for his assistance in dispelling the darkness, are due the thanks of every one interested in the affairs of the seventeenth century.

SAMUEL R. GARDINER.

"Great Writers Series."—*Life of Sir Walter Scott*. By Charles Duke Yonge. (Walter Scott.)

LET me say frankly at the outset that Prof. Yonge has not given any fresh biographical information respecting Scott. Nor was it likely he could do so. Lovers of the great master who desire an elaborate portrait of him must still turn to Lockhart's *Life*—one of the most charming books of its kind in the language. But busy men, who desire an accurate, succinct, and pleasantly told narrative of Scott's career; or readers conscious of an imperfect acquaintance with the subject, who want a safe and instructive commentary on Scott's poems and novels, will find this volume useful, notwithstanding the similar works by George Gilfillan, Mr. R. H. Hutton, Mr. W. M. Rossetti, and others. It must here be sufficient to discuss one or two of Prof. Yonge's critical opinions.

The threefold classification in which Prof. Yonge places the novels, is, on the whole, just; though at first sight it seems a little startling to find *Waverley* described as a novel dealing not entirely with Scottish life. In support of this contention, Prof. Yonge points out that Scott, when putting into definite shape his idea of illustrating old Scottish life, as Miss Edgeworth had illustrated the life of Ireland, sought to heighten English interest and sympathy by associating his story with a great historical crisis common to both England and Scotland. *Guy Mannering* is adequately dealt with by Prof. Yonge. Jeffrey, in one of his letters, ranked it below *Waverley*; but Time, the ruthless reverser of critical judgments, has not always upheld even the deliberate sentences of that critical lawgiver, much less all his *obiter dicta*. The writing of this story was an important epoch in Scott's career, for few can doubt that by the creation of Meg Merrilies he first took rank among the pre-eminently great novelists; indeed, the whole atmosphere of the tale has that indefinable quality always present in really great works of fiction—a something not of the plot or situations, but arising from the fact that to their creator the characters were vital. In one of the most suggestive of his essays Mr. Theodore Watts has pointed out how essential is this quality of vitality to all imaginative work of the first order, and has shown the fallacy of the superficial criticism which

asserts that because Scott was an exceedingly rapid writer he was therefore wanting in the higher "imaginative energy." He adds:

"The plot grows out of the scenes; the scenes do not grow out of the plot. Hence, in the deepest and truest sense, Scott, often called the most improvisatorial, is the least improvisatorial of writers. . . . This is why, in short, there is more imagination in a single page of *The Antiquary* than in an entire story by Gaboriau."

Prof. Yonge has rightly given an important place to *The Antiquary*, for, as Lockhart says, "there is assuredly no one of all his [Scott's] works on which more of his own early associations have left their image." *Old Mortality* is dealt with at a length commensurate with its importance not merely as a novel but on account of the historical questions involved. Prof. Yonge is a warm defender of Claverhouse, and in his view *Old Mortality* is remarkable not only because it is, in Lockhart's phrase, "the novelist's first attempt to re-people the past by the power of imagination working on materials furnished by books," but also because, to a large extent, the "author's principal object" was the vindication of a "great historical character." Space will not serve to discuss fully the difficult question of the fidelity to truth of Scott's portraiture. But this much may be conceded even by those who, doubting its accuracy, hold that Claverhouse's cruelties exceeded the measure of his time and his orders—namely, that his character (as is often the case with great men) had two distinct and almost antithetical sides; while Scott, owing to his own cast of mind and political idiosyncrasy, could only see the side which was knightly and pure. Passing over *Rob Roy* we come to *The Heart of Midlothian*. It is in this tale (though Prof. Yonge has not mentioned it) that one of the great faults of Scott as a novelist first becomes apparent. I refer to prolixity in description, which clogs the narrative, and is, in truth, one of the chief causes of Scott's waning popularity with a certain class of readers in our own day. In Prof. Yonge's opinion Scott made a new departure of an important character in *Ivanhoe*; for, abandoning Scotland, which had hitherto been the scene of all his novels, he took a wider range and attempted a "description of the great feudal hero Richard I., and of the condition of England in his time." Prof. Yonge has some pertinent remarks as to the reasons which induced Scott to endeavour to throw novelty into the theme of his stories, together with some apt comments on the historical novel generally. Though he "will not go so far as to say that *Ivanhoe* is the best of all the novels," yet he holds "that it stands high even among Scott's master-pieces." Are not we made to feel this the more because of the charm of Scott's personality—a charm so great as to permeate his writings and cause us to forget this serious artistic blemish, that the mediaevalism of this and other stories is too often, after all, not a genuine mediaevalism but a cheap counterfeit? What Prof. Yonge has to say about the *Abbot* and *Kenneth* is eminently judicious; while his comparison of Varney with Iago is interesting, even although his point is not absolutely made.

Competent critics have frequently urged against Scott a supposed failure in feminine

portraiture. It is contended that we "rarely know how the heroine feels"; for although painting love in its results and commanding influence with a powerful touch, Scott does not succeed in leading us "to 'the inmost enchanted fountain' of the heart." This indictment, were it proved, would be a grave detractor to Scott's claim as a great artist. Prof. Yonge, however, is of an opposite opinion; he speaks of the "exquisite delicacy exhibited by Scott in the drawing of his female portraits," adducing, it must be said, not a little evidence in support of his view. He has some sensible remarks on Scott's occasional deficiency in management of plot (a deficiency which he believes would have been at once admitted by Scott himself); and says that "the plot was never the chief object in his [Scott's] eyes; the object of his chief study was rather the portrayal of character." In the valuable concluding chapter, where Prof. Yonge discourses on Scott's place as a writer, I do not observe that he has mentioned one of Scott's abiding claims to distinction as a literary craftsman. I refer to his use of dialogue as an important part of the very mechanism of the story. Before Scott arose English novels were structurally narrative, the dialogue being used for what may be called imitative purposes only, not as an active agent for carrying on the dramatic action; in Scott the form of the novel became twofold, the purely dramatic and the purely narrative being combined, and this has continued to be the form of the English novel ever since. Thus Scott, even apart from his imagination and his other great gifts, has deeply influenced the cause of our literature.

Though not without his faults, Scott's charm as a man needs no setting forth; yet none the less, one of the pleasantest portions of this volume is the concluding paragraphs in which the author describes Scott's domestic relations. It is very pleasant and salutary to think that the greatest novelist of the century should have possessed that sanity of life and conduct which is the crown of the highest genius.

H. T. MACKENZIE BELL.

How to write the History of a Family. By W. P. W. Phillimore. (Elliot Stook.)

A good deal that is bad in the present age is attributed to the sceptical spirit that prevails. Let us admit that in the field of genealogy it has had a beneficial influence. The Romance of the Peerage has lost its popularity, and family historians are now expected to display the same appreciation of truth as other chroniclers. Facts, however dry and seemingly unimportant, are valued above the most ingenious fictions, and not a few "family trees" have, in consequence, lost their topmost branches. Mr. Phillimore belongs to the modern school of genealogists, and has already given unimpeachable evidence of critical sagacity as well as of patient industry. He knows where to look for information and how to use it when acquired, and there can be no better guide to those storehouses of genealogical lore—the Public Records—than the author of this succinct, yet comprehensive, handbook.

It has been too much the habit of those who have made genealogy a pastime to content themselves with making more or less accurate extracts from county histories and works of

similar character, and constructing out of such materials a pleasant and plausible story. Mr. Phillimore is not content with such a course. The student who accepts his guidance must be prepared for hard and honest labour, and must make truth the object of his search. In no field of enquiry is it more necessary to "verify your quotations" than in the field of genealogical research. There is a curious persistency of error which nothing but careful investigation and some amount of training can successfully meet. Constant recourse must be had to the documentary evidence which is now available in so many quarters, but which from its very profusion is apt to embarrass the enquirer. And, indeed, without some such key as Mr. Phillimore supplies, the visitor to Fetter Lane would be likely enough to come away disappointed and despairing. What, for instance, can he learn from the title of that valuable series of Rolls called "Ministers' Accounts"? He may think they have reference to the high officers of the state or to the sequestered clergy; but he will be scarcely likely to know that they comprise returns made annually

"by the king's ministers—that is to say, his reeves, bailiffs, and others—of the profits of the various possessions of the Crown, and are necessarily of an extremely varied character. Setting out, as they do, the names of tenants, and giving particulars of the holdings, often with recitals of leases, they will be found most useful to the genealogist."

Mr. Phillimore does not neglect what he terms "Provincial Records"—a mine of genealogical wealth which has been as yet very imperfectly worked. Of course, the parochial and episcopal registers have always been more or less accessible; but it is only of late years that the records relating to counties and boroughs, and the books of the trade guilds which existed in every town, have been much thought about. The truth is that, owing to the greater facilities now afforded, it is easier to trace the descent of families and lands than it ever has been; and, while documents without number have perished in the last three centuries, the number made available for use exceeds that to which Dugdale or Hearne had access.

Among the most valuable features in Mr. Phillimore's handbook is the appendix, which contains a list of the Record publications, state papers, reports of the deputy keeper, and the "Rolls" series. There are also some useful examples given of the various forms in which pedigrees may be arranged, and the special advantages of each plan are readily seen. While insisting on the necessity of an index, the author consistently takes care that his own little volume shall be provided with an excellent one. Although it will not wholly supersede the larger works on the same subject by Grimaldi, Thomas, and Sims, it will be found a most convenient manual, and, so far as we have tested it, thoroughly trustworthy.

CHARLES J. ROBINSON.

Through the Yang-tse Gorges; or, Trade and Travel in Western China. By Archibald John Little. (Sampson Low.)

THIS is an exceedingly interesting and well-written book, giving a graphic account of the

dangers and difficulties attending a boat journey up and down the great river of China between Ichang and Chung-king. The author is a Shanghai merchant who has resided in China for nearly thirty years. He is a gentleman of well-known scientific attainments. And as he is, moreover, perfectly familiar with the language, and both speaks and reads it with fluency and ease, he was peculiarly fitted for the task he undertook. He has managed to bring back a great number of novel and interesting facts connected with parts of the empire till hitherto but little visited by foreigners, and to place them before the public in a most readable and lively way. For although the volume modestly professes to be nothing more than the transcript from a diary kept during the journey, it deals largely with such matter as foreign trade with the west of China, the prospects of opening up the country by railways and steamers, the missionary problem, and the opium question. All who are interested in the future of the Far East will do well to study the author's clear and dispassionate views on these difficult and embarrassing subjects.

Leaving Shanghai in the middle of February, the author travelled by one of the fine river steamers to Hankow, whence he proceeded by native boat to Ichang, the journey of 400 miles being accomplished in seventeen days. A stay of three days at Ichang enabled him to visit some of the places of interest in the neighbourhood, and to witness the curious process (peculiar to the place) of otter fishing, which is thus described:

"Attached to the rocky shore, in a small bay, sheltered somewhat from the violence of the current, the fishermen have their otter station. From the bank and overhanging the water depend small bamboos, like fishing-rods, to the extremity of each of which is attached an otter by an iron chain fixed to leather thongs, crossed round the animal's chest and immediately behind the shoulders. Some of the animals were playing in the water, swimming as far as the length of their tether would allow them; others had hung themselves across their bamboos, resting doubled up, and looking for all the world like otter skins hung up to dry in the sun. When required for use, the fisherman, after casting his net, which is heavily loaded all round the foot, draws up its long neck to the water-level, and inserts the otter through the central aperture; the otter then routes out the fish from the muddy bottom and rocky crevices in which they hide. Fish, otter, and net are then all hauled on board together, the otter is released and rewarded, and a fresh cast is made" (pp. 88-9).

As far as Ichang the river is easily navigable by steamers, and it retains its well-known name of Yang-tse Kiang. But above, where the stream assumes various names, the real difficulties commence; and the passage has to be performed, at all events at present, by boats and junks specially contrived for the purpose, and propelled by a combined system of rowing, sculling, poling, tracking, and, occasionally, sailing. The distance from Ichang to Kwei-chow-fu (estimated by the writer at 146 miles) was performed in seven days. The stream here traverses the Great Gorges, which present some of the most magnificent river scenery in the world, the first impression of which is thus graphically described:

"The reach of the river above Ichang is about

three-quarters of a mile wide, and has all the appearance of a mountain loch. No sign of an outlet is visible; and as, toiling against the small rapid, or 'chi-pa,' you approach the upper end, the river seems lost entirely. Suddenly, on the left, a cleft in the mountains comes in sight, and lo! there is the Great River, narrowed to 400 yards, flowing in majestic grandeur between precipitous limestone cliffs which, in the distance, seem to close together and to leave no room for the river between them. The view and the surprise that burst upon one for the first time are indescribable; and no pen can paint the beauty and impressiveness of the panorama that slowly unrolled itself during the next three hours, as we made our way slowly up some ten miles of the gorge to our moorings for the night. The water in the gorges is extremely deep (50 to 100 fathoms). Not a ripple disturbs its surface, and not a sound beyond the occasional echoes of the trackers' voices breaks the awful stillness. Clouds enveloped the higher peaks and enhanced the gloom of the chasm up which we slowly crawled. . . . I was alone, . . . and I rejoiced that it had been my good fortune to visit the Yang-tse Gorges before the inevitable steamboat and the omnivorous globe-trotter had destroyed their charm. Such scenery is better left unvisited, if it has to be rushed through with steam, leaving no time to study the details or to fix any one picture firmly in the mind before it is obliterated by the next. The photographs and drawings that have hitherto been made of the Ichang Gorge fail lamentably to convey any idea of the size, which is the most striking feature. The dark limestone strata being disposed horizontally, and the cleavage being vertical, account for the striking forms, the towers and buttresses, into which the mountains have been cut up; the narrow side glens, where small streams enter the river, are equally wall-sided, and each turn in the valleys is a right angle. Vegetation, wherever a ledge afforded room, was rich and abundant, and the air was scented and the gloom enlivened by the fruit-trees, now masses of blossom" (pp. 104-5).

Alas for poor Dr. Barton's and poor Mr. Thomson's beautiful sketches and photographs of these wonderful scenes! Alas for the permanence of the feelings which inspired the above poetical outburst against the profanity of a "ho-lun-chwan" in the Gorges! For, the author has actually procured and equipped a small steamer, the *Kuling*, in which he is about to attempt the passage of the river above Ichang, and thus to solve a much disputed point. The difficulties of the passage did not end with the Gorges, for immediately on leaving Kwei-chow-fu

"our progress to-day was through a succession of eddies and small rapids. In the words of Tennyson (slightly altered), 'The rapid runs by every rapid point,' and it was a constant succession of jumping out to haul us up by main force round these points, and in again to paddle the boat up the eddies. This work culminated in the fierce rapid of Lao-ma (Old Horse), at which we were detained some time waiting our turn to get through, while the Ting-chai (my official conductor) jumped ashore . . . and pressed extra trackers into our service. . . . We passed the minor rapid of Miao chi-tse (Temple stairs), the water rushing over a succession of rock steps with, however, a clear channel, but an eight-knot current in mid-stream" (pp. 159-61).

It will be comforting to those "Fan-Kwei" who purpose visiting Szechuen to learn that,

on crossing the frontier and entering that favoured province,

"the little urchins ran on in front shouting 'Yang-jen!' (ocean-man or foreigner), but no 'Yang-kwei-tse' (foreign devil) was heard any more from this time forth. This opprobrious term, by which foreigners are universally designated in the eastern provinces, is happily unknown in Szechuen" (p. 140).

One of the most interesting and novel facts mentioned by the author is that there are boarding schools in Szechuen: "Here [at the city of Chang-sho] one of my companions . . . informed me that he had been two years at a boarding school, the first time I ever heard of the existence of such an institution in China."

The terrific flood of 1870—several times alluded to, which, in the Gorges, rose 200 feet above low-water level, swept away entirely the city of Feng-tu and devastated the low-lying ground as far down as Hankow—was mild, however, in its effects to the awful flood of last autumn in the Hwang-ho, which burst its banks at a point about 300 miles from the sea, made itself a new channel, and is estimated to have destroyed in the province of Honan from one to two million persons, though it is probable that this estimate is greatly under the number of those actually drowned.

There are a few inaccuracies in the book which might be corrected in a future edition. Thus, for instance, the distance between Ichang and Kwei-chow-fu is given on p. 151 as 146 miles, while on the next page it is stated to be 150 miles. The population of Szechuen is variously given: on p. 148 at 35 millions; on p. 208 at 30 to 35 millions; on p. 37 as being far larger than that of France (which is close upon 38 millions); while on p. 13 Mr. Popoff's recent estimate, which "is believed to be fairly accurate," gives the population of the province at over 71 millions. "The highest northing since leaving Ichang" is stated on p. 170 to be at Wan-hsien—viz., 30° 57'; whereas Wu-shan-hien, which had already been passed, is in 31° 15', the similarity of the names having probably caused the mistake. The date of Capt. Blakiston's celebrated voyage up the river is given on p. 231 as 1860, whereas it was in 1861. The "Bellows Gorge" is given on the map accompanying the book as being below Kwei-chow, in Hupeh, though it is in reality just below Kwei-chow-fu, in Szechuen; and here again the mistake is easily accounted for by the identity in name of the two places.

As mentioned above, Mr. Little has equipped a steamer, and has obtained permission from the Tsung-li-yamen to make a single trip up the rapids with passengers, but without cargo. He is just about to start on his venturesome undertaking. Whether he will be successful or not is a matter upon which opinion is greatly divided. The difficulties and dangers of such a passage are fully set forth in his book, which has only to be studied to gain a very fair idea what the navigation of the river is above Ichang. That he will carry with him the sympathy and best wishes for success of everyone at home and in China who has the welfare of the empire at heart is certain; but it is impossible, at the same time, not to remember the estimate of the river in the Gorges that Capt. Blakiston puts into the

mouth of the porpoises at Ichang—"That top-side river no belong Mr. Neptune King, hab got too muchey rock and rapid, makey all same chow-chow water!"

M. BRAZLEY.

An Inquiry into Socialism. By Thomas Kirkup. (Longmans.)

MR. KIRKUP's essay might have been as correctly entitled "An Inquiry into Individualism" as "An Inquiry into Socialism." It is rather an indictment of the present system of ill-regulated competition than an investigation into the economic truth of socialistic theories; and the ideal of the future is presented to us less in the form of what is probably attainable than of what is eminently desirable. Having touched very briefly on the history of socialism, he traces the rise of the present system, and proceeds to show how it tends to commercial anarchy, social misery, and the debasement of moral ideas. This theme he expands in an inquiry into the nature and prospects of socialism. He invites us to look forward to a society based on useful work or service, and on association or co-operation, in which not private self-interest but a desire to serve the common good will be the controlling power, and in which a more equitable economic system will enable men to live freer and more beautiful lives than they do to-day. This ideal, he urges, is in harmony with the requirements of ethical, industrial, and political progress; and towards it, as many signs indicate, we are steadily moving.

With a great part of Mr. Kirkup's denunciation of the present system we cordially agree. That in many aspects it is a wasteful system, that its rewards are inequitably distributed, that it produces terrible misery, and that where uncontrolled by other influences keen competition for wealth tends to the debasement of morality—these are truths thrust upon us every day. There is ample excuse for the impatience of socialists. They can urge, moreover, this vital consideration—that the evils mainly arise from the weakness among us of the social feeling, and that the progress of men will be measured and accompanied by the growth of this feeling. Whether their methods are wise or not is a simple question of their practicability, with regard to which we must form our judgment on known facts of human nature and economical history. Mr. Kirkup is free from the crude notion that a system of socialism can be furnished ready made:

"It is indeed a common fault of socialistic theories," he says most truly, "that they begin at the wrong end, and indicate as the starting-point what even on their own principles is really the goal of a long process of social development, laying down as if for immediate realisation a programme which it would require generations to carry out."

He strips away from socialism the accidental or misleading features on which enthusiasts or careless critics have insisted. It is not communistic nor revolutionary, nor a mere mode for increased state interference. It simply sums up the economic changes of the next stage of social evolution. His is not the socialists' socialism as preached to the people; but, all the same, he is bold enough to maintain what

he rightly considers the essential part of the socialist doctrine—namely, that the wage system is doomed. "So long as the present wage system prevails," he says, "there can be no real solution of our social difficulties." As slave and serf labour gave way to wage labour, so must the latter give way to the associated or co-operative labour of persons jointly owning the means of production; and towards this result industrial society is tending. This is his contention, by which his whole theory stands or falls. It appears to us totally unfounded. Not a sign is visible of the decay of the wage system. Individualists of the pure faith are dying out; large businesses are driving out small; the democracy is gaining power; and our generation has witnessed the growth of state and municipal socialism and the success of the co-operative movement. All this is true, but it scarcely touches the matter in hand. It is cheering evidence of the development of the idea of social responsibility, but it does not point to the decline of the wage system. The argument from co-operation is relevant indeed, but it is mournfully weak; for the co-operative stores, which in certain localities have had remarkable success, do not affect the industrial relations, while co-operative production, as a means of superseding the system of employer and wage-earner, has conspicuously failed. Co-operative mills are for the most part substantially joint-stock companies, in which the workmen may or may not be shareholders, and in which, as in many private concerns, they receive a share of profits. The co-operators, in fact, carry out the wage system very much in the same way as their individual competitors, and so long as men differ from one another in capacity they cannot do otherwise. Were there nothing else, this difference in capacity would compel us to regard the socialist idea of associated labourers jointly owning the means of production as the dream of a future which will never be present. If Mr. Kirkup were right in saying that, so long as the wage system prevails, there can be no real solution of our social difficulties, then indeed we should lose faith. Such hope as we have is grounded on the belief, which he shares and on which he lays just emphasis, that more and more are men becoming penetrated with the sense of social responsibility. G. P. MACDONELL.

NEW NOVELS.

Robert Elsmere. By Mrs. Humphry Ward. In 3 vols. (Smith, Elder & Co.)

Only a Governess. By Rosa N. Carey. In 3 vols. (Bentley.)

Molly's Story. By Frank Merryfield. In 3 vols. (Ward & Downey.)

Confessions of a Young Man. By George Moore. (Sonnenschein.)

Savage London. By Henry King. (Simpson Low.)

His Heritage. By Linda Gardiner. (Kegan Paul, Trench & Co.)

A Love Crime. By Paul Bourget. (Vizetelly.)

It is not easy to briefly criticise a novel that is unmistakably the product of deep thought,

varied spiritual experience, and much literary care—still less, when it is a faithful record of the mental growth of a nature of exceeding beauty and power. Ordinary critical canons have to be set aside, or hardly taken into account. All that the critic of fiction commonly looks to—incident, evolution of plot, artistic sequence of events, and so forth—seems secondary when compared with the startlingly vivid presentment of a human soul in the storm and stress incidental to the renunciation of past spiritual domination and the acceptance of new hopes and aspirations.

In the remarkable study from life where-with Mrs. Humphry Ward has followed up her delightful, but relatively unimportant, first venture, it seems to me that she has produced a book which cannot fail of a wide and potent influence. As a novel it is a powerful story, and it is written with all the charm of style which characterised *Miss Bretherton*; and merely as a tale of contemporary English life, a fictitious record of the joys and sorrows, loves and antagonisms, fortune and misfortune of men and women more or less like individuals whom most of us know, it is keenly interesting. But *Robert Elsmere* is more than this. It seems to me a book that has a permanent value apart from its attraction as a skilful tale—one that must stimulate every reader, a book not readily to be forgotten or to be read merely for the pleasure of the moment. Of course, in one sense there are innumerable works of fiction whose *raison d'être* is the delineation of the moral and mental development of an exceptionally interesting man or woman; yet, when one looks retrospectively upon the list, how meagre it seems—how few and far between are the names writ in red lettering! Mrs. Ward's literary method is that of George Eliot. Indeed, there is a curious affinity in *Robert Elsmere* to *Adam Bede*—though there is perhaps not an incident, possibly no play of character or acute sidelight of thought or vivifying suggestion, that could be found in both, while the plot and general scheme are entirely dissimilar. In scope *Robert Elsmere* is ampler, in human sympathy it is broader, in insight it is as deep, if not so keen; on the other hand it has little of the other work's dramatic intensity, and it has one ominous flaw which *Adam Bede* has not—though *Middlemarch* and *Daniel Deronda* are not void of the blight—it suffers from diffuseness. If it should not win a permanent place in Victorian fiction, it will, I believe, be for no other reason than that it is too heavily handicapped with a superfluity of words. Mrs. Ward is too excellent a literary artist to make this perceptible in any one page. It is only after having read one of the "Books," or perhaps not until the conclusion of the third volume, that it is realised there has not been sufficient verbal economy. The day of the interminable novel is doomed. Though all the wisdom of Solomon were to be enshrined in a tale, it would avail nothing—if the tale were in five thick volumes. For after all, there is no evasion of the fact that a story must be a story, that is, whatever else it be, it must be narratively interesting; and to be interesting, a story must not demand days, much less weeks, of assiduous reading.

Mrs. Ward's book deals with the mundane fortunes and spiritual history of one Robert Elsmere, who from a brilliant undergraduate becomes an earnest clergyman; who, against many warring impulses and influences, passes through the dark valley of renunciation, and at last finds saving grace in the purest socialism. There is nothing new in all this. The charm and the impressiveness are in the telling. The tragedy—in a sense the whole book is a tragedy, for there is an echo throughout as of the Parcae at their mystic task—is not of the vulgar kind; neither bloodshed nor wrong-doing is responsible for it, but only the blind and terrible impartiality of fate. The mischance of destiny in the union of those two noble souls, Catherine Leyburn and Robert Elsmere, owes its keenest pathos to the great love which unites husband and wife, despite their spiritual estrangement; and the tragedy of the first revelation of the dividing gulf, even the slow and terrible tragedy of Elsmere's passionate struggle for life, is as nought compared with the spiritual desolation in which Catherine is ultimately left. The narrowness of her nature—beautiful and saintly as it is—is her doom. Her vision is intense within its scope, but it is simply impossible for her to scan horizons beyond her ken. There is no tragedy like unto love's discovery of the futility of its most cherished hopes; and it is this supreme tragedy which, with rare power and insight, Mrs. Ward has set herself to interpret. The personality of Roger Wendover, and the striking figures of Langham, the Oxford don and intellectual and spiritual *roué*, Grey, the popular "coach," and Newcome, the fiery Ritualist zealot, may be more or less recognisable; yet in each case the portrait is so subtly wrought as to defy absolute identification. Roger Wendover seems to me one of the most impressive personages drawn by any contemporary novelist; and it is his influence, I may add, that is the final and most potent factor in the dissolution of Robert Elsmere's sunlit sand-mansions. In conclusion, I would say that Mrs. Ward not only shows an intimate knowledge of life and nature in northern Westmoreland and southern Surrey (the "backgrounds" she most affects), but, along with a swift and penetrating insight, betrays an exceptionally delicate faculty for selection of essential detail.

Miss or Mrs. Carey's novel, *Only a Governess*, has good points, and the narrative flows as placidly and pleasantly through sheets of good print as one of our Midland streams through leagues of meadow-land. If I find the book dull, the fault is possibly my own; for the personages of the story are not altogether uninteresting folk, and the author's style, if not distinctive, is at least agreeably mediocre. Miss Rossiter, the governess of the Chudleigh family, is the magnet for many errant affections; and it is not until Launcelot Chudleigh endeavours to win her as his wife that he and the reader learn that the winsome Huldah Rossiter is no other than—well, I will not betray the only little mystery that the book can boast.

Molly, whose story is set forth in the chronicles "edited" by Mr. Frank Merryfield, was an excellent, garrulous, and some-

what tiresome domestic, who followed the fortunes of the Blackburns and the Thornwoods, outlived most of her associates, and died in the odour of parlour-grace. Three volumes of this amiable creature's memoirs, narrated in a style that is common without piquancy or raciness, is more than one reviewer whom I wot of can stand; so, without praise or blame, I leave *Molly's Story* to the judgment of those who will have patience to read right through these episodes from the family history of the Blackburn-Thornwoods, as told by the worthy but sadly monotonous Miss Russell.

Mr. George Moore's new book defies adequate review. It raises a hundred points for literary discussion, and deals so trenchantly with difficult problems and is so bold in its personalities that one can simply say—get it and read it. It is a brilliant sketch; much the best thing that Mr. Moore has yet done: the production of a man of wide culture, and containing scarcely a single page void of something suggestive, amusing, daring, or—impertinent. It is in autobiographical form, and the reader will need to look closely to gather that this autobiography is at least nominally fictitious. In Mr. Moore's previous books which I have read—*A Mummer's Wife* and *A Modern Lover*—there was a certain unwieldiness of language akin to Zola's, without the latter's sledge-hammer force; but in these "confessions" he writes with a verve and literary grace altogether beyond the French novelist, to whom he is commonly (though mistakenly) supposed to be in close literary relationship. With regard to the audacious personalities, I confess that I find it difficult to formulate any sweeping censure, for it would be hypocritical to deny that Mr. Moore's pungent criticisms of contemporary writers have interested and amused me. There are, however, certain remarks which transgress the bounds of courtesy, and one or two epithets which are as objectionable as they are uncalled for. There is one very *naïve* passage on page 295:

"In England, as in France, those who loved literature the most purely, who were the least mercenary in their love, were marked out for persecution, and all three were driven into exile. Byron, Shelley, and George Moore, and Swinburne, he, too, who loved literature for its own sake, was forced," &c.

The italicisation is mine; but comment I have none. As a perfectly candid account of the mental development (I was about to add "moral," but there isn't any) of a young man of the "pure Pagan" kind, this book has genuine interest. In point of mere cleverness—a quality often sneered at, probably for the "sour grapes" reason—these "confessions" seem to me without a rival in recent English fiction. The book is unequal: the "Strand" portion of it, for example, might advantageously be excised. At the same time it is likely to prove *caviare* to the general, for its most attractive interests are literary. Plot, in the ordinary sense, there is none. There are no stirring incidents, and no love episodes. It is simply the record of a sensualist in life and literature—a "sensualist" not in its derogatory, but in its actual sense. Finally, I would ask how so brilliant and clever a book could be allowed to

go forth handicapped with such an ugly and totally irrelative cover-design? Perhaps it is Nemesis for the Emma episode, the only real blot upon what otherwise is Mr. Moore's *chef d'œuvre*.

Every page of *Savage London* bears witness to the author's familiarity with the scenes he describes. The eight studies from wretchedness here brought together are stirring, pathetic, and vivid narratives of life amid what may be called the ooze of civilisation. There is nothing namby-pamby nor wantonly sensational about any of them. All are honest and manly transcripts from such depths of poverty as not one in a thousand of us even guesses at. "Flags"—the story of a crippled girl—has a dramatic intensity, and "A Pilgrim's Progress" a piteousness, which show that Mr. King has, to a rare degree, the faculty to subtly touch readers to emotional sympathy.

His Heritage is the title of an interesting account of how one Martin Hall came "unto his ain again," and how in the midst of the triumph of long-delayed justice he fulfilled the saying of Epicurus, that a good man should ever willingly die for his friend. The plot is somewhat commonplace, though stories of defrauded inheritance are seldom uninteresting; but the narrative is brisk and nowhere flags unduly.

M. Paul Bourget's delicately written but morbidly analytical *Crime d'Amour* is so widely known that I need not here do more than allude to it. The anonymous translator has had a difficult task in rendering into English the prose of so exquisite a master of his art as M. Bourget. It is exact, it is even pleasing; yet there is a total lack of that which to me, at any rate, was the chief charm of the original, the almost over-refined subtlety and delicacy of the language. It was only M. Bourget's assured skill that preserved his unpleasant story from vulgarity. In the English version, I confess, the border line seems to me occasionally transgressed.

WILLIAM SHARP.

MEDIAEVAL ROMANCES.

"The English Charlemagne Romances."—*Huon of Burdeuz*. Parts III. and IV. Edited by S. L. Lee. Early English Text Society. (Trübner.) Mr. Lee is to be congratulated on having been able to finish his English edition of *Huon*, and no one who has any experience of editing will be discontented with his apology for the length of time which has passed since he began it. Indeed, he may rather think himself happy in having been delayed only by pressure of other work and default of leisure. There are more annoying causes than these which sometimes delay the painful editor. The parts now before us, completing the work, consist first of the ending of the text, and next of a part which contains some editorial comments, a series of notes by Mr. Clouston on the magical points of the romance, a couple of indices, and a glossary. The whole gives in convenient and well-edited form an edition of one of the most interesting of the *chansons*—interesting from the very reason that it is late, and therefore combines a considerable number of very different elements. The exact separation and discussion of these elements is the task, not of an editor of the English adaptation, but of an editor of the French romance in its latest and fullest form—a task hitherto

unattempted. But Mr. Lee has done all that can reasonably be expected from an incumbent of his own office, and more. His excursions on various points are valuable, and we have only to protest mildly against one slight instance of "overweening." It is not exactly the fact that, as Mr. Lee says, "it has recently been proved that euphuism is a Spanish product, an imitation of the style of Antonio de Guevara, a Spanish writer of the early part of the sixteenth century." In the first place, "proof" of such a fact is impossible, unless, indeed, some new Mr. Collier were to be fortunate enough to discover an autograph of Lyly, properly witnessed, and dated Magdalen College, with an acknowledgment that he, Lyly, was going, in imitation of one Guevara, to do certain things. In the second place, what has been not "proved," but made reasonably probable, is that Guevara was one of the patterns of a style which had, beyond all question, other patterns, some of them dating a good deal earlier than the early part of the sixteenth century. But this is not a matter of great importance, and we only mention it because this too dogmatic habit has in matters literary often been the cause of a corresponding excess of scepticism. It does not at all affect the excellence and acceptableness of Mr. Lee's work on this interesting romance, which deserves, at least as well as any other, the position of link between the simpler adventure-stories of the Arthurian cycle or the *gestes*, and the elaborate magic-and-giant-wonders of the Amadis and its derivatives.

Der Löwenritter von Christian von Troyes. Herausgegeben von Wendelin Förster. (Halle: Niemeyer.) The reproach, in our opinion justly, brought against the habit of re-editing already edited texts when there is plenty of new matter waiting for the light, will not apply to Dr. Förster's edition of the *Chevalier au Lyon or Yvain*; although, through Dr. Holland's now thrice reprinted work, this poem is better known than anything of its author's. For Dr. Förster, editing a complete edition of *Christian*, was naturally not bound to mutilate it, however good a presentment of separate works might exist. Moreover, while Dr. Holland went on the principle of taking one MS., and at most supplying wants from others, Dr. Förster has adopted the more fashionable (we do not say the better) plan of composing a "critical" text from all. He has also given a good body of general notes, as well as the sterner apparatus criticus with which some German critics content themselves, and a full introduction. The book appears at a useful time, for *Yvain* has, we believe, been selected as one of the subjects for the Modern and Mediaeval tripos at Cambridge. It is well worth reading, being more manageable in size, and having, perhaps, a stronger smack of individual flavour than the longer, and, in a sense, more important poems, of which *Lancelot* and *Percivale* are the chief; while it is more interesting than either *Cligès* or *Erec*. Few better patterns of the Arthurian type of knight exist than the Knight of the Lion, and Lunete is an engaging heroine. We dare not follow Dr. Förster in his brief introductory plunge into the great abyss of the general Arthurian problem. It is enough to say that he has our assent in his expression of opinion that too little credit has been given to the French poets for actual invention.

Die Werke des Troubadors N'at de Mons. Zum ersten Mal herausgegeben von W. Bernhard. (Heilbronn: Henninger.) Herr Bernhard's edition of N'at or Ato de Mons is a workmanlike performance. The Troubadour in question had, it is hardly needful to say, nothing to do with the better-known Mons in Hainault. His Mons was near Toulouse, and the family to which it gave name was a noble

one. Ato, who lived in the thirteenth century, seems to have served, or been on good terms with, the kings of Castile and Aragon; and he addresses to them and others divers long poems of short lines, rhyming in couplets, and sometimes with more or less intricate stanza arrangements. The *Ensenhamen*, or instructive epistle, is Ato's favourite style; and, to tell the honest truth, he is not an inspiring writer. Indeed, few of them are, save in a very limited number of well-known lyrical bursts.

La Chanson de Roland. Traduction archaïque et rythmée par L. Clédât. (Paris: Leroux.) The comparatively small number of those who occupy themselves about translations at all, from the scholarly point of view, is so sharply and with no possibility of conversion divided into those who disapprove of translations altogether, and those who approve of them altogether, that perhaps no one can give a thoroughly impartial or, at least, open-minded judgment on any book of the kind. We own that in our case disapproval of what M. Clédât has endeavoured to do is so strong that it may possibly (though we do not think it has had that effect) have made us unjust to him. In no language or country perhaps is it so desirable that old classics should not be modernised as in France and in French. For nowhere else is there such a curiously Philistine and irrational disinclination to take the very slight trouble necessary to read such classics unmodernised. No one, Frenchman or foreigner, who possesses a good knowledge of the modern language and a little brains wants any but very slight help of notes and glossary to enable him to read anything from *Roland* downwards; and it is wrong to give him crutches when fair walking with a light cane is so easy. Besides, the losses in translation are tremendous. M. Clédât has pitched the assonance overboard, or rather, he has kept it when he can, and dropped it when he cannot keep it, thereby causing hideous breaks of continuity. And the gain appears to us of the smallest. For instance—and it is a fair instance—M. Clédât renders the line—

"Tréva le jor, la nuit est assérie"
thus,

"S'en va le jour, la nuit est attardée."

Now the two words sacrificed here are words which almost anyone but an idiot can understand. "Tréva," as M. Clédât truly says in a note, is just like "trépasa," "goes across," "goes over." "Assérie" hardly needs *serus* to help the comprehension of it, for *soir* is enough. And the substitution gives remarkably little help, for "la nuit est attardée" would not naturally mean "the night is late," but "the night is long in coming"; and M. Clédât has to give a note to explain his version. We might multiply this (which we have taken at strict *sortes Virgilianae* hazard) to any extent; and we can only regret that so much labour (for the labour must have been very considerable) has been so spent. A brief and sufficiently, but not elaborately, annotated edition of the *Chanson* in French is a thing for which there is ample room; and M. Clédât might have given it far more easily than this, and a great deal more profitably.

NOTES AND NEWS.

THE new edition of Mr. Browning's poems will consist of sixteen volumes, small crown octavo. There will also be an issue of a limited number of copies on large paper. More than one portrait will be given, besides a few other illustrations. The first volume, containing "Pauline" and "Sordello," will be published towards the end of April.

PROF. JAMES DARMESTETER proposes to collect into a volume the articles descriptive of

his recent visit to India, which have been appearing in the *Débats* and the *Revue Bleue*. The book will be published by Lemerre, of Paris, under the title "Lettres sur l'Inde."

MR. FREDERICK HAWKINS'S promised continuation of his history of the French theatre will be published next week by Messrs. Chapman & Hall. It is entitled *The French Stage in the Eighteenth Century*, and, like its predecessor, is provided with portraits and a chronology. How attractive the subject is may be gathered from the fact that among those whom it introduces to us in one way or another are Regnard, Baron, Lesage, Destouches, Mdlle. Lecouvreur, Quinault-Dufresne, Marivaux, Mdlle. Dangeville, Voltaire, Piron, Mdlle. Dumesnil, Mdlle. Clairon, Diderot, Lekain, Prévile, Sédaine, Molé, Beaumarchais, Mdlle. Contat, and Talma. The author, it is understood, has imported a new element of interest into his work by showing that, for nearly thirty years before the Revolution came, it was clearly foreshadowed in the moods of the audience at the Comédie Française on particular occasions.

OWING to his many engagements and contemplated journey to South Africa on his return from Asia, Mr. Charles Marvin has been compelled to resign the task of writing the life of Prince Gortschakoff, for the "Statesmen Series." Messrs. W. H. Allen & Co. have, therefore, made arrangements with Mr. G. Dobson, who for some years has acted as correspondent for the *Times* at St. Petersburg. Mr. Dobson served as special correspondent of that paper during the war in Bulgaria, and had numerous opportunities, before and after the campaign, of becoming intimately acquainted with the personages and events connected with the latter portion of Prince Gortschakoff's career.

MESSRS. FREDERICK W. WILSON & BROTHER, of Glasgow, announce for publication by subscription a new book on Walt Whitman, by Mr. W. S. Kennedy. Besides a good deal of unpublished material derived from Whitman's admirers, and critical chapters, the volume will contain a bibliography of *Leaves of Grass* and a concordance to the same. It will be illustrated with a portrait, a view of Whitman's house at Camden, and a facsimile of his handwriting. It is noteworthy that, though the author is an American, the only publisher is the Scotch firm mentioned above.

MR. JOSEPH HATTON spent some time last summer examining the "Mary the Maid of the Inn" myth at Kirkstall Abbey, near Leeds. The result is a short story, entitled *The Abbey Murder*, which Mr. Spencer Blackett will publish at the end of this month.

MESSRS. SAMPSON LOW & Co. will publish in a few days an entirely new edition of *William I. and the German Empire: a Biographical and Historical Sketch*, by G. Barnett Smith, brought down to the date of his death. The same publishers will also reissue, in a cheaper form, *The Emperor Frederick: a Diary*.

MR. T. FISHER UNWIN will issue immediately *The German Emperor and Empress, Frederick III. and Victoria: the Story of their Lives*, being a popular issue of Miss Dorothea Roberts's "Two Royal Lives," which has passed through three editions under the old title.

A NEW edition of *The Directory of Second Hand Booksellers* will be issued shortly by Messrs. Elliot Stock. It will contain, besides the name and address of the booksellers in Great Britain, those in the United States, Canada, and the principal towns of Europe; and it will give much new information not contained in the first edition.

A NEW and cheaper edition of *Child Life in Japan*, by the late Mrs. M. C. Chaplin Ayrton, will be published immediately by Messrs.

Griffith, Farran & Co. The book originally appeared ten years ago, and in its then expensive form met with considerable success, the edition being entirely sold out in a very short time.

MESSRS. SWAN SONNENSCHN & Co. will issue in a few days a second edition of Prof. Kirchhoff's *Volapük*, which will shortly be followed by a Key to the work prepared by the author.

MR. ANDREW LANG has been appointed to the Gifford lectureship on Natural Religion at his own university of St. Andrews.

SIR WILLIAM WILSON HUNTER will deliver an address to the boys at Eton College on the evening of Saturday next, March 17, upon "An Indian Civilian, at Work and at Play."

MR. SAMUEL BRANDRAM announces a series of eight recitals, to be given at the Steinway Hall on Saturdays, at 3 p.m., during the months of April and May. The staple, of course, will be Shakspeare—both entire plays and selections. But the programme also includes a good deal of Sheridan and Dickens; and, we have been interested to notice, among the ballads, Rossetti's "The King's Tragedy."

MR. GEORGE H. ELLIOTT, of Gateshead, has been appointed to the chief librarianship of the public library about to be opened in Belfast.

DURING the first four days of next week Messrs. Sotheby will sell a very choice collection of books brought together from several libraries. Undoubtedly the greatest attraction is the unique and hitherto unknown duodecimo of Thomas Middleton, entitled *Honorable Entertainments composed for the Service of this Noble Citty* (1621); but there are also a number of other works by the contemporaries and followers of Shakspeare. Among modern rarities, we notice the Pisa edition of the *Adonais* (1821); William Blake's *America* (1793) and Alexander Gilchrist's copy of Blake's *Poetical Sketches* (1783); and Mr. Swinburne's *Le Tombeau de Theophile Gautier* (Paris, 1873).

LAST week we noticed a French collection of autographs. We have now received a dealer's catalogue from Germany, in which not the least notable specimens are likewise English. Among sovereigns, we notice that the signatures of Elizabeth and Cromwell are the most highly prized, while Nelson is placed above Blücher. Neither Goethe nor Schiller is represented. The catalogue, which is illustrated with two photographs, is issued by J. A. Stargardt, of Berlin. Besides autographs, it includes a collection of nearly 500 portraits.

ON Saturday last, March 10, a silver drinking cup and salver, with a congratulatory address, was presented to Mr. Edward Frank Wyman, in celebration of his silver wedding, by those employed by the well-known printing firm in Great Queen Street, of which he is a member.

THE FORTHCOMING MAGAZINES.

THE second number of the *Archaeological Review* will open with a paper by Mr. J. G. Frazer on "The Language of Animals." Capt. Conder will write upon "The Pre-Semitic Element in Phoenicia." The historical section will contain a paper by Miss Toulmin Smith on "The Bakers' Guild at York," illustrated by facsimile drawings of the sixteenth century method of baking; and a paper by Mr. J. Horace Round on Richard I.'s change of seal. Mr. Arthur Evans, Dr. Kuno Meyer, Mr. Hartland and others will also contribute to this number. Among the index notes will be an index of Udal's *Ralph Roister Doister*, and some notes on Westminster Palace from the Records.

THE Princess Christian, whose interest in nursing is so well known, will contribute an article, on "Nursing as a Profession for

Women," to the April number of the *Women's World*.

WILLIAM P. P. LONGFELLOW, Professor of Architecture in the Massachusetts Institute of Technology, will contribute to *Scribner's Magazine* for April an essay on "The Greek Vase," as an expression of the wonderful sense for refinement and nobility of form possessed by the ancient Greeks. The illustrations for this article are from public and private collections in America. The concluding paper on "The Campaign of Waterloo," by John C. Ropes, will be a critical estimate of the movements made by the leading generals, and an analysis of Napoleon's mistakes. The title of Mr. R. L. Stevenson's paper will be "Pulvis et Umbra." It is a plea for a brave attitude towards life "in our isle of terror and under the imminent hand of death."

THE April number of the *Classical Review* will contain, among original articles: "Beginning of a Catalogue of the Classical MSS. in the British Museum," by Mr. E. Maunde Thompson; "The Fish 'Oppis,'" by Mr. J. Thacker Clarke; and among reviews—Sidgwick's "Eumenides," by Mr. R. Whitelaw; Newman's "Politics," by Mr. D. G. Ritchie; and Brochard's "Les Sceptiques Grecs," by Prof. Lewis Campbell.

THE April number of *Time* will contain articles on "Spineza," by Prof. F. Pollock; "The German Labour Colony," by Mr. Conyngham Greene; "The House of Lords—a New Suggestion," by Mr. F. Pulling; "Beaumarchais," by Mdlle. T. Blaze de Bury; a paper dealing with the iniquities of modern servants, entitled "Blackmail on the Hearth"; and the opening chapters of Mr. Julian Corbett's new novel, "Kophetua the Thirteenth."

MESSRS. SAMPSON LOW'S ANNOUNCEMENTS.

"Three Cruises of the *Blake*," by Alexander Agassiz, Director of the Museum of Comparative Zoology at Cambridge, Mass., fully illustrated, in 2 vols.; "Antipodean Notes," collected on a nine months' tour round the world by Wanderer; "The Italian Masters," by Prof. Attwell; "Turbans and Tails; or Sketches in the Unromantic East," by A. J. Bamford; "Hymns and other Verses," by Canon Baynes, editor of *Lyra Anglicana*; "Authentic Biography of Rev. Henry Ward Beecher," authorised by his family, largely autobiographic; "A Practical Treatise on Animal and Vegetable Fats and Oils," comprising both fixed and volatile oils, their physical and chemical properties and uses, the manner of extracting and refining them, and practical rules for testing them, as well as the manufacture of artificial butter, lubricants, including mineral lubricating oils, &c., and on ozokerite, by William T. Brannet, illustrated with 244 engravings; "The History of Wool and Wool Combing," by James Burnley, with illustrations; "The Three Principles of Book-keeping," a popular treatise on the theory and practice of accounts, by J. J. Chaplin; "A Thought-Reader's Thoughts," by Stuart Cumberland; "Dethroning Shakspeare," a selection of letters contributed to the *Daily Telegraph*, with the preliminary editorial papers, edited, with notes and comments, by R. M. Theobald, hon. sec. to the Bacon Society; "The Great Cryptogram," Francis Bacon's Cipher in the so-called Shakspeare plays, by Ignatius Donnelly, in 2 vols.; "Pictures of East Anglian Life," by Dr. P. H. Emerson, "English Catalogue of Books for 1887," containing a complete list of all the books published in Great Britain and Ireland in the year 1887, with their sizes, prices, and publishers' names, also of the principal books published in the United States of

America, with the addition of an index to subjects; "Handbook of Surgery," by Dr. F. Bismarck, a new translation from the third German edition, by Dr. R. Farquhar Curtis, with 647 illustrations; "Songs of the Birds," by the Rev. E. A. Evans, new edition, with numerous illustrations; "Lights and Shadows of Melbourne Life," by John Freeman; "Sunny Fields and Shady Woods," by the Countess A. de Gasparin; "Before the Curfew, and other Poems," chiefly occasional, by Dr. Oliver Wendell Holmes; "Tent Life in Tiger Land," being twelve years' sporting reminiscences of a pioneer planter in an Indian frontier district, by the Hon. James Inglis (Maori); "Life of Nathaniel Hawthorne"; "Low's Handbook to the Charities of London, 1888," enlarged edition, giving the objects, date of formation, office, income, expenditure, invested funds, bankers, treasurers, and secretaries of over a thousand charitable institutions, fifty-first year, revised according to the latest reports; "Life of Comr. M. F. Maury," compiled by his daughter, D. F. Maury Corbin, edited by Mr. Clements Markham; "Land and Work," an examination into the depression of the agricultural, manufacturing, and commercial industries of the United Kingdom, with a proposal for the union of the agricultural interest, by Warneford Moffat; "London of To-day, 1888," by C. E. Pascoe, fourth year of publication, with illustrations; "The Land of the Pink Pearl; or, Recollections of Life in the Bahamas," by L. D. Powles, late circuit justice in the Bahama Islands; "Around the World on a Bicycle," by Thomas Stevens, Vol. II.; "Near and Far," an angler's sketches of home sport and colonial life, by Wm. Senior ("Red Spinner"); "Shakespeare's Heroines," a series of studies, by the greatest living British painters, Goupilgrave illustrations; "Birds in Nature," text by R. Bowdler Sharpe, with forty coloured plates of birds as seen wild in nature, and the surroundings in which they are found; "A Manual of Practical Dairy Farming," by H. Upton; "The Land of Rubens," a companion for visitors to Belgium, by Conrad Busken Huet, translated from the Dutch, and edited by Albert D. Van Dam; the Lea and Dove illustrated edition of Walton and Cotton's "The Compleat Angler," edited, with lives of Walton and Cotton, by R. B. Marston, containing a reprint (by permission) of "The Chronicle of the Compleat Angler," being a bibliographical record of its various editions and imitations, by Thomas Westwood and Thomas Satchell, in 2 vols.; "Directory and List of Products of the Chemical Industries of the German Empire," by Otto Wenzel. New Novels: "Adventures of a House-Boat," by William Black, in 3 vols.; "Bonaventure," a prose pastoral of Acadian Louisiana, by G. W. Cable; "Beyond Compare," a story by Charles Gibbon, in 3 vols.; "Ulu," an African romance, by Joseph Thomson and Miss Harris-Smith, in 2 vols.

ORIGINAL VERSE.

THE LETTER OF FREDERICK III. TO PRINCE
BISMARCK.

"Nor caring for the splendour of great deed
And strife for glory, but with this content
That some day graven on my monument
The humblest child of Fatherland may read,
'He who the glorious Kaiser did succeed
Was sworn to Peace—his rule beneficent.
He served his people on their welfare bent
And sowed for generations hence Faith's seed.'"
Oh, by the palms and laurels 'neath the dome
Where rests before the dark-draped altar shrine
The warrior king who made a nation one,
Did father e'er beget a nobler son?
Had ever people, when their chief went home,
A surer pledge of kingliness divine?

H. D. RAWNSLEY.

IN MEMORIAM.

ANNE BENSON PROCTER.

OUR readers may not unnaturally have expected to see in the ACADEMY last week some obituary notice of a lady so well known as Mrs. Procter, who, if not literary herself, has been closely connected with almost every eminent man and woman of letters since the beginning of the century. The present paper was not at once written in deference to the wishes of the dead, who often expressed to the writer her feeling that obituary notices were too hurried and ill-considered, and that in most cases silence was the fitting form of respect and sorrow. She had also the strongest dislike to the view, not uncommon—as it would seem—that death removes all seals of secrecy, that private letters may be read by the world, and private affairs revealed so soon as the voice which would have protested is hushed for ever. Bearing her wishes on the subject in mind, the writer only now speaks when, other notices having already appeared, some of the nearest relatives and friends desire that some further slight account of Mrs. Procter should be placed on record by one who had the honour to know her well.

Anne Benson Procter was born at York on September 11, 1799. Her father, Mr. Skepper, was a Yorkshire squire of small landed property, but descended and deriving his name from the German Scheffer, the partner of Fust, the earliest printer. Her mother was a Miss Benson, of the same county, and aunt of the present Archbishop of Canterbury. Mrs. Skepper, early left a widow, married Mr. Basil Montagu, Q.C., the well-known reformer of the bankruptcy laws and editor of Bacon. Though he had been married twice before, he was still a young man, occupying a good social and literary position, and able to introduce his brilliant young wife to a circle in which she took a prominent part. Mr. Montagu was fourteen when Dr. Johnson, whom he knew, died; he was the intimate associate of Godwin, Coleridge, Wordsworth; he watched by Mary Wollstonecraft's death bed; Sir James Mackintosh helped to steady those liberal principles which were growing somewhat wild under Godwin's influence; his home was the haunt not only of Londoners like Charles Lamb, but of young men from the country before they grew famous, if only they had promise in them, like Edward Irving and Carlyle.

Thus from her early childhood Anne Skepper was surrounded by liberal and literary influences which moulded her strong, bright nature. The word liberal is used, however, only to designate her independent, vigorous thought; for in politics Mrs. Procter was, and remained, a high Tory, a Church and State woman of the old school, accepting in these later years the principles of the Primrose League, and wearing its badge with pleasure. Her recollections of those early days were most interesting; but she was so full of life to the last, and so in touch with all that was around her, that the talk about them was quite unlike ordinary senile memories: Lamb and Godwin might have passed from us but yesterday. Not long since a letter from Lamb to Mrs. Basil Montagu found its way into the autograph market, in which he expressed contrition for having allowed himself to become the worse for liquor at her table. Mrs. Procter said:

"But they have not seen the second letter, which I have upstairs, written next day, in which he said that my mother might ask him again with safety, because he never got drunk twice in the same house."

She would speak, as if it had been of a romance of last week, of how zealously Mrs. Montagu threw herself into young people's love affairs,

so that Irving's marriage with Miss Martin took place from her house; and at the age of eighty-five, as many of Mrs. Procter's friends will remember, Mrs. Montagu's daughter engaged with inherited zeal in the arrangements for another marriage opposed by the lady's family. She was ever ready to do battle for her mother and stepfather if they were misunderstood or misrepresented in the smallest degree. It was not enough to her generous nature that their high characters and their name in the world should speak for themselves. Thus, when Carlyle's disparaging remarks on Basil Montagu's patronage and the kindness of his wife were brought to light with ill-nature and unwisdom, she printed and circulated widely early letters which showed Carlyle as a grateful suppliant for favour; and it was with difficulty that some of her friends persuaded her to suppress a scathing motto from "Othello," which seemed to her to fit the facts of the case.

In 1823, Miss Skepper married Bryan Waller Procter, known in literature as "Barry Cornwall," who was shortly after called to the Bar. Means were small, Mr. Procter was "a simple, sincere, shy, and delicate soul," as Mr. Coventry Patmore calls him, and his wife's spirits often had to do for both. She retained her old literary friends, and made by degrees many more, who loved herself and her husband for their own sakes. During great part of their early married life they lived with the Montagus, so that the two circles of friends were fused into one. Mr. Procter's poems are probably now known but to few; but when he was a young man, in the third decade of this century, they had a vogue which would now be scarcely understood. Popular composers set his songs—much better than words to music were wont to be—and schoolboys had them by heart. Still, though more than fifty years have gone by since he saw them, the present writer could repeat a poem on London streets, which were not found to be paved with gold—"King Death," "The Sea," and many others—read in school hours under the shelter of a friendly desk-lid. Nor did we schoolboys think them, as Lamb did, "redundant." In July, 1827, Lamb wrote to Patmore: "Procter has a wen growing out at the nape of his neck, which his wife wants him to have cut off; but I think it rather an agreeable excrescence—like his poetry—redundant." The wen is probably as much imagination, or banter, as the next sentence: "Godwin was taken up for picking pockets."

Six children, in somewhat rapid succession, left scant time for society; but it was never dropped, and in one way or another the Procters knew most people worth knowing in London. They were, as Mr. Patmore says—we may make his words plural—"the friends of almost every person of character in art or letters." They had, after a while, sufficient means, Mr. Procter having been appointed, in 1831, Commissioner in Lunacy—an office which he held for thirty years. Mr. Procter died in 1874, and had reached the precise age which his wife also had attained at her death.

During all those years when as Miss Skepper in her mother's house, and afterwards in her own, so many persons passed before her, it is not to be expected that she would, or could, view all with equal liking, and in truth she piqued herself on being as good a hater as she was a friend. It would not be fair to specify later names; but since, as Sydney Smith once said, "We are all dead now," there can be no harm in telling that her pet aversion was the pedant philosopher, Godwin. He was the type of the few persons for whom she could feel no tolerance.

During Mr. Procter's failing health his wife was a good deal withdrawn from the society of all but her intimate friends—and they were

many; but, for the last thirteen years, few people have been better known in London, nor till quite within the last few months would any one have learnt from her conversation or manner that she had passed from middle life to old age. What she was at fifty she was at eighty and long past that time.

"Our Lady of Bitterness" one among her friends has named her, and she did not shrink from the title; but neither he nor any one who knew her well would recognise it as more than an accidental description. Her conversation and her criticism were always tonic; and there must be a dash of bitter in every tonic, how pleasant and healthful soever it may be. She always sat very upright, with her whole figure as it were on the alert. Then, when need was, she seemed to straighten herself still more, and with a spark of mischief in her eyes, bright to the last, she flashed out her verbal dagger, whose blade was so keen that the interlocutor admired the weapon more than he felt the wound. She never was prosy, though she now and then repeated to her hearers a good thing she had said on another occasion—

"I found myself, my dear," she said, "in such odd company last night, at Mr.—'s. I don't know how the man came to ask me or why I went. But when I saw Lady— (who had just been divorced), I could not resist saying to her 'What an odd party this is! All the men have been co-respondents, and all the women, *except you and me*, have lost their characters.'"

But this keenness of tongue was accompanied by the greatest kindness of heart and action. When Mrs. Jameson was in need, Mrs. Procter's untiring energy gained from her friends a sufficient sum to settle on her an adequate annuity. She was even too chivalric and self-denying for the sake of those who told her a story which worked on her sympathies. And she was equally pleased to sit for an evening with an invalid or poor friend in humble lodgings as at a great entertainment where she was the life of the party. She kept herself young in a measure through the young whose *confidante* and adviser she was on many occasions.

Her reading was, with limitations, extremely various, one curious limitation being that she knew no language but her own. Some phrases of French everyone must learn if they live a certain number of years in the world, but she refused to admit that she knew any; and if by chance in her presence a French story was told, or a French phrase used, her whole figure grew stony, and her countenance was as that of the deaf adder that stoppeth her ears. It might almost be thought that, as M. Renan is said to have avoided learning English lest he should injure the perfection of his French style, so Mrs. Procter avoided foreign tongues for the sake of her English. A very few weeks before her death she was speaking of the novel, *The New Antigone*, of which she had read every word, and praised it for the sake of the conversations. "People speak in it as they were taught to speak when I was young. They use good grammar, and always finish their sentences: that is rare both in books and talk now." It is quite true that her own words were as finished as they were incisive. There is, perhaps, no one else in recent days, with the exception of George Eliot, whose spoken words, if taken down in shorthand for a book, would have left no room for correction. But Mrs. Procter was by far the more rapid and conversational of the two.

Her energy and interests were marvellous, and her physical powers great. On a day for instance when she was "at home," and received visitors all the afternoon, she would dine out, and go on to an evening party, at which she rarely sat down, as fresh at midnight as at noon. The writer has a vivid remembrance

of a country house party, less than eighteen months since, at which from half-past ten in the morning; during a fairly long afternoon's walk; and in the evening she was the youngest of the company. Near midnight she stood many minutes with her bed candle in her hand, dramatically representing a scene which had amused her a few days before.

It would be, however, a complete mistake to consider Mrs. Procter as one who lived merely for society, much as she enjoyed it. It was, she said herself, a question of temperament. There was no reason why, if she enjoyed seeing her friends abroad, she was not doing as good a work as if she had been asleep in her chair. She did not go at all on the French principle—that a man is as young as he feels, and a woman as old as she looks; feeling was to her the test in the case of both sexes. Much the same rule applied to her entrance into society again after the deaths of husband and daughters. That those who were gone would have wished her to do so, that a pretence of not liking it better than moping alone would have been mere hypocrisy, were adequate reasons for doing as she wished; nor was there in this any want of affection. The touching way in which she was wont to speak of "my Adelaide," "my Edith," showed how present and vivid were the memories of those who had left her side. She could not endure the way in which many people think it a sign of reverence to change or sink their voices in talking of their dead relatives, "as if they had done something to be ashamed of, as you would speak of a bankrupt uncle."

In regard to her daughters and other members of her family who followed in their steps, she showed a wise tolerance. One after another of them became Catholics, one a nun. The family union was in no way broken for this cause. The granddaughter who ministered to her last days did the same. She was free as her aunts had been to act on her honest convictions. On her own faith she was reticent, no doubt believing that "it was that of all sensible people which sensible people never tell." But if it be one of the signs of a mind at rest to be sunny and cheerful, then she had such a mind, the outcome of a good life.

If Mrs. Procter was interesting as an acquaintance, she was still more valuable as a friend. Probably in later years it was by some accident that any were admitted to this inner circle. One such friend entered into it, owing to an accidental conversation with her daughter a few weeks before her death. That the hand of death was on Miss Procter was only too evident, but the mother and the daughter each trying to spare the other, the subject was avoided. Miss Procter told a friend how near the end was, that she grieved only for the suffering it would cause her mother, how deep was her own inward peace, and how great the comfort of her faith. The end came at last suddenly; and Mrs. Procter blamed herself with calm unshrinking bitterness that she had not told her daughter how near the end was. The friend was able to remove the notion that death had been unexpected, and will never forget the relief to the mother's heart, the unforgetting gratitude during the remaining years for so slight a service.

There are other old ladies living in society, clever and bright, but Mrs. Procter stood alone. She was always transparently simple, spoke her whole mind, and was entirely herself. Any transparent artifice was never intended to conceal. If her hair was not grey, but a *blond cendré*, it was because all women of fifty years ago wore a front; never was false hair so completely *en evidence*. If she differed from a speaker she said so; and if she thought him silly it appeared in her tone, but always with a kindly tolerance.

In her passes away one whom many have

liked, and an inner circle have loved, who sat at the feet of those who talked with Johnson and Boswell, and about whose chair have gathered most of the wisest and most entertaining men who succeeded them—to the poets and the novelists who are yet young. She wrote next to nothing herself, only bright little letters which will never be published, in a handwriting clear, precise, and ladylike as herself. If those who came about her live as long as she did, or longer yet, it will always be among their pleasantest and happiest memories—not always, perhaps, possible to make clear to others, since no evidence of what she was will remain—that they knew Mrs. Procter, or better still, were honoured by her friendship.

CORRESPONDENCE.

BISHOP COLENSO.

London: March 15, 1888.

There is one fact concerning Bishop Colenso which ought to be known before the eulogy by Sir George Cox can be accepted at par. He compiled a Hymnal for use in his diocese, from which he excluded rigidly every mention of the very name of Christ. It did not merely, like Unitarian Hymnals, omit Trinitarian hymns and hymns of worship to Christ, but there was absolutely no allusion to such a being as Christ throughout the volume.

It was soon suppressed as impolitic. I had it in my possession for a considerable time; but I gave it to the late Martin R. Sharp, editor of the *Guardian*, that he might use it, if necessary, in the controversy as to the moral tenability of Bishop Colenso's position, then agitated.

R. F. LITTLEDALE.

DANISH PLACE-NAMES AROUND LONDON.

Nottingham: Feb. 24, 1888.

As to the Danish local name "Vandel," referred to by Mr. Rye, I may state that I was well aware that "Vandill," or "Vendill," was the old name of the northern part of Jutland, that name being embodied in the familiar "Vendil-skagi," the [name of the Skaw or Skagerack. I suppose Mr. Rye's modern Danish "Vandel" is some relic of this territorial name; but, obscure as is the origin of "Vendill," it in no way affects the derivation of "Wandsworth" from the Old English personal name *Wendel*. It would have been more to the point had Mr. Rye pointed out that the corresponding Old Norse name "Vendill," which is elsewhere authenticated, is embodied in the Danish "Vindels-bæk"; but even if a corresponding English "Wendles-bec" existed, I should still maintain that the English names in "Wendel" are native compounds from a genuine English form of a common Teutonic personal name.

I am not easily surprised at the sweeping historical deductions that local historians draw from impossible etymologies of local names; but Mr. Rye has fairly astonished me. Being struck with the superficial resemblance of certain modern Danish local names to certain modern English ones, he has, without inquiring into the history of these names, or troubling himself about the phonology of the two languages, proceeded to bracket them together, and has then assumed that the English names are merely reproductions of the Danish ones. But the most surprising portion of his theory is that these fallacious parallels prove that the English reproductions are due to Danish invaders who preceded the Romans! To accept this theory we are bound to believe that the original Danish names and their English reproductions have preserved their original likeness to one another undisturbed by the national or linguistic changes of two thousand years. The bare statement of such a theory is sufficient to condemn it in the eyes of anyone who has devoted a little time to the analytical study of the Teutonic dialects.

It is possible that there may be a few cases where an English local name is a reproduction of a Danish one. Indeed, we have, if we may accept the evidence of the *Flatey* book (i. p. 203), an instance of this process in the case of "Slesvig," the name of the northern head-quarters of the *bingmanna-l'ð* in England.

* Since "Wendles" in local names is sometimes reduced to "Wanda," one is tempted to guess that *Wansbeck*-water is really "Wendles-bec." At all events, this guess is more probable than Taylor's derivation of *wan* from "Welsh *afon*," the *s* being "probably a vestige of the Gadhelic *uige*!"

The continental Slesvig derives its name from the Slie fjord (Munch, *Det Norske Folks Historie*, i., pt. 1, p. 381). But even if this instance were free from doubt, I should still demur to Mr. Rye's proposition that "hundreds of the names of our English villages were simply reproductions by Danish settlers of their home-names." Certainly Mr. Rye's list does not support any such conclusion; for the comparisons are, in the majority of cases, owing to the philological recklessness displayed in the compilation of the list, utterly fallacious. No Teutonic philologist would, I think, dream of connecting "Tjerne-holme" with Turn-ham, "†l-holm" with Wal-ham, "Ræve-hede" with River-head, *bjerg* with "bury," &c. Mr. Rye must know that a modern English name is not a true index of its original form, and a modern Danish form is even less reliable than a modern English one.

Mr. Rye does not appear to have taken any steps to ensure the accuracy of his English examples. He tells us seriously that the Danish *ø*, "island" (=O.N. *øy*, Icel. *ey*, O.E. *æg*, all from a common Teutonic *aujō-*) is preserved in "Harr-ow," "Hounsl-ow"; and "†apl-ow." In the first place it is impossible for the Danish *ø* to have produced "ow"; and some eight or ten centuries ago this word was practically identical in sound with O.E. *æg*, which is represented in local names by "ey." Now, it is fairly certain that the termination of "Houndslow" and "†aplow" is *low*, "a hill or tumulus" (O.E. *hlāw*, *hlæw*, Got. *hlaiw*, not recorded in O.N.), and "Harrow" represents *hearge*, the dat. sing. of *hearth*, a heathen temple or, perhaps, the grove without the temple (see Grimm, *Deutsche Mythologie*, p. 59). It is recorded in Domesday as "Herges," and in an original charter of A.D. 825, as *æt Hearge* (*Cart. Sax.* i. 530, 4, 35). Then the house of "Limehouse" is, as Prof. Skeat has shown, a corruption of *oast* (O.E. *æst*), "a kiln," a word that is not represented in the Scandinavian dialects. Neither *house* nor *oast* could have yielded a modern Danish *ose*, as in Mr. Rye's parallel. Mr. Rye might have discovered that *flet*, "a stream," is a genuine English word. It occurs in "Wippedes-fléot," one of the earliest English names that we have recorded. If he had consulted Domesday before comparing the Lincolnshire "London-thorpe" with the name of the metropolis, he would have found that the old name of this village was "Lunder-torp," which has certainly no connexion with "Londinium." It is merely an instance of the Old Norse fashion of compounding with the gen., *Lunder* being the gen. *lundar* of *lundr*, "a grove," which is preserved in Lincolnshire and Nottinghamshire as *Lound*.

This brings me to Mr. Rye's strange idea that "London" is a repetition of the Danish "Lunden"—an idea that is almost as wild as his theory that "Dover" (a name derived from an exceptionally well-authenticated Celtic word that occurs in Gaulish as well as British names) is merely a repetition of the Danish local name "Dovre" (*Popular History of Norfolk*, p. 4, note *). A few years ago, a correspondent of *Notes and Queries* made the amusing suggestion that *horn* in English local names was derived from *ferne*, a word that he found attached to some islands on a map of Norway. His ignorance of Danish was so intense that he did not know that the *erne* was merely the plural sign *er*, and the plural of the suffixed article, the word in the nom. sing. being *ø*! As Mr. Rye has professedly taken his examples from a modern Danish gazetteer, it is possible that he may have been similarly misled by the suffixed article, and that *Lund-en* simply means "the grove." In Norwegian local names *en* frequently represents the nom. or dat. sing. of *vin*, "a meadow," as in the common name Horgen=O.N. *Hörgin* or *Hörgini* (Olaf Rygh,

Mynder om Gudene og deres Dyrkeles i Norske Stednavne, in Kjør's edition of Munch's *Norrøne Gude og Helte-Sagn*). I do not know sufficient of Danish local etymology to say whether this may be the origin of "Lund-en," or whether this name may represent the dat. pl. "Lundum," which does occur as a Danish local name. But in any case I think there can be no reason for deriving "London" from the obscure Danish "Lunden."

It can be easily proved, without having recourse to the original Danish forms, that some of Mr. Rye's English names are in no way connected with the assumed Danish parallels. Take "Hackney" = Danish "Aake-næs." The English name seems to represent an original *æt Hæccan tēge* from the personal name "Hæcca," whereas the Danish "Aake-næs" has no initial *h*, has a long vowel (*aa*=*ā*) instead of a short one, and is, if we may trust the modern form, derived from an entirely different name—the O.N. *Áki*. The corresponding name to "Hæcca" in O.N. is *Haki*, which is embodied in the Danish "Hage-sted," "Hak-sted." Nor is it easy to see how the Danish "Bromelle" can be in any way connected with the English "Brom-ley," which represents *æt bróm léage*—that is "broom-lea." Now, as neither *bróm* nor *léah* are represented in the Scandinavian dialects, it is difficult to believe in a Danish "Brom-ley"; and if *léah* had existed in O.N., it must have borne the form *lō*, which could not very well yield a modern Danish *le*. An equally impossible equation is that of "Brixton" with the Danish "Brix-gaard." Brixton was not the name of a township, but of a stone in the parish of Lambeth. The early forms of this name are: A.D. 1062, "æt Brixges stāne, tō Brixes stān[e]" (*Cod. Dipl.* iv. 158, 4) and the Domesday "Bricsi-stan," "Brixi-stan." There can be no doubt that the first part of this compound represents the O.E. personal name "Briht-sige"—a form that could not occur in Old Danish, for the reasons that *briht* is a peculiarly English metathesis of *berht*, and that this common Teutonic word is represented in O.N. by *bjartr*, from which *Brix* cannot be descended, since the *x* in "Brixton" represents the coalescence of the *s* of *sige*, and of the guttural spirant *h*, which does not exist in the O.N. form. There is the further objection that the Teutonic names in *briht* were very sparingly used by the Northmen; and there is, I believe, no record of an O.N. equivalent to the English *Briht-sige* or *Beorht-sige*. It is not improbable that Brixton derives its name from "Berht-sige," a relation of *dux* Ælfred, the owner of Clapham in 871-889. See his will in Sweet's *Oldest English Texts*, No. 45, *Second Anglo-Saxon Reader*, p. 194. Clapham is mentioned in this will as "Cloppaham"—a fact that is fatal to the derivation of this name from Osgod Clapa, the usually received etymology cited by Mr. Rye.

Parallel formations in English and Danish local nomenclature may arise (1) from both languages using common Teutonic words in the formation of local names, or (2) from their use of common Teutonic personal names, or (3) from the introduction into England of particular Danish names or words. A good instance of the first process is Mr. Rye's "Wester-ham" and the Danish "Vester-holm," where the first member of these compounds is a common Teutonic adj. meaning "western." *Westerham* occurs as "Westar-ham" in the will of Ælfred, A.D. 871-889, above referred to. I may here state that the English *ham* is not equivalent to the Danish *holm*. This early mention of

* Cf. A.D. 944, "Hæccan bróc"; *Chron. Mon. de Abingd.* i. 113, 3, and A.D. 709, "Hæccan ig"; *Cod. Dipl.* vi. 221, 13; "Heohene-ig"; *Vari. Sax.* i. 184, 32 (late copy).

"Westerham" renders the connexion of *hám* with *holm* impossible in this case. Again, as *land* and *end* are Teutonic words common to English and O.N., it is not necessary to suppose that our "Landsend" is a reproduction of "Landzendi," the O.N. name for the southern point of Norway. But the name "Kirkby" affords an even stronger proof of the baselessness of Mr. Rye's theory that agreements between English and Danish local names are due to reproduction. This name occurs in Iceland as "Kirkju-bœr," in Denmark as "Kirkeby," in Normandy as "Crique-bœuf," and in England as "Kirkby." Now, since *Kirk* never meant anything but a Christian temple in any Teutonic dialect, it is certain that the English Kirkbys are not legacies from the ante-Roman Danes; and the English and Norman instances can hardly have been borrowed from Denmark at a later date, for these names were, in all probability, conferred before Denmark was converted to Christianity. All four instances were, no doubt, entirely spontaneous compounds formed by the inhabitants of each country. As an example of the second process, I will take Mr. Rye's "Sunbury" = "Sonne-bjerg." The former is recorded in A.D. 1066 as "in Sunna-byri" (*Cod. Dipl.* iv. 177, 23), and in Domesday as "Sune-berie." Both forms represent an O.E. *æt Sunnan byrig*, where *Sunnan* is the gen. of the personal name **Sunna*. The Danish "Sonne-bjerg" is, I suppose, from the corresponding Old Danish name *Suni*, gen. *Sunne*, but, although this Danish name may be part of the common Teutonic heritage, it is possibly a name borrowed from the English **Sunna*, since names beginning with *Sun* are very rare in O.N., the most familiar instance, "Sunniva," being clearly a representation of the O.E. "Sun-gifu" (Aasen, *Norsk Navnebog*, p. 75). But there are certain common Teutonic names that were so altered under the influence of English and Norse phonology that we can readily determine which is the English and which is the Norse form. The O.N. *Gunn-arr* will serve as an example of this. This name is apparently embodied in Mr. Rye's "Gunnarsbury" and in the Danish "Gunnars-Kjer." The English name corresponding to "Gunn-arr" was "Gúð-hera," so that when we find "Gunn-arr" in an English local name we know that that name is due to Danish influence. And we have evidence that "Gunn-arr" was in use in England, a *Gunner dux* being mentioned in 931 (*Cart. Sax.* ii. 365, 11), and in other charters of this period. Now, it is evident that an English *by* owned by this or any other *Gunn-arr* might be called "Gunnars-by" without its name being in any way a reproduction of the equivalent "Gunnars-bœr," near Tonsberg, Norway; and in the same way we may account for "Gunnars-bury," and even for the Norman *Gonne-tot* = "Gunnars-toft" (Munch, *N. F. H.*, i., p. 1, p. 681, citing Petersen, "Om Stedsnavne i Normandiet," *Nordisk Tidsskrift for Oldkyndighed*, ii., pp. 224-242). Similarly the Nottinghamshire "Gun-thorpe" (Domesday *Gune-torp*) is entirely independent of the Danish "Gunde-rup" and "Gunnarup"; and the Lincolnshire "Gun-by" (Domesday *Gunne-bi*) is likewise independent of the Danish "Gunn-by," these names being all derived from men named *Gunni*, gen. *Gunna*.†

* I say "apparently" because I have no old forms of this name before me. The apparently similar Lincolnshire "Goner-by" is not derived from *Gunn-arr* but from *Gunn-varðr*, the Domesday form being "Gunn-worde-bi."

† I may here mention, to show the folly of taking a modern Danish local name as a basis of comparison, that "Gunn-rød" is not derived, as its modern form suggests, from *Gunni*, but from the fem. name *Gunn-hildr*. (See Nielsen, *Old danske Personnavne*, p. xii.)

Nor is there any reason to imagine that the English "Grims-thorpe" is a reproduction of the Danish "Grims-trup," both being derived from the O.N. personal name *Grimr*, if, indeed, the English instance be not from an English *Grim*.

It is, I think, unnecessary to proceed with the analysis of Mr. Rye's fallacious parallels. There is nothing in any of them to support the strange proposition that the English examples are due to "reproductions by Danish settlers of their home-names," whether that reproduction be assumed to have taken place before the Roman invasion or when the historic Danes appeared in England. There is a tendency among English antiquaries to over-rate the Danish influence in local etymology. This may be due to the glamour of the Sagas, or to Worsaae's interesting, but somewhat imaginative work. In any case, we meet with Danish explanations of good English names almost as frequently as we do with modern Welsh etymologies of equally undoubted English compounds.

W. H. STEVENSON.

FORS FORTUNA.
